At the municipal elections, which, in July, were held throughout France, the Government of that country abandoned its practice of openly proposing to the people "official" candidates, although it used its influence for the success of its candidates no less vigorously than in the years before. The result of the election did not materially differ from that of the general election in the previous year. In a great majority of the towns, the Government candidates were elected, while the Opposition displayed the same strength as before in the large cities. The Opposition gained a considerable number of votes, and a few members of the Corps Legislatif, at the supplementary elections for members of this body held in 1865. The expectations of internal reform in France were totally disappointed. (*See FRANCE.*) An important victory was gained by the Progressive party of Sweden, which, with the active support of the Government, prevailed upon the Houses of Nobles and the Clergy to consent to a radical constitutional amendment, in virtue of which a legislature composed of two elective Houses, is to take the place of the former four Houses of the Nobles, the Clergy, the Burghers, and the Peasants. (*See SWEDEN.*) In Austria, the Emperor, seeing the impossibility of prevailing upon Hungary and other eastern provinces of the Empire to accept the Constitution of 1851, suspended this Constitution, in order to make an attempt to reconcile the Hungarians by far-reaching concessions. This measure, and those of a like kind that followed it, were received with great dissatisfaction in the German provinces, the Diets of which protested against the Imperial rescript as a violation of the Constitution; while most of the non-German provinces sent to the Emperor addresses of thanks for giving greater guarantees of equal rights to the non-German nationalities of the Empire than they found in

the old Constitution. (*See AUSTRIA and HUNGARY.*) In Prussia, the breach between the King and the people continued as before, without, however, leading to any practical consequence. (*See PRUSSIA.*) The Federal diet of Germany passed several resolutions contrary to the views of Austria and Prussia, but was too timid and powerless to push matters to an open rupture. (*See GERMANY.*) In Russia, the first elective provisional Diets were held. The nobility of several petitioned the Emperor to grant a Constitution of the Empire, embracing a legislature of two Houses; but the Emperor severely censured this movement. (*See RUSSIA.*)

The hope of effecting a telegraphic communication between Europe and America was again doomed to disappointment; but the Atlantic Telegraph Company at once resolved not to relinquish the object; and it has since officially announced that in June, 1866, another effort will be made to raise the old cable, and to lay a new one. The interest in a telegraphic connection of Europe with America is so great that, besides the English-American Company, several new companies have been formed in other countries, to try different routes for the same object. But all of these are likely to be forestalled by the company which has undertaken to connect Eastern Asia with the western coast of North America.

An interesting fact in the commercial history of Europe is the great difference in the movements of shipping of the several countries during the period from 1856 to 1863. Looking at the ratio of increase only, we find Norway at the head of all, having had a total addition to her mercantile navy in the period mentioned of 169,000 tons, or 6 per cent. annually. Next comes Hanover, with a total increase of 45,000 tons, or 6 per cent. annually; Prussia, with a total increase of 105,900, or 5.5 per cent. annually; Hamburg, with a total increase of 66,100 tons, or 5.5 per cent. annually; Bremen, with a total increase of 54,000 tons, or 5.1 per cent. annually; Italy, with a total increase of 153,900 tons, or 4 per cent. annually; Mecklenburg, with a total increase of 33,600 tons, or 4 per cent. annually; Oldenburg, with a total increase of 19,400 tons, or 3.3 per cent. annually; Great Britain, with a total increase of 873,000 tons, or nearly 3 per cent. (2.85 per cent.) annually; Sweden, with a total increase of 44,100 tons, or 2.4 per cent. annually; France, with a total increase of 127,000 tons, or 1.9 per cent. annually; Denmark, with a total increase of 43,400 tons, or 1.8 per cent. annually; Spain, with a total increase of 40,000 tons, or 1.4 per cent. annually; Russia, with a total increase of 12,000 tons, or 0.5 per cent. annually; Lubeck, with a total increase of 500 tons, or 0.4 per cent. annually. In contrast to the rapid increase there is a perceptible diminution in the commercial shipping of other nations. The Dutch commercial fleet actually lost, in the same period, a total of 28,100 tons, or 0.7 per cent. annually; Greece lost a total of 3,600 tons, or 1.5

per cent. annually; Austria lost a total of 53,800 tons, or 2 per cent. annually; and Belgium lost a total of 14,800 tons, or 3.6 per cent. annually. By summing up and comparing these several items with each other, it will be found that while in the septennial period mentioned all Europe added 1,980,000 tonnage to the capacity of her mercantile fleet (possessing ships of 11,892,600 tons in 1863, against 9,912,000 in 1856), Prussia and the minor States of Germany augmented their commercial strength by 324,500 tons, against a corresponding increase in Great Britain by 878,000 tons; in Italy, by 153,000 tons; and in France by 127,000 tons. Thus, while the British, German, French, and Italian shipping are on the ascending scale, the Austrian is falling off, and the Russian can be hardly said to be making progress.

The strength of the crews in the various countries is by no means in proportion to the number and size of the ships. Thus England, with her 28,600 vessels, of 5,308,008 tons burden, had 213,900 sailors on board ship in 1863; while Italy, with 16,600 vessels, of 686,000 tons (inclusive of the larger class of fishing-smacks), numbered a sea-faring population of no less than 100,000 men in 1862. Again, France, in 1862, had 62,200 men on board of 15,132 vessels, of 1,044,000 tons (not reckoning 25,000 on 8,250 fishing-smacks); Spain, in 1861, required even 46,900 men to man her 9,707 ships, of 443,000 tons (not reckoning 40,000 men on 10,817 fishing-smacks); while Germany, with the 6,295 vessels, of 1,303,802 tons, she owned in 1864, had employment for 38,100 navigators. It appears from this that on board an English or German ship one man represents about three on board a Spanish. To complete this list, Russia, in 1863, had 3,333 vessels (the greater half Finnish), of 375,000 tons, with 19,400 men.

EVERETT, EDWARD, D. C. L., an American statesman, diplomatist, scholar, and author, born in Dorchester, Mass., April 11, 1794, died in Boston, Mass., January 15, 1865. His father, Rev. Oliver Everett, was a distinguished clergyman in Boston until 1792, when he resigned his pastoral charge on account of ill health, and passed the remainder of his life in the adjacent village of Dorchester. His son, the subject of this sketch, entered Harvard College in 1807, and was graduated with the highest honors, in a class of remarkable promise, at the early age of seventeen. During his academic course, he displayed the same enthusiastic love of literature, and extraordinary powers of execution, which were among the strongly marked features of his character in after life. At this time, he was the principal editor of a magazine called the "Harvard Lyceum," conducted by the under graduates, and containing numerous specimens of his classical research, playful humor, and expressive style. Among his contributions to this periodical was a burlesque on Joel Barlow's "Columbiad," which had recently been brought out in a style of typographical pretension that

was equalled only by the inflated pomp of its phraseology. The fame of the youthful student long lingered round the walls of Harvard, and his name was widely quoted as a prodigy of precocious genius. After leaving college, he was appointed to the office of tutor, which at that period was deemed not the least among the academic honors of his Alma Mater. In connection with the duties of this post, he pursued the study of theology, and in 1813 succeeded the eloquent and greatly admired Buckminster, as pastor of the Brattle Street Church in Boston. His congregation represented the most intelligent and refined circles in that city, and he immediately rose to distinction as an eloquent and impressive pulpit orator. Less than twenty years of age, his almost juvenile presence and singular youthful beauty formed a strange contrast to the maturity and wisdom of his thoughts, the classic elegance of his style, and the chaste gravity of his elocution. During the next year he published a "Defence of Christianity," in reply to a young man named English who had obtained a certain notoriety by renouncing the Christian faith while studying for the ministry, and making a profession of Judaism. The work of Mr. Everett was received with a wonder and delight which at this day it is difficult to imagine, but the tradition of which is unimpaired in the literary history of New England. It was remarkable for its prodigious array of Biblical and philological learning, its frequent use of the researches of German theologians, whose names had then scarcely been heard of in this country, and its occasional passages of tender and pathetic eloquence.

In the same year he was elected Eliot Professor of Greek literature in Harvard College, and in order to qualify himself more fully for the duties of the office, he entered upon an extended course of European travel and study. After four years' residence at some of the principal universities and capitals of Europe, during which time he had pursued an extensive range of study, embracing the ancient classics, the modern languages, the history and principles of the civil law and public law, together with the political systems of Europe, he returned to Cambridge in the year 1819. His accession to the academic staff gave an almost incredible impulse to the students of the University; his appearance was hailed as a new and splendid light in the literary horizon, "another morn risen on mid noon;" his lectures in the branch of learning to which his professorship was devoted, and his Sunday discourses in the college chapel, produced a sensation almost unprecedented in the annals of purely didactic eloquence. During the same year, he took charge of "The North American Review," which he conducted till 1824, in the summer of which year he delivered his celebrated Phi Beta Kappa oration, to an immense audience at Cambridge, including Gen. Lafayette, who was then in the midst of his triumphant progress through the United States. The subject of this oration was, "The circum-

stances favorable to the progress of Literature in America." The oration, both in its matter and the eloquence of its delivery, was well worthy of the fame of the rising orator. A writer in the "Christian Examiner" of November, 1850, thus describes the effects it produced upon the audience: "The sympathies of his audience went with him in a rushing stream as he painted in glowing hues the political, social, and literary future of our country. They drank with thirsty ears his rapid generalizations and his sparkling rhetoric. The whole assembly put on one countenance of admiration and assent. As with skilful and flying hands the orator ran over the chords of national pride and patriotic feeling, every bosom throbbed in unison to his touch; and when the fervid declamation of the concluding paragraph was terminated by the simple pathos of the personal address to Lafayette, his hearers were left in a state of emotion far too deep for tumultuous applause."

This was the first of a series of discourses pronounced by Mr. Everett on public occasions during the next forty years, embracing every variety of topic connected with our national history, character, and prospects, and which combine in an eminent degree the peculiar charm of popular oratory with those substantial merits of thought and style which do not shrink from the cold criticism of the closet.

In 1824, Mr. Everett commenced his political career as member of Congress from Middlesex, in which district he resided for many years. By several relections he served ten years in the national House of Representatives, and during the whole period he held the important post of member of the Committee on Foreign Affairs; and in the Twentieth Congress, though belonging to the minority in politics, he was appointed chairman of that committee by the Democratic Speaker, Mr. Stevenson, of Virginia. During nearly the whole of his Congressional course he was placed on the most important select committees, and in every instance was appointed to draw up the majority or minority report.

Among the important topics which he thus discussed in his reports, and some of which he subsequently handled with great ability in the pages of the "North American Review," were—the question of the Panama Mission, the minority report of the Retrenchment Committee, the Georgia Controversy (in which he took strong grounds in favor of the Indians), the minority report of the Bank Investigating Committee, the minority report of the Committee on Foreign Relations on the Controversy with France in the spring of 1835, two or three reports on the French Spoliation Claims, some letters to Mr. Canning in 1827, on the Colonial Trade, and a full discussion of the South Carolina doctrine of nullification. This subject was subsequently, in October, 1830, further handled with great ability in the "North American Review."

In the autumn of 1834 he declined a renomination to Congress, and was chosen Governor

of Massachusetts by a large majority at the ensuing election. He was afterwards thrice re-elected, holding the executive office for four years. In 1839 he was defeated by Mr. Morton, the Democratic candidate, by a majority of one vote.

In June, 1840, he sailed with his family for Europe, and passed the summer in France, and the following winter in Florence and its vicinity. He had intended to pass another winter in Italy, but the election of General Harrison to the Presidency, and Mr. Webster's selection as Secretary of State, led to his appointment to the post of Minister Plenipotentiary to Great Britain. Our relations with the British Government at this time were less cordial than they had been. The Northeastern Boundary question, which had long been a matter of controversy, had reached a stage in which war seemed inevitable. The recent burning of the *Caroline*, and the arrest of McLeod, had produced great irritation on both sides of the Atlantic. The case of the *Creole*, and questions connected with Oregon and Texas, were also adding bitterness to the public feeling. In addition to this, American vessels had been seized and detained by British cruisers on the coast of Africa. On all these questions, except the Northeastern boundary, which was transferred to Washington by the appointment of Lord Ashburton as special ambassador, Mr. Everett was left to negotiate with the British Foreign Secretary, without special instructions, and all of them were managed with consummate ability, the interests of his own country protected, and at the same time the respect and confidence of the English Government secured. In his discussion of the construction of the first article of the convention between the two countries on the subject of the fisheries he obtained for American fishermen the long-disputed right to take fish in the bay of Fundy, and procured at various times, and in spite of great obstacles, the release of between sixty and seventy American citizens who had been sent to the penal colony of Van Diemen's Land on conviction of their participation in the Canadian rebellion. Notwithstanding the unpleasant state of feeling which existed when he entered upon his duties, and the gravity of the questions which he was called to discuss with the British Foreign Secretary, Mr. Everett was unquestionably the most popular minister who had ever represented the United States near the Court of St. James. His thorough culture, his accomplished manners, and his eloquence, caused him to be very generally admired. The University of Oxford conferred on him the honorary degree of D. C. L., and learned societies in great numbers enrolled him as an associate. In 1843 President Tyler offered him the post of Commissioner to China, with a view to establishing commercial relations with that vast empire, but his health and other considerations compelled him to decline. In 1845 he returned to the United States, and accepted the appointment of President of Har-

vard College. His administration of this eminent post was not attended with any considerable success. He failed to win the sympathies of the students. His manners were too formal and reserved for the taste of the "ingenuous youth" under his charge; his sensitive temperament presented a perpetual bait to the spirit of juvenile mischief; his health declined under the annoyances of the situation, and at the close of three years he retired in weariness and disgust from an office for which, it would have seemed, he possessed the most express and admirable qualifications.

Mr. Everett gave a portion of his leisure, after resigning the presidency of the college, to the preparation of a collected edition of his orations and speeches, which appeared in two volumes 8vo, in 1850. He also superintended the publication of the new edition of the works of Mr. Webster, at his special request, and prepared an elaborate memoir, which was prefixed to the first volume. Upon the death of Mr. Webster, in 1852, he was invited by President Fillmore to accept the vacant place of Secretary of State, which office he held during the last four months of Mr. Fillmore's administration, months of intense labor and of great anxiety. In these four months, aside from the ordinary duties of the department, he adjusted the perplexing affairs of the *Crescent City Steamer* and the *Lobos Islands*, prosecuted with energy the difficult negotiations pertaining to the fisheries, concluded an international copyright convention with Great Britain, and a consular convention with France, and in a diplomatic note of great ability declined the proposition of Great Britain and France to enter into a tripartite convention guaranteeing to Spain in perpetuity the exclusive possession of Cuba. In March, 1853, he took his seat in the United States Senate, to which he had been elected before leaving the Department of State, and made an able and elaborate speech on the Central American question. During the summer he replied to Lord John Russell's protest against the doctrines asserted by the United States Government, in his note declining the tripartite convention, and spoke several times in opposition to the proposed new Constitution of Massachusetts. At the opening of the regular session of Congress, Mr. Everett was in his place, and on the 8th of February made an able speech in opposition to the Nebraska-Kansas bill. His health was, however, seriously impaired, and in May, 1854, under the imperative advice of his physician, he resigned his seat in the Senate. A few months of rest and quiet restored him, and having been called to prepare for the *Encyclopædia Britannica* a life of Washington, subsequently published in one volume in this country (New York, 1860), he availed himself of the thorough and careful investigations made for that purpose to prepare an address on the character of Washington. The project of purchasing Mount Vernon for the General Government, by a private subscription, had then been

recently started, and Mr. Everett entered into it with great enthusiasm. He delivered his address on Washington in the different cities and towns of the United States, nearly one hundred and fifty times, consecrating to this object the entire proceeds of his efforts, giving his time and expenses freely for the purpose. He also turned to the same channel the proceeds of a series of articles written by him for the "New York Ledger," amounting to \$10,000. The entire amount thus raised by his exertions for this object exceeded \$100,000.

In 1857 and 1858 he donated to the Boston Provident Association and other charitable associations of Boston the proceeds of some other lectures, amounting to \$13,500; in 1858 his eulogy on Thomas Dowse, yielded to the Dowse Institute, and the Massachusetts Historical Society, about \$1,500, and his address on the "Early Days of Franklin," several times repeated, produced about \$4,000 for the Association of Franklin Medallists. He took an active interest in the establishment of the Boston City Public Library, and made to it at different times large donations of judiciously selected books, as well as money contributions.

In 1860 Mr. Everett was nominated for the Vice-Presidency on the ticket with John Bell, of Tennessee, for President, but was defeated. While peace seemed possible, and negotiation and compromise had some hope of winning the day and averting the threatened war, Mr. Everett, by constitutional as well as by personal inclination intensely conservative, sought the things that belonged to peace. But when war came, his course was such as at once to excite the grateful admiration of the friends of the Union. Forgetting his old timorousness, unseduced by the example of cherished personal friends and political associates, he did not hesitate for a moment to throw the weight of his resplendent talents, his public influence, his political learning, his captivating eloquence, on the side of our national integrity and emancipation. In spite of the deepest personal sympathies with the South, with a warm appreciation of the charm in character and manners of so many of the inhabitants of that sunny, impulsive region, and with lively recollections of their enticing hospitalities and flattering tributes to a pardonable self-love, his allegiance to the North never wavered for an instant.

Throwing his whole soul into the cause with a warmth and fervor unknown even to his younger days, he advocated it in tones of soul-stirring eloquence. In all the principal cities of the North, as well as on the heights of Gettysburg after their baptism of fire and blood, he thrilled his audiences with the flame of his own patriotism. It was as a slight token of appreciation of his manifold labors in behalf of his country, that the majority in Massachusetts placed his name in the Presidential election of 1864 at the head of their electoral ticket as an elector at large; and the depositing of his vote in the Massachusetts Electoral College for Abra-

ham Lincoln, was the closing act of his political life. It is said that he had devoted the leisure of many years to the preparation of an elaborate work on the principles of international law, but that the work was left incomplete at his death.

His death was very sudden, and preceded by no severe illness. He addressed his fellow-citizens at Faneuil Hall on Monday, January 9th, in aid of sending provisions to Savannah for the relief of the suffering inhabitants, and during the afternoon of that day was present in court, in reference to a claim for damages against the city of Charlestown, for overflowing a portion of his estate in Medford, by constructing a dam in Mystic River. On Tuesday he became affected with a very severe cold, but neither his friends nor himself deemed it serious. Saturday evening he appeared about as well as usual, and retired to bed, declining to trouble any one to remain with him. About three o'clock Sunday morning, January 15th, his housekeeper entered his room and found him sleeping naturally. An hour later she was alarmed by hearing a heavy fall in his room, and found him lying on the floor, breathing heavily. A physician was promptly summoned, but before his arrival Mr. Everett died.

On the receipt of the telegraphic despatch announcing his death, President Lincoln caused the following announcement to be published:

DEPARTMENT OF STATE, WASHINGTON, Jan. 15, 1865.

The President directs the undersigned to perform the painful duty of announcing to the people of the United States, that Edward Everett, distinguished not more by learning and eloquence than by unsurpassed and disinterested labors of patriotism, at a period of political disorder, departed this life at four o'clock this morning. The several Executive Departments of the Government will cause appropriate honors to be rendered to the memory of the deceased at home and abroad, wherever the national name and authority are acknowledged.

WILLIAM H. SEWARD.

Few of our public men have filled a larger space in the world of politics, or the brotherhood of letters. Of a reserved and fastidious turn of mind, of a singularly sensitive temperament, shy, almost to coldness, in the expression of personal feeling, with the timidity which proceeds from delicacy of organization, and a spirit of excessive caution and forecast, and a constitutional aversion to extremes both in the sphere of thought and of action, he was little fitted by nature or habit for the stormier scenes of politics, the rude strife of parliamentary debate, or the adroit and ready tactics of an unscrupulous party leader. His native tastes and endowments inclined him to a life of purely intellectual and æsthetic pursuits; he was more at home in the "quiet and still air of delightful studies" than amid the throng and pressure of practical affairs; with the exception of strictly abstract and metaphysical discussions, there was no branch of literature in which his capacity would not have enabled him to become a master; and there were few, in which both his aptitudes and his attainments did not entitle him to a highly honorable distinction. In

the field of poetry, history, criticism, classical learning, popular eloquence, he possessed abilities, which if exclusively directed to a single object of ambition, would have given him a brilliant preëminence; no department of what is somewhat loosely called polite letters, was foreign to his nature; and in several of the higher spheres of intellectual activity he was probably without a rival among the ablest and most distinguished men of the past or present generation. He certainly lacked the force of character which qualifies a man to guide and mould the opinions of his fellows; with a genuine love of progress, it is no paradox to say that he combined a dread of innovation; he shrunk before the ghosts of public rumor; his trust in principle was even modified by his mistrust of consequences; with a want of the enthusiasm, the personal magnetism, the free, spontaneous abandonment to the genial impulses of the moment, which make ardent friends, he was annoyed with the perpetual fear of making enemies. He carried his kindness of manner, his spirit of conciliation, his deference to prevailing prejudices, his love of complimentary allusions, to the very verge of sincerity; it was hard for him to make up his mind to call a bad thing, or a false idea, by its right name; and even in the defence of vital public interests, he trembled before the audacious or the subtle assaults of his antagonists; he was too fond of granting concessions for the sake of peace. The great error of his life, in this respect, and one from which he never fully recovered in the esteem of many, was his memorable apology for slavery in his maiden speech on the floor of Congress, which called forth the expression of such withering scorn from Mr. Randolph, and which clung, like a plague-spot, to his garments.

In his personal habits, Mr. Everett was a model of industry, promptness, and power of easy and rapid execution. He never forgot an appointment, nor neglected a duty. In the performance of his literary tasks he was as punctual as the rising of the sun. Though essentially scholastic in his habits, no man had a clearer head or a readier hand in the routine of practical affairs. With his love of elegant retirement, he exercised a devotion to detail, which would seem marvellous to persons who are not aware how largely this element enters into the conditions of success, and even of greatness, in every department of life. His handwriting, which he formed when a school-boy, and retained to old age, was as lucid and beautiful as copper-plate. The act of composition cost him little effort at the time, although the fruit of years of thought and study, and the manual process of writing, stamped his most ornate and exquisite productions indelibly upon his memory. His manners were polished and courtly, though wanting the subtle grace of natural sympathy. He was not a man of quick or strong emotions, unless he apprehended some rude invasion of his fastidious personality. He was alert in resenting a fancied injury or insult, or even an unfavorable criticism, and the comments of hostile tongues would sometimes affect him even to tears. He loved the approval of indifferent persons too much for his own happiness, perhaps for his own dignity, although his sensitiveness to public opinion strengthened his habits of self-command, and made him, in all the relations of life, a paragon of external propriety. He will be regarded as one of the most highly gifted and admirably cultivated men of the present age, but he has left no monument which will furnish an adequate memorial of his genius to future generations.

F

FENIAN BROTHERHOOD. This is the name of an organization of persons born in Ireland, which exists in the United States, the British Provinces of North America, Ireland, and elsewhere. It commenced about 1857, in an organization known as the Emmet Monument Association. The pith of the name consists in the fact that Robert Emmet, an Irish revolutionist, when about to be executed in 1803, asked of his countrymen, that no monument might be erected to his memory until his country should have become free of British thralldom. An association, therefore, which proposed to build a monument to Emmet on Irish soil, implied an effort for the overthrow of the British power in Ireland. The name of Fenian was subsequently adopted, being recognized by Irishmen as relating to the period in which their ancestors were most prosperous, happy, and independent. The most active agent, in creating the organization, was John O'Mahony,

the head, at present, of the order in the United States. Little, however, was accomplished previous to 1859, when it became developed in its present form, and began to extend both in Ireland and North America.

The organization, especially in the United States, is formed on scientific principles. Nothing better could be devised for bringing into action the highest efficiency of its members. The lowest detail consists of a Local Circle of not less than sixty members, when a commission is granted by the State Centre, which also authorizes the Circle to send a delegate to the next Fenian Congress. The Circle numbering sixty, its members elect a permanent Centre, who, if approved by the State Centre and Head Centre, will then be approved and confirmed by the latter. These Centres, on a certain day of each month, make out in duplicate full reports of all their proceedings, receipts, and disbursements, increase or decrease of members,

etc. One copy is sent to the State Centre, and the other forwarded for file and comparison to the Head Centre's headquarters. Any circle failing to report for three months will be set down as "in bad standing," and will be cut off from connection unless full and satisfactory explanations are forwarded. The initiation fees of each Circle are not less than one dollar—many rich and patriotic members having volunteered as high as five hundred dollars; and the weekly dues of each member not less than ten cents—about fifty cents per month being the average actually paid in by each member. Candidates for membership must be proposed by one Fenian brother and seconded by another. Their names and evidence as to their good moral character are then submitted to the Committee of Safety of each Circle, this committee consisting of not less than three nor more than seven of the most discreet and trustworthy members of the Circle. This committee is nominated by the Centre of each Circle, but must be approved by a majority vote of all the members; and its report on each candidate for admission must be submitted, for acceptance or rejection, to a regular meeting of the Circle. If the candidate for admission be accepted, he then, if in the United States, is only asked to make the following declaration: "I solemnly pledge my sacred word of honor, as a truthful and honest man, that I will labor with earnest zeal for the liberation of Ireland from the yoke of England, and for the establishment of a free and independent government on the Irish soil; that I will implicitly obey the commands of my superior officers in the Fenian Brotherhood in all things appertaining to my duties as a member thereof; that I will faithfully discharge my duties of membership as laid down in the constitution and by-laws thereof; that I will do my utmost to promote feelings of love, harmony, and kindly forbearance among all Irishmen; and that I will foster, defend, and propagate the aforesaid Fenian Brotherhood to the utmost of my power." All political discussions as to any but Irish national affairs are peremptorily excluded from the deliberations of Circles; while religious discussions of any kind are excluded altogether. Centres of Circles correspond with State Centres; State Centres with the Head Centre. All correspondence with the brothers in Ireland, the Canadas, or elsewhere in foreign parts, has to pass through the Head Centre—the Head Centre and Central Council know the true names and addresses of the officers of the "I. R. B.," or Irish Revolutionary Brotherhood, and other brotherhoods in Ireland, the Canadas, and elsewhere. Members of the "I. R. B." coming from Ireland, must first be certified by the Head Centre, to whom they shall show their credentials as brothers in good standing when they left their native land. The names of all Fenian brothers expelled for perfidy, are sent by the Head Centre to all State Centres, these latter communicating them to all their

subordinate Centres of Circles. When brothers are about changing their localities of residence, they must procure, for a trifling fee, letters of introduction from the Centre of their late Circle to the Circle they are about joining. If these are in different States, the introduction must be avouched as correct by the State Centres as well. The decision of the Head Centre, approved by a majority of the Central Council, is absolute upon all points within the association. Each State Centre of the order is appointed and commissioned by the Head Centre, on the recommendation of a majority of the delegates from the various Circles in the State entitled to vote. The Head Centre, however, has power to reject such nominations, being responsible to the next annual Congress for his action; and with the assent of the Central Council may even remove such State Centres as may be agreed upon, and appoint other and more trustworthy men in their places. The State Centres are charged with establishing District Centres and organizing Circles in their respective States or Territories, settling all minor disputes and reporting twice a month to the Head Centre the progress, numbers, and financial condition of their charges. The chief officer of the order in the United States, as in other countries, is called the Head Centre. He is elected annually by a general Congress, composed of the various State Centres, *ex officio*, and one delegate from each Circle in good standing, containing not less than one hundred members, with one additional delegate from each.

Previous to the reorganization of the Brotherhood in the United States, in 1865, the Head Centre was assisted by a Central Council of Ten, who were nominated by himself, but must be confirmed by a Congress of the order. The same mode of appointment was adopted for the Treasurers and Secretaries. The Central Council elected its own President and other officers. It had the power to call conventions of all State Centres, or a general Congress in case of emergency. These bodies had the power to impeach or remove any officer. The Council also were required to audit and approve all financial transactions of the Brotherhood, and to report once a year to each session of the Fenian Congress.

The first Congress of the order was held in Chicago in November, 1863, and the second in Cincinnati in January, 1865. The Congress at Chicago consisted of nearly two hundred delegates. They reformed the constitution of the order, and more boldly avowed its designs, and rendered it an open organization. In January 1865, the membership had so greatly increased as to number about the following Circles: Connecticut, 8; California, 13; Delaware, 3; Indiana, 29; Illinois, 26; Iowa, 15; Kentucky, 8; Kansas, 3; Louisiana, 1; Missouri, 9; Montana Territory, 2; Maine, 3; Michigan, 9; Minnesota, 3; Massachusetts, 65; Nevada, 3; New Hampshire, 9; New York State, 41, and in District of Manhattan (New York city), 26;

New Jersey, 5; Ohio, 22; Oregon, 8; Pennsylvania, 27; Rhode Island, 10; Tennessee, 4; Vermont, 6; Wisconsin, 11; Army and Navy, 15—the Fenians of this latter naval and military class numbered about 14,620. The membership of the Circles ranged from sixty to nearly five hundred, and that of the order at that time was estimated at 80,000 in good standing. At the session of the Congress in January, standing committees were appointed on Military Affairs, on Foreign Affairs, on Ways and Means, on Government and By-laws, and on Fenians in Ireland. About the same time a Fenian Sisterhood was established, which promises to include large numbers.

Another Congress of the Brotherhood assembled in Philadelphia in September, 1865, at which a new constitution was adopted after the model of the Constitution of the United States. Its design, stated in the preamble, is to secure the blessings of liberty for the Irish race in Ireland. Its members shall consist of citizens of the United States of Irish birth and lineage, and Irishmen and friends of Ireland living on the American continent, and in the provinces of the British Empire wherever situated. No change is made in the general pledge above mentioned, by which its members are bound together. The Brotherhood is subdivided into State, District, and Social Circles as previously. The Congress consists of a Senate and House, composed of one delegate for every hundred members of a Circle, more or less, but none less than ten, and an additional delegate for every fraction above fifty. The Senate consists of fifteen members, nominated by a committee of two from each State and district, elected by the delegates of each State and district in Congress assembled. One of their number must be chosen President of their body; he then becomes Vice-President of the Brotherhood. The Senate meet in perpetual session while in office, and organize within two days after their election, and adjourn from time to time.

The Executive power is placed in the hands of a President elected annually by the Congress. He nominates, and the Senate elects, secretaries of Military Affairs, of the Treasury, of Naval Affairs, and of Civil Affairs. In the same manner an agent of the Irish Republic and Subscription agent are appointed. The President and Senate make arrangements and treaties with persons or powers friendly to the objects of the Brotherhood, and appoint envoys and ambassadors; and "the President, Vice-President, and all civil officers shall be removed from office and expelled, on impeachment for and conviction of treason, bribery, or other high crimes or misdemeanors." The details of the organizations under the new constitution are such as have been stated above.

After the adjournment of the Congress public offices were opened by the officers of the Brotherhood in New York, and an issue of bonds commenced. A difficulty subsequently ensued between the Senate and President which pro-

duced an apparent division in the order. It was ultimately healed so far as not to interfere with the great objects in view.

While the Congress was in session at Philadelphia, an application was made to the President for the release of Mr. John Mitchell, an Irish revolutionist who had been enlisted in the cause of the Confederate States. Col. Roberts, the envoy of the Congress, thus addressed President Johnson:

MR. PRESIDENT: I have the honor of being delegated by the convention of Irish-American citizens, assembled in Philadelphia, representing large social classes in thirty States and territories, to wait upon your Excellency and express to you how deeply they feel the act restoring to freedom a man whom they love and venerate for his self-sacrificing devotion to his native land. They remember nothing of John Mitchell's American career. They can never forget that he risked all a patriot should for Ireland. I am sure, your Excellency, the American people will have no cause to regret the sympathy they feel, and the friendship we believe they entertain for their fellow-citizens of Irish birth. We, sir, are not unconscious of the fact, that we have found in America, liberty, justice, and an asylum.

President Johnson replied in substance as follows:

GENTLEMEN: I am glad to learn that the steps which have been taken in the matter referred to, have met with the approval of the gentlemen who have sent you here. As you, sir, delicately remarked, we could not remember Mr. Mitchell's American career; but we were anxious, as a mark of respect and compliment to the large section of our countrymen with whom Mr. Mitchell was previously identified, to yield to their expressed wishes in that regard.

The part of the organization existing in Ireland is known under the initials I. R. B., or Irish Revolutionary Brotherhood. It is, from the necessity of the case, secret and oath-bound, it being treason against the ruling, or British government. Its secrecy is so successfully contrived as to have defied, thus far, with success, the spies and the gold of the government; and its organization is unshaken in consequence of its inviolable secrecy. Its members in Ireland are required to be able-bodied men, who are sworn into military service and secretly drilled as soldiers, for which purpose teachers, it is supposed, have been supplied from among the Irish soldiers in the United States. The numerical strength of the Fenians in Ireland is represented as formidable, when compared with the numbers which England and Scotland could add to the British army. The military resources and the strength of numbers must be contributed by the Brotherhood in other countries. England's hour of distress is designed to be Ireland's opportunity. Of the organization in Canada, or in the other British possessions, little is publicly known. They have served to awaken apprehension and increased watchfulness among the local authorities.

The organization of such an extensive conspiracy to wrest from the British crown the third member of its kingdom, early excited the apprehensions of the government. During the year soldiers were sent into Ireland, and the con-

stabulary force increased. A state of martial law was created in some counties; suspected persons were arrested, among whom was James Stephens, the Head Centre, as it appears, not only in Ireland, but of the whole Brotherhood. Notwithstanding the vigilance of the keepers, Stephens quietly disappeared from prison, and the utmost efforts of the government have failed to discover the place of his concealment or to detect his accomplices. Searches were also made, and arms discovered and prisoners arraigned for trial, but nothing occurred during the year to change the attitude of the government and the Brotherhood. In the British Provinces some apprehensions of an invasion by Fenians from the United States, caused the militia, on two or three occasions, to be placed under arms and ordered to the place of the anticipated attacks. But the apprehensions proved groundless.

FINANCES OF THE UNITED STATES.
The current receipts and expenditures of the United States for the fiscal year ending June 30, 1865, were partly stated and partly estimated by the Secretary of the Treasury (Mr. Fessenden) in his annual report to Congress under date of December, 1864. The actual receipts for the first quarter of that year, ending September 30, 1864, were as follows:

<i>Receipts.</i>	
From Customs.....	\$19,271,091 96
From Lands.....	842,185 84
From Direct Tax.....	16,079 86
From Internal Revenue.....	46,562,859 92
From miscellaneous sources.....	9,020,171 44
	<hr/>
Add balance in the Treasury July 1, 1864....	\$75,212,889 02
	18,842,553 71
Receipts from all sources except loans.....	<hr/>
	\$94,054,947 73

The expenditures during the same first quarter were as follows:

<i>Expenditures.</i>	
For the civil service.....	\$8,712,422 51
Pensions and Indians.....	4,935,179 81
War Department.....	286,200,288 52
Navy Department.....	83,292,916 49
Interest on public debt.....	19,921,054 48
	<hr/>
Total.....	<hr/>
	\$353,061,861 81

The estimates for the remaining three quarters of the same fiscal year, ending June 30, 1865, were as follows:

<i>Receipts estimated.</i>	
From Customs.....	\$51,000,000 00
From Internal Revenue.....	203,000,000 00
From Lands.....	800,000 00
From miscellaneous sources.....	15,000,000 00
	<hr/>
	\$269,800,000 00
	<hr/>
Total receipts from ordinary sources, actual and estimated, with balance on hand, July 1, 1864.....	<hr/>
	\$368,354,947 73

<i>Expenditures estimated.</i>	
For the civil service.....	\$26,852,489 47
Pensions and Indians.....	6,516,595 72
War Department.....	677,479,384 89
Navy Department.....	109,929,644 16
Interest on public debt.....	71,869,160 70
	<hr/>
	\$892,667,274 44
	<hr/>
Total expenditure, actual and estimated....	<hr/>
	\$1,245,729,185 75

Expenditures brought forward.....	\$1,245,729,185 75
From this amount there was deducted an unexpended balance of appropriations of former years.....	<hr/>
	\$350,000,000 00
Leaving total expenditure, actual and estimated.....	<hr/>
	\$895,729,185 75

The actual receipts and expenditures from the ordinary sources of revenue during the fiscal year, exceeded the estimates as follows:

<i>Receipts.</i>	
Balance in the Treasury July 1, 1864, agreeably to warrants.....	\$96,739,905 73
From Customs.....	4,928,260 60
From Lands.....	996,553 81
From Direct Tax.....	1,200,573 03
From Internal Revenue.....	209,464,215 25
From miscellaneous sources.....	82,975,284 47
	<hr/>
Total.....	<hr/>
	\$426,307,792 89
<i>Expenditures.</i>	
For civil service.....	\$44,765,558 12
Pensions and Indians.....	14,258,575 88
War Department.....	1,081,823,800 79
Navy Department.....	122,567,776 12
Interest on public debt.....	77,897,712 00
	<hr/>
Total.....	<hr/>
	\$1,290,312,982 41

These were the results of the ordinary sources of revenue and expenditures during the fiscal year ending June 30, 1865. It was the estimate of the Secretary in December, 1864, that it would be necessary to provide by loans the sum of \$570,727,508.11 for the year ending July 1, 1865. The heavy expenditures of that fiscal year were the result of the gigantic scale on which the war was prosecuted during a portion of the year, and the payment of officers and men mustered out of the service.

The action of Congress providing means for the Treasury consisted in the passage of a revised act for raising internal revenue on March 3, 1865; also on the same date an act further revising the duties on imports; also on the same date the passage of an act authorizing the Secretary of the Treasury to borrow any sum, in addition to the amounts previously authorized, not exceeding \$600,000,000, to be issued in Treasury notes or bonds, of which the latter were to be 5.40s, and the former convertible into bonds. The rate of interest was six per cent. in coin, or $7\frac{1}{10}$ per cent. in currency. Previously, on January 25th, an act was passed authorizing the Secretary to issue Treasury notes for the balance of \$400,000,000 of bonds not issued, which were authorized by an act of June 30, 1864. According to the report of Secretary Fessenden, there were to be added to the resources for the fiscal year ending June 30, 1865, balances remaining from previous loans authorized; that is, on July 1, 1864, there still remained authority to borrow the following amounts:

* The actual balance in the Treasury July 1, 1864, as stated by Secretary Fessenden, was \$18,842,553.71. But in his report there was excluded from the public debt the sum of \$77,897,847.02, which amount had been paid out of the Treasury, but had not been reimbursed to the Treasurer by warrants, and was not reimbursed until after the commencement of the next fiscal year. This explains the difference between \$18,842,553.71, assumed in that report as the balance in the Treasury July 1, 1864, and \$96,739,905.73, the balance according to the warrant account.

1. Under the act of March 3, 1863, so much of \$75,000,000 advertised previously to June 30, 1864, as had not been awarded to bidders, \$82,459,700 00
2. Under act of March 3, 1864, as had not been subscribed for and paid into the Treasury, viz:..... 127,608,520 00
3. Under the act of June 30, 1864..... 400,000,000 00
4. Amount of Treasury notes issued under former acts which had been redeemed and cancelled, and which the Secretary was authorized to replace by notes issued under the act of June 30, 1864..... 62,191,400 00

Total available resources July 1, 1864, under laws authorizing loans.....\$622,284,625 00

These were the extraordinary resources of the Treasury existing or specially provided during the fiscal year ending June 30, 1865, and designed to defray the expenditures not only of that fiscal year but of so much of the ensuing one as elapsed previous to the meeting of Congress in December, 1865.

Under the act authorizing the issue of \$600,000,000, the Secretary issued during the month of March \$70,000,000 of notes payable three years after date, and bearing an interest payable semi-annually in currency at the rate of 7 $\frac{3}{8}$ per cent. per annum, and convertible at maturity, at the pleasure of the holders, into 5.20 gold-bearing bonds.

Upon the capture of Richmond and the surrender of the Confederate armies, it became apparent that there would be an early disbanding of the forces of the United States, and consequently heavy requisitions from the War Department for transportation and payment of the army, including bounties. As it was important that these requisitions should be promptly met, the Secretary perceived the necessity of realizing as speedily as possible the amount, \$530,000,000, still authorized to be borrowed under this act. The 7 $\frac{3}{8}$ notes had proved to be a popular loan; and although a security on longer time and lower interest would have been more advantageous to the Government, he considered it advisable to continue to offer these notes to the public. By the skill and energy of the agent, Jay Cooke, and the hearty coöperation of the national banks, these notes were distributed in every part of the Northern, and some parts of the Southern States, and placed within the reach of every person desiring to invest in them. No loan ever offered in the United States, notwithstanding the large amount of Government securities previously taken by the people, was so promptly subscribed for as this. Before the first of August the entire amount of \$530,000,000 had been taken, and the Secretary had the unexpected satisfaction of being able, with the receipts from customs and internal revenue, and a small increase of the temporary loan, to meet all the requisitions upon the Treasury.

On \$230,000,000 of these notes the Government has the option of paying the interest at the rate of six per cent. in coin, instead of 7 $\frac{3}{8}$ in currency. The Secretary says "he thought it advisable to reserve this option, because he indulged the hope that before their maturity specie payments would be restored," and be-

cause six per cent. in coin is as high a rate of interest as the Government should pay on any of its obligations.

During the fiscal year the entire receipts from extraordinary sources were as follows:

From loans applicable to expenditures..... \$864,868,499 17
From loan applied to payment of public debt, 607,361,241 68

From ordinary sources above stated and balance on hand..... \$1,472,224,740 85
426,807,702 83

Total receipts of all kinds to July 1, 1865, \$1,893,532,533 24

Besides the ordinary expenditures above stated was added a sum of \$607,361,241.68 for the redemption of that amount of public debt; thus making the total expenditures \$1,897,674,224.09, and leaving a balance in the Treasury on July 1, 1865, of \$858,309.15.

The items of the increase and decrease of the public debt for the fiscal year 1865 were as follows:

Amount of public debt June 30, 1865.....\$2,682,593,026 53
Do. do. June 30, 1864..... 1,740,690,486 49

Total increase..... \$941,902,537 04

Which increase was caused as follows, by—

Bonds, 6 per cent., act July 17, 1861.....\$29,799,500 00
Bonds, 6 per cent., act Feb. 25, 1862..... 4,000,000 00
Bonds, 6 per cent., act March 8, 1863..... 82,327,726 66
Bonds, 6 per cent., act June 30, 1864..... 91,789,000 00

\$157,916,226 66

Bonds, 5 cent., act March 3, 1864..... 99,432,850 00

Bonds, 6 per cent., acts July 1, 1862, and July 2, 1864, issued to Central Pacific Railroad Co., interest payable in lawful money, 1,253,000 00

Treasury notes, 7-30, acts June 30, 1864, and March 3, 1865, interest payable in lawful money..... 671,610,400 00

Compound interest notes, 6 per cent., act June 30, 1864, \$173,756,080 00

Temporary loan, 6 per cent., act July 11, 1862..... 17,886,869 96

196,142,949 96

United States notes, acts Feb. 23, 1862, July 11, 1862, and Jan. 17, 1863..... 1,509,295 16

Fractional currency, act March 3, 1863..... 7,963,098 55

Gross increase.....\$1,135,282,820 68

From which deduct for payments—

Bonds, 6 per cent., act July 21, 1845..... \$1,400 00

Treasury notes, 6 per cent., acts Dec. 23, 1857, and March 2, 1861..... 158,800 00

Bonds, 5 per cent., act Sept. 9, 1850, (Texas indemnity)..... 1,307,000 00

Treasury notes, 7-30, act July 17, 1861..... 80,212,800 00

Certificates of indebtedness, 6 per cent., act March 1, 1862, 44,957,000 00

Treasury notes, 5 per cent., 1 and 2 year, act March 3, '63, 111,132,740 00

United States notes, act July 17, 1861, and Feb. 12, 1862..... 808,896 25

Postal currency act, July 17, 1862..... 5,352,147 84

\$193,329,733 59

Net increase..... \$941,902,537 04

The amount of the public debt on October 31, 1865, without deducting funds in the Treasury, was.....\$2,608,549,487 53

Do. January 1, 1866..... 2,507,810,867 99

Decrease..... \$1,220,638 56

A part of this debt consisted of currency or United States notes used as a circulating medium and fractional currency, as follows:

United States Notes, Jan. 30, 1864.....	\$431,173,670 84
“ “ “ 1865.....	432,687,966 00
“ “ Oct. 30, 1865.....	428,160,569 00
“ “ Jan. 1, 1866.....	426,231,389 75

The amounts of fractional currency outstanding at the same dates were as follows:

Fractional and postal currency June 30, 1864..	\$22,994,877 25
“ “ “ 1865..	25,005,828 76
“ “ Oct. 30, 1865..	26,057,469 20
“ “ Jan. 1, 1866..	26,000,420 62

The fiscal year 1866, which commenced on July 1, 1865, showed the following results for the quarter ending September 30, 1865:

Balance in Treasury, agreeable to warrants, July 1, 1865.....	\$353,309 15
Receipts from loans applicable to expenditures.....	\$138,773,097 22
Receipts from loans applied to payment of public debt.....	138,409,163 35
	277,182,260 57
Receipts from customs.....	47,009,538 03
Receipts from lands.....	132,890 68
Receipts from direct tax.....	81,111 30
Receipts from internal revenue.....	96,618,885 65
Receipts from miscellaneous sources.....	18,893,729 94
	162,186,200 55
Total.....	\$440,226,770 27

Expenditures.

For the redemption of public debt.....	\$138,409,163 35
For civil service.....	10,571,460 99
For Pensions and Indians.....	6,024,241 86
For War Department.....	165,369,237 32
For Navy Department.....	16,520,609 81
For interest on public debt.....	86,173,481 50
	\$373,063,254 83

Leaving a balance in the Treasury on October 1, 1865, of..... \$67,153,515 44

For the remaining three quarters of the year the Secretary presents the following estimates, which show a deficiency of over \$100,000,000 for the year. Receipts for three quarters ending June 30, 1866:

Balance in Treasury October 1, 1865.....	\$67,153,515 44
Receipts from customs.....	\$100,000,000 00
Receipts from lands.....	500,000 00
Receipts from internal revenue.....	175,000,000 00
Receipts from miscellaneous sources.....	30,000,000 00
	305,500,000 00
Total.....	\$372,653,515 44

Expenditures for the three quarters ending June 30, 1866:

For the civil service.....	\$32,994,052 38
For pensions and Indians.....	12,256,790 94
For the War Department.....	307,788,750 37
For the Navy Department.....	35,000,000 00
For interest on public debt.....	96,513,868 75
	434,553,462 64

Deficiency..... \$112,194,947 20

The estimates of the Secretary for the fiscal year next following and terminating on June 30, 1867, show a surplus exceeding \$100,000,000. This is virtually recovering the \$100,000,000 deficiency for the fiscal year ending June 30, 1866, and nothing more. It will be seen that the estimates differ from those of the preceding year, chiefly by the reduction of the expenditures of the War Department. Thus upon the important expenditures of that department depends the estimated deficiency or surplus. The receipts for the year ending June 30, 1867, are estimated as follows:

VOL. V.—22 A

From customs.....	\$100,000,000 00
From internal revenue.....	275,000,000 00
From lands.....	1,000,000 00
From miscellaneous sources.....	20,000,000 00
	\$396,000,000 00

The expenditures, according to the estimates, will be—

For the civil service.....	\$42,165,599 47
For pensions and Indians.....	17,609,640 33
For the War Department.....	39,017,416 18
For the Navy Department.....	43,982,457 50
For interest on public debt.....	141,542,063 50
	\$284,317,181 88
Leaving a surplus of estimated receipts over estimated expenditures, of.....	\$111,682,818 12

The deficiency estimated for the current fiscal year should be increased by the sum of \$32,536,901 of public debt to be provided for during the year. The most important subject, however, connected with the finances of the United States relates to the public debt. This has so suddenly grown to such vast proportions as to overshadow all the resources of the country. Its amount on June 30, 1865, with the nature of the various obligations, are shown in the table on the following page.

It will be noticed that the legal tender notes known as currency or circulating medium form a large item of this indebtedness. The amount of this paper circulation on October 31, 1865, was as follows:

1. United States notes and fractional currency.....	\$454,218,038 20
2. Notes of the National Banks.....	185,000,000 00
3. Notes of State Banks, including outstanding issues of State Banks converted into National Banks.....	65,000,000 00
Total.....	\$704,218,038 20

The amount of notes furnished to the national banks up to and including the 31st of October, was a little over \$205,000,000, but it was estimated that \$20,000,000 of these had not then been put into circulation. In addition to the United States notes, there were also outstanding \$32,536,900 five per cent. Treasury notes, and \$173,012,140 compound-interest notes, of which it was estimated that \$30,000,000 were in circulation as currency.

By this statement, without including 7 $\frac{1}{2}$ notes, many of the small denominations of which were in circulation as money, the paper circulation or money of the country amounted on October 31, 1865, to the sum of \$734,218,038.20. This feature of the public debt is the first to attract attention in any consideration of the subject. The legality of these notes first presents itself to the mind of the Secretary. His views on the question were thus expressed:

The right of Congress, at all times, to borrow money and to issue obligations for loans in such form as may be convenient, is unquestionable; but their authority to issue obligations for a circulating medium as money, and to make these obligations a legal tender, can only be found in the unwritten law which sanctions whatever the representatives of the people, whose duty it is to maintain the Government against its enemies, may consider in a great emergency necessary to be done. The present legal-tender acts were war measures, and while the repeal of those provisions which made the United States notes law-

STATEMENT OF THE INDEBTEDNESS OF THE UNITED STATES, JUNE 30, 1865.

[illegible]

ful money is not now recommended, the Secretary is of the opinion that they ought not to remain in force one day longer than shall be necessary to enable the people to prepare for a return to the constitutional currency. It is not supposed that it was the intention of Congress, by these acts, to introduce a standard of value, in times of peace, lower than the coin standard, much less to perpetuate the discredit which must attach to a great nation which dishonors its own obligations by unnecessarily keeping in circulation an irredeemable paper currency. It has not, in past times, been regarded as the province of Congress to furnish the people directly with money in any form. Their authority is "to coin money and fix the value thereof;" and, inasmuch as a mixed currency, consisting of paper and specie, has been found to be a commercial necessity, it would seem also to be their duty to provide, as has been done by the National Currency act, that this paper currency should be secured beyond any reasonable contingency. To go beyond this, however, and issue Government obligations, making them by statute a legal tender for all debts, public and private, is not believed to be, under ordinary circumstances, within the scope of their duties or constitutional powers.

The influence of this feature of the debt on the commercial affairs of the country in a time of peace, and the dangers that financial disaster will ensue, were looked upon with so much apprehension as to cause the Government to urge upon Congress the policy of contraction. The evidence of these dangers is drawn from the past financial history of the country. The bank note circulation of the country at various periods of highest and lowest issues prior to the war was as follows:

YEARS.	Circulation.	Deposits.	Loans.
January, 1830.....	\$61,324,000	\$55,560,000	\$200,451,000
January, 1835.....	103,692,495	83,051,000	365,163,000
January, 1836.....	140,301,688	115,104,000	437,506,000
January, 1837.....	149,185,890	127,397,000	525,115,000
January, 1843.....	58,564,000	56,168,000	254,544,000
January, 1856.....	195,747,950	212,706,000	634,183,000
January, 1857.....	214,778,822	230,351,000	684,456,000
January, 1858.....	153,203,344	185,982,000	538,165,000
January, 1860.....	207,102,000	233,302,000	691,945,000

It appears by the above that the bank note circulation of the United States increased from \$61,324,000 to \$149,185,890 between January 1, 1830, and January 1, 1837, in which latter year a great financial collapse took place. The circulation, deposits, and loans of that year compared as follows: Circulation, \$149,185,890; deposits, \$127,397,000; loans, \$525,115,000. The circulation then fell from \$149,185,890 in 1837, to \$58,564,000 in 1843, and rose to \$214,778,822 on January 1, 1857, in which year the next severe crisis occurred. The circulation, deposits, and loans at this time compared as follows: Circulation, \$214,778,822; deposits, \$230,351,000; loans, \$684,456,000. The amount of specie in circulation at these periods may be estimated at \$30,000,000 for 1837, and \$50,000,000 for 1857. On the 30th of September, 1865, the deposits of the national banks alone amounted to \$544,150,194; their loans, estimating the national securities held by them as a loan to the Government, amounted to \$913,045,629; both of which items were increased during the month of October, while on

the 30th of that month the circulation, bank and national, exceeded \$700,000,000.

The years of 1837 and 1857 were ones of great inflation; and the revolution of the former not only produced great immediate embarrassment, but a prostration which continued until 1843; at the commencement of which year the bank note circulation amounted only to \$58,566,000; deposits, \$56,168,000; loans, \$254,544,000. Flour declined in New York from \$10.25 per barrel on January 1, 1837, to \$4.69 on January 1, 1843, and other articles in about the same proportion. In 1857 the evil had not been long at work, and productive industry had not been seriously diminished, yet the reaction, though sharp and destructive, was not general, nor were the embarrassments protracted which resulted from it. The effect of the present inflation of prices upon the cost of labor and of all elements entering into the production of the staple commodities, whether in agriculture, mechanics, or manufactures, has been such as to invite the direct competition of all other countries in our markets. This has made the American market the best to sell in and the worst to buy in on the part of foreigners. In the absence of an adequate export demand, which there is a tendency to diminish, it will result in stripping the country of the precious metals, and the creation of a debt abroad that will be a greater drain on the national resources than the present debt.

On a gold valuation of the imports and exports, the balance which has accrued against this country during the four years previous to June 30, 1865, including the interest on American securities held abroad and purchased within that time, and also taking into consideration the difference between the standard of American and that of foreign gold (9 $\frac{1}{2}$ per cent.), has been \$308,000,000. In consequence of the probable falling off in the export of coin, and the increased amount of interest to be paid abroad, it is estimated that the accruing balance during the present fiscal year will amount to \$120,000,000, making a total for five years of \$428,000,000. The only resource to pay this gold balance has been, and still is, the sale of securities abroad. The amount required, if sold at an average discount of forty per cent., will be \$713,000,000, and the annual interest at six per cent. will be \$42,780,000. The discount of forty per cent. will amount to \$285,200,000; every dollar of which will be an entire loss to the country.

As contraction appeared to be a measure of safety imperatively demanded, and which required the action of Congress, the Secretary of the Treasury recommended to that body to declare that the compound-interest notes should cease to be a legal tender from the day of their maturity, and that the Secretary should be authorized, in his discretion, to sell bonds of the United States, bearing interest at a rate not exceeding six per cent., and redeemable and payable at such periods as might be conducive to the interests of the Government, for the pur-

pose of retiring not only compound-interest notes, but the United States notes. It was estimated that it would not be necessary to retire more than one, or at most, two hundred millions of United States notes, in addition to the compound notes, before the desired result would be attained. It was the immediate aim of the Secretary to establish the policy of contraction, under the belief that the business of the country would readily accommodate itself to the proposed change in the action of the Government, and that specie payments might be restored without a shock to trade, and without a diminution of the public revenues, or of protective industry.

Having adopted this general policy of contraction, it was then proposed by the financial officer of the Government, in the first place, to institute measures for funding the obligations which were soon to mature. From the changes which had taken place by October 31, 1865, in the statement for June 30th, on the preceding page, it appears that besides the compound interest, the United States, and the fractional notes, the past due debt amounted to \$1,373,920.09. The debt due in 1865 and 1866, to \$187,549,646.46. The debt in 1867 and 1868, to \$848,323,591.80.

It was proposed to Congress to authorize the selling of bonds bearing interest at a rate not exceeding six per cent., for the purpose of funding so much of this debt as was in notes, and also to meet any deficiency for the present fiscal year, to pay the certificates of indebtedness as they matured, and also any portion of the debt maturing prior to 1869, that can be advantageously retired. The effect of these suggestions, if adopted, would be to put the debt in such a form that the interest only could be demanded, until the Government might be in a condition to pay the principal. Having thus placed the indebtedness of the country in such a position that it could be easily managed, it only remains to provide for raising, in a manner the least odious and oppressive to tax-payers, the revenues necessary to pay the interest on the debt, and a certain definite amount annually for the reduction of the principal. In the opinion of the Secretary of the Treasury, without any increase of taxation, but with the labor question at the South settled on terms just to the employer and to the laborer, and with entire harmony between the different sections, the debt would be rapidly diminished in burden and amount by the growth of the country. His views of the rapidity with which the debt might be paid, are thus expressed:

The following estimate of the time which would be required to pay the national debt (if funded at five per cent. and at five and one-half per cent.) by the payment of two hundred millions of dollars annually on the interest and principal, and also of the diminution of the burden of the debt by the increase of productions, may not be without interest to Congress and to tax-payers.

The national debt, deducting moneys in the Treasury, was, on the 31st of October, 1865, \$2,740,854,750.

Without attempting a nice calculation of the amount it may reach when all our liabilities shall be accurately ascertained, it seems safe to estimate it, on the 1st of July, 1866, at three thousand millions of dollars. The exact amount of existing indebtedness yet unsettled, and the further amount that may accrue in the interval, are not now capable of exact estimation, and the revenue of the same period can be only approximately calculated, but it will be safe to assume that the debt will not exceed the sum named.

The annual interest upon three thousand millions, if funded at five and a half per cent. per annum, would be one hundred and sixty-five millions, but if funded at five per cent. it would be one hundred and fifty millions.

Now, if two hundred millions per annum should be applied, in half yearly instalments of one hundred millions each, in payment of the accruing interest and in reduction of the principal funded at the higher rate of five and a half per cent., the debt would be entirely paid in thirty-two and one-eighth years. At five per cent. per annum, it would be extinguished by the like application of one hundred millions every six months, in a little over twenty-eight years.

At the higher rate, the sum applied in the first year in reduction of the principal of the debt would be thirty-five millions of dollars; in the last, or thirty-second year, when the interest would be diminished to a little over nine millions, about one hundred and ninety-one millions of the uniform annual payment would go to the reduction of the principal.

On the assumption that the debt may be funded at five per cent., \$50,000,000 would be applicable to the reduction of the principal in the first year, and in the twenty-eighth or last year of the period—the interest falling to less than \$8,000,000—\$192,000,000 of the annual payment would go to the principal.

The annual interest accruing upon \$1,725,000,000 of the debt on the 31st of October last averages 6.62 per cent. A part of this sum is now due, another portion will be payable next year, and the balance will be due or payable, at the option of the Government, in 1867 and 1868. If these \$1,725,000,000 shall be funded or converted into five per cents by the year 1869, the average interest of the whole debt will be 5.195 per cent. In the year 1771, if the debt then maturing should be funded at the same rate, the average interest would be reduced to 5.15, and in 1831 to five per cent., excepting the bonds for \$50,000,000 to be advanced in aid of the Pacific Railroad at six per cent., which will have thirty years to run from their respective dates. The interest of these bonds, added to the supposed five per cents, would, in 1881, make the average rate of the entire debt 5.03 of one per cent. until the whole should be discharged.

In these calculations of the average rate of interest upon the funded debt, the outstanding United States notes and fractional currency are not embraced. Whatever amount of these \$454,000,000 may eventually be funded at five per cent. per annum, will proportionally reduce the average rates of interest upon the whole debt.

By the terms and conditions of some portion of the debt, the interest on the whole cannot be reduced to exactly five per cent., unless money may be borrowed, at some stage of the process, at a trifle below five per cent. A bonus of one-tenth of one per cent., paid by the bidders for five per cent. loans, would more than cover the excess, the probability of which fully warrants the calculation submitted as to the payment of the total debt at this rate.

It must be observed, also, that the assumed principal of the debt in July, 1866, must undergo some diminution before the funding in 1867, 1868, and 1869, begins. If only \$100,000,000 shall be paid off in those three years, the principal, thus reduced to \$2,900,000,000, would be extinguished by the process already stated in twenty-nine years, if funded at five and a half per cent., and, if at five per cent., in something less than twenty-seven years. And, it is well

worthy of attention, that \$100,000,000 less principal, at the commencement of the process of payment, will save \$400,000,000, in round numbers, in the end, if the rate is five and a half per cent., and \$300,000,000 if five per cent. The burden of a national debt is, of course, relative to the national resources, and these resources are not, strictly speaking, capital, but the current product of the capital and industry of the country. The annual product, however, is found to bear a certain ratio to capital, and this ratio may be conveniently and safely used in computing the probable resources which must in the future meet the national requirement for the payment of interest and extinguishment of the debt.

In the opinion of the Secretary, subsequently expressed, the annual product of the labor and capital of the country may be considered as bearing the ratio of twenty-five per cent. to the capital wealth of the country. Taking the returns of the census of 1860 as the amount of the wealth, and regarding the increase to 1870 only at one hundred and twenty-five per cent., the annual income at that period will amount to a sum twice as large as the present debt. A payment of \$200,000,000 on the public debt, out of this sum, would be only 2.9 per cent. He concludes, that no act of Congress, except for raising the necessary revenue, would be more acceptable to the people, or better calculated to strengthen the national credit, than one which should provide that \$200,000,000, commencing with the next fiscal year, shall be annually applied to the payment of the interest and principal of the national debt. These favorable views served to sustain public confidence in every department of industry. For the measures of the Government relating to revenue, see the subject of *Taxation* on a subsequent page.

Statement of the Public Debt on the 1st day of January in each of the years from 1791 to 1842, inclusive, and at various dates in subsequent years to July 1, 1865.

Products, other than those of agriculture, were, in the year ending June 1st, 1860, valued as follows:

Product of the Fisheries.....	\$12,924,092
Salt, bushels, 12,190,958.....	2,265,302
Copper, Lead, Nickel and Zinc.....	3,316,516
Gold, California.....	45,221,693
Coal, tons, 15,173,409.....	19,365,765
Petroleum, 1861.....	500,000

The returns of the manufacturing industry of the country are of surprising magnitude. The total value of domestic manufactures, including fisheries, and the product of the mines, according to the census of 1850, was \$1,019,106,616. The product of the same branches, excluding fisheries and mines, for the year ending June 1st, 1860, reaches an aggregate of nineteen hundred millions of dollars (\$1,900,000,000), being an increase of more than eighty-six per cent. in ten years. The amount was partly ascertained, and the remainder carefully estimated

in taking the census. The table on the following page shows the results for 1860 in the several States and Territories.

In estimating the value of the statistics of this country, due allowance must be made for the devastation of the late war. If the recovery is rapid, they become more valuable as a criterion of future wealth, than if it should be slow and tedious.

The sales of gold coin during the year, by the Treasury Department, amounted up to November 1st, to \$27,993,216, on which a premium of \$12,310,459 was realized. These sales were made for the purpose of reducing the constant accumulation beyond the amount required to pay the interest on the public debt.

The total value of the bullion deposited at the mint and branches during the last fiscal year was \$32,248,754.97, of which \$31,065,349.74 was in gold, and \$1,183,405.23 in silver. Deducting the re-deposits, there remain the actual deposits, amounting to \$27,982,849.09.

The coinage for the year was, in gold coin, \$25,107,217.50; gold bars, \$5,578,482.45; silver coin, \$636,808.00; silver bars, \$313,910.69, including the two and three cent pieces, \$1,183,330.00; total coinage, \$32,819,248.64.

At the branch mint in San Francisco the gold deposits were \$18,808,318.49, and the silver deposits and purchases \$540,299.20 in value. The value of the gold coined was \$18,670,840.00; of silver coined, \$320,800.00; and of silver bars, \$145,235.58. Total coinage, \$19,144,875.58.

At the branch mint in Denver the total deposits were \$548,609.85, of which \$541,559.04 was in gold, and \$7,050.81 in silver.

The premium at which gold has been held in the New York market above paper money, or Government notes, on each day subsequent to the suspension of specie payments up to December 31st, 1865, is stated on a subsequent page.

Commercial intercourse with the Southern States has been conducted through the Treasury Department during the war. An act of Congress of July 2d, 1864, authorized the purchase, by agents of the department, of the products of the insurrectionary States. This was closed by executive orders, on the east side of the Mississippi, on June 13th, and on the west, on June 24th. It is thought that the net profits of the Government by these purchases will amount to a million and a half of dollars.

Since the suspension of purchases by the Government the duties of these agents have been confined to securing the property (chiefly cotton) captured by the military forces in pursuance of the acts of March 12, 1862, and July 2, 1864, relative to captured and abandoned property. Up to the 31st of March last, there had been received at New York, Cincinnati, and St. Louis, the places designated for sales—including 38,319 bales obtained at Savannah, 4,151 bales at Charleston, and 2,331 at Mobile—about eighty thousand bales.

* A bale of 400 lbs.

The general rule under which agents have been acting since the surrender of the Southern forces, has been to collect and forward, as captured property, all cotton described upon the books and lists of the Confederate Government, or which there was sufficient reason to believe was owned or controlled by it, and that which belonged to companies formed for the purpose of running the blockade, in support of, if not in direct cooperation with that Government, leaving individual claimants of the property to their recourse before the Court of Claims, as provided by the third section of the act approved March 12, 1863. In the performance of their duties, the agents had great difficulties to encounter, from the unwillingness of the planters to surrender the captured property in their possession, from extensive depredations upon it after it was collected, and from powerful combinations formed to prevent, under various pretexts, the property fairly captured from

coming into the possession of the United States. In spite of all these obstacles, however, it is estimated, from data furnished by the agents, that there will be secured to the Government not less than one hundred and twenty-five thousand bales of cotton, including the eighty thousand bales already referred to. What part of the proceeds of this property will ultimately be retained by the Government will depend upon the success of the claimants before Congress and the courts. In collecting this cotton, there have been doubtless some instances of injustice to individuals who may be entitled to the consideration of the Government; but the Secretary believes that the cotton which has been taken by the agents was rightfully seized, and cannot be equitably claimed.

The following tables, showing the price of gold on each day for the last four years, are from the New York Commercial and Financial "Chronicle: "

Excluding cotton, iron, rosin, and a few other articles whose fluctuations in value are partly due to other well-known causes, the general course of prices tended upwards during the increase of paper money. That increase reached its highest point in the summer of 1865, since which the paper money has been gradually diminishing, and prices have fallen also.

The following is a comparative statement of failures, their number and amount in 1865 and the previous nine years, in the Northern States:

Number.	Liabilities.	Number.	Liabilities.
1857.....4,257	\$265,813,000	1862.....1,652	\$23,049,300
1858.....3,113	73,603,747	1863.....495	7,899,000
1859.....2,959	51,814,000	1864.....610	8,579,700
1860.....2,733	61,739,474	1865.....530	17,625,000
1861.....5,935	173,632,170	Av. from '57 to '65	76,473,000

It will be seen by these figures that while the number of failures during 1865 has been about the same as those of the two preceding years, the liabilities are quite double. In explanation of this it may be said that nearly one-half of the failures in 1865 were confined to the leading cities, the liabilities thereof being over three-fourths of the entire amount throughout the Union. This of course is always the result in cities where a concentration of trade results in heavier obligations. Considering the enormous volume of the internal and foreign commerce of the country, the number of its traders, the exceptional condition of its finances, the burden which it bears, and the struggle from which it has emerged, these failures are surprisingly few.

FINE ARTS. Under this head it is proposed to give an annual summary of the chief events occurring in relation to art, both in Europe and America. Criticism, except of a very general character, will be avoided, as inconsistent with the scope or purpose of the article, which will record chiefly the increase, discovery, accumulation, dispersion, or destruction of works of art during the year. Incidental to this will be an account of the rise of new artists into eminence, or the decease of those already known; but in the latter case the chief information must be sought for under the appropriate biographical or obituary head.

ENGLAND.—So great has been the accumulation of works of art in England during the present century, in consequence not only of the increase of wealth but of improved taste, that London has become one of the chief European marts for the purchase or sale of this species of property, the value of which of late years has been considerably enhanced. Every spring, when the city is fullest of people of wealth and art culture, collections of various degrees of merit, but generally of native or at least modern origin, are disposed of at auction, and pass into the possession of new collectors. Whether from a capricious taste or impaired means, it often happens, however, that such works remain but a comparatively short time in the hands of the purchaser, and that a few years will find them again offered for public competition. Another, and probably a better, reason for this frequent change of ownership, is the enormous rise in the value of pictures which has taken place within a comparatively recent period, and which has made the purchase and sale of them a source of profit to expert dealers. Hence the frequent reappearance of the works of popular artists like Turner, Landseer, Stanfield, Roberts, Faed, and others, in the auction-room, indicates a less healthy growth in taste than the casual observer might suppose, but rather great activity of the commercial spirit of the country in a new channel. Whether such a result is beneficial to British art, it does not fall within our province to inquire; but that it tends to increase the number of artists and of their works is beyond question. The spring of 1865 witnessed a more than ordinary activity in the public sales of works of art, and during the months of March, April, and May thousands of oil paintings, water-color drawings, engravings, etc., were disposed of at unexampled prices by the metropolitan auctioneers. "Everybody," says the London "Athenæum," "who has a collection seems determined to dispose of it, and accident has thrown a large number of works on the art-market; but as those who have taste and means seem just as eager to buy as the collectors are to sell, the activity of the art-marts is but a natural consequence of the law of supply and demand, the natural limit having been extended in several instances by the accidental reappearance of many works twice or

three times during the season. It is always dangerous to assume the prophetic character; but it appears very improbable that, on the average, works of art will fetch higher sums than they have during the present year." This supposition will not appear unreasonable in view of the fact that, during the season in question, the productions of several British artists, who have flourished within the last quarter of a century, have realized prices varying from five hundred to nearly twenty-five hundred guineas, or many times more than these artists would have obtained for them a few years ago. The first prominent sale of the season was that of the collection of Mr. H. Wallis, comprising 180 pictures which realized an aggregate of £9,645. In March a collection of 170 oil paintings and water-color drawings, belonging to Mr. T. Blackburn, was sold for £8,763, and a miscellaneous collection of 177 oil paintings fetched over £10,000. Another collection of 78 pictures, the property of Mr. R. G. Reeves, was disposed of for £6,275. On March 24th and 25th a collection of oil pictures and water-colors, including masterpieces by Turner, Stanfield, Roberts, Creswick, Müller, and others, realized the large sum of £18,475. The productions by Turner were water-color drawings, never previously exhibited in public, and sold for almost as many guineas as the artist could originally have obtained shillings. This portion of the sale closed with Turner's famous oil painting "Palestrina," which brought 2,100 guineas. At the same sale a landscape by Stanfield, "On the Maas, near Dordt," fetched 2,110 guineas, and "Interior of St. Stephens, Vienna," by Roberts, 1,820 guineas. So large were these prices that competent critics declared their inability to comprehend on what principle the purchases were made, unless that of buying what could be most readily and profitably sold again. On April 7th and 8th, the collection of Mr. John Knowles of Manchester, rich in engravings, water-color pictures, and oil paintings, was disposed of at auction for £21,750. Three pictures realized over £4,000, viz.: "Spanish Muleteers crossing the Pyrenees," by Rosa Bonheur, 2,000 guineas; "Religious Controversy in the time of Louis XIV.," by Elmore, 1,000 guineas; and "The Errand Boy," in size only 14 inches by 19, by Sir David Wilkie, 1,050 guineas. In this sale, as at previous ones, it was noticed that the highest prices were given for pictures by no means the highest in the scale of merit, but which from certain extrinsic qualities, or on account of the popularity of the artists, were nevertheless in greater demand and were held to possess greater merit than those in which intellectual labor was combined with unquestioned artistic qualities. One of the most interesting sales in April was that of the artistic remains of John Leech, comprising sketches, drawings, and a few oil paintings, and which realized the handsome sum of £6,580. Most of the sketches were little more than first ideas of the pictures which for so many years

delighted the readers of the London "Punch," each the work of a few minutes; and yet so eagerly were these slight efforts sought after, that they sold at prices varying from 3 and 4 guineas up to 15 or 16. The celebrated series illustrating the sporting career of "Mr. Briggs," ranged from 49 to 110 guineas each; indeed, there was not a scrap of paper bearing a few scratches of the pencil of this universally popular and lamented artist that was not valued at many hundred times its weight in gold. In May the sale of the drawings, sketches, and pictures, in oils and water-colors, of another popular artist, the late David Roberts, R. A., took place, occupying six days, and realizing £16,425. Here, also, trifling efforts of the deceased artist realized large sums. On May 11th and 12th a collection of 260 works, mostly water-color drawings, belonging to Mr. Thomas Greenwood, was sold for £10,250; and on the 20th a small but valuable collection owned by Mr. Duncan Fletcher was dispersed at auction. It included "The Prize Calf," by Landseer, 1,370 guineas, and a "Landscape, with Cattle," by Callcott and Landseer, 2,000 guineas. It is worthy of notice, however, that these as well as other works originally belonging to the Bicknell collection, were sold at a considerable reduction from previous prices. On the 27th of May a collection of 200 water-color drawings by Turner, W. Hunt, D. Cox, Copley Fielding, and other distinguished artists in this department, characterized as the finest submitted for many years to public auction, was disposed of for upwards of £16,000. A number of other collections were sold during the season, to which it is impossible to refer with particularity. Probably the number of separate works equalled 3,000, and the aggregate amount realized fell but little under, if it did not exceed, £200,000. These were almost without exception the productions of modern British artists. But an insignificant number by Continental painters were sold, and by "old masters" none at all, so far as reports indicate.

Of the annual Exhibitions of the Royal Academy, the Society of British Artists, the General Exhibition of Water-Color Drawings, and other collections of new works by contemporary British artists, there is nothing especial to say. They contained individual pictures of considerable merit in each department of painting, but the greater part of such collections were, according even to local critics, distinguished rather by a "dead level of mediocrity and insipidity" than by any promise of healthful development in art. The painters seem to be more of mannerists than of creators of ideas, and overlay their works with gaudy and incongruous coloring, while conventionalism in expression, form, and composition is everywhere most unpleasantly conspicuous. So apparent were these defects in the Exhibition of the Society of British Artists that out of more than a thousand pictures which it contained, few, it is said, rose above the most common average of picture-

making, while the greater part of them fell below it. It would be unfair, however, to suppose from these annual exhibitions that the pictorial art of the country is unable to produce works of merit. Many of the best artists do not contribute to these exhibitions, and not a few of eminence and reputation have been of late years too much occupied with great public works to undertake private commissions. In this latter class may be included men like Maclise, Herbert, Watts, and Dyce, whose frescoes in the Houses of Parliament and other public buildings are creditable specimens of the first modern attempts in England to revive the practice of this branch of the art. During the year Maclise has been occupied in putting the finishing touches to his great fresco in the Palace at Westminster, representing the "Death of Nelson," which is described as a natural and emotional work, singularly free from exaggeration, sentimentality, or conventionalism. At last accounts the work was completed with the exception of the application of the coating of water glass, which is intended to fix the colors and render the whole durable as stone. With respect to the whole series of mural decorations of the Houses of Parliament, two serious obstacles have been encountered—a deficiency of light and a tendency in some of them to premature decay. Whether the latter circumstance is owing to defective processes or to the natural dampness of the building, has not yet been satisfactorily determined. In the way of restoration, nothing has been done to these works except by Mr. Herbert, who has repainted a single head in a composition illustrating a scene from "King Lear," which is probably an experiment in a direction different from that taken in the first working of the picture. The restoration of the whole work, if possible, will be commenced when the experiments of the painter are completed. The deficiency of light is an obstacle less easy to surmount. Gilding has been attempted in some instances as a means of relief, but with very moderate success; and there is reason to apprehend that the absence of direct light in many parts of the building will prove an insuperable objection to any extensive system of pictorial ornamentation.—During the summer of 1865 three pictures by Mr. F. E. Church, the American landscape painter, "Chimborazo," "Cotopaxi," and "The Aurora Borealis," were exhibited in London, and elicited high encomiums from the English art critics, one of whom described them as "works of thoroughly legitimate, refined, classical art, not perfect, it may be, but combining more of the elements of great landscape painting than any thing we have of late ourselves produced; great in conception, brilliant in execution, and with a finer perception of the beautiful, a more tender and elevated poetical feeling, than have been displayed in this branch of the art since Turner."—Among the most noticeable pictures of the year was "The Marriage of the Prince and Princess of Wales," by William P. Frith, R. A., well known

by his painting of the "Derby Day." The scene is the Royal Chapel at Windsor, and the rather commonplace and conventional details of the work, which cannot claim to rise higher than an elaborate portrait piece, are said to be managed with masterly effect. In particular, the distribution of the lights is very happily rendered.—At last accounts the embellishments of the interior of St. Paul's Cathedral, London, were temporarily suspended for want of funds. The metropolitan journals evince their mortification at this fact, while stating that some of the recent provincial restorations have cost a much larger sum than that required for the cathedral of the richest city in the world. It is said that Mr. Watts has undertaken to make designs for mosaics to represent the four evangelists in as many pendentives of the Church, exclusive of one by the same artist already executed; also that Mr. Stevens is engaged to furnish designs for mosaics of three prophets of the Old Testament, in addition to that of Ezekiel, now in its place.—The Cathedral of St. Patrick's, Dublin, restored at an immense expense by the munificence of Mr. B. L. Guinness, was early in the year again opened for divine service.

In the department of plastic art the greatest activity seems to be now exhibited in the erection of statues or monuments to public men. The number of those in honor of the late Prince Consort is limited only by that of the chief towns in the United Kingdom, and affords a touching illustration of the affection with which his memory is regarded. In several of the remote colonies of Great Britain memorials of the same kind are in process of erection. The National Memorial to the Prince, to be erected in London, is still under way, and judging from its great size and multiplicity of details, a long time must elapse before it is completed. The model of the statue of the Prince, to be designed by Baron Marochetti, is not yet sufficiently advanced for the purposes of description; but the four large compositions representing Europe, Asia, Africa, and America, which have been intrusted respectively to Messrs. McDowell, Foley, Theed, and Bell, are making satisfactory progress. These are intended to occupy pedestals removed from the main structure, with which they will be connected by marble projections, containing on each side flights of steps. More immediately connected with the base of the principal erection are four other groups, Industry, Agriculture, Commerce, and Engineering, to be executed by Weeks, Marshall, Thornycroft, and Lawlor; while the four sides of the pedestal supporting the statue of the Prince will be ornamented with subjects representing Painting, Sculpture, Music, Architecture, etc., by Armistead and Phillip. The completed work, which will be one of the most considerable of its class in Europe, will thus present specimens of the art of the best living British sculptors, and, in spite of a want of congruity in idea and treatment, will illustrate the present condition and development of sculpture in the United

Kingdom. The predilection for colossal statues in England is somewhat remarkable at present, and the number of such works now executing for London, the provinces, and the colonies, is described as beyond all precedent. It is satisfactory to know also that these works exhibit in general an improvement upon recent productions of their class, which have not the credit of being even questionable as to their degree of merit. The money which the latter have cost, however, is not considered to have been entirely thrown away, as they have subverted a useful purpose in instructing sculptors what to avoid. These are all private or subscription commissions, and do not include the series of statues of English Kings ordered by Government for the new Houses of Parliament, which is rapidly approaching completion.—In March the statues of Professor John Wilson ("Christopher North") and Allan Ramsay, both by John Steell, were unveiled in Edinburgh with much ceremony in the presence of the municipal authorities and a large assembly of spectators. A design for an Equestrian statue of the Prince Consort for Edinburgh, by the same sculptor, is said to have been approved by the Queen. Among other testimonials to distinguished men in progress are a statue of Sir Joseph Paxton, for the Crystal Palace grounds; a bust of Thackeray, by Baron Marochetti, to be placed in Westminster Abbey, between the monuments of Addison and Macaulay; a statue of Burke, by Foley, for Trinity College, Dublin; and a statue of Macaulay, by Woolner, for the University of Cambridge. A monument to Shakespeare, from penny subscriptions, it is in contemplation to erect on Primrose Hill, near London. Any thing like a complete enumeration of the works in marble or bronze now in progress would be inconsistent with our plan. It may be sufficient to say that the art of sculpture is practised by considerably over one hundred persons, the best of whom receive more commissions than they can execute.

The British Museum, the repository of so much that is precious, in certain respects perhaps priceless, in art material, has received during the last year some valuable examples of ancient sculpture purchased from the ex-king of Naples, and which formed part of the famous Farnese collection. They comprise an equestrian statue of the Roman emperor Caligula, one of the only four known ancient marble equestrian groups existing; an Apollo, apparently of the Athenian school; a Mercury, identical with one in the Vatican; a group of Mercury and Hersè; the famous Diadumenos or Polyclitus; an heroic figure; a Satyr, and a colossal bust. It was mainly through the intervention of Mr. W. W. Story, the American sculptor, residing in Rome, that these treasures were secured to the museum. From the Pourtales sale in Paris the same institution also procured some fine specimens of antique art, including the bust known as the "Guistinian Apollo;" a seated Jupiter in bronze but eighteen

inches high, but as grand in treatment and effect as if it measured as many feet; a fine bronze Venus of the Roman era; and a variety of vases and miscellaneous articles. Of late years a formidable rival to the British Museum has come into existence at Brompton, near London, under the name of the South Kensington Museum. Established originally as a Ceramic Museum in connection with the Schools of Design, it was intended to contain a collection which should be simply one of reference for the workman. But according to a writer in the London "Art Journal," "the interests of the genuine workman have been neglected in the formation of the museum, that a gorgeous display might be made of expensive and showy china, enamels, bronzes, etc., that attract other classes, and secure the votes of dilettanti members of the House of Commons." Being a new institution, unfettered by custom or precedent, and under the control of an enthusiastic and somewhat ambitious board of management, it has actually thrown down the gage to its venerable rival in South Russell Street, and competes with it for public favor as well as parliamentary appropriations. In both efforts it seems likely to be successful. Thanks to a large portion of the national collection of pictures recently transferred to its commodious galleries, and to its accessibility day and evening to all classes, it has become one of the most popular and agreeable resorts of the metropolis, and seems rather a gigantic curiosity shop than a museum of industrial art, as originally intended. Of late, however, public attention has been directed to the purchase by its trustees, at extravagant prices, of numerous trivial articles, interesting to the mere curiosity-hunter, but of no possible use in developing national taste; and it is now seriously debated whether such articles ought not to be transferred to the British Museum, where they more properly belong, and the Kensington institution, restricted to its legitimate purposes, viz.: the collection of "ornamental art in connection with manufactures." That some arrangement of this nature will soon be made, seems not improbable. Among other art treasures which the South Kensington Museum has lately absorbed is the series of Cartoons by Raphael, which have for so many years proved the principal attraction of Hampton Court Palace. They have been removed, against the earnest protest of the inhabitants of the adjoining parishes, on the score of inadequate accommodation, the dust and dampness of Hampton Court, it is said, having seriously injured their surfaces.—The Royal Academy, now rapidly approaching the hundredth year of its existence, closed its exhibition for 1865 in August. The monetary produce of the exhibition greatly exceeded that of any previous year, amounting to upward of £13,000, and the sale of pictures was larger than usual. In consequence of its great wealth and prestige, it continues to be a power in the British art world, but its influence in forming public taste and developing national art

has not been felt to the extent anticipated by its founders. The sculptor John Gibson, one of its members, has intimated his intention to add to the great resources of the academy by a bequest of £32,000, the sole condition being that a part of its gallery shall contain casts of his works, to be supplied by the sculptor. Engraving on metal and on wood is somewhat unequally pursued in England at present, the former process seeming in danger of becoming eventually a lost art, while the latter is cultivated at a constantly increasing rate and with surprising results.—During the year, Mr. G. T. Doo's large line engraving from Sebastian del Piombo's "Raising of Lazarus," in the National Gallery, by far the most important works of its class produced for many years, was completed. In drawing, texture, and masterly rendering of chiaro-scuro, it is said to recall the efforts of the best era of line engraving. Of the numerous specimens of excellent wood engraving produced during the year we can only refer to the illustrations from the old masters and the mediæval illuminators in the edition of the New Testament published by the Messrs. Longman, of London. Nothing yet produced in the art excels, if indeed it approaches, the delicacy and beauty of these impressions, which are more effective for their size than engravings on steel or copper.—A patent has been taken by Mr. Emery, of Cobridge, for a new method of decorating pottery, by which the art becomes so simplified as to be within the reach of any one capable of tracing a passable outline with the crayon. The design is drawn in color, on earthenware or porcelain, so as to resemble at once the ordinary results of drawing or enamelling, and subsequently submitted, as enamels are, to the heat of the kiln. It is proposed as an amusement for young persons, but will doubtless soon subserve a much higher purpose.—During the year British art lost two distinguished representatives, Sir Charles Eastlake, President of the Royal Academy, and Mr. J. F. Herring, the animal painter. The latter was well known in the United States through prints of his works. Notices of each will be found elsewhere.

FRANCE.—The rage for buying works of art, noted as so prevalent in England in 1865, found its counterpart on the other side of the channel, and Paris fairly rivalled London in the number and value of the collections offered to public competition at auction. In the latter part of February was commenced the sale of the celebrated collection of the Count de Pourtales-Gorgier, who died about ten years previous, leaving directions that the dispersal of his art treasures should not commence until 1865. Whether this was a mere whim on the part of the owner, or an instance of sagacious foresight, cannot be ascertained; but it is certain that the result has been exceedingly satisfactory to his heirs. The collection comprised pictures, sculptures, medals, bronzes, antique gems, almost every variety of pottery, ivory carvings, etc., and was by many degrees the most complete

and valuable which has of late years been put into the market. The catalogue of the objects offered for sale filled 500 pages; and the sale, which lasted more than a month, was attended by the representatives of every considerable museum and collector in Europe. The following list will give some idea of the quality of the pictures sold, which numbered upward of 400, by both old and modern masters, and the prices fetched by them:

ARTIST.	SUBJECT.	PRICE. France.
P. Delaroche.....	{ Cardinal Richelieu, sick, in a barge on the Rhone..... Death of Richelieu.....	{ 80,000
Greuze.....	Innocence.....	100,200
P. de Champagne.....	Marriage of the Virgin.....	48,500
	Portrait of his Daughter.....	29,100
F. Hals.....	Portrait of a Man.....	51,000
Rembrandt.....	A Burgomaster.....	84,500
".....	A Veteran Soldier.....	27,000
Murillo.....	Triumph of the Eucharist.....	67,500
Velasquez.....	Dead Body of an Armed Man.....	87,000
Antonella di Messina.....	Portrait of a Man.....	111,250
Sebastian del Plombo.....	Portrait of a Duke of Urbino.....	98,000
Bronzino.....	Portrait of one of the Medici.....	55,000
Leonardo da Vinci.....	Virgin and Child.....	88,500
Claude.....	Landscape.....	86,500
France.....	The Virgin.....	21,500

As an illustration of the prodigious rise which has taken place in this species of property, it may be mentioned that the picture by Antonella di Messina, which brought 111,250 francs, was originally purchased in Florence by Pourtalès, for 1,500 francs, and was appraised in his inventory in 1855 at 20,000 francs. The sixteen pictures above cited realized an average of nearly 55,000 francs each, which would be more than \$11,000, computed on a specie basis. No other department of the collection realized so much money as the pictures, although the prices obtained were high. The bronzes and terra cottas fetched 150,000 francs, the gems and glass-ware 45,743 francs, the coins and medals 18,430 francs, and the sculptures in wood and ivory, the renaissance bronzes, armor, etc., over 500,000 francs. Some small specimens of the "Henri II. Ware," were sold at prices ranging from 20,000 to 30,000 francs each, which were nevertheless considered by competent judges rather low. The total proceeds of the sale amounted to nearly 3,000,000 francs, which, considering the interest of the sums expended in forming the collection as money lost, gave a profit on the outlay of a million and a half of francs, or nearly a hundred per cent. The collection of the Marquis de Lambertye, consisting principally of modern pictures, was sold in March, but such was the prevailing mania for works by old masters, as exemplified by the Pourtalès sale, that the prices obtained were comparatively low. Baron de Grootelinsdt's gallery, containing some masterpieces of the Dutch and Flemish schools, was sold in May, and realized a large sum; but the great picture sale of the season was that of the Duc de Morny's collection numbering one hundred and twenty-eight works, for which nearly 1,700,000 francs were obtained. A small *genre* picture by Greuze, brought 90,000 francs, a landscape by Hobbima,

81,000 francs, and a portrait by Rembrandt, 155,000 francs. Upwards of a dozen other works, principally by Dutch and Flemish masters, some of which are well known in the history of art, realized from 20,000 to 30,000 francs each. These statistics show that, whereas in London the demand was almost exclusively for modern pictures, in Paris the old masters were rather in the ascendant.—The first portion of a series of mural pictures round the principal court of the Hotel des Invalides has been completed by Benedict Masson. The subjects are taken from the early history of France, and embrace a period from the time of the Druids to the invasion of France by the Normans. Of the same class of works is a series of four pictures representing memorable events in the history of Paris, which Yvon, a battle-painter of reputation, is executing for the Hotel de Ville in Paris. In addition to the usual exhibitions of pictures in Paris during the season, one of water-color drawings was opened in September, which contained no fewer than three hundred works by Hildebrandt, a German artist of considerable repute in this department.—Among the architectural improvements in the French metropolis may be mentioned the restoration of the Cathedral of Notre Dame, and the completion of the new chapel of the Palais de l'Elysée. The former is now beginning for the first time in several centuries to appear to advantage; the latter is an unusually successful attempt to revive the Byzantine style, and is rich in marbles and in mosaics of saints and sacred personages.—The principal contribution to plastic art during the year was the monument of Napoleon Bonaparte and his family, erected in the town of Ajaccio. It consists of an equestrian statue, ten feet high, of the emperor, surrounded by statues, seven feet high, of his four brothers, all cast in bronze furnished from cannon taken in the Italian campaigns of 1859. The general arrangements were made by M. Viollet le Duc, and the sculptures are the work respectively of MM. Barye, sen., Thomas, J. Pettit, Maillet, and Dubray. A statue of Dr. Jenner by Eugène Paul has been erected at Boulogne, and one of Arago at Estragel, near Perpignan, his birthplace.—The most remarkable and widely known effort of French art produced during the year, was Gustave Doré's series of designs for the illustrated edition of the Bible, published by M. Mame, at an outlay of 600,000 francs. Of this sum 91,200 francs were paid to the artist for his designs, two hundred and twenty-eight in number. The latter, though somewhat unequal in merit, are as a whole wonderfully effective, and exhibit a fertility of invention which, considering the rapidity with which they were prepared, has perhaps never been excelled. The engraving of each plate cost from 1,000 to 1,400 francs. The work was edited by M. Mame from pure love of art, without the least expectation of realizing any profit therefrom, and with the hope only of recovering the money expended.

It has nevertheless proved a substantial success, from two to three thousand copies having been sold by the close of the year, a number of which were orders from England and America.

GERMANY.—The extensive series of frescoes commenced years ago by Kaulbach, in the New Museum at Berlin, is rapidly approaching completion. One of the smaller pictures gives a curious illustration of the kind of humor in which this artist occasionally indulges. It represents Germany absorbed in reading Humboldt's "Cosmos," and letting the imperial crown fall off her head in the abstraction caused by her studies. Underneath, the various small States that compose the Confederation are stretching out their heads as far as possible, to escape from under a hat which is coming down upon them—an allusion to the popular phrase of uniting the whole of Germany "under one hat." A new National Museum is to be erected in the rear of the building which contains these works.

—A monument has been erected at Harlaching, near Nuremberg, in honor of Claude Lorraine, who passed some time there. Statues of the deceased architects Von Gärtner and Von Kleuze are to be erected in Munich, at the cost of the ex-king Ludwig; and a mausoleum for the body of the late king Maximilian, to be executed by the architect Riedel, is to be placed in the church of the Theatines. An important report has been made by a commission appointed by the king of Bavaria to test the process proposed by Professor Pettenkofer for cleaning pictures, and which consists simply in exposing the canvas to the vapor of alcohol. The defects noticed in old oil paintings, it is now known, are due to the loss of molecular cohesion; and the fumes of the alcohol, by causing the molecules to reunite, restore the optical effect of the original. The result is that the cracked and broken surface of the varnish is replaced by a continuous one. The commissioners recommend the process, which they tried upon more than fifty pictures, "as the rational groundwork of the future means of regeneration and conservation of the Bavarian State pictures," and as a help to the restorer's art, rather than a substitute for it. An equestrian statue of Gen. "Stonewall" Jackson is in progress at Nuremberg, by a young sculptor of that place, named Volk, who was in the rebel service as draughtsman during the late civil war in America, and took a cast from the face of Jackson after death.—The destruction by fire of the ducal palace at Brunswick, with all its magnificent furniture and a large number of valuable pictures and other works of art, involved also the loss of Rietschel's noble bronze group of "Brunonia," the patron goddess of the place, and a present from the people of Brunswick to their sovereign. It consisted of a colossal figure in a car drawn by four colossal horses, and was completed only a few months before its destruction.—A statue of the late Prince Albert was dedicated at Coburg on August 27th, his birthday, in presence of Queen Victoria and the

principal personages of the royal houses of England and Saxe-Coburg. The work was cast in bronze at Nuremberg, from a design by Theed.

BELGIUM.—Some of the principal Belgian artists are now engaged in executing important public commissions. De Keyzer, President of the Antwerp Academy of Arts, is engaged upon a series of pictures for the vestibule of that institution; Baron Leys is decorating one of the apartments of the Hotel de Ville at Antwerp; and Slingeneer is at work on a series for a public edifice in Brussels. In the latter city a monument to Counts Egmont and Horn is to be erected, to include four figures, the two nobles and two soldiers. A statue of Teniers, by Duceju, is to be erected in one of the squares of Antwerp, by command of the late King Leopold.

ITALY.—Among the great works in sculpture in progress at Rome during 1865, was Tenerani's monument to the memory of Pius VIII., which, by the close of the year, was nearly completed; and the colossal group, consisting of the Saviour and the two chief apostles, with the Pope kneeling in front, will shortly be placed above the door, in the church of St. Peter's, leading from one of the aisles to the sacristy. Another example of sculpture lately erected in St. Peter's, is a colossal statue of St. Angela Merice, founder of the Ursuline nuns; a venerable and dignified figure, affording a striking contrast to a young girl standing near her. This group is by Galli. Rome still continues to be the headquarters of many foreign sculptors, prominent among whom are W. W. Story, Miss Harriet Hosmer, and others from the United States. One of the chief commissions with which Story is now occupied, is a statue of Edward Everett, to be cast in bronze, for several gentlemen in Boston. A colossal bronze-gilt statue of Hercules, lately exhumed, it has been finally decided by the Roman Pontifical Archaeological Academy shall be designated the "Mastai Hercules," in honor of the family name of Pope Pius IX., and be placed in the Vatican. It is supposed to be identical with a famous statue of Hercules, known as the Great Protector of the Flaminian Circus, and to which oracular powers were assigned. In respect of execution it is said to be superior to any thing yet discovered in Rome. Even the Apollo Belvidere and the bas-reliefs of the Pantheon, though of a purer style, lack the incomparable finish of this statue. Another recent discovery is that of the foundations of a temple of Jupiter in the garden of the Caffarelli Palace. The Sciarra Palace was recently partially destroyed by fire, but its fine gallery, containing masterpieces by Raphael, Titian, Leonardo da Vinci, Caravaggio, etc., escaped injury.—In Mantua, a celebrated picture by Raphael, the "Madonna di Loreto," which has long been missing, has been accidentally discovered in a broker's shop. It measures three feet by four, and when found was covered with a thick coat of paint, apparently put on designedly. After

the removal of this, the picture presented indubitable evidence of being a work in Raphael's best manner.—At Florence sculpture is successfully practised by a number of American artists, some of whom have been long resident in the city. Of these the oldest is Hiram Powers, who is much employed in executing copies of his chief works, and who is now engaged upon a new ideal bust of "Clytie." W. T. Hart, of Kentucky, known by his statue of Henry Clay, at New Orleans, has been modelling an ideal group representing the triumph of Virtue over Love, and has nearly finished in marble a copy of his Henry Clay, for the city of Louisville. Thomas Ball, of Boston, has been engaged upon a statue of Edwin Forrest, of heroic size, as he appeared in the part of "Coriolanus;" and also upon a statuette, three feet high, of President Lincoln freeing the slave; and a head for a colossal statue of Edward Everett, to be eight and a half feet in height and in an attitude of oratory. J. A. Jackson is engaged in reproducing in marble his group of "Eve and Abel;" and Colonel Henry, of Kentucky, who served as a cavalry officer during three years of the American civil war, and suffered nearly a year's imprisonment in Richmond, has produced a successful bust of President Lincoln, and an ideal piece representing "A Libby Prisoner listening to Kilpatrick's Guns." He is now engaged on a bas-relief of a "Soldier's Dream in the Libby Prison." The inauguration of the monument raised in Florence in honor of Dante, took place on May 14th, the six hundredth anniversary of his birth, in the presence of King Victor Emanuel and deputies from every province, town, academy, society, and important institution in the kingdom.—Early in the year reports were extensively circulated of important excavations and discoveries in Pompeii, which proved to be unfounded. During the greater part of the year, in consequence of a want of funds, no excavations of importance were undertaken; but the slight amount of work done served to discover a life-size equestrian statue, in bronze, pronounced to be a representation of the Emperor Nero, and which is soon to be set up in the Naples Museum. The face and general attitude of the figure resemble the well-known statue of Marcus Aurelius in Rome, which, however, is upward of a century later in date.—During some excavations in the little town of Civita Lavinia, built on the ruins of Lanuvium, a colossal statue of the Emperor Claudius was discovered. The figure is upright, resting on the right leg, and is draped with a great cloak, which, falling over the left shoulder, leaves the breast naked. Its dignified position well suits the type of Jove, under whose attributes the emperor is represented, with a crown of oak leaves on his head and the eagle at his feet. The hands, which, with the arms, a portion of the drapery, and the upper part of the eagle, are unfortunately missing, undoubtedly held some emblems of the power of the father of the gods. The statue appears to

have been anciently restored, but it was never completely finished behind, from which circumstance it is to be inferred that it originally occupied a niche, as the front parts are worked to perfection. The features especially are transcribed with marvellous accuracy and fidelity, and serve by their expression to confirm all that ancient historians have transmitted to us respecting the stupidity of the Emperor Claudius, of whom a more faithful portrait cannot be found in any of the sculpture galleries of Rome.

UNITED STATES.—During the recent war the Fine Arts witnessed a very considerable development in the United States, the result in part of the intellectual activity which the contest promoted, and in a very considerable degree also of the abundance and wide diffusion of paper money. Contrary to general expectation, painters and sculptors found a ready market for their productions, and at one period the mania for collecting became so prevalent that large numbers of pictures by modern European artists were imported into the country, and sold at what seemed enormous prices even in the inflated currency which formed the circulating medium. During the latter part of 1863 and the first six months of 1864, upwards of thirty collections of pictures were disposed of at auction, in the city of New York, realizing, probably, not less than half a million of dollars, and at an advance of from fifty to one hundred per cent. on the original cost. The most important of these sales was that of Mr. John Wolfe's gallery, comprising principally excellent specimens of the best modern French, German, and Belgian painters, which realized \$114,000 in currency—equivalent, at the commencement of 1864, to about \$75,000 in specie. The success of this sale was a great incentive to other collectors to dispose of their works; but the sums realized by the Wolfe gallery, even when reduced to a specie basis, were too high to become a recognized standard of value; and gradually, as the market became overstocked, prices declined to their normal rate.

The succeeding year witnessed comparatively few public sales in the chief art emporiums, and a much lower scale of prices. In consequence, however, of the demand so prevalent in 1864, large numbers of foreign pictures continued to be imported, which were sold at prices affording a fair remuneration to the dealers. These works were confined almost exclusively to the modern German, French, and Belgian schools, the prominent painters of which are already so well known in the United States that no considerable collection is without specimens by one or more of them. Notwithstanding the intimate commercial relations between the United States and Great Britain, the demand for pictures by British painters is so slight that probably not more than one of them is imported into the country where twenty of the productions of Continental schools

are received. There was no time during 1865 when the exhibition rooms of the picture dealers in New York, Boston, or Philadelphia, did not contain a fair proportion of the latter. The rise in value has not been confined to foreign importations, but native artists have asked and obtained much higher prices than ever before; and in many cases, notwithstanding the influx of European works, have received commissions beyond their ability to execute immediately. Thus, contrary to general expectation, but not contrary to the experience of other nations under similar conditions, art flourished during a civil war of unexampled magnitude to a degree never before witnessed in the country; and to the list of reputable artists who were before the public in 1861, the names of not a few of considerable promise had been added at the close of 1865. At the commencement of the war American painting was practised almost exclusively in three departments, landscape, portraiture, and *genre*, the first named being cultivated much more extensively than the other two; and the close of the struggle found the practice relatively the same. The year 1865 proved no exception in this respect, and to the surprise of most persons, who looked for some new development of aim, or some higher influence imparted by the war, pictures identical in character with those of the last decade continued to be produced, the only difference being that the number was increased and the quality considerably improved. Scarcely a picture of the large, historic type familiar to European galleries has issued from the studio of an American painter; and of the few battle pieces or pictures illustrating the dramatic episodes of the war which have been painted, nearly all were the work of foreign artists residing in the country. Humorous incidents, however, and subjects suggested by the camp, the bivouac, or the march, have found some capable illustrators. The tragic or pathetic element, except as developed in the numerous clever designs for the illustrated newspapers, seems to be that with which the artistic mind of the country is unable or unwilling to grapple. In the most exciting periods of the war, when public attention was absorbed with grave events, American artists seemed most occupied in reproducing on the canvas the beautiful scenery of their country; and even the young members of the profession, just coming upon the stage, who might be supposed to be influenced more strongly than their older brethren by the ideas and feelings to which the epoch has given birth, were content to follow in the beaten path marked out by their predecessors. Of the causes which have contributed to produce this result two only need be mentioned here: 1. The time is not yet ripe for the intellectual fruits, whether in the domain of art or of literature, of which the great rebellion has sown the seeds. 2. The art genius of the nation has been so exclusively developed in the department of landscape painting that

it cannot be immediately diverted into other channels.

As the commercial centre and metropolis of the country, the city of New York has, of late years, become the chief market for the disposal of foreign as well as domestic works of art, and is the residence of a larger body of artists, and the receptacle probably of a greater number of art treasures than can be found elsewhere. The value of the collections made by several of its private citizens already forms a large item in estimating the wealth of the city, and to these collections very considerable additions were made in 1865. A fresh impulse was also given to the development of native talent by the opening, on April 27th, of the new building recently erected by the National Academy of Design, at the corner of Twenty-third Street and Fourth Avenue, on the occasion of the fortieth annual exhibition of that institution. The building is worthy of note as one of the first attempts in the United States to apply the revived Gothic style, now so prevalent in Europe, to a purely secular structure. It is of rectangular shape, and to the casual observer is noticeable chiefly for the pleasing contrasts of gray and white marble, and the tasteful sculptures of its exterior walls. So marked is the contrast in these respects with the great majority of American public buildings that the new Academy has been justly considered to commemorate a new era in national architecture, and to be as deserving of attention as the pictures and sculptures of which it is destined to become the receptacle. The interior, though less capacious than will probably satisfy the needs of so considerable an art emporium as New York promises to become, is sufficient for present purposes, and is well arranged for displaying its contents to advantage. The building was designed by Mr. P. B. Wight, and erected at a cost of over two hundred thousand dollars. The exhibition of 1865 comprised 616 pictures, drawings, and designs, and 81 works in sculpture, and was one of the most satisfactory and attractive in the history of the Academy, notwithstanding the absence from its galleries of works by several prominent contributors of former years. As usual, landscape predominated, with every variety of treatment, from academic generalization to the most advanced pre-Raphaelitism. Portraiture and *genre* were also well represented, but of historical pieces the specimens were few and of no very promising quality. The National Academy is now in the forty-first year of its existence, and numbers 76 academicians and 79 associates. Among the former may be mentioned Bierstadt, Church, Cropsey, Durand, Gifford, Gignoux, Hart, Kensett, and Mignot, landscape painters; Baker, Elliott, Hicks, Staigg, and Stone, portrait painters; Darley, Gray, Leutze, Page, Weir, and White, painters of history or ideal subjects; Dana, Hennessy, Eastman Johnson, and Mount, painters of *genre*; and Brown, Rogers, Thompson, and

Ward, sculptors. Its associates comprise a number of young men of promise who are destined to make their mark at no distant day. Early in the year "Historic Annals" of the Academy were published by Thomas S. Cummings, one of its founders. In November, a collection of pictures was exhibited in the same building, in aid of the Artists' Fund Society, and, in the succeeding month, some sixty works contributed to it by members, were sold at auction for \$7,500. At various times also, during the year, conspicuous works by Bierstadt, Huntington, Rossiter, Leutze, Hope, Carpenter, Cropsey, Hart, and others, were elsewhere in the city on public view, besides miscellaneous collections by native and foreign artists. Carpenter exhibited a large picture of President Lincoln and his Cabinet, painted from careful sittings by all the persons represented; and Leutze, one of Mr. Lincoln in the act of delivering an address in front of the Capitol at Washington. Hope's picture represented the encampment of the "Army of the Potomac" at Camberland Landing, on the Pamunkey, in May, 1862. Under the auspices of a London Committee, comprising such artists as Stanfield, Maclise, and Goodall, an exhibition of modern paintings by English, French, and Flemish masters was, in December, opened in the Studio Building, Tenth Street. It was the fourth of its kind held in New York, and, apart from its usefulness in developing a system of international exhibitions of art, and thereby educating the American public in a knowledge of the different European schools, has doubtless proved an incentive to American artists to work with a higher aim and in wider fields. Among the artists represented were Maclise, Millais, Hughes, Frith, and Leighton, of the English school; Meissonnier, Frère, Gérôme, Ary Scheffer, Lambinet, etc., of the French school; and Leys, Gallait, Koller, Lamorinière, etc., of the Belgian school. Though prominent in the annals of modern European art, not all of the above names were adequately represented in the exhibition. A noticeable feature in New York, and generally also in the larger cities, has been the frequent exhibition at the establishments of prominent picture dealers of choice collections of paintings by foreign artists. The noted French painter, Gérôme, was in particular represented by several striking works. In the department of sculpture, several works by Rogers, Ward, and Thompson merit attention. The first of these added to his reputation as a truthful illustrator of incidents and character associated with the late war, by the production of three new groups: "Midnight on the Border," "Taking the Oath," and "The Bushwhacker." An exhibition of his principal designs in London, during the summer, elicited high encomiums from the art critics of that city. Thompson produced a model of a statue of Napoleon I., and Ward one, of heroic size, entitled "The Indian Hunter." The latter it is designed to have cast in bronze by private sub-

scription and placed in the Central Park. To the attractions of this resort is about to be added a hall of statuary in the building formerly employed as a public arsenal, which will contain a collection of casts from the principal works of the late Thomas Crawford. A monument to Shakespeare is also in progress in the Park.

The spring exhibition of the Pennsylvania Academy of Fine Arts, opened in Philadelphia in April, with a collection of over eight hundred paintings, drawings, and sculptures. "The works sent in by our resident artists," said a local critic, "are generally of a higher class than they have heretofore been. There are a smaller number of absolutely detestable works among them. At the same time, no new man has particularly evidenced any tendency to rise out of the general ring, and we still recognize such artists as Rothermel, Hamilton, and Lambdin, as by their different classes of merit, incontestably supreme upon the walls of our yearly exhibition of paintings." In addition to these names, those of Moran, Dana, Bierstadt, Blauvelt, Schussele, and many others of local reputation, were well represented. Later in the season occurred the exhibition of the Philadelphia Sketch Club, containing a meritorious collection of pictures, a portion of which was subsequently transferred to New York for a similar purpose.

The decoration of the Capitol and other public buildings at Washington has made marked progress during the year, notwithstanding a proposition to authorize Mr. Powell to "paint a picture for the Capitol, at a cost not to exceed \$20,000," was defeated in Congress, on the score principally that the present was an inopportune time for appropriations in aid of art. The principal undertaking was the frescoing of the canopy of the Capitol dome by Constantine Brumidi, an artist who has for many years been employed upon the building, and whose designs were several years ago approved by a Congressional committee, and by the then Secretary of the Interior, Hon. Caleb B. Smith. The space allotted to the work comprises an area of six thousand square feet, upon which sixty-three figures of colossal size have been designed, which, however, from the pavement below, a distance of one hundred and sixty-five feet, will appear of ordinary life size. The central figure, in the chief of the several groups which the composition comprises, is a portrait of Washington, in a sitting posture. To his right is seated the Goddess of Liberty, and on the left a female figure representing Victory and Fame, proclaiming freedom. In a semicircle is a group of females, representing the thirteen original sister colonies, bearing aloft a banner on which is inscribed the words *E Pluribus Unum*. Surrounding this under circle, near the base of the design, are six groups representing War, Agriculture, Mechanics, Commerce, the Navy, and Science. In that of War, America, in the shape of the Goddess of Liberty, stands erect,

bearing in one hand a shield and in the other a sword. At her side is the American eagle; beneath her feet are stalwart men, some with the torch of the incendiary in their hands, others crouched by the side of cannon. She treads on an ermine-bordered robe, and the whole is intended to be typical of the downfall of tyranny. The next group is the Arts and Sciences—presided over by the Goddess Minerva. Franklin and Fulton are prominent figures in this group, and various emblems typifying the national advancement in Art and Science are introduced. These descriptions indicate the general character of the whole composition, which is in the classical allegorical style, with abundant illustrations derived from pagan mythology. The work will probably be completed in the spring of 1866. In connection with the subject of the ornamentation of the national Capitol may be mentioned the fact, that the Speaker of the House of Representatives has considered it necessary to inform that body that the superb bronze doors of the rotunda, designed by Crawford, have been recently much mutilated and otherwise injured, chiefly, it is supposed, by relic and curiosity hunters. In view of this vandalism, it has been suggested that the doors should be deposited in some less public place. The art of polychromy has recently been applied to the ceiling of the great central hall of the Patent Office in Washington, by Mr. Shulter, an artist of some experience. The result is described as very beautiful, and the general effect as equal to that of any similar apartment recently ornamented in this style in Europe.

FITZROY, Vice-Admiral ROBERT, a British naval officer, meteorologist, and author, born at Ampton Hall, Suffolk, July 5, 1805, died by his own hand, April 30, 1865. In February, 1818, he entered the Royal Naval College, Portsmouth, where he was awarded a medal for his proficiency in his studies. The following year he was appointed to the "Owen Glendower," then coasting between Brazil and Northern Peru. Subsequently he served upon other vessels, passing through the different grades of promotion until in 1834 he was made captain of the "Beagle," a vessel employed in surveying the shores of Patagonia, Terra del Fuego, Chili, and Peru. During these surveys he expended considerably more than £3,000 out of his private fortune in buying, equipping, and manning small vessels as tenders, to enable him to carry out the orders of the Admiralty, an outlay which was not refunded to him. In 1841 Capt. Fitzroy sat in the House of Commons as member for Dunham, and in the following year was selected to attend the Archduke Frederick of Austria, in his tour through Great Britain. In 1843 he introduced a bill into Parliament for establishing mercantile marine boards, and enforcing the examination of masters and mates in the merchant service, and the same year went out as governor of New Zealand. In 1854, upon the establishment of the meteorological department of the

Board of Trade, Capt. F. was placed at its head, and to him are owing the storm signals and other models of warning that are now in use for the benefit of seamen. His own life, however, was the price of his devotion to his duties. His brain became overtaxed, and while in an unsound state of mind he deliberately cut his own throat. He was the author of a work entitled "Narrative of the Surveying Voyages of H. M. S. 'Adventure,' and 'Beagle,'" four vols.; "Remarks on New Zealand," 1846; and "Sailing Directions for South America," 1858. He was made Rear-Admiral in 1857, and Vice-Admiral in 1863.

FLORIDA. This State was so far removed from the scenes of war, that no event of general importance took place previous to the measures for its reorganization under the Federal Government. On July 13, 1865, President Johnson issued his proclamation appointing William Marvin Provisional Governor of Florida. This proclamation was similar in all respects except the date, name of the State and Provisional Governor, with the one issued relative to Alabama, to which the reader is referred. The Governor soon commenced his duties, and on August 2d delivered an address to the people of Jacksonville. He proposed to make known the plan of the President, and to call their attention to those subjects most essential to their welfare. Confiscation, he said, had been practised on both sides; but, by the failure of the rebellion, all property confiscated by the officers of the Confederacy would now revert to the original owners. Pardon was now offered, with a few exceptions, to all. These exceptions were presumed to be persons of superior intelligence, and with ability to make some effort to secure pardon; persons of greater responsibility and obligations to the State. For himself, he should take pleasure in recommending to the President all who were truly penitent, and gave good evidence of a determination to be good citizens in the future. The decrees of confiscation of houses and lands, which had been entered upon by the Federal authorities in the absence of the owners and without their appearing, would be opened when these owners had been embraced in the amnesty proclamation. They would be allowed to appear and have a full hearing on their merits, and might plead their pardons, if such plea should be deemed admissible in their cases. With the fall of the Confederacy, the black man's bondage has been brought to an end, and he can never be enslaved here again. He had no authority to resuscitate the civil authorities, or to appoint any one to an office beyond what was necessary to the calling of the State Convention. His business was to assist them to inaugurate a State Government. He appealed to them to lay aside all revengeful feeling, and to enter with ardor and good faith upon the new order of affairs. On the next day the Governor issued the following proclamation to the people, stating the details of the plan upon which he intended to proceed:

The civil authorities in this State having engaged in an organized rebellion against the Government of the United States, have, with the overthrow of the rebellion, ceased to exist, and the State; though in the Union, is without a civil government.

The Constitution of the United States declares that the United States shall guarantee to every State in the Union a republican form of government, and shall protect each of them against invasion, insurrection, and domestic violence. In order to fulfil this guarantee and for the purpose of enabling the loyal people of this State to organize a State government, whereby justice may be established, domestic tranquillity insured, and loyal citizens protected in all their rights of life, liberty, and property, the President of the United States has appointed me Provisional Governor of the State, and made it my duty, at the earliest practicable moment, to prescribe such rules and regulations as may be necessary and proper for convening a convention composed of delegates to be chosen by that portion of the people of the State who are loyal to the United States, and no others, for the purpose of altering or amending the constitution of the State, and with authority to exercise within the limits of the State all the powers necessary and proper to enable the loyal people of the State to restore it to its constitutional relations to the Federal Government, and to present such a republican form of State government as will entitle the State to the guarantee of the United States therefor, and its people to protection by the United States against invasion, insurrection, and domestic violence.

In the performance of the duty thus enjoined upon me by the President, I shall, as soon as the people of the State have had the opportunity to qualify themselves to become voters, appoint an election, to be held in the different counties in the State, of delegates to a State convention to be convened at a time and place to be hereafter named.

The persons qualified to vote at such election of delegates and the persons eligible as members of such convention will be such persons as shall have previously taken and subscribed the oath of amnesty as set forth in the President's Proclamation of May 29, A. D. 1865, and as are also qualified as prescribed by the constitution and laws of the State in force immediately before the 11th day of January, 1861, the date of the so-called ordinance of secession. Where the person is excepted from the benefits of the amnesty proclamation, he must also have been previously specially pardoned by the President before he can become a qualified voter or eligible as a member of the convention. This interpretation of the two proclamations of the President I received from himself in person, and also from the Attorney-General.

The oath referred to may be administered by and taken and subscribed before any commissioned officer, civil, military, or naval, in the service of the United States, or any civil or military officer of a loyal State or Territory, who by the laws thereof is qualified to administer oaths. The officer administering the oath is authorized and required, on request, to give to the person taking it certified copies thereof.

In order to give to the well-disposed people of this State time and opportunity to qualify themselves to be voters for delegates to the convention, the election will not be held until a reasonable time has elapsed for them to take and subscribe the oath required, and to procure the special pardon where such pardon is a prerequisite qualification. The election will be held immediately thereafter, and no allowance will be made for unreasonable delays in applying for pardons.

Applications for pardon should be in writing, and addressed to the President of the United States, and state the ground on which a special pardon is considered as necessary. The application should have attached to it the original oath or affirmation contained in the proclamation of amnesty. In most cases the application for pardon will not be acted upon by the President until it has received the rec-

ommendation of the Provisional Governor. It will save time, therefore, to seek his recommendation in the first instance. The application should then be sent to the office of the Attorney-General.

I have been informed by the military authorities that a considerable number of posts have already been established in the State, and others soon will be, with officers attached, authorized to administer the oath required and to give certified copies thereof, so as thereby to give every facility for taking the oath, with little or no inconvenience or expense to the applicant.

In the mean time, and until the reestablishment of a State government, it is left to the military authorities to preserve peace and order, and protect the rights of persons and property.

An understanding has been had with the commander of the department whereby persons occupying the offices of judges of probate may continue to take proof of wills and issue letters testamentary and of administration, and clerks of circuit courts may take the proof or acknowledgment of deeds and mortgages and record the same as heretofore, and all persons occupying ministerial offices may continue to perform such duties and offices as are essential and convenient to the transaction of business. If any doubt should hereafter arise concerning the validity of their acts, such doubt can be removed by a legislative act of confirmation.

By the operations and results of the war slavery has ceased to exist in this State. It cannot be revived. Every voter for delegates to the convention in taking the amnesty oath takes a solemn oath to support the freedom of the former slave. The freedom intended is the full, ample, and complete freedom of a citizen of the United States. This does not necessarily include the privilege of voting. But it does include the idea of full constitutional guarantees of future possession and quiet enjoyment. The question of his voting is an open question—a proper subject for discussion—and is to be decided as a question of sound policy by the convention to be called.

Upon the establishment of a republican form of State government under a constitution which guarantees and secures liberty to all the inhabitants alike without distinction of color, there will no longer exist any impediment in the way of restoring the State to its proper constitutional relations to the Government of the United States, whereby its people will be entitled to protection by the United States against invasion, insurrection, and domestic violence.

Dated at Jacksonville, Florida, this 3d day of August, 1865.

WILLIAM MARVIN,
Provisional Governor.

The Governor then visited various parts of the State, delivering addresses to the people, and urging them to coöperation; and on August 23d he issued a further proclamation, prescribing such rules and regulations as were deemed necessary and proper for convening a convention, and appointed a day for the election of members for the convention, as follows:

Whereas, by the proclamation of Andrew Johnson, President of the United States, dated 13th of July, A. D. 1865, I have been appointed Provisional Governor of the State of Florida, with instructions to prescribe, at the earliest practicable period, such rules and regulations as may be necessary and proper for convening a convention of the people, composed of delegates to be chosen by that portion of the people who are loyal to the United States, and no others; and also, with all the power, necessary and proper, to enable such loyal people of said State to restore it to its constitutional relation to the Federal Government, and to present such a Republican form of Government as will entitle the State to the guarantee of the United States therefor, and its people to the

protection of the United States against invasion, insurrection, and domestic violence:

Now, therefore, I, William Marvin, Provisional Governor of the State of Florida, as aforesaid, do, by virtue of the power in me vested, as aforesaid, proclaim and declare:

1. That an election for delegates to a convention will be held on Tuesday, the 10th day of October, A. D. 1865, at the different precincts at which elections are directed and authorized by law to be held for members of the Legislature.

2. That the thirty-nine counties in this State shall be authorized and entitled to elect delegates to the said convention severally as follows, to wit: Escambia two, Santa Rosa two, Walton two, Holmes one, Washington one, Jackson three, Calhoun one, Franklin one, Liberty one, Gadsden three, Wakulla one, Leon four, Jefferson three, Madison two, Taylor one, Lafayette one, Hamilton two, Suwanee one, Columbia two, Baker one, Bradford one, Nassau one, St. John's one, Duval one, Clay one, Putnam one, Alachua two, Marion two, Levy one, Hernando one, Hillsborough one, Manatee one, Polk one, Orange one, Volusia one, Brevard one, Sumter one, Monroe one, and Dade one.

3. Every free white male person of the age of twenty-one years and upwards, and who shall be, at the time of offering to vote, a citizen of the United States, and who shall have resided and had his home in this State for one year next preceding the election, and for six months in the county in which he may offer to vote, and who shall have taken and subscribed the oath of amnesty, as set forth in the President's proclamation of amnesty, of the 29th day of May, 1865, and if he comes within the exceptions contained in said proclamation, shall have taken said oath, and have been specially pardoned by the President, shall be entitled to vote in the county where he resides, and shall be eligible as a member of said convention, and none others. Where the person offering to vote comes within the exceptions contained in the amnesty proclamation, and shall have taken the amnesty oath, and shall have made application to the President for a special pardon, through the Provisional Governor, and shall have been recommended by him for such pardon, the inspectors or judges of the election may, in most instances, properly presume that such pardon has been granted, though owing to the want of mail facilities it may not have been received by the party at the time of the election.

Free white soldiers, seamen, and marines, in the army or navy of the United States, who were qualified, by their residence, to vote in said State, at the time of their respective enlistments, and who shall have taken and subscribed the amnesty oath, shall be entitled to vote in the county where they respectively reside; but no soldier, seaman, or marine, not a resident in the State at the time of his enlistment, shall be allowed to vote.

4. The amnesty oath may be taken and subscribed before any commissioned officer—civil, military, or naval—in the service of the United States, or any civil or military officer of a loyal State or Territory, who, by the laws thereof, is qualified to administer oaths. The officer administering the oath is authorized and required, on request, to give to the person taking it certified copies thereof. It is administered to all persons applying at the different military posts in this State, without fee. The taking of the oath does not, of itself, operate as a pardon in cases where the party is excepted from the general amnesty and needs a special pardon.

5. That the Judges of Probate in the several counties, provided they shall have respectively taken the amnesty oath, or in case of the inability or absence of any judge in any county, or his neglect or refusal to act, then the Clerk of the Circuit Court, provided he shall have taken the amnesty oath, shall distribute the poll books and appoint, for the different election precincts in their several counties, three inspectors

or judges of the election, who shall have taken the amnesty oath, to hold said election, who shall conduct the same, as near as may be, in conformity with the laws of this State as they existed prior to January 10, 1861. The inspectors of the different precincts shall, as soon as possible after the election, count the votes and make and sign a certificate of the result of the election at said precinct, and one of them, to be determined by lot, if not otherwise agreed upon, shall convey and deliver, without unnecessary delay, the said certificate, the poll book and ballots, to the Judge of Probate of the county or to the Clerk of the Circuit Court, whichever of them may have appointed said inspectors. The judge or clerk receiving said certificates, poll books, and ballots shall, thereupon, without unnecessary delay, call to his assistance two respectable inhabitants, having the qualification of voters, and shall publicly count the votes and compare with the poll books. They shall make and sign certificates of the result of the election in their county, and furnish to each person elected one of said certificates. The judge or clerk shall also transmit by mail, prepaying the postage, properly enveloped and addressed to the Provisional Governor, at Tallahassee, one of said certificates, together with the ballots and poll books of the several precincts, or he shall convey the said certificate, poll books, and ballots, properly enveloped and addressed as aforesaid, to the nearest military post, and deliver the same to the commander to be forwarded to this office.

The counties in which there is neither a qualified Judge of Probate nor a qualified Clerk of the Circuit Court, or in which they may neglect or refuse to act, the qualified voters are hereby authorized to assemble at the county site, and in Dade County, at Indian Key, and elect the judges of election, who shall have taken the amnesty oath, and who shall hold the election, count the votes, and give to the person elected a certificate of his election. One of them, to be agreed on or determined by lot, shall also send by mail, or convey to the nearest military post as aforesaid, a duplicate certificate of the election and the poll books and ballots, to be forwarded to this office as aforesaid.

No person shall act as an inspector or judge of the election who shall not have previously taken the amnesty oath, and no other oath shall be exacted of said judges or inspectors, but their personal honor will be considered as pledged for the faithful and honest performance of their duties.

6. The commander of the Military Department of the State has, in the absence of mail facilities, generously ordered the officers and soldiers under his command to aid and assist in the distribution of the poll books and this proclamation, and in receiving the returns of the election and forwarding them to this office.

7. That the delegates who shall be elected as aforesaid shall assemble in convention, at the city of Tallahassee, at twelve o'clock, on Wednesday, the 25th day of October, A. D. 1865, and elect a President and other necessary officers, and proceed to the discharge of their duties. The convention will be the judge of the election of their respective members.

The commandant of the Military Department of the State has issued a general order directing that a United States transport steamer shall leave Key West on Wednesday, the 18th of October, and touch at Tampa, Manatee, and Cedar Keys, on her way to St. Mark's; and that another steamer shall leave Pensacola on Saturday, the 21st, bound for the same port, touching at Appalachicola; and another shall leave Enterprise, on the St. John's River, on Friday, the 20th, bound to Jacksonville, touching at the various points on the river; and another shall leave Fernandina on Friday, the 20th, and St. Augustine on Saturday, the 21st, bound to Jacksonville. These steamers will convey the delegates elected free of charge, except for their lodging and meals.

8. A constitution, republican in form, having been made, altered, or amended, and adapted to the new order of things, the convention will provide, by a schedule, for the election of a Governor and General Assembly, and for the reorganization of a permanent State government.

9. By the operations and results of the war slavery has ceased to exist in the State. It cannot be revived. Every voter for delegates to the convention, in taking the amnesty oath, takes a solemn oath to support the freedom of the former slave. The freedom intended is the full, ample, and complete freedom of a citizen of the United States. This does not necessarily include the privilege of voting; but it does include the idea of full constitutional guarantees of future possession and quiet enjoyment. The question of his voting is an open question—a proper subject for discussion—and is to be decided as a question of sound policy by the convention to be called.

10. Upon the establishment of a republican form of State government, under a constitution which guarantees and secures liberty to all the inhabitants alike, without distinction of color, there will no longer exist any impediment in the way of restoring the State to its proper constitutional relations to the Government of the United States, whereby its people will be entitled to protection by the United States against invasion, insurrection, and domestic violence.

Given at Tallahassee, Florida, this 23d day of August, 1865.

WILLIAM MARVIN, Provisional Governor.

SAMUEL J. DOUGLAS, Private Secretary.

The members of the Convention, thus called, were duly elected on October 10th, and assembled at Tallahassee on the 25th. The Convention was organized by the election of E. D. Tracy, of Nassau County, as president, with other officers. The Provisional Governor, Marvin, in his message to that body, stated that the former slave had become free, and in the reestablishment of the State Government it was necessary to recognize that fact, and to frame the Constitution accordingly. It was expected they would declare in the Constitution that neither slavery nor involuntary servitude, except for crime, shall exist. He recommended that the Constitution should define, with as much accuracy as possible, what the civil rights and political privileges of the emancipated negro should be. He said: "It may be difficult to define, with any degree of accuracy, wherein freedom in society and under an organized government consists. But I think it may be said, in general terms, to consist chiefly, in the right to be protected, by constitutional law, in the enjoyment of life, in the acquisition by honest industry of property, in its possession and transmission to heirs, in a right to personal security and locomotion, and, generally, in a right to improve one's intellectual, moral, and religious condition, and to pursue happiness according to one's own ideas of happiness, not interfering with the exercise of the same right on the part of others. But freedom does not necessarily include the idea of a participation in the affairs of Government. The privilege of voting at elections, the capacity to hold office, or to sit on juries, are not essential rights of freedom. They are privileges conferred or duties enjoined upon certain persons or classes of persons by the supreme power

of the State, for and on account of the public good; and the persons or classes of persons upon whom these privileges are conferred or these duties enjoined, may be increased or diminished, within reasonable limits, without impairing rights of freedom, according as that power may determine. Persons may be free, without the capacity to hold office, to sit on a jury, or to vote at elections. The English people are free, and yet not one-tenth of the adult male population are entitled by law to vote at elections or to sit on juries. In our own State, foreigners are not entitled to vote or to sit on juries until they have been naturalized, yet they are free; women and children are not entitled to vote, or hold office, or sit on a jury, yet they are free." He also recommended the adoption of the Federal Constitutional amendment relative to slavery; that negroes should be admitted to testify in courts of justice, and that the Convention should adopt suitable measures to guard the two races against discriminations to be made between them by the courts or the Legislature in any matter touching their rights. He further recommended the passage of an ordinance declaring that the ordinance called the Ordinance of Secession, passed by a convention of the people on the 10th day of January, 1861, was and is null and void; and an additional ordinance annulling or ratifying such other ordinances, acts of the Legislature, and judicial proceedings, as the interest of the State might require.

The Convention, in the progress of its business, adopted the following ordinance relative to secession:

Whereas, the people of the State of Florida are anxious in good faith to restore the State to her former peaceful relations with the United States; therefore,

Be it ordained by the people of the State of Florida, in convention assembled, That the ordinance adopted by the convention of the people on the 10th day of January, 1861, known as the Secession Ordinance, be and the same is hereby annulled.

On the passage of the ordinance, an amendment was moved to substitute the words "is null and void" in place of "annulled." The motion failed to pass, and the vote on the passage of the ordinance was unanimous.

The following ordinance in relation to slavery was also adopted:

Whereas, slavery has been destroyed in this State by the Government of the United States; therefore,

Be it ordained by the people of the State of Florida, in convention assembled, That neither slavery nor involuntary servitude shall in future exist in this State, except as a punishment for crime, whereof the party shall have been convicted by the Courts of the State; and all the inhabitants of the State, without distinction of color, are free, and shall enjoy the rights of person and property without distinction of color.

In the preamble the words "by the Government of the United States" were added as an amendment to the report of the committee, on the motion of a member, who "wished the world to know that the abolition of slavery by the people of Florida was not a voluntary act

on their part, but a compulsory measure adopted in obedience to the commands of the President, after slavery had been destroyed by the military power of the Government." This amendment was adopted, by a vote of 20 yeas to 14 nays.

The following ordinance repudiating the State debt was also adopted. The vote was—yeas 33; nays 9. Its adoption was understood to be the desire of the Federal Government, otherwise it would not have been passed by the Convention:

Be it ordained by the people of Florida, in convention assembled, That all State Treasury notes issued, and all other liabilities contracted by the State of Florida, on or after the 10th day of January, A. D. 1861, to the 25th day of October, A. D. 1865, except such liabilities as are provided for by this Constitution, be and are declared void, and the General Assembly shall have no power to provide for the payment of the same, or any part thereof.

The following ordinance, defining the position of the freedmen in the courts of justice, was adopted—yeas 26; nays 19:

Be it ordained by the people of Florida, in convention assembled, That, in all criminal proceedings founded upon injury to a colored person, and in all cases affecting the rights or remedies of colored persons, no person shall be incompetent to testify as a witness on account of color. In all other cases, the testimony of colored persons shall be excluded, unless made competent by future legislation. The jury shall judge of the credibility of the testimony.

The Convention further ordered that the election of Governor and other executive officers, Judges of the Supreme and Circuit Courts, Solicitors, Representatives in Congress, and members of the Legislature, should be held on November 29th, and that the Legislature should assemble on the third Monday of December. On November 10th Governor Marvin sent the following despatch to President Johnson:

TALLAHASSEE, FLA., NOV. 13, 1865.

The Convention has annulled the ordinance of secession, abolished slavery, and declared that all the inhabitants of the State, without distinction of color, are free; and that no person shall be incompetent to testify as a witness on account of color in any matter wherein a colored person is concerned.

It has repudiated the State debt contracted in support of the rebellion, amended the constitution in other respects, and adjourned.

WILLIAM MARVIN, Provisional Governor.

During the sessions of the Convention the Governor had reported its progress to the authorities at Washington, and received the following reply:

WASHINGTON, NOV. 1, 1865.

Your letter of October 7 was received and submitted to the President. He is gratified with the favorable progress toward reorganization in Florida, and directs me to say that he regards the ratification by the Legislature of the Congressional amendment of the Constitution of the United States as indispensable to a successful restoration of the true loyal relations between Florida and the other States, and equally indispensable to the return of peace and harmony throughout the republic.

WILLIAM H. SEWARD.

These measures had been ably opposed during their consideration by the Convention, but

their ultimate adoption was satisfactory to the people.

The election, which was held on November 29, resulted in the choice of David S. Walker as Governor, and W. W. J. Kelley as Lieutenant-Governor; Secretary of State, B. F. Allen; Attorney-General, J. B. Galbraith; Comptroller, L. G. Pyles; Treasurer, C. H. Austen; Representative in Congress, Ferdinand McLeod; Judge of Suwanee Circuit, T. T. Long; Judge of Eastern Circuit, E. A. Putnam. Members of the Legislature were also chosen. The entire vote polled was less than 4,000. In 1860 the vote of the State at the Presidential election was 14,347.

The Legislature was organized on December 18th. Provisional Governor Marvin delivered an address, in which he recommended the passage of laws which should secure to freedmen their rights of person and of property, give them an easy and cheap remedy for the collection of wages, and protect them against imposition. At the same time he urged that measures should be devised for obliging the negro to fulfil his contracts, and prevent him from leaving his employer at a time when his services were most needed. On December 21st the newly elected governor, Walker, was duly inaugurated. In his address he recommended the adoption of measures similar to those urged by Provisional Governor Marvin. He opposed the granting of suffrage to the negroes as a measure to which neither an honest nor conscientious consent could be given.

The Legislature elected as Senators to Congress Governor Marvin and Wilkinson McCall. On January 18th the following despatch was sent from President Johnson to Governor Marvin:

DEPARTMENT OF STATE, WASHINGTON, JAN. 18, 1866.

To His Excellency William Marvin, Provisional Governor of the State of Florida, Tallahassee:

SIR: The time has arrived when, in the judgment of the President of the United States, the care and conduct of the proper affairs of the State of Florida may be remitted to the constitutional authorities chosen by the people thereof, without danger to the peace and safety of the United States.

By direction of the President, therefore, you are relieved from the trust which was heretofore reposed in you as Provisional Governor of the State of Florida. Whenever the Governor elect shall have become qualified to discharge the duties of the Executive office, you will transfer the papers and property of the State, now in your custody, to his Excellency Governor Walker. It gives me especial pleasure to convey to you the President's acknowledgments of the fidelity, loyalty, and discretion which have marked your administration.

You will please give me a reply, specifying the day on which this communication is received.

I have the honor to be, your Excellency's most obedient servant,

W. HUNTER,
Acting Secretary.

DEPARTMENT OF STATE, WASHINGTON, JAN. 18, 1866.

To His Excellency D. S. Walker, Governor of the State of Florida, Tallahassee:

SIR: By direction of the President, I have the honor herewith to transmit to you a copy of a communication which has been addressed to his Excellency

William Marvin, late Provisional Governor of the State of Florida, whereby he has been relieved of the trust heretofore imposed in him, and directed to deliver into your Excellency's possession the papers and property relating to that trust.

I have the honor to tender to you the coöperation of the Government of the United States whenever it may be found necessary in effecting the early restoration and the permanent prosperity and welfare of the State over which you have been called to preside.

I have the honor to be, with great respect, your most obedient servant,

W. HUNTER, Acting Secretary.

On transferring the office to Governor Walker, Provisional Governor Marvin thus described the condition of affairs:

It is not intended that the militia or volunteer troops shall appear under arms before they have received special orders from myself or the Constitutional Governor, unless in some unforeseen case of justifiable necessity. The admirable disposition made of the white troops of the United States by the General in command will secure the peace and quiet of the State, if the civil authorities do their duty, as I have no doubt they will. The colored troops have nearly all been removed from the interior of the State to the seaboard, and I am assured that the remainder will be just as soon as the interest of the public service will permit it.

He represented the State Government as entering on its new career under great difficulty and embarrassment. The people were greatly impoverished by the war and poorly prepared to pay taxes. The State Treasury was empty. Taxes upon the lands of the State were due to the United States Treasury nearly to the amount of \$77,520. The labor of the State was disorganized and demoralized, and the whole fabric of society more or less disturbed by the constant friction and irritation produced by the new state of affairs. Martial law continued to exist for the higher crimes, and might at any time be extended. He recommended that the Treasury should be replenished by taxation, and that a temporary loan should be obtained for immediate necessities. He further said: "We need to look calmly, dispassionately, and earnestly at our real and true condition, and realize it in all its force, and then we ought patiently, enduringly, and faithfully to labor to improve it."

FRANCE, an empire in Europe: Emperor, Louis Napoleon (Napoleon III.), born April 20, 1808, chosen hereditary Emperor by a "Plébiscite" of 7,864,189 against 231,145 votes, November 21 and 22, 1852: son, Napoleon Eugène Louis Jean Joseph, born March 16, 1856.

There are in the Government of France five divisions: the Emperor, the Ministers, the Council of State, the Senate, and the Legislative Body (*Corps Législatif*). The Ministers, the Members of the Council of State, and those of the Senate, are all nominated solely by the Emperor. The Senate is to consist of no more than one hundred and fifty members, and the Cardinals, Marshals, and Admirals of the Empire belong to it by right of their dignity. The members of the Legislative Body are elected

for the term of six years by general suffrage, at the rate of one member to every 35,000 electors. The Legislative Body, which was chosen in 1863, consists of three hundred and eighty-three members. Its President is Count Walewski, appointed September 1, 1865. At the general election, in 1863, the combined Opposition succeeded in electing about thirty-five of its candidates. Since then, until January, 1866, twenty-seven partial elections have been held in the Departments of the Côte d'Or, Seine, Pyrénées Orientales, Bas-Rhin, Vosges, Nord, Gard, Dordogne, Ardèche, Aude, Bas-de-Calais, Finisterre, Charente Inférieure, Calvados, Marne, Puy-de-Dôme, Landes, Oise, Basses-Pyrénées, Aisne, and Yonne. These divers electoral districts are spread over all France, and may therefore be considered as indicative of the progress of public opinion throughout the country. In 1863 those twenty-seven districts gave 546,000 votes to the Government, and only 200,000 to the independent candidates; whereas the same districts gave in the partial elections 455,000 votes to the former, and 298,000 to the latter, showing a transfer of about 100,000 votes from the one to the other, and reducing the difference to the credit of the official nominees, which was 346,000 votes, to 157,000. In 1863 the independent candidates obtained a majority in only three of the twenty-seven districts, namely, those of the Seine. In the partial elections, the independent or Opposition candidates were elected in eleven of those districts, viz., those of the Seine, in the Côte d'Or, Bas-Rhin, Vosges, Nord, Charente Inférieure, Marne, Puy-de-Dôme, Aisne.

The area of France amounts to 207,232 square miles. The population, according to the census of 1861, was 37,382,225 souls. The French Government takes a census every five years, or twice as often as that of the United States or Great Britain. It appears from comparative returns that the French population increases very slowly compared with some other countries. The following statistics exhibit the number of inhabitants in France, at each census, from 1836 to 1861:

	Census of Population.	Increase.	Annual Increase Per cent.
1836.....	38,540,910		
1841.....	34,230,148	683,269	0.41
1846.....	35,400,476	1,170,898	0.68
1851.....	35,738,170	332,684	0.22
1856.....	36,139,864	345,194	0.22
1861.....	36,917,254	577,890	0.32

From these returns it appears that during the period from 1851 to 1861 the population of France has increased only about 2.7 per cent., while the population of the United States during the ten years from 1850 to 1860 increased 35.58 per cent. The French census furnishes some singular facts, showing the disinclination of the population of the empire to emigrate. Of the 36,864,678 souls composing the purely French population of the empire, but 3,883,579 were domiciled out of the departments where they

were born; more than 88 per cent. of the entire population were living in their departments. The agricultural population of France is set down at 53.15 per cent. of the whole; the manufacturing 29.42; the commercial 4.11; the various professions 4.15, and the clergy 0.5. Statistical returns show that in England the agricultural population is about 25 per cent. of the whole, and it is stated that on the Continent the proportions fluctuate, in the different countries, between 30 and 40 per cent.

Algeria, which is divided into the three provinces of Algiers, Constantine, and Oran, has a population of 2,999,124 inhabitants, of whom (1864) 204,877 were Europeans.

The Government of France is constantly extending the frontier of its colonies, as will be seen by comparing the following table with that given in the ANNUAL CYCLOPEDIA for 1864:

COLONIES (1865).	Hectares.	Population.
Asia.....	2,286,962	1,728,870
Africa.....	27,342,460	787,512
America.....	29,103,913	806,912
Oceania.....	2,130,000	65,000
Total.....	60,863,335	2,888,294

Under the protectorate of France are the following countries:

	Hectares.	Population.
Asia—Cambodia.....	5,000,000	1,000,000
Africa—Porto Novo, on the Gold Coast...		20,000
Oceania—Society Islands.....	117,472	10,347
Toubonal Islands (2).....	10,280	550
Pomotou " (79).....	2,556,722	8,000
Gambier " (6).....	72,080	1,500
Total.....	7,736,514	1,040,397

The budget for 1866, as voted by the Senate and the Legislative Body, was as follows:

	RECEIPTS.	EXPENSES.
	France.	France.
Ordinary Budget.....	1,982,987,155	1,981,418,803
Extraordinary Budget...	151,806,011	149,718,800
	2,034,793,166	2,031,137,603

Surplus of receipts, 3,654,558.

According to the budget of the Minister of War for 1866, the army was composed as follows:

	PEACE FOOTING.		WAR FOOTING.	
	Men.	Horses.	Men.	Horses.
Staff.....	1,846	160	1,914	
Gendarmes.....	24,791	14,769	25,688	15,000
Infantry.....	250,454	326	515,085	
Cavalry.....	62,792	47,612	100,221	65,000
Artillery.....	39,696	16,646	66,192	49,888
Engineers.....	8,410	1,119	15,448	1,400
Military Equipments...	5,655	5,496	15,829	12,000
Administration.....	10,511	240	17,536	
	404,158	84,863	737,798	143,288

The navy, on January 1, 1865, was, according to the Gotha Almanac for 1866, as follows:

	No.	Tons.	Horse power.
Iron-clad screw steamers, } built or building.....	51	952	19,985
Screw steamers, not iron-clad..	240	4,867	68,929
Side-wheel steamers.....	84	474	17,880
Sailing vessels.....	97	1,438	

The Blue Book presented to the Legislative Body by the Government in 1866 has the following remarks on the navy: "During the year 1865 the construction of vessels for the new fleet has continued to the extent of the credits allowed. The bases adopted in 1857 have been completed by new types of iron-clad vessels more especially intended, some for distant missions, others for the defence of our ports, roadsteads, and rivers. Two of those war vessels, belonging to the category of those inserted in the tables presented in past years in the statement of the situation of the empire, have therefore been built; an iron-clad corvette, and a coast-guard vessel with a spur. The number of vessels in this fleet, which (exclusive of gunboats) was 123 on the 31st December, 1864, is 129 on the 31st December, 1865. They are subdivided as follows:

	Fast Vessels.	Mixed Vessels.	Total.
Iron-clad frigates.....	10		10
Iron-clad corvettes.....	1		1
Coast-guard iron-clad rams.....	1		1
Ships of the line, not iron-clad.....	13	23	36
Frigates, not iron-clad.....	18	6	24
Corvettes, not iron-clad.....	11		11
Advice-boats, not iron-clad.....	46		46
Totals.....	100	29	129

Thus the new fleet has been increased by six finished vessels, viz.: three iron-clad frigates, of 1,000 horses' power; one iron corvette, of 500 horses' power; one iron-clad coast-guard, of 500 horses' power; one corvette, not iron-clad, of 500 horses' power. The steam fleet comprises, now finishing or afloat, 11 vessels, of 7,050 horses' power. Lastly, the steam fleet on the stocks counts 28 vessels, in different degrees of advancement."

The general and special commerce of France with the countries of America during the year 1863 was as follows (value expressed in millions of francs):

COUNTRIES.	IMPORTS.		EXPORTS.	
	General Com.	Special Com.	General Com.	Spec. Com.
United States of America...	92.1	81.5	107.8	94.2
Mexico.....	4.9	4.3	22.2	16.4
Guatemala.....	1.6	0.8	0.1	
Hayti.....	37.4	28.7	14.8	11
Brazil.....	84.6	57.7	81.7	58.8
Argentine Republic.....	52.6	51.2	44.4	32.9
Uruguay.....	38.6	32.7	23.4	16.7
Chili.....	7.2	7.6	34.3	23.7
Peru.....	34.5	30.1	33	25.8
Bolivia.....			0.3	0.2
Ecuador.....	0.4	0.4	1.6	1.4
United States of Colombia...	1.9	1.1	6	5.2
Venezuela.....	7.3	5.7	6.6	5.2

The commerce with some of the leading countries of Europe was as follows (value expressed in millions of francs):

Russia.....	81.8	62.2	84.1	80.4
German Zollverein.....	265	189.7	228.2	208.8
Great Britain.....	691	592.6	1,089.8	796.6
Belgium.....	860.7	267.7	245.8	210.6
Italy.....	247.2	204.3	854.2	237.8

The total commerce of France, during the year 1863, was (value expressed in millions of francs):

Imports—General Commerce.....	3,286.4
Special Commerce.....	2,426.4
Exports—General Commerce.....	3,526.4
Special Commerce.....	2,662.5

The movements of shipping during 1864 were as follows:

VESSELS.	ENTERED.		CLEARED.	
	Ships.	Tonnage.	Ships.	Tonnage.
French.....	13,814	1,979,145	13,840	2,069,643
Foreign.....	13,821	2,781,397	19,053	2,893,719
Total.....	32,135	4,760,542	32,893	4,903,362

The merchant navy, on December 31, 1863, consisted of:

	Ships.	Tonnage.
Sailing Vessels.....	14,747	900,317
Steamers.....	845	84,913
Total.....	15,092	985,235
Coasting Vessels.....	8,005	55,199

The speech of the Emperor, on receiving the diplomatic corps, on January 2, 1865, did not contain any remarks of prominent interest. The Emperor promised to make every effort that his relations with foreign powers should "be ever animated by respect for right, and love of peace and justice."

The Minister of Public Worship, J. Baroche, on January 1st, sent a circular to all the French bishops, stating that the Papal Encyclical of December 8, 1864, contained propositions contrary to the principles on which the constitution of the empire reposed, and that the reception and publication of such documents could not be authorized. The bishops were, at the same time, requested to transmit to the clergy the necessary recommendations to abstain from observations that might lead to regrettable interpretations. A number of bishops did not comply with this request, but published the entire Encyclical in their dioceses. The letters of several were referred by the Government to the Council of State, as exceeding the legal functions of the bishops, and the French Minister in Rome was instructed to complain to the Papal Government, of two letters addressed by the Papal Nuncio in Paris, to the Bishops of Orleans and Poitiers, as constituting an infraction both of international law and of the public law of France. The controversy was subsequently settled in an amicable way.

The French Chambers were opened by the Emperor on February, 15th. The following are the most important passages of his address:

The Roman Question.—In the centre of Europe the action of France ought to be exercised more reso-

lutely. I wish to render possible the solution of a difficult problem. The Convention of 15th September, disentangled from passionate interpretations, consecrates two great principles—the strengthening of the new kingdom of Italy and the independence of the Holy See. The provisional and precarious state which excited so many alarms is about to disappear. It is no longer separate members of the Italian country seeking to be united, by feeble bonds, to a little state at the foot of the Alps; it is a great country, which, elevating itself above local prejudices, and scorning thoughtless impulses, boldly transports its capital to the heart of the Peninsula, and places it in the midst of the Apennines as in an impregnable citadel. By that act of patriotism Italy constitutes herself definitively, and, at the same time, reconciles herself with Catholicity. She engages to respect the independence of the Holy See, to protect the frontiers of the Roman States, and thus permits us to withdraw our troops. The Pontifical territory, efficaciously guaranteed, is placed under the safeguard of a treaty, which solemnly binds the two Governments. The Convention is not then an arm of war, but a work of peace and conciliation.

Algeria.—In Africa, a sudden insurrection has intervened to trouble the security of our possessions, and show how ignorant certain tribes still are both of our force and our benevolent intentions. It is at the moment when, by a spirit of generous justice, we were assuring the property of the soil to the Arab population; when, by liberal measures, we attempted to make that abused people comprehend that, far from oppressing, we wish to call it to the benefit of civilization—it is at that moment, I say, that, misled by religious fanaticism, the neighboring Arabs of the desert raised the standard of revolt. In spite of the difficulties of the places and the severity of the weather, our army, conducted with ability, soon gave an account of the insurrection; and, after the combat, no bloody repression, no useless severity saddened the victory. The zeal of the experienced chief placed at the head of Algeria, the unity of the restored command, the declaration of the generous designs of France, every thing will concur, I hope, to prevent the return of the like disorders.

Religion and Public Instruction.—Religion and public instruction are the objects of my constant preoccupation. All the forms of worship enjoy an equal liberty. The Catholic clergy exercises, even beyond its own ministry, a legitimate influence. By the law of instruction it gives its concurrence in the education of youth; by the electoral law it may enter the public councils; by the constitution it has a seat in the Senate. But the more we surround it with consideration and deference the more we count upon its respecting the fundamental laws of the State. It is my duty to maintain intact the rights of the civil power, which since St. Louis no sovereign of France has ever abandoned. The development of public instruction deserves your care. In the country of universal suffrage every citizen ought to be able to read and write. A project of law will be presented to you still further to disseminate primary instruction.

Agriculture and Commerce.—It is thus that we shall be able to remove the partial distress under which agriculture suffers. Some attribute this distress to the suppression of the sliding scale. They forget that in 1851, when the sliding scale still existed, the price of corn was considerably lower, and that this year even exportations of grain exceed greatly the importations. It is, on the contrary, due to a liberal legislation, due to the impulse given to all the elements of national wealth, that our foreign commerce, which in 1851 amounted to 2,614,000,000*fr.*, amounts to-day to the prodigious figure of more than 7,000,000,000*fr.*

Individual Liberty.—Passing to another order of ideas, measures will be proposed to you which will have for their object to increase the guarantees of

individual liberty. The first authorizes admission to provisional liberty, with or without guarantee even; in criminal matters it will diminish the rigor of preventive detention. The second suppresses the *contrainte par corps* (personal detention) in civil and commercial matters—an innovation which is, however, but the reappearance of a very ancient principle. From the earliest stages of Rome it was decided that the property, and not the body of the debtor, should be held responsible for the debt.

The Policy of the Imperial Government.—Let us continue, then, to follow the path traced out abroad. Let us live in peace with the different powers, and only allow the voice of France to be heard for right and justice. At home let us protect religious ideas without yielding up in any way the rights of the civil power, diffuse instruction in all classes of society, simplify without destroying our admirable administrative system, give to the communes and the departments a life more independent—arouse individual initiative, and the spirit of association, and finally elevate the soul and the body of the nation. But while making ourselves the ardent promoters of useful reform, let us maintain with firmness the basis of the constitution. Let us oppose the exaggerated tendencies of those who provoke changes with the sole object of sapping that which we have founded. Utopia is to good what illusion is to truth; and progress is not the realization of a theory more or less ingenious, but the application of the results of experience, consecrated by time, and accepted by public opinion.

Both the Senate and the Legislative Body adopted addresses to the Emperor, reiterating the views of the imperial speech, and expressing unbounded confidence in the policy of the Government by an almost unanimous vote. In the Legislative Body, several subjects of the address, especially the one on Mexico, were severely and brilliantly attacked by members of the liberal Opposition, but without effect. Considerable interest was awakened by a speech on the Roman question by M. Thiers, who attacked the unity of Italy, and demanded continued protection of the temporal power of the Pope; but the majority of the Legislative Body, as well as of the Senate, sustained the Government in this as well as in every other question. Two prominent members of the liberal Opposition, Olivier and Darimon, separated in some questions from their party, recognizing the Imperial Government as the true expression of the popular will, and promising it their entire support, in case it should adopt a more liberal policy. The session of the Legislative Corps was closed on July 4th.

The report of the assassination of President Lincoln produced a great excitement in the French Chambers. In the Legislative Body of June 1st, M. Rouher, Minister of State, and M. Schneider, the acting President, made themselves the interpreters of the horror and indignation which the whole nation felt with regard to the crime. "Abraham Lincoln," said M. Rouher, "displayed in that unfortunate struggle which distracts his country, that calm firmness, that indomitable energy, which is the characteristic of great souls, and the necessary condition of the accomplishment of great duties. On the morrow of victory he showed himself generous, moderate, conciliatory. He was anxious

to bring the war to an end, and by peace to restore to America her splendor and prosperity." And M. Schneider felt sure that "the emotion caused by the assassination had been nowhere so profound and universal as in France. Called to the head of affairs at a critical time," he continued, "which will be forever memorable, Mr. Abraham Lincoln rose to the height of his difficult mission. After having shown indomitable firmness during the struggle, he seemed likely, by the moderation of his language and views, to bring about a fruitful and durable reconciliation between the children of the American nation. His latest acts were the crowning of the life of an honest man and a great citizen."

Previously a letter from the leading members of the Democratic Opposition had expressed to the President the desire that the Legislative Body should follow the example of other European Parliaments, and pass resolutions expressive of indignation at the crime, and of sympathy with the American people. The Emperor deputed an aide-de-camp to call on the Minister of the United States, to request him to convey to President Johnson the expression of profound affliction and sorrow with which the odious crime had inspired the Emperor, and the same sentiments were expressed by the Empress on receiving Mr. and Mrs. Bigelow. The Minister of Foreign Affairs addressed the following despatch to the French Minister in Washington:

PARIS, April 28th.

SIR: The news of the crime of which President Lincoln has just been the victim, has caused in the Imperial Government a deep feeling of indignation. His Majesty at once despatched one of his aides-de-camp to the Minister of the United States, to request that he would transmit the expression of this feeling to Mr. Johnson, who is now invested with the presidency. In the despatch which I addressed to you yesterday, I desired to make known to you, without delay, the painful emotion which we have felt; and to-day I am anxious, in conformity with the intentions of the Emperor, to render a well-merited homage to the great citizen whose loss the United States deplore. Raised by the suffrages of his country to the first magistracy of the republic, Mr. Abraham Lincoln had displayed in the exercise of the power placed in his hands the most sterling qualities, for in him firmness was allied to high principle. His great soul never shrank from the terrible trials which were reserved for his Government; at the moment when an atrocious crime removed him from the mission which he fulfilled as a religious duty, he felt that the triumph of his policy was definitively secured. His recent proclamations are marked with the thoughts of moderation which inspired him in approaching resolutely the task of reorganizing the Union and assuring peace. The supreme satisfaction of accomplishing this work has not been granted to him; but in collecting these evidences of his great wisdom, as well as the examples of good sense, of courage, and of patriotism which he has given, history will not hesitate to place him in the rank of the citizens who have been the greatest honor of their country. By order of the Emperor, I forward this despatch to the Minister of State, who is directed to communicate it to the Senate and Legislative Body. All France will join in his Majesty's feelings.

Receive, &c.,

DROUYN DE LHUYS.

To this despatch the following answer was received:

WASHINGTON, May 22, 1865.

SIR: The Marquis de Montholon has handed to me the copy of a despatch, dated the 28th April, addressed by M. Drouyn de Lhuys to M. de Geofroy, charging him to express to the Government of the United States the feelings with which the Emperor and the French Government have been inspired by the assassination of President Lincoln, the horror and sympathy they have felt on learning that unexpected catastrophe, and lastly, their great esteem for the character and virtues of the deceased President. This despatch bears the impress of a spirit of generosity and of cordial sympathy toward the United States which does honor to the ancient friendship of the two nations, and which is on our part cordially reciprocated. Your recent despatch has also informed me of what took place in the Senate and in the Legislative body under the circumstances in question. I must therefore request you to inform M. Drouyn de Lhuys of the manner in which those manifestations of good wishes have been received, and to tell him that they will remain engraved in the grateful remembrance of the Government and the people of the United States. With that object you will please to leave with M. Drouyn de Lhuys a copy of the present letter.

I am, &c.,

W. HUNTER.

On May 1st, the Emperor embarked at Marseilles for a protracted visit to Algeria. Immediately on landing he issued two remarkable proclamations; one to the European settlers, and the other to the Arabs. To the former he said:

Have faith in the future. Become attached to the land which you cultivate as to a new fatherland, and treat the Arabs, in the midst of whom you must dwell, as fellow-countrymen. We must be the masters, because we are the more civilized; we must be generous, because we are the stronger. Let us, then, justly unceasingly the glorious act of one of my predecessors, who, in planting thirty-five years ago, on the soil of Africa, the banner of France and the Cross, unfurled at once the sign of civilization and the symbol of peace and charity.

In his address to the Arabs he remarked:

France came to Algeria in 1830, not to destroy the Arab nationality, but to liberate the people from ages of oppression. Nevertheless, you have fought against your liberators. I honor your sense of warlike dignity, but God has decided. Recognize the decrees of Providence. Like yourselves, our ancestors courageously resisted, and yet from their defeat dates their regeneration. Your Prophet says: "God gives power to whomsoever he will." I come to exercise power in your interest. I have irrevocably assured to you the proprietorship of the land you occupy. I have honored your chiefs and respected your religion. I wish to increase your well-being. Tell your mistaken brethren that 2,000,000 Arabs cannot resist 40,000,000 Frenchmen. I thank the great majority for their fidelity. Great recollections and powerful interests already unite you to the mother country, and a military confraternity has been formed in the Crimea, Italy, China, and Mexico. Place confidence, then, in your destinies, almost united with those of France, and acknowledge, with the Koran, that "what God directs is well directed."

The Emperor was received by many of the Arabs with great enthusiasm, and on his return to France prepared a treatise on the French administration of Algeria, declaring some features of it to have been mistakes, and ordering the Governor-General to make some radical changes in the future.

An imperial decree, dated December 24, 1864, but not published until January 3, 1865, ap-

pointed Prince Napoleon a member and Vice-President of the Privy Council. On May 15th, Prince Napoleon made a long speech at Ajaccio, on the inauguration of a monument to Napoleon I., giving an eloquent biography of the Bonapartes and a history of the life and acts of the First Napoleon, which he described as a complete programme of liberal policy. The speech made a profound sensation in the political world, but gave great offence to the Emperor; who addressed to his cousin the following letter, dated September 23d:

I cannot refrain from mentioning to you the painful impression produced upon me by reading your speech at Ajaccio. By leaving you during my absence near the Empress and my son, as Vice-President of the Council of State, I wished to give you a proof of friendship and confidence, hoping that your presence, conduct, and discourse would testify to the union reigning among our family. But the political programme which you place under the *egis* of the Emperor can only be useful to the enemies of my Government, as furnishing ground for judgment that we cannot admit. You express sentiments of hatred and rancor which are no longer of our day. To be able to apply to the present time the ideas of the Emperor, it is necessary to have passed through the severe trials and responsibility of power. Can we, moreover, pigmies as we are, really estimate, at its true value, the great historical figure of Napoleon? Standing before a colossal statue, we are powerless to take in the whole at a glance. We never see but the side which strikes our view; but that which is clear to all the world is that to prevent anarchy, that formidable enemy of true liberty, the Emperor had to establish, first in his family, and then in his Government, that severe discipline admitting but one will and one action. I cannot henceforth deviate from the same rule of conduct.

Prince Napoleon replied to this letter by tendering his resignation as Vice-President of the Privy Council, and President of the Commission of the Universal Exhibition. His resignation was accepted.

The rigorous legislation of France as regards the liberty of the press was fully upheld in 1865, and not only did the French papers continue to suffer from it, but leading foreign papers like the *Independence Belge*, were subjected to it. After having been several times seized, the circulation of this paper in France was for a time altogether prohibited. The Empress, on the eve of the return of the Emperor from Algeria to France, closed the period of her regency by a decree, dated June 8th, annulling the *oversissements* given up to that time to the press. On September 22d, the Minister of the Interior addressed a circular to the prefects, in which he urges them to peruse the provincial newspapers with attention, and when they contain serious errors to make known the real facts by means of *communiqués*. "This line of conduct," says the minister, "must be pursued persistently in order to prove efficacious; but your interference must not degenerate either into abusive communications or irritating polemics."

On June 29th, an imperial decree was issued, dissolving the municipal councils throughout France and ordering new elections to take place on July 22d. The Marquis de Lavalette, Min-

ister of the Interior, published a circular, in which he says that, as local questions only have to be decided at these elections, he recommends to the prefects that the electors should be allowed to manifest their choice spontaneously, and should only be interfered with if imprudent persons attempt to alter the character of the elections by importing questions of a political nature. This abandonment of one of the most unpopular features of the imperial policy, the "official candidatures," was well received, although it soon appeared that it was more apparent than real, as the Government in most places used its whole influence in favor of the so-called "municipal ticket." The result seems to have satisfied both the Government and the Opposition. The Government candidates obtained the majority in the departments, while the Opposition claimed the majority in the great towns.

An imperial decree of September 4th annulled the resolutions adopted by the Councils-General of the Seine and Marne, as having exceeded the limit of their powers. The resolutions in question expressed the wish that the law should afford to the Councils-General the power of deciding disputed departmental elections, and suggested to the Government whether it would not be advisable to give the Councils-General the right of nominating their presidents, vice-presidents, and secretaries.

The French Government, during the year 1865, carried on war against the Republican party of Mexico and the insurgents of Algeria. Of the relation of France to Mexico, the "Blue Book," which was communicated to the members of the Legislative Body in January, 1866, speaks as follows:

The French Government, on undertaking the expedition to Mexico, placed before it an aim to which it has rendered subordinate its conduct, and on which its decisions are still depending. We went to Mexico to obtain redress, not to proselytize for the cause of monarchy. Our soldiers are not in Mexico with the object of intervention. The Imperial Government has constantly repelled that doctrine as contrary to the fundamental principles of our rights. Mexico is at present ruled by a regular Government, anxious to fulfil the engagements it has made in respect both to the persons and properties of foreigners. When the necessary arrangements are concluded with the Emperor Maximilian, we shall be so far from repudiating the results of our principles as regards intervention, that we shall, on the contrary, accept them as the guiding rule for all Powers, and it will then be easy to foretell the time when we shall be able to effect the return of the expeditionary army.

The relation of France to the United States is reviewed by the same book in the following manner:

Great changes took place last year in the aspect of affairs in the United States. In view of the conflict proceeding between the North and the South, we were, in common with the other maritime powers, under the necessity of recognizing the existence of two belligerents, and of stating the fact by a public declaration. Immediately it became certain that the Union renounced exercising the laws of war to such neutral vessels, we hastened to revoke the measures which were the consequence of our neutrality. The complete success of the Federal forces has caused the

return to the Union of all the States who endeavored to secede therefrom. From that moment the solicitude of the Washington cabinet was directed to the means of repairing the calamities of so profound a crisis. We most earnestly and constantly desired the pacification of the United States, and were rejoiced to see a termination to the effusion of generous blood. We now wish that this great country may promptly effect its reorganization in the manner best calculated to insure its future tranquillity and assist the resumption and development of the important commercial relations it maintains with the whole world.

The occupation of Mexico by French troops, continued throughout the whole year a subject of animated diplomatic correspondence between the Governments of France and the United States. The most important of the American despatches were made public by the Washington Government, in reply to a call for them on the part of the Senate; and the publication of this part of the correspondence, induced the French Government to enclose (contrary to its original intention) its own despatches in the "Yellow Book," which was laid before the Chambers in January, 1866. It appears from these despatches, that since the termination of the war in the United States, the remonstrances of the Washington Government against the continued occupation of Mexico by the French, became more urgent. It was represented to the French Government that the sympathies of the American people were strongly with the Republicans of Mexico, and the voice of the whole people demanded that foreign troops should no longer interfere with the popular sovereignty of the Mexican nation. France, in reply, disclaimed any intention of territorial aggrandizement, and subsequently intimated a readiness to withdraw her troops, in case the Government of the United States would pledge itself to recognize the Imperial Government. When this was declined by the United States, France intimated that she would be satisfied with a pledge not to interfere in the internal affairs of Mexico. But this was likewise declined at Washington. At the close of the year, the opinion generally prevailed, that France would yield to the urgent remonstrances of the United States, and this opinion was greatly strengthened by the words on Mexico, contained in the speech with which the Emperor, on January 22, 1866, opened the Chambers. The Emperor thus referred to the affairs of Mexico and the United States:

In Mexico, the government founded upon the will of the people, is being consolidated. The opposition, conquered and dispersed, have no longer a chief. The National troops have displayed valor, and the country has found guarantees of order and security which have developed its resources and raised its commerce, with France alone, from twenty-one to seventy-seven millions.

As I expressed the hope last year that our expedition was approaching its termination, *I am coming to an understanding with the Emperor Maximilian to fix the epoch for the recall of our troops*, before their return is effected, without compromising the French interests which we have been defending in that remote country.

North America, issuing victoriously from a formidable struggle, has reestablished the Union and sol-

emply proclaimed the abolition of slavery. France, which forgets no noble page of her history, offers up sincere wishes for the prosperity of the great American Republic, and for the maintenance of the amicable relations which will soon have had a century's duration.

The emotion produced in the United States by the presence of our troops on the Mexican soil, will be pacified by the frankness of our declarations. The American people will comprehend that our expedition, to which we invited them, was not opposed to their interests. Two nations equally jealous of their independence, ought to avoid every step which might affect their dignity and their honor.

In Italy the French Government began to execute the "September Convention," and to withdraw its troops from Rome. It offered at the same time to the Pope its assistance to facilitate the recruitment and organization of his military forces. As regards the Pontifical debt, the French Government expressed in the "Blue Book" a hope that soon an understanding would be arrived at with the Italian Cabinet, which the Holy See might accept without sacrificing its dignity. Prince Conza, of the Danubian Principalities, was advised by France to respect European treaties, "which are based upon mutual rights," and are a guarantee of friendly relations between the different European Powers.

FRANKFORT, a free city in Germany. The government is vested in a Senate and a Legislative Assembly. The former is composed of four syndics and twenty-one members elected for life. The Legislative Assembly consists of fifty-seven members chosen by the burghers of the city, of twenty permanent representatives of the burghers, chosen by the common council of the city, and of eleven members chosen by the rural communities. The Senate is presided over by two burgomasters, who are elected in the month of September, for the term of one year. First burgomaster in 1865, Senator and Syndic, Dr. P. F. Gwinner; second burgomaster, Senator, Dr. J. A. Spelta. Area, forty-three square miles. Population in 1861, 83,390; in 1864, 91,180 (in the city 78,177; in the rural districts, 13,003); increase, 9.34 per cent. In religious denominations, the inhabitants were, in 1858, divided as follows: Lutheran, 43,946; Evangelical Church, 1,416; German Reformed, 5,448; Calvinists, 460; Roman Catholics, 15,788; German Catholics, 428; Israelites, 5,738; other denominations, 164. The receipts in the budget for 1865 were estimated at 2,853,565 florins, and the expenditures at 2,424,546 florins. Public debt in 1865, 7,300,220 florins; railroad debt, 6,745,300 florins; communal debt, 1,278,800 florins.

A meeting of deputies of the several German Legislatures, which the Senate allowed to be held, in September, notwithstanding the remonstrances of Austria and Prussia, called forth from these two powers a threatening note (dated October 8th). The Senate replied by a note of October 21st, energetically repelling the imputations made by the two powers. (See GERMANY.)

FREEDMEN AND REFUGEES. In the ANNUAL CYCLOPEDIA for 1864, allusion was made to an interview held by Gen. W. T. Sherman and Secretary Stanton, at the beginning of the year 1865, with the representatives of the colored men of the coast region of Georgia and South Carolina. The result of this interview was the publication of the following special field order by Gen. Sherman:

Special Field Orders No. 15.

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, SAVANNAH, GA., January 16, 1865.

I. The islands from Charleston, South, the abandoned rice-fields along the rivers for thirty miles back from the sea, and the country bordering the St. John's River, Florida, are reserved and set apart for the settlement of the negroes now made free by the acts of war and the proclamation of the President of the United States.

II. At Beaufort, Hilton Head, Savannah, Fernandina, St. Augustine, and Jacksonville, the blacks may remain in their chosen or accustomed vocations—but on the islands, and in the settlements hereafter to be established, no white person whatever, unless military officers and soldiers detailed for duty, will be permitted to reside; and the sole and exclusive management of affairs will be left to the freed people themselves, subject only to the United States military authority and the acts of Congress. By the laws of war, and orders of the President of the United States, the negro is free, and must be dealt with as such. He cannot be subjected to conscription or forced military service, save by the written orders of the highest military authority of the Department, under such regulations as the President or Congress may prescribe. Domestic servants, blacksmiths, carpenters, and other mechanics, will be free to select their own work and residence, but the young and able-bodied negroes must be encouraged to enlist as soldiers in the service of the United States, to contribute their share toward maintaining their own freedom, and securing their rights as citizens of the United States.

Negroes so enlisted will be organized into companies, battalions, and regiments, under the orders of the United States military authorities, and will be paid, fed, and clothed according to law. The bounties paid on enlistment may, with the consent of the recruit, go to assist his family settlement in procuring agricultural implements, seed, tools, boots, clothing, and other articles necessary for their livelihood.

III. Whenever three respectable negroes, heads of families, shall desire to settle on land, and shall have selected for that purpose an island or a locality clearly defined, within the limits above designated, the Inspector of Settlements and Plantations will himself, or by such subordinate officer as he may appoint, give them a license to settle such island or district, and afford them such assistance as he can to enable them to establish a peaceable agricultural settlement. The three parties named will subdivide the land, under the supervision of the Inspector, among themselves and such other as may choose to settle near them, so that each family shall have a plot of not more than (40) forty acres of tillable ground, and when it borders on some water channel, with not more than 800 feet of water front, in the possession of which land the military authorities will afford them protection, until such time as they can protect themselves, or until Congress shall regulate their title. The Quartermaster may, on the requisition of the Inspector of Settlements and Plantations, place at the disposal of the Inspector, one or more of the captured steamers, to ply between the settlements and one or more of the commercial points heretofore named in orders, to afford the settlers the opportunity to supply their necessary wants, and to sell the products of their land and labor.

IV. Whenever a negro has enlisted in the military service of the United States, he may locate his family in any one of the settlements at pleasure, and acquire a homestead, and all other rights and privileges of a settler, as though present in person. In like manner, negroes may settle their families and engage on board the gunboats, or in fishing, or in the navigation of the inland waters, without losing any claim to land or other advantage derived from this system. But no one, unless an actual settler as above defined, or unless absent on Government service, will be entitled to claim any right to land or property in any settlement by virtue of these orders.

V. In order to carry out this system of settlement, a general officer will be detailed as Inspector of Settlements and Plantations, whose duty it shall be to visit the settlements, to regulate their police and general management, and who will furnish personally to each head of a family, subject to the approval of the President of the United States, a possessory title in writing, giving as near as possible the description of boundaries; and who shall adjust all claims or conflicts that may arise under the same, subject to the like approval, treating such titles altogether as possessory. The same general officer will also be charged with the enlistment and organization of the negro recruits, and protecting their interests while absent from their settlements; and will be governed by the rules and regulations prescribed by the War Department for such purposes.

VI. Brigadier-General R. Saxton is hereby appointed Inspector of Settlements and Plantations, and will at once enter on the performance of his duties. No change is intended or desired in the settlement now on Beaufort Island, nor will any rights to property heretofore acquired be affected thereby.

By order of Major General W. T. SHERMAN.
L. M. DAYTON, Assistant Adj.-Gen.

This order, which was sanctioned by the Government, conveyed, as Gen. Sherman has since explained, only a possessory title to these islands to the freedmen, during the continuance of the war, or until the Government should, after the conclusion of the war, define its policy in regard to the restoration of forfeited lands to political offenders. At the time of issuing it, neither Gen. Sherman nor the other parties concerned looked for so speedy a termination of the war as actually took place. From the beginning of 1865, however, the course of events tending to the speedy close of the war, and to the practical establishment of the policy of emancipation all over the South, hastened to their final issue. The march of Sherman through the Carolinas, the expeditions of Stoneman through Southwestern Virginia and Western North Carolina, and of Wilson through the heart of Alabama and Georgia, Sheridan's raid toward Lynchburg, the fall of Mobile, and especially the defeat and surrender of Lee's army, and the evacuation of Richmond and Petersburg, and the subsequent surrender of Johnston, each set at liberty large numbers of the slaves, and spread more widely among the negroes the conviction that their day of deliverance had come. Before the consummation of all these events, Congress had passed an act establishing a Bureau of Freedmen, Refugees, and Abandoned Lands, and had ordered to be committed to it the care of the freedmen which had hitherto been in the hands first of the War and afterwards of the Treasury Department. The new

bureau was attached to the War Department. The bill was crude in its provisions (*see* CONGRESS, U. S.), and no appropriation was made for carrying out its purposes. The Secretary of War, however, obviated the latter difficulty, by authorizing the assignment of army officers, so far as was possible, to the special duties required, and provided for its accommodation buildings then in the possession of the Government for military purposes, and furnished them by requisitions on the Quartermaster's Department. Early in May, almost immediately after the surrender of Gen. Johnston's army, the President appointed Maj.-Gen. Oliver O. Howard, then in command of the Army of the Tennessee, to be the commissioner or head of this bureau. Gen. Howard possessed eminent qualifications for this difficult and responsible post; he was a man of unimpeachable integrity, conscientious, and religious; a man of rare executive ability and extensive military attainments; he had commanded large bodies of troops in most of the slaveholding States, and previous to the war had spent considerable time at the South, under circumstances which enabled him to comprehend very thoroughly the relation which existed between the slaveholders and the slaves; he had a strong sense of justice, and a disposition to do right in all cases; and while not so radical as some in his views, he believed in emancipation, and in the capacity of the negro race for elevation and improvement.

In entering upon his duties, Gen. Howard first appointed the ten assistant commissioners to whose aid he was entitled by the provisions of the act. With one exception (the assistant commissioner for Louisiana), they were all army officers in actual service, and several of them of the rank of brigadier-general. The commissioners appointed were: for the District of Columbia, Brevet Brig.-Gen. John Eaton, jr.; for Virginia, Brevet Col. Orlando Brown, A. Q. M.; for North Carolina, Col. E. Whittlesey, formerly a Professor in Bowdoin College, and assistant adjutant-general on Gen. Howard's staff; for South Carolina and Georgia, Brig. and Brevet Major-Gen. Rufus Saxton; for Florida, Brevet Col. T. W. Osborne, formerly chief of artillery of the Army of the Tennessee; for Alabama, Brevet Maj.-Gen. Wager Swayne; for Louisiana, Rev. T. W. Conway, late major volunteers and general superintendent of freedmen's affairs, Department of the Gulf, under the Treasury Department. Mr. Conway was relieved in the summer of 1865, and Brevet Maj.-Gen. Absalom Baird appointed his successor, Brig.-Gen. J. S. Fullerton acting until Gen. Baird could enter upon his duties; for Texas, Brevet Brig.-Gen. E. M. Gregory; for Mississippi, Col. Samuel Thomas, 64th U. S. O. I.; for Kentucky and Tennessee, Brig.-Gen. Clinton B. Fiske, with headquarters at Nashville; for Missouri and Arkansas, Brig.-Gen. J. W. Sprague. Gen. Howard soon found that some of his commissioners had too large a territory, and in some cases was compelled to

divide their departments. He also found it necessary to organize districts in each department, which were placed in charge of sub-assistant commissioners, who reported to their respective chiefs. He organized the Bureau into four divisions, viz.: I. Lands, embracing abandoned, confiscated, and those acquired by sale or otherwise. II. Records, embracing official acts of the commissioner, touching labor, schools, quartermasters' and commissary supplies. III. Financial affairs; and, IV. The medical department. Gen. Howard then issued his circular No. 2, giving a general exhibit of his purposes under the law. The effort was made, and generally with success, to establish the most harmonious relations between the Department commanders, appointed by the War Department, and the assistant commissioners of the Bureau. In many instances subordinate officers of the military departments acted also as sub-commissioners for the Bureau. We cannot, perhaps, define more clearly the work of the Bureau, and especially the duties required of the assistant commissioners and their subordinates, than by quoting portions of the circulars of instructions issued from time to time by Gen. Howard.

By circular No. 10, of July 11th, assistant commissioners are directed to report monthly as to the number of self-supporting refugees and freedmen in colonies, camps, depots, or hospitals, and on government farms or other lands under the supervision of the commissioners, and also the number of such persons who may not be so disposed of, to whom rations and clothing have been issued, to what amount, and whether furnished by donation or purchase. It was intended that the first of the above reports should cover the period from the time when the assistant commissioners entered upon their duties up to the first of the month following the receipt of the circular.

Reports were also directed to be made by the commissioners of all lands under their control held for the benefit of refugees or freedmen, with statements whether such lands were abandoned or confiscated, and a brief description of each tract, together with the name of the former owner and occupant. Hereafter descriptions must be furnished of lands brought under the supervision of the commissioners during the month for which their reports are made, stating how they were acquired, etc., and lands lost to the use of the Bureau will be accounted for with equal accuracy.

In addition to the above, the number of schools, scholars, and teachers at present under the direction of the Bureau are to be carefully reported, and rosters of all officers and civilians employed by each assistant commissioner as sub-commissioners, staff officers, or agents, their respective duties, and how much salary is allowed each civilian, and from what fund it is paid, to be reported upon monthly, from the reception of the above order.

Circular No. 11 requires that the assistant commissioner should be careful in the establish-

ment of sub-districts, to have the office of the agent at some point easy of access to the people of the sub-districts. He will have at least one agent—either a citizen, officer, or enlisted man—in each sub-district. He will be furnished with the proper blanks for contracts, and will institute methods adequate to meet the wants of his districts, in accordance with the rules of the Bureau. No fixed rate of wages will be prescribed for a district; but in order to regulate the wages in given individual cases, the agent should have in mind minimum rates for his own guidance. By careful inquiry as to the hire of an able-bodied man when the pay went to the master, he will have an approximate test of the value of labor. He must, of course, consider the entire change of circumstances, and be sure that the laborer has sure protection against avarice or extortion. Wages should usually be secured by the crops or lands. Employers are desired to enter into written agreements with employes, setting forth stated wages, or securing an interest in the crops or land, or both. All such agreements will be approved by the nearest agent and a duplicate filed at his office. In case there should be no agent within reach, the nearest postmaster will forward the duplicate of contracts direct to the assistant commissioner for the State.

Attention is especially called to section four of the law establishing the Bureau, with regard to setting apart land to every male citizen, whether refugee or freedman, etc., and the same arrangement is recommended when it can be effected between private parties. This course is a recognition of the general principle in the law.

In order to enforce the fulfilment of contracts on both contracting parties, the commissioner of the Bureau lays down no general rule. The assistant commissioner must use the privilege and authority he already has. Provost courts, military commissions, and local courts, when the freedmen and refugees have equal rights with other people, are open to his use. In the great majority of cases his own arbitrament or that of his agent in the settlement by referees will be sufficient.

No assistant commissioner or agent is authorized to tolerate compulsory unpaid labor, except for the legal punishment of crime. Suffering may result to some extent, but suffering is preferred to slavery, and is to some extent the necessary consequence of events. In all actions the officers should never forget that no substitute for slavery, like apprenticeship without proper consent, or peonage—*i. e.* confining them without consent to the land by any system—will be tolerated.

The assistant commissioner will designate one or more of his agents to act as the general superintendent of schools—one for each State—for refugees and freedmen. This officer will work as much as possible in conjunction with State officers who may have school matters in charge. If a general system can be adopted for a State,

it is well; but if not, he will at least take cognizance of all that is being done to educate refugees and freedmen, secure proper protection to schools and to teachers, promote method and efficiency, correspond with the benevolent agencies which are supplying his field, and aid the assistant commissioner in making his required reports.

Surgeon O. W. Horner, chief medical officer of the Bureau, will have the general supervision of medical matters connected with refugees and freedmen. The assistant commissioners will instruct their medical and other officers to make the medical department self-supporting as far as possible.

All public addresses of a character calculated to create discontent are reprehensible; but the assistant commissioner and his agents must explain by constant recapitulation the principles, laws, and regulations of this Bureau to all parties concerned. It is recommended to the assistant commissioners to draw up in writing a careful summary, to be publicly and privately read by agents throughout their respective districts. Circular No. 15, as revised and issued September 12th, gave important instructions relative to abandoned lands. It was as follows:

Circular No. 15.

WAR DEPARTMENT, BUREAU OF REFUGEES,
FREEDMEN AND ABANDONED LANDS,
WASHINGTON, Sept. 12, 1865.

1. Circular No. 13, of July 28, 1865, from this Bureau, and all portions of circulars from this Bureau conflicting with the provisions of this circular, are hereby rescinded.

2. This Bureau has charge of such tracts of lands within the insurrectionary States as shall have been abandoned, or to which the United States shall have acquired title by confiscation or sale, or otherwise; and no such lands now in its possession shall be surrendered to any claimant except as hereinafter provided.

3. Abandoned lands are defined in section 2 of the act of Congress approved July 2, 1864, as lands the lawful owner whereof shall be voluntarily absent therefrom, and engaged either in arms or otherwise in aiding or encouraging the rebellion.

4. Land will not be regarded as confiscated until it has been condemned and sold by decree of the United States Court for the district in which the property may be found, and the title thereto thus vested in the United States.

5. Upon its appearing satisfactorily to any assistant commissioner that any property under his control is not abandoned as above defined, and that the United States has acquired no title to it by confiscation, sale, or otherwise, he will formally surrender it to the authorized claimant or claimants, promptly reporting his action to the commissioner.

6. Assistant commissioners will prepare accurate descriptions of all confiscated and abandoned lands under their control, keeping a record thereof themselves, and forwarding monthly to the commissioner copies of these descriptions in the manner prescribed in circular No. 10, of July 11, 1865, from this Bureau. They will set apart so much of said lands as is necessary for the immediate use of the loyal refugees and freedmen, being careful to select for this purpose those lands which most clearly fall under the control of this Bureau, which selection must be submitted to the commissioner for his approval. The specific division of lands so set apart into lots, and the recital or sale thereof, according to section 4 of the law establishing the Bureau, will be completed as soon as practicable and reported to the commissioner.

7. Abandoned lands held by this Bureau may be restored to owners pardoned by the President, by the assistant commissioners, to whom applications for such restoration should be forwarded, so far as practicable, through the superintendents of the districts in which the lands were situated. Each application must be accompanied by—first, evidence of special pardon by the President, or a copy of the oath of amnesty prescribed in the President's proclamation of May 29, 1865, when the applicant is not included in any of the classes therein excepted from the benefits of said oath; second, proof of title. Officers of the Bureau through whom the application passes will endorse thereon such facts as may assist the assistant commissioner in his decision, stating especially the use made by the Bureau of the land.

8. No lands under cultivation by loyal refugees or freedmen will be restored under this circular until the crops now growing shall be secured for the benefit of the cultivators, unless full and just compensation be made for their labor and its products and for their expenditures.

O. O. HOWARD, Maj.-Gen., Commissioner.

ANDREW JOHNSON,
President of the United States.

* No report received of property restored.

† No report received.

‡ No land in possession.

Circular No. 15 was rendered necessary by the decision of the President, contrary to the previous understanding in the War Department, that a pardon, either special or under the terms of his amnesty proclamation, carried with it a restoration of all real estate to the pardoned man, except such as had been actually sold under a decree of confiscation. As the immediate restoration of this property, without reference to the condition of its present occupant, would have caused great and unjustifiable suffering to loyal citizens, it was provided that a condition precedent to the restoration should be a recognition and satisfaction of these claims. Large quantities of abandoned lands were thus restored during the year, and the preceding table shows the condition of the lands which were or had been in possession of the bureau to December, 1865.

Under this decision of the President, the former proprietors of the islands along the coast of Georgia and South Carolina, who had abandoned their property in 1862, and which had been cultivated by the freedmen in 1863, 1864, and 1865 (the last year under Gen. Sherman's special field order, which we have already given), began to be clamorous for the restoration of these islands to them, and the driving off of the freedmen without remuneration for their labor and outlay. These cases were regarded as differing in many respects from those in the other States; Gen. Sherman had, so far as possible, given the freedmen a possessory title in these lands, and under that title they had gone forward and planted crops, relying in perfect confidence upon the disposition of the Government to deal justly by them. Yet, in accordance with the decisions in the other cases, the former proprietors had some semblance of right in their claim to be repossessed of their property. Feeling confident that Gen. Howard could adjust the matter more satisfactorily than any one else, the War Department issued the following order:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, October 9, 1865. }

Whereas, certain tracts of land, situated on the coast of South Carolina, Georgia, and Florida, at the time for the most part vacant, were set apart, by Maj.-Gen. W. T. Sherman's special field orders No. 15, for the benefit of the refugees and freedmen that had congregated by the operations of the war, or had been left to take care of themselves by their former owners; and whereas, an expectation was thereby created that they would be able to retain possession of said lands; and whereas, a large number of the former owners are earnestly soliciting the restoration of the same, and promising to absorb the labor and care of freedmen: It is ordered that Maj.-Gen. Howard, Commissioner of Bureau of Refugees, Freedmen, and Abandoned Lands, proceed to the several above-named States and endeavor to effect an arrangement mutually satisfactory to freedmen and landowners, and make a report; and in case a mutually satisfactory arrangement can be effected, he is duly empowered and directed to issue such orders as may become necessary after a full and careful investigation of interest of parties concerned.

By order of the President of the United States.

E. D. TOWNSEND, Assistant Adjutant Gen'l.

Gen. Howard undertook the mission, and proceeded at once to Charleston, where he arrived October 17th. From thence he went to Edisto Island, and on the 19th, accompanied by several officers and Mr. William Whaley, the representative of the planters, met the freedmen at a large church on the island. The interview was a sad one; the freedmen felt that they were treated with injustice, but were after all fully persuaded of the rectitude of the General's intentions; and after stating their case so strongly that even the former proprietors could not deny that it would be a wrong to dispossess them without fair remuneration, they left the matter entirely in Gen. Howard's hands, promising to abide by his decision, as did also the former landholders. After careful consideration, he decided to constitute a board of supervisors, in which the Government, the planters, and the freedmen should each have a representative, for the adjustment of contracts and cases of difficulty. Where a landowner had been constantly loyal, or had received his pardon, he was required to sign an obligation which Gen. Howard drew up, and which required the obligator to promise and engage that he would secure to the refugees and freedmen then resident upon his estate the crops of that season, harvested or unharvested; that they should be allowed to remain upon the estate at their present houses, or other homes on the island, so long as the responsible refugees and freedmen (embracing parents, guardians, and other natural protectors) should enter into contracts by leases or for wages in terms satisfactory to the supervising board; also that the obligator would take proper steps to enter into contracts with these responsible refugees and freedmen, and they on their part must enter into said contracts within the period of two months from date, or surrender the right to remain on the estate. The obligator was required to interpose no obstacle to schools for the freedmen sanctioned by the supervising board. Neither the landowners nor the refugees and freedmen were to be obligated by the instrument beyond one year from its date unless it was renewed. This last provision was intended to allow Congress to pass upon the question of the final restoration of these lands. Having selected the most capable man he could find to represent the Bureau in this matter, Capt. Alexander P. Ketchum, 128th U. S. C. T., and acting assistant adjutant-general, Gen. Howard left him specific instructions, and went on to Savannah and Fernandina, Florida, taking measures to prevent the ejection of the freedmen from their homes, while the planters were treated with kindness and courtesy. Proceeding to Mobile, the General telegraphed to the Secretary of War the course he had pursued, urging at the same time that the attention of Congress should be called to the matter at the commencement of the session, and that these islands, or a part of them, should be purchased by the United States, with a view to their rental and eventual purchase by the freed-

men. In Virginia quite an amount of land was libelled and about to be sold by the marshal just previous to the establishment of the Bureau, when the sales were suspended by the Secretary of War, in order that these lands might be turned over to the Bureau for the benefit of the freedmen. By the decision of the President, all or nearly all these lands were lost, being restored to pardoned persons. Gen. Howard, on the 4th of September, addressed to the Secretary of War a proposition, asking, first, that whenever special pardons (*i. e.* to persons having over \$20,000 worth of property) should be granted by the President, a specific stipulation should be made by the pardoned party, if a landowner, that he would grant to each head of family of his former slaves a homestead, varying in extent from five to ten acres, to be secured from alienation during the lifetime of the grantee; the location, precise extent, and other details to be determined by three referees, two to be chosen by the interested parties, each selecting one, and the two a third; and, second, that other persons, not landholders, be conditioned according to their several circumstances, by equivalent or proper stipulation, to be determined by a committee of three appointed by the President. This suggestion was not acted upon by the President.

In regard to the employment of the freedmen, the commissioner did not deem it desirable to fix the rate of wages, but to leave it to be regulated by the demand. This seemed to be a matter of justice both to the employers and the freedmen, as though in some cases it might have secured compensation at temporarily better rates to the freedman than he would at first command in the open market, yet in the end he would have been unable to advance beyond the minimum, however much greater might be the real value of his labor, while in the scarcity of labor which existed all over the South, any temporary depression of prices was sure to right itself. The assistant commissioners and their agents were, however, instructed to see to it that in the contracts for labor the freedmen were not wronged, and to compel the observance of contracts on both sides. At first the negroes, on many of the plantations, apprehensive that the cruelties which had hitherto been practised on them by their old masters, would be continued under the new régime, refused to work for them, and flocked to the towns, cities, villages, and military posts, and sought work there. The commissioner, under these circumstances, caused his agents to open communications with employers needing laborers North and South, and to procure, as far as possible, good places for these freedmen. Schools were also established at the military posts, some of them of an industrial character, by the various benevolent associations interested in behalf of freedmen, and were aided by the Bureau.

Government farms, under charge of officers of the Bureau, were also worked to some extent by this surplus and otherwise unemployed pop-

ulation. There was a very general impression among the freedmen, arising in part, perhaps, from the wording of the law establishing the Bureau, and in part from the talk of both white and colored soldiers, that the lands of disloyal owners would be divided among them, and many of them were averse to making contracts, which, as they imagined, would preclude their receiving their share in those lands. The commissioner and his agents did all in their power to disabuse them of this impression; and when Christmas came and went, and they found there were no lands to be divided, they very generally entered into contracts. Their desire for ownership of the soil, is, however, in many respects a commendable one, and should, so far as is consistent and practicable, be gratified. The eagerness of the freedmen to acquire the rudiments of education, is another interesting feature in their new condition. In spite of all obstacles, many are determined to learn to read and write. Schools have been established for the purpose of their instruction, both by benevolent associations and by the Bureau, and \$27,819.60 was expended for the support of the latter in about six months. "In many parts of the country," says General Howard, "the hostility of the white people to these schools has been undisguised, and every effort has been made to get the buildings, used for school purposes, away from the teachers. It is difficult to describe the odium with which the excellent self-denying school teachers are met; doubtless the treatment to which they are subjected arises in part from the feelings engendered by war, but is mostly due to the prejudice against educating the blacks, and the belief that the teachers are fostering social equality. It is right, however, to say that there are many Southern men who earnestly advocate the introduction of schools, and several churches have established them in connection with their organizations."

Transportation has been allowed free to stores and supplies for the benefit of both refugees and freedmen; to teachers duly authorized by the commissioner or assistant commissioners; to army officers travelling under the order of the commissioner or his assistants; and to such destitute refugees and freedmen as were dependent upon the Government for support, to points where they could procure employment or subsistence. In six months (June to December, 1865) transportation was granted thus to 4,031 persons of color, 1,778 white refugees, 1,946 freed people, and 307 teachers, etc.; and twenty-one boxes and bales were transported free, containing stores for the refugees and freedmen.

Rations were bestowed sparingly, and only where there was absolute necessity. Teachers, etc., were allowed to purchase rations on the same terms with officers of the army. Dependent freedmen and refugees in hospitals, and the wives and children of soldiers were supplied, and a lien taken on the crop for repayment, but this was remitted wherever they were obliged

to give up their lands. The general principle in the Mississippi Valley and elsewhere has been that those able to work and support themselves, have been obliged to refund the cost of the ration when they obtained employment; but orphan children in asylums, the sick in hospitals, and the helpless have been fed. As far as possible, too, each estate, county, district, parish, or town, has been held responsible for its own poor. As a general rule, the planters have taken care of the poor and helpless that remained on their plantations. Some have angrily driven them away, but this was not the general rule.

The receipts of the Bureau to November 1, 1865, including \$115,236.42 of retained bounties held in trust for colored soldiers or their families, were \$907,396.21, and the total expenditures \$478,363.17, leaving a balance on hand of \$813,796.62.

The breaking up of the old plantation system, the congregating of the freedmen in considerable numbers in cities, towns, villages, and at military posts, under circumstances often of privation both of food and clothing, and the not un-

frequent expulsion of the aged, infirm, and sick from plantations by the former masters, who were indignant at the change of affairs, and especially at the unwillingness of their former slaves to labor for them without definite contracts, all tended to increase greatly the sickness and mortality among the freedmen. The commissioner found his abilities overtaxed in supplying medical treatment to these poor unfortunates, yet he did what he was able. There were on the 31st of October 42 hospitals, with a capacity of 4,500 beds, and 24 asylums, colonies, etc., with accommodations for 5,000 more, with 18 commissioned medical officers, and 83 contract physicians, 180 male and 177 female attendants, under the control of the Bureau, in which those suffering from severe disease could be placed, but the number requiring aid far outran these scanty accommodations. The annexed table shows the number of freedmen treated by the medical department of the Bureau, from its organization to the close of October, as well as the number of deaths and the number remaining under treatment October 30, 1865:

Where there was no medical attendance, as was the case for some time in some of the Southern cities, the mortality was fully thirty per cent. of the sick; but when there was ample provision made for their care, and medical treatment as in the District of Columbia, it never exceeded four per cent.

During the same period 2,531 white refugees were received into the hospitals of the Bureau, of whom 227 or about nine per cent. died, and 338 remained in hospital on the 30th of October. The white refugees were also cared for in private hospitals or those of the Union and Western Sanitary Commissions, so that these figures do not represent by any means the number of their sick.

The following table shows the number of schools for freedmen in each military department, the number of teachers, and the number

of scholars. Many of these schools were organized and are now taught by teachers employed and paid by the National Freedmen's Aid Society, the American Missionary Association, the Boston Freedmen's Aid Society, the Baptist Free Mission Society, the American Baptist Home Mission Society, the Western Freedmen's Aid Societies, and the Western Sanitary Commission. To all of these, however, the Freedmen's Bureau lent a helping hand. Rations were furnished to the teachers at the commutation price, and transportation, when necessary, free. In cases where there were no teachers of these associations, or later by the Freedmen's Commission, the Bureau appointed and supported them. The freedmen themselves in almost all cases provided for the incidental expenses, and wherever they could do so contributed to the support of the teachers and the procuring of school books:

EDUCATIONAL STATISTICS, OCTOBER 31, 1865,

DEPARTMENTS.	No. of Schools.	No. of Teachers.	No. of Pupils.	REMARKS.
District of Columbia.....	41	91	4,894	These are aside from the regular colored schools of the District, supported by the colored citizens. Some opposition. A few are self-supporting. Bitter opposition; not only to the schools, but to the Bureau, and cruelty to the freedmen. Opposition, with violence to the schools. Less opposition than in most of the South. Schools organizing. Strong opposition. Violent opposition in some parts of Kentucky, and Middle and Western Tennessee. A number of school-houses burned. Schools organizing; some opposition.

General Howard visited Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Louisiana, Mississippi, and Tennessee, on a tour of inspection, in October and November, 1865. A strong conviction exists that free labor, notwithstanding the sudden emancipation, and the thousands of causes of disturbance incident to the war, will prove successful; but in order to hasten this result, every effort must be made by officers of the Government, and all others concerned, to secure confidence between the holders of property and the freedmen, and restore that confidence wherever it has been impaired. On the part of the freedmen, they are looking for justice and privileges with perhaps too exalted notions; yet their confidence cannot be obtained without a reasonable extension to them of the rights and privileges of free men. On the part of the property-holders, great complaint is made of want of security of labor, the majority seeking some compulsory process; that is, some substitute for slavery. "There are so many examples of complete success of free labor that I bring them as an answer to such complaints; and I believe that the causes of complaint are due as much to the prejudice of the employer, and want of practical knowledge of any other system than the one under which he has been brought up, as to the ignorance and suspicion of the laborer.

"I therefore earnestly advocate equality before the law, trusting to time and education to overcome prejudice and ignorance."

He advocates the continuance of the Bureau or some substitute for it of a national character, for a variety of reasons, all of which were deemed satisfactory by Congress, who passed a bill continuing it and enlarging its powers, in February, 1866, which was, however, vetoed by the President on the 20th of that month. Some of these reasons were of great importance; such were the following:

The Government has set the slaves free, and bound itself to make that freedom an undisputed fact. Some guarantee, beyond any existing ordinance in any State I visited, is essential to secure the actual and continuous protection of life and property to the freedmen. Where legislation is constrained, as it now is in the Southern States, for the most part, from several causes, there is danger of the statute law being

in advance of public sentiment, so that where there is the most liberality, ill consequences would be likely to result if Government protection should be immediately withdrawn.

Where the Bureau fails to afford this protection, it is yet a means of exposing to the Government, and to the public, acts of injustice and oppression; and in this way it affords a moral check against their commission.

A want of mutual confidence between the white employers and the colored employés actually exists to a large extent. This can usually be traced to circumstances connected with the war, and it is increased by the peculiar prejudices and education of all persons under the slavery system.

The Bureau officers actually do restore this confidence, as a general rule, when fairly met.

With scarcely any exceptions, the freedmen expressed the utmost confidence in its agents, and are only alienated where agents prove themselves untrue to their interests.

Wherever the planters have taken advantage of the aid afforded by the Bureau, the best results have followed. This work will require time for its completion.

Education is absolutely essential to the freedmen to fit them for their new duties and responsibilities. I find many enlightened and learned men in every State, advocating the necessity and wisdom of establishing a system of education; yet I believe the majority of the white population to be utterly opposed to educating the negroes. The opposition is so great that the teachers, though they may be the purest of Christian people, are, nevertheless, visited publicly and privately with undisguised marks of odium. This Bureau fearlessly superintends and fosters these schools, which it is believed will, in time, by their success and good influence, bring over all fair men, at least, to their support.

Every colored man I met, of any considerable intelligence, pleaded earnestly for the continuance of the Bureau, as his only hope of justice and privilege correspondent to the necessities of his new position. Therefore I should fear an almost universal disturbance among the freedmen, as a consequence of its removal, till society had become more settled and State action more liberal than at present.

The absolutely indigent, as orphans, sick, aged, and infirm persons, now aided by the Bureau, have no present prospect of local aid.

The Bureau, with its agencies, affords a means of constant and reliable information essential to Congressional and Executive action, till hostility against the Government shall have more completely subsided, till free labor shall have become more palatable, and till the rights of negroes to full protection by the laws becomes more generally believed in than now appears.

The Bureau, in conjunction with the military force, is at present a means of encouraging immigration to the different Southern States. Union men of the

South, and Northern men now residing there, have expressed their utmost fear lest the War Department should withdraw its agencies, asserting that the state of society is such, that they could not remain in the South with safety. Quite a number have urged me, with all their might, to do what I could to prevent such withdrawal. This fear is doubtless much exaggerated, and probably based on the unusually large criminal list, yet it does exist. Every possible material interest now favors such immigration.

General Howard urged in his report the necessity of some further legislation to provide effectually for the aged, infirm, and helpless negroes, to furnish school buildings and sites for the benefit of the children of freedmen and poor whites, and to guarantee to the freedmen the right to rent and purchase real estate. His estimates of the amount necessary for the expenditure of the Bureau for the fiscal year commencing January 1, 1866, were \$11,745,050.

On the 28th of December, 1865, General

Howard communicated to the Secretary of the American Freedmen's Aid Commission, at Washington, the following table showing the number of Freedmen then receiving supplies from the Bureau, and the probable number who would need them through the winter:

	Now receiving Rations.	Estimate for Winter.

G

GASKELL, Mrs. ELIZABETH CLEGHORNE, an English author and novelist, born in 1823, died at Alton, England, November 12, 1865. Her maiden name was Stevenson, and she was the wife of a Unitarian clergyman, who was for several years a resident of Manchester. Her first novel, "Mary Barton," published in 1848, at once attracted attention by its vigorous sketches of character and its graphic illustrations of English factory life. Indeed, so faithfully were these portrayed that the manufacturers manifested some degree of hostility toward both the work and its author, and thus greatly increased its circulation. This was followed by "Moorland Cottage" (1850), "Ruth" (1853), a tale of considerable power, and, like most of her works, founded on her observation of the habits and privations of the poor; and subsequently by "Cranford," "Lizzie Leigh," "Round the Sofa," and "Sylvia's Lovers." Mrs. Gaskell, however, is better known in America by her "Life of Charlotte Brontë," prepared for the "London Daily News," and republished by the Appletons. The great interest taken here in the author of "Jane Eyre," insured for the biography a wide circulation, and the fascinating style in which it was written added to its popularity; but her too frank disclosures of certain domestic details exposed her to not a little censure among the family friends, and to some personal inconvenience. Mrs. Gaskell's novels are distinguished by their singularly quiet and natural tone, their forcible delineations of character, and the purity and felicity of their style. Her last work, just completed, is entitled "Wives and Daughters," and is now republished in this country; and the latest work of her pen was a little story for the Christmas number of "All the Year Round," which forms one of "Doctor Marigold's Prescriptions."

Mrs. Gaskell had just begun to reap the full reward of her literary labor, and was preparing to give her husband a pleasant surprise by taking him to a lovely home which she had purchased, when her death took place. While reading to her daughters in the family circle, she suddenly expired.

GASTEIN, CONVENTION OF. The village of Gastein is a watering-place in Austria, in the Inn village, situate about forty-nine miles from Salzburg, and three thousand feet above the sea. At this place a convention was concluded between Austria and Prussia on August 14, 1865, for the regulation of the administration of the duchies Schleswig and Holstein. In virtue of this agreement Austria assumed the administration of Holstein, and Prussia the administration of Schleswig. England and France announced, in diplomatic notes, their dissatisfaction with the arrangement. (*See* AUSTRIA AND SCHLESWIG-HOLSTEIN.)

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1865. In no department of Physical Science is there so great and so constantly increasing zeal manifested as in Geographical discovery. Governments prompted by the desire of increasing their commerce or of territorial acquisition, corporations which seek in hitherto unknown lands markets or sources of wealth, Geographical Societies which desire to add to the knowledge already attained of the earth's surface, and individuals with whom the love of adventure and discovery is a passion, or who are prompted by the higher motives of philanthropy and religion, all endeavor to promote the progress of discovery and exploration in every quarter of the globe. Some idea of the extraordinary activity with which geographical investigation is prosecuted, may be acquired from the fact that in the year 1865 no less than sixteen hundred and fifty distinct publications

on geographical subjects were issued throughout Christendom. Of these two hundred and thirty-five were atlases, maps, or charts. The Germans are most active and zealous in their explorations, but the English and French are not far behind them. In the United States the prevalence of war has diminished the zeal for geographical research, yet something has been done, mostly by individuals or single States, to promote discovery and exploration. Beginning, as usual, with the AMERICAN CONTINENT, we find that the researches into the geography of the *Arctic regions* have been vigorously prosecuted. Captain Charles F. Hall, whose narrative of his first voyage of discovery was published in 1864, set out in June of that year, far more fully equipped than before, for a second expedition into the regions of "frost and perpetual snow." He was successful in some of the objects of his expedition. Taking with him his faithful interpreters and friends, Ebiebing and Too-koo-li-too (the Esquimaux man and woman who accompanied him to the United States after his first voyage), he reached, before the close of the autumn, the vicinity of the Esquimaux or Innuits, with whom he had before become acquainted. Here, soon after, he gained, to his great satisfaction, information respecting four of Franklin's men, Captain Crozier, Parry, and Lyon, and another, who had survived when the others perished from cold and starvation, the three latter having subsisted on the flesh of their dead comrades, and had been sheltered and fed by the Innuits. One of them had subsequently died of illness, but there was some reason for believing that Crozier and the others might still be alive. He also learned that they had had a battle with the Indians (not Esquimaux) near the Estuary of Great Fish or Back's River, before they were reduced to starvation, and that Crozier and some of the others were wounded but none of them killed, while large numbers of the Indians were slain. After their recovery from starvation, Captain Crozier and his two surviving comrades had gone to the southwest by land, probably with the intention of reaching Fort Churchill or York Factory. They were well supplied with food, and had skin or rubber boats to cross the streams. They did not reach either of those points, or something would have been heard of them long since; but Capt. Hall is very sanguine that they might yet be living, having become familiar with the Inuit mode of life and conforming to it. Captain Hall made other interesting geographical discoveries respecting the Northwest passage, the coasts of the Northern Ocean, etc., full particulars of which have not yet been published.

Another expedition to the Polar region has been projected in England by Captain Sherrard Osborne, to be undertaken under the auspices of the Royal Geographical Society; but after a long and animated discussion at several meetings of the Society, and several communications from Dr. A. Petermann, and other eminent

foreign geographers, as to the best route, whether by Spitzbergen or by the coast of Greenland, the expedition was postponed to the coming summer.

British America, at least east of the Rocky Mountains, has not been the field of any geographical explorations during the year, though its active geologists have been investigating with great zeal its abundant sources of mineral wealth. The mines of gold, copper, silver, and lead, projected in the eastern provinces with a fair showing of success, have attracted considerable attention, while other and rarer minerals are found in different portions of its territory. The western provinces, British Columbia and Vancouver's Island, have been explored with considerable care during the year, an expedition under command of Mr. Frederic Whymper having traversed the latter through its entire diameter, and made a glowing report of its productions and capacities, mineral, vegetable, and animal. They found a chain of seven lakes, connected with each other and extending nearly across the island, their united length being twenty-two miles. Gold was found in great abundance, iron of a superior quality, nickel, plumbago, and petroleum, the latter in immense quantities. Dr. Brown, the botanist of the expedition, discovered a new genus of pines, of colossal size. Another party explored the Fraser River region, with gratifying results.

In the *United States*, the close of the war has brought out numerous reports of commanding officers, of military surveys made in connection with their campaigns, which throw much light on the topography of the sections traversed. The geographical and geological survey of California has been prosecuted with zeal, and two volumes of the report of the commission have been published. The mountains of the State have been explored, and their altitude approximately ascertained. The loftier peaks of the State (the highest in the United States) are found in the Sierra Nevada. Several of these exceed 15,000 feet in height. The Coast range is much lower, but its culminating points are from three-fourths of a mile to a mile in elevation, San Carlos, the highest, being 4,977 feet; Mount Hamilton, 4,440; Mount Diablo, 3,856; and Mariposa Peak, 3,700.

The organization of an Imperial Government in *Mexico* has led to the active exploration of portions of the territory of that interesting country, and the appearance of a new map of Mexico on the scale of 1:3,000,000, with plans of Matamoras, Tampico, and Vera Cruz, and a plan of the route between Vera Cruz and Mexico. The Secretary of the Mexican Geographical Society, under date of June 28, 1865, communicated to the Secretary of the Imperial Geographical Society of Paris some facts of interest. On Mount Santa Maria, near the Mexican capital, a mass of ruins has been unearthed and explored, and many objects of antiquarian interest discovered. Among these were idols, masks, ear-rings, collars, rings, pen-

nons, obsidian headed lances, housekeeping utensils, etc., etc. Vocabularies of the Camanche and Turascan languages were contributed by members of the Society, and several volumes in the mystic language of the ancient Mexicans, as well as a grammar of the Chacona language. Preparation was also made for the publication of a physical map of Mexico, indicating its climates, productions, etc.

In *Central America* the principal geographical interest has been concentrated on the most desirable route for an interoceanic canal across the isthmus of Darien, or at some other point across the Andes of Central America. In former volumes of the *ANNUAL CYCLOPEDIA* we have enumerated many of these proposed routes, but others still are suggested. Mr. Laurence Oliphant read a paper, before the Royal Geographical Society of London, on a new route, by way of the river Chepo or Bayanos on the Pacific side, and the Mandinga on the Atlantic side. The Chepo discharges its waters into the Pacific about thirty miles east of Panama, and is navigable for large ships to Teruble, from which point to tide-water on the Mandinga is only fifteen miles. The elevation of the Andes in this distance will, however, be a serious objection to the construction of a canal. Gen. Mosquera, the Columbian minister at the court of St. James, gave some account to the Society of an exploration of a route through the valley of the Cauca. Mr. Evan Hopkins advocated the route of the Panama Railroad, as the elevation of the Andes at that point did not exceed 250 feet. Mr. Gerstenberg, another explorer, objected to all these proposed routes—that they had no good or well-sheltered harbors at either extremity which would permit the passage of ships in all weathers into the canal. The route from San Miguel to the Bay of Caledonia was the only one which fulfilled this condition. There was, however, one difficulty in making a canal by this route. The distance from tide-water to tide-water was thirty-five miles, and the elevation to be overcome by locks 980 feet, and this very considerable elevation was mostly within a space of three miles, and at a point where it would be difficult to furnish sufficient water for the canal. The numerous projects for an interoceanic canal and the various points proposed for its *termini* indicate, as Sir Roderick I. Murchison well remarked, that a geographical knowledge of the American Isthmus is still one of the numerous desiderata of geography.

In *New Granada*, a State belonging almost equally to Central and South America, Mr. Robert Cross, a commissioner sent by the English Secretary of State for India to collect seeds of the *Cinchona*, or *Quinquina Pitayo*, for the cinchona plantations in India, reported to the Geographical Society, at its April meeting, that he had followed the course of the Andes Cordilleras in his route from Quito through Ibarra, Pasto, and Popayan. The wooded valley of Sylvia is the centre of a district abounding in cinchona. Seven days' journey south of Sylvia

he found a volcano not heretofore described, but which in common with a village near it bore the Indian name of Puracé. During his journey he made the ascent of the peak of Finon from Pitayo, and by means of boiling water ascertained that its height was about 8,000 feet. The Indians of Pitayo speak the *Paes* dialect, which differs greatly from the *Quichua*, the language of the Indians of Ecuador, Peru, and Bolivia, and has no affinities with the *Guambiana*, the dialect of the neighboring Indians of Sylvia, Toteró, Paniquita, and Puracé. In crossing the glacial plateau of Guanacas, in order to descend from the forests of Pitayo into the valley of the Magdalena, Mr. Cross and his mule came near perishing from the intense cold. Along the road at short distances were found numerous skeletons of men and animals who had thus perished.

Dr. Karl von Seebach, a distinguished German geographer, in the autumn of 1864, visited Costa Rica, with the purpose of exploring its volcanoes, which are very numerous and active. In the months of December and January he made a survey of the volcanoes Rincon de la Vieja and Cuipilapa Miravalles, and the mountain peaks Tenorio and Pelado, as well as a very considerable number of lower summits, some of them volcanic. These had, however, all been previously described, and his investigations only confirmed the substantial accuracy of previous surveys. On his return to Nicaragua in the latter part of January, he received information of another volcano in Costa Rica, which, though superior in height, and more remarkable in character than any of the other volcanoes in the State, was as yet unknown except by name to European explorers. Early in March he set out to survey it, and explored it with great thoroughness. It is called Turrialba, and is in the northern part of the State, west of the better-known volcano of Cartago or Irazu. The active crater, which is 9,342 feet above the sea level, is the lowermost of four summits which join one another, the eruption having apparently torn away a portion of its original elevation. The next summit has several points which emit smoke, but no active crater; and the further and loftier summits, though not now indicating any recent volcanic action, have crater basins and lava deposits, indicating their former activity. Seen from Irazu, the higher and now inactive summits have the appearance of overhanging the crater, and of being to some extent undermined by it.

SOUTH AMERICA proper is the favorite field for geographical explorers; its lofty mountains, its mighty rivers, its vast forests and savannas, as yet but imperfectly known, its novel and abundant fauna and flora, and its precious metals and gems, render it one of the most attractive of regions for the scientific adventurer.

Brazil has long been the object of geographical study; but so vast is its territory, that as yet but a small portion has been thoroughly explored. Dr. Bousquet, a physician and natu-

ralist of Paranagua, communicated in the spring of 1865, to the French Department of Foreign Affairs, a paper giving interesting information respecting the province of Parana in the Brazilian empire. The province possesses a very fertile soil, and the finest climate in South America, uniting the advantages of the intertropical regions with those of the south of France and Italy, and it produces in abundance the vegetables and fruits common to the tropics and the south of Europe. It might easily furnish abundant exports from these products, but at present its exports are confined to ship-timber and fire-wood and Paraguay tea (*yerba maté*). The last-named plant is grown only in Paraguay, Parana, and a few points in the province of Rio Grande de Sul. It is in great demand all over South America, being used instead of Chinese tea, and often of coffee. The province of Parana is adapted beyond any other portion of South America for profitable silk culture. The common silk-worm there (the *Bombyx arrindia*) feeds upon the leaves of the *ricinus*, or castor-oil plant, and yields five or six annual crops of cocoons. The soil and climate are also well adapted to the cultivation of coffee and sugar-cane and tobacco. The coffee is reckoned superior to that of Rio. The Brazilian sugar has a good reputation, and the tobacco is not inferior to the best Vuelta Abajo.

Vanilla grows wild in all parts of the province, and in perfume is equal to the best Mexican or Venezuela article. Cotton yields two good crops in a year. All the leguminous plants, as well as rice and maize, are cultivated with success. The forests abound with valuable timber, both for ship-building and cabinet purposes. Among these are the *Arariva*, whose wood is red, yellow, or black; the *Carulla*, yellow and black; the *Corindila*; the *Tujuba*, a sort of iron-wood; the *Jinquitiba*; the red *Peroba*; and the white, red, and black *sassafras*. The country is rich in medicinal plants, shrubs, and gums. Among these are the *ipeacuanha*, a very superior sarsaparilla, the *Cambara*, and the *Carroba*, both possessing the highest reputation in scrofulous and syphilitic affections; the balsam of copaiba, the *Jahophacurus*; the *Quassia amara*, and the *Angura*, whose resin and bark are reputed in the country an antidote to phthisis.

The province is also very rich in minerals. Its marble and porphyries are of excellent quality and in abundant quantity. Gold is found imbedded in quartz and mingled with the sands of the rivers, and iron and argentiferous galena are plentiful. Near the city of Paranagua is a mine of cinnabar, and it yields, though very rudely worked, a large supply of quicksilver. The Tybagy River and some other streams contain diamonds of considerable size, emeralds, topazes, amethysts, turquoises, and rubies. The Bay of Paranagua abounds in fish of excellent quality and large size.

In the early part of the year, Professor Louis Agassiz, with a large staff of assistants, sailed

from Boston for Rio Janeiro, on a scientific exploration, appertaining rather to natural history and palæontology than to geography, but still having some reference to geographical science. He commenced his labors at Para, early in August, and soon found the necessity of distributing his force so as to cover the greatest possible extent of territory in the shortest possible time. He discovered very early that each separate region of the great basin of the Amazon had its separate collection of different species of fish. On the 8th of September he wrote that he had obtained more than three hundred species of fish, about three-fourths of them new, although he had then examined only one-third of the Amazon without touching its affluents. At Para alone he found sixty-three species, forty-nine of them hitherto unknown, and which would require the establishment of eighteen new genera to give them place in the system of fishes. The other fauna of the Amazon-basin presented numerous novelties of species. On the 10th of September the Professor left Manaos in Amazonas for Tabatinga in Peru.

The war now raging, and which has been in progress for some months, between the Brazilian Government and the Argentine Confederation on the one side, and the Paraguayan Government on the other, can hardly fail to result in opening to commerce and the world the rich and fertile region which has so long been ruled by those who have maintained a policy as exclusive as that of China.

Herr Waldemar Schultz, a German geographer and antiquarian, published in August, 1865, in the *Zeitschrift für Allgemeine Erdkunde* of Berlin, a very elaborate essay "On the usual manner of Life, Civilization, Rites, and Customs of the Aborigines of Central South America," including under this term the subjects of the Incas. The essay exhibits extensive and patient research, and brings to light many new facts relative to that interesting people.

Several discussions have been held in the foreign geographical societies, and communications read on the causes of the rapid decrease of the Indian tribes in both North and South America. In North America the unwillingness of the Indian races to assimilate to the customs and mode of life of the whites, their frequent wars and raids, excessive intemperance, and exposure, often with insufficient food, and the prevalence of small-pox and other severe epidemic and contagious diseases, are undoubtedly the principal causes of the decay and rapid extinction of the aboriginal tribes. In South America and Mexico there are to be added to these, according to the testimony of travellers, the amalgamation of races, the very general habit of producing abortion in the case of first children, that the Indian may not be deprived of the menial services of his squaw, and the prevalence of suicide, especially in any severe illness.

Proceeding southward, we come to the *Argentine Confederation*. The province of Mendoza in this Confederation, whose chief city was in 1864 nearly destroyed by an earthquake, has been during 1865 explored with considerable care, and its census taken by the authorities. From this census we glean the following facts: The province of Mendoza is divided into twelve sub-delegations and fifteen departments. Its area is 11,250 square leagues, or 1,800,000 square quadras (the square league contains 160 square quadras). Of this quantity 138,599 quadras were under cultivation, and 309,633 square quadras were capable of cultivation. The principal crops were grain, wine, and fruits. The population of the province was 57,476 souls, of whom 28,599 were males, and 28,879 females; 12,048 were married, 42,907 unmarried; 706 were widowers, and 1,815 widows; 20,251 were between one and ten years of age, 24,263 between ten and thirty, 9,981 between thirty and fifty, and 2,965 between fifty and one hundred. Twenty-four persons were over one hundred years of age.

The live stock consists of 150,961 neat cattle, 77,054 horses, of which about 20,000 were saddle-horses, 7,188 mules, 227,753 sheep, 66,819 goats, 124,089 head of poultry, 15,000 asses, and 3,600 fatted beasts.

There are in the province some remarkable warm springs or geysers, one of which, with a breadth of about 195 feet, throws the hot water periodically to a height of from 150 to 160 feet, and others of less extent send it to a height of 100 to 130 feet. The temperature of the hot springs is about 118° Fahrenheit. The waters are charged with sulphur, and are regarded as of advantage in rheumatic and scrofulous diseases.

In the province of Corrientes, in the Argentine Confederation, there is a large lake on the elevated plateau which overlooks Paraguay, called the Lake of Irira, signifying in the Guarani tongue, Clear-water Lake. This lake has had from the discovery of the country an island containing about fifty square leagues. Some time since a mysterious darkness enveloped the island, and remained for several days. When this finally cleared up, a pillar of smoke was seen ascending from the island, and all over the lake small islands not previously existing were discovered to the number it is said of thousands, some of which seemed to float upon the waters. The caymans or alligators, which abounded in the lake, soon took possession of these and basked upon them. The inhabitants of the borders of the lake are greatly terrified at these occurrences, and cannot be induced by any rewards to go to the principal island, though it is said that several Jesuits, expelled from the neighboring mission, escaped thither, and have a beautiful plantation there; and that an Indian of the Tobas tribe, the last of his family, has also taken up his residence there. Wild animals are certainly not wanting on the island, as in a clear and still night their

roaring can be heard distinctly, and the boa constrictor has found a home there, though not known to exist on the mainland in the vicinity.

Spain is conducting a war with the South American States on the Pacific slope, Chili, Bolivia, Peru, and Ecuador; and this war may to some extent delay or impede the development of those States. Chili, which, for a few years past, has been making rapid progress in education, wealth, and social improvement, now finds herself compelled to maintain a large maritime force to repel the invasion of the Spanish troops. She has thus far done this successfully, and with the alliance of the other western States of South America will probably continue to do so, but at the expense of considerable material progress. The communications between Chili and the Argentine Confederation by means of passes and lakes in the southern part of the Andean chain have received further exploration, and nine distinct routes, all of them practicable without serious difficulty, are now described, by which the commerce of the two countries can be maintained. Of these, one or other of those by Lake Rinihue or its vicinity, described in the *ANNUAL CYCLOPEDIA* for 1864, are the most desirable.

Herr Hugo Reck, a German civil engineer, of very profound scientific attainments, who spent four years, 1858-1862, in the exercise of his profession in connection with some of the largest mines of the Republic of Bolivia, and subsequently for two years was engaged in the survey and exploration of the Bolivian Andes, has published in Petermann's *Mittheilungen* in an extended and valuable treatise on the history, physical geography, orography, hydrography, and meteorology of Bolivia, one of the most important contributions to geographical science of the year. We can notice only a few of the many additions he has made to our knowledge of the geography of that republic. He gives from his own measurement the height of more than thirty of the highest summits of the Andes proper, and ten or twelve others from the admeasurements of Pentland and Signor Pissis; the snow-line of five of the highest from his own observations; the height of five passes and seventeen summits of the isolated and middle range, and of ten summits of the eastern or inner Cordilleras. Some of his measurements differ considerably from both Pentland's and Pissis' results, but from his very great care and the superior instruments he had at command we believe they are more nearly accurate than the figures of those eminent observers. We can only give the height of the three peaks of Illimani, according to his measurement. The North Peak he makes 20,608 feet, or nearly 250 feet lower than Pentland; the Middle Peak 21,092 feet, or about 200 feet higher than Pentland; and the South Peak, the highest of the three, 21,137, about 180 feet higher than Pentland, and 18 feet lower than Pissis. Huayna Potosi he found to be 20,101 feet, or about 30 feet higher than Pentland's, and more than

800 above Pissis' measurement. Sorata, whose southern pinnacle is now generally believed to be the highest of the South American mountains by a few feet, he did not measure; but from the results of his examination of Illimani, it is somewhat doubtful which is the higher. The snow-line on Illimani (lat. $16^{\circ} 38' S.$) he found to be 17,171 feet, and the average height of the snow-line in five mountains lying between $16^{\circ} 38'$ and $21^{\circ} 43' S.$ was 17,105 feet. The middle range of mountains did not attain to as great a height as the giants of the Andes proper, only two of the peaks rising above 18,000 feet. Of the inner or western Cordilleras the summits of the Cordillera de Andacahua are the loftiest, rising to an average height of about 18,900 feet.

Herr Reck devotes considerable space to the description and statistics of the lofty table-lands or Pampas of Bolivia. These occupy a large portion of the area of the republic, that of Oruro, "the great central plateau of Bolivia," being 2,580 square leagues in extent. The average elevation is 12,431 feet, though the highest are 13,640 above the sea level.

Herr Reck's observations on the hydrography and climate of the country are very complete. The river systems and fresh and salt water lakes are all described, and their size, extent, and sources specified. He gives valuable information relative to the temperature and climate of the Puna brava, or elevated Pampas. The town of Potosi is about 13,084 feet above the sea level, on one of these plateaus, and the temperature there in November, the hottest month, was at 8 A. M. $60^{\circ} 29' F.$; at 2 P. M. $68^{\circ} 25' F.$; at 10 P. M. $51^{\circ} 42' F.$ In July, the coldest month, it was at 8 A. M. $36^{\circ} 30' F.$; at 2 P. M. $53^{\circ} 31' F.$; at 10 P. M. $39^{\circ} 34' F.$ In the lower Pampas, at an elevation of nearly or quite 12,000 feet, the sun is very hot in November, though when not exposed to its direct rays the strong breeze reduces the temperature. Herr Reck found on the Aullagas Pampa, November 4, 1860, the temperature in the shade at mid-day was $79^{\circ} 25'$ while in the sun, and reflecting the heat of the sands, the thermometer stood at 138° . There is usually in these regions neither rain nor snow except in the months of August and September.

There have been some geographical discoveries and explorations made during the year in the ATLANTIC OCEAN. The attempt to lay the Atlantic Telegraph Cable proved a failure, owing to untoward accidents which, in the opinion of those best qualified to judge, should not shake our faith in the possibility of its ultimate accomplishment. The attempt will probably be repeated during the coming summer. Capt. Toynebee, R. N., has made a series of observations during five voyages between England and India, relative to the specific gravity and temperature of the sea at different points, which he laid before the Royal Geographical Society on the 8th of May, 1865. He found the specific gravity decrease as he approached the equator,

and also in the Bay of Bengal. In the former case he attributed it to the vast quantity of rain which falls south of the equator between the northeast and southeast trade winds. In the Bay of Bengal he believed it due to the volume of water poured into that bay from the great rivers of India. Between $1^{\circ} 30'$ north latitude, and $30'$ south, the temperature of the ocean is uniformly 70° Fahrenheit, except along the west coast of Africa; from August to February, cold currents flow near the land, and, as they approach the Cape of Good Hope, the temperature decreases very rapidly. In February, in Table Bay, he had found the water as low as 51° Fahrenheit. To the southeast of the cape it rises with considerable rapidity, reaching, on the parallel of 40° south, longitude 50° east from Greenwich, 67° Fahrenheit. This warm current enters and passes through the Channel of Mozambique. The temperature of the land around the cape is reduced by this coldness of the sea.

"The Sea of Sargasso" is one of the names which has been applied to that extensive portion of the Atlantic Ocean lying between 16° and 38° north latitude and between 29° and 50° west longitude from Greenwich, which is constantly covered with one or more species of seaweed (principally the *fucus natans*), in such quantities as to appear in some places like a prairie in the sea. Many observations in relation to this floating mass of vegetation have been recorded, but the latest and most thorough has been that of Captain Leps, of the French Imperial Navy.

Contrary to the generally received opinion that this vegetation had its origin and growth in the Gulf of Mexico, and was driven to this region between the trade winds by the Gulf Stream, Capt. Leps maintains that it has its origin and growth in the vicinity where it is found; that it is analogous in character to some of the fresh-water algae, and propagates itself by continuous growth without any necessary connection with earthy matters, but deriving its nourishment from the air and the soluble matters of the ocean, and that the comparative stillness of the waters in the region where it is found, in consequence of their lying between the atmospheric currents of the two trade-winds, facilitates its growth and extension; and that it is only kept in bounds by the force of the winds on its borders which drive off large masses, and throw them upon the shores of France and Northern Africa. Capt. Leps believes that this vast floating mass of seaweed might be utilized to advantage either by being gathered on ships and brought to the French coast, where great quantities are now burned and lixiviated for the sake of the soda and iodine they contain, or that these valuable ingredients might be extracted at the region itself, on iron-plated rafts, or the decks of vessels, as the oil is extracted from the whale's blubber on board the whaling-ships.

In EUROPE, geographical science has made decided progress during the year. The publi-

cation of the Emperor Napoleon III.'s Life of Cæsar has led to the discussion and investigation of many points in regard to his expeditions, and especially of his invasion of Britain. A German geographer, Herr H. J. Heller, has published an elaborate essay on the subject of his landing in Britain, in the *Zeitschrift für Allgemeine Erdkunde*, in which, bringing forward all the references to it in the works of the Roman geographers, and illustrating the subject by a well-drawn ancient map, he furnishes ample material for the decision of this long-mooted question.

The *French Government* has completed its topographical survey of France, long since undertaken, and the French geographers are urging upon the Government the importance of a new one on a larger scale, and with the advantages to be derived from better instruments, and from the local surveys which have been made in some portions of the State.

The *Republic of Switzerland* has completed, and has now in progress, the best maps of its surface and orography of any country in Europe. A carefully engraved map on copper, on the scale of 1:100,000, is completed in twenty-five sheets. A steel-plate map, on a scale of 1:250,000 in four sheets, is in progress, and each of the cantons has a map of its own territory on scales varying from 1:25,000 to 1:50,000. The maps of the republic and some of those of the Cantons represent, by different degrees and modes of shading, the comparative height of every portion of the territory. General Dufour has been engaged for thirty years in the survey which has thus been completed.

The great increase in the trade of Amsterdam within a few years past has made the great canal across the isthmus of North Holland insufficient for the accommodation of the commerce of that city, and a new and more direct ship-canal of the largest size is now in course of construction to connect the city with the Gulf of Y. It is expected that it will be finished in 1868.

The Sand Dunes on the coast of *Jutland* have been for some years past the object of special investigation by the Danish geographer and geologist, Andersen, who published in 1865 a large volume giving the results of his observations, one of the ablest contributions to littoral geography ever made. He has considered the sand dunes historically, geologically, geographically, and economically.

M. Schmidt, a Russian geographer, has been investigating the phenomena of the glacial period in *Sweden, Norway, and Finland*. He finds confirmation of the opinion advanced by Lovén, Torell, and other Swedish and Russian geographers, that this whole region was at one time covered with glaciers, probably about the close of the tertiary period, or in the course of what modern geologists call the glacial period. At that time it must have presented an appearance analogous to that of Greenland at the present day. The grooves and furrows in the rocks indicative of glacial action, all have a direction

from northwest to southeast, and these furrows are seen even in the island of Gothland, in the Baltic Sea. From this and other indications, M. Schmidt believes that the Baltic Sea did not exist in the glacial period, and that the glaciers extended over its present surface, and that the convulsions which resulted in the depression of the bed of that sea, and which left only the Swedish mountains above the surface of the ocean, put an end to the glaciers. About the commencement of our present geological era, the continent began to rise again, and has continued to rise to the present day, lifting gradually the submerged lands out of the sea.

Mr. C. W. Blomstrand, one of the corps of explorers in the Swedish Exploring Expedition to Spitzbergen in 1861, gives an account, in the Transactions of the Swedish Academy, of the discovery of extensive coal measures in the vicinity of King's Bay, which is at the northern end of Foreland Sound. The coal crops out near the base of a mountain, and extends from the moraine of one glacier to the foot of another. It is of very good quality. There is also marble of great beauty in the same vicinity. This discovery may render that portion of Spitzbergen habitable, and thus qualify it to become a base for north polar expeditions.

The measurement of an arc of meridian across Europe is still in progress, the scientific bureau charged with it having its headquarters in Berlin, Prussia, and having collected there all the documents connected with the survey. The Department of War at St. Petersburg has reported to the permanent geodesic committee a list of the points in Russia of which the latitude, longitude, and altitude had been determined either astronomically or geodesically up to 1860. The number of these points is 17,240. A hydrographic exploration of *Lake Ladoga* has been in progress, under the direction of Grand Admiral Constantine, since 1858, and is now about complete. At the session of the Imperial Geographical Society of St. Petersburg in March, 1865, M. Andreew, one of the engineers of the survey, gave some account of the results of this exploration. The lake abounds with fish of a great number of species, some of them of excellent quality. The *sigue* is the best known of these, and is renowned for its exquisite flavor. The fisheries for it are principally in the south part of the lake. The climate along the shores of the lake is rigorous. The temperature of the water from the breaking up of the ice to midsummer is from 36° to 39° F. In August it rises from 43° to 45° F. The ice is usually from 3½ to 4½ feet in thickness. The navigation of the lake is conducted mostly by sailing-vessels of a very rude construction. About six hundred of these arrive annually at Schlusselfbourg from different points on the lake and the rivers flowing into it. They bring cargoes of firewood, timber, granite, marble, graphite, black sand, hay, cast-iron, copper, iron, salt fish, etc. The Karèles, who inhabit the eastern shores of the lake, are a very ignorant and superstitious

people, and live in great poverty and discomfort. They are mostly engaged in the rearing of cattle, and it is among them that the rinderpest or cattle-plague is said to have originated, and from them it has been propagated all over Europe. This disease, however, has existed from time immemorial in Siberia, and it is by no means impossible that it has been introduced thence into the districts of Olonetz and Petrosavodsk. M. Andreew believes that the disease is caused by the cattle drinking the red and stagnant water of the marshes. In Finland, the adjoining country, the inhabitants dig wells for the supply of their households and their cattle, and do not suffer them to drink the marsh water, and the rinderpest is unknown there.

In the exploration of *Northern Russia*, now in progress under the direction of M. Barbot de Marné, the question long since raised by Russian geographers in relation to the comparative claims of the Vytchegda and Dwina to be considered the principal stream, has again come up for decision, and the eminent geographer has given it careful consideration. The Vytchegda is longer and deeper than the upper Dwina, and at their point of union seems the more important stream, but the basin of the Jug or Young and the Dwina is the largest in Northern Russia, and drains a greater surface than the Vytchegda. M. Barbot de Marné concludes that the Jug or Young is the primitive stream, and that the whole river, after the junction of the Dwina and Vytchegda, should bear the name of Jug or Young.

The various explorations and surveys of the Alps which have been conducted during the last hundred years, the Lombardic Alps and especially the clusters of elevated peaks known as the Adamillo and Ortles groups, have been overlooked until within the past three or four years. They have now been the object of a very thorough exploration, and though there is no one summit which attains to quite the height of Mont Blanc, there is nowhere else in Europe so large a number of peaks of two miles or a little more in height clustered in so small a territory. Among the explorers who have made these groups a special study, are Lieutenant Payer, Dr. Von Ruthner, E. Von Mojsisovics, Secretary of the Vienna Alpine Club, Messrs. Freshfield, Walker, and Beechcroft, and Mr. Ball, President of the London Alpine Club, Mr. F. F. Tuckett, Messrs. E. N. and H. E. Buxton, and Dr. P. G. Lorentz. Mr. Tuckett, in a very able paper on these groups in Petermann's *Mittheilungen* for January, 1865, gives tables of the height of the principal passes, and of the highest summits in this region. It should be remarked that nearly all these peaks and passes are included in the district lying between 46° and $46^{\circ} 45'$ north latitude, and between $7^{\circ} 52'$ and $8^{\circ} 30'$ east longitude from Paris, or in other words a tract 40 by 50 miles in extent. There are sixteen known passes over these mountains, ranging in height from

about 6,000 feet to over 11,000 feet. There are ninety-eight summits above 7,000 feet in height. Of these, four are above 12,000 feet, viz.: Ortles Peak, 12,814; King's Peak, 12,348; Zufall (Accident) Peak, No. 1, 12,348; and Zebbru Peak, 12,255. Twenty-eight other peaks are between 11,000 and 12,000 feet; thirty-three between 10,000 and 11,000; twenty-five between 9,000 and 10,000; seven between 8,000 and 9,000; and one between 7,000 and 8,000 feet. The upper glaciers of the Ortles Peak are 11,445 feet above the sea level.

M. Hecquard, French consul at Scutari, explored in 1864 the principality of Montenegro, and in a communication to his Government gives a very full and interesting account of that small but free State. The people are not highly educated, but they have a considerable measure of intelligence and self-reliance, such as results from many years of free government. Their government was a theocracy until recently; the Vladika being high-priest or bishop as well as ruler; but on the accession of the Prince Danilo I., he refused the episcopate, and was only their civil and military governor. The country is 54 geographical miles in its greatest length, and about 50 in its greatest breadth, and contains about 1,325 square miles. The population numbers about 180,000, and from the character of their country, little of the land being arable, they are compelled to make the raising of cattle, sheep, and goats, their principal business. Butter, cheese, wool, and the hides of their cattle are their chief exports, though of late the production of silk, and of honey and beeswax, have increased their wealth and added to their salable commodities. They raise wheat, maize, and some barley and oats, and cut what hay they can, but are obliged to supplement this crop with the stalks of the maize, and with the small branches and leaves of trees, for the forage of their cattle during the winter. Their supply of maize and other grains is not sufficient for their wants, and they are obliged to import some grain from Russia. The code of laws instituted by Prince Danilo was somewhat severe, though well adapted to the character of the people. He suppressed the *vendetta*, or law of retaliation, though with great difficulty; put an end to theft, which had been one of their crying sins; abolished the facility of divorce, and established a system of imposts. Under his administration, which terminated with his death in 1863, the country prospered, in spite of wars and famines. The mountains which cover the greater part of the surface are of a secondary formation, consisting of limestone, dolomite, etc., and at some points there is anthracite coal, petroleum, and hematitic iron ores. The mountains abound in wild animals, bears, wolves, wild boars, chamois, hares, foxes, martens, etc., and the rivers and lakes contain great numbers of fish, the salmon of the Maratchka being particularly celebrated for its size and flavor.

The island of Crete or Candia was surveyed

and explored by Captain Spratt, an officer of the English navy, in 1852; and the German geographer, Petermann, taking the results of his survey and subsequent reports of other explorers, in 1865 constructed a physical map of the island of great interest. The area of the island is about 3,170 square miles. The surface is for the most part elevated, rising in the central portions of the island into a ridge or backbone, varying from 2,000 to more than 8,000 feet in height, in the western part one or two summits attaining the height of about 8,700 feet. The shores are almost without exception bold, the water being seldom less than from 10 to 40 fathoms in depth, and increasing at a short distance to 100 or 200 fathoms.

The late Dr. Barth, who, in the autumn of 1864, explored the *Ægean* Sea and its shores, as well as the mountains which overlook that sea, in a report to the Royal Geographical Society of Berlin, states, as the result of his explorations, that the Thessalian Olympus range has the highest summits to be found in the region of the *Ægean* and Cretan Seas, the loftiest peak rising to the height of 9,754 feet, and that the mountains of the Turko-Grecian peninsula culminate in the summits of Rilo and Perim Dag, which have no equals in height on that coast.

Dr. Blau, the Prussian consul in the province of Bosnia* (the western portion of European Turkey), sent to his Government in 1865 some statistics of that province. The population he states at 882,722, of whom 449,479 are Greeks, 286,708 are Turks, 132,743 are Catholics, 10,026 are Gypsies, 2,438 Jews, and 1,228 belong to other sects and nationalities.

Victor Emanuel, King of Italy, gave permission in 1865 for the resumption of excavations on the site of Pompeii, and a number of interesting statues and buildings have been exhumed. In the house of Pansa, in the street of Fortune, a sculptured cross not yet finished has been found, covered with insulting inscriptions and caricatures ridiculing the notion of a crucified God.

M. Emil Sydow, gives in Petermann's *Mittheilungen* for December, 1865, a general review of European cartography, *i. e.* that connected with government surveys during the year 1865. From this it appears that nearly all the Governments of Europe are actively engaged in the prosecution of topographical and geodetic surveys, and that the greater part of them have published maps of portions, at least, of their surveys, executed in the best style, and so engraved as to indicate the height of the surface, while some of them give other and interesting details relative to the physical geography, zoology, industry, education, and religion of the countries represented. Russia has organized the most extensive surveys of this kind, occupying with her explorers and geographers large tracts in various portions of her vast empire; but several of the other States are not far behind her in the extent of their surveys, and are conducting them with great care and labor.

In ASIA the greatest interest of the year centred in the prosecution of further discoveries in Arabia. Prompted by the interesting discoveries made by Mr. Palgrave, of which an account was given in the *ANNUAL CYCLOPÆDIA* for 1864, Lieut.-Col. Lewis Pelly, of the British army, proposed to penetrate to Riadh, the capital of the Wahabite kingdom, and endeavor to effect a commercial treaty with the Sultan of that kingdom. He accordingly set out on the 18th of January, 1865, from Bushire, on the Persian Gulf, accompanied by Dr. Colville and Lieut. Hawes, and landing at Kuait, or Korem, in about lat. $29^{\circ} 10' N.$, near the head of the Persian Gulf, proceeded directly southwest toward Riadh. Soon after leaving Kuait, the travellers found themselves without any roads, but entered on immense plains or prairies, slightly undulating, and at this time of the year covered with a light crop of grass. Serpents, lizards, and venomous insects abounded, and they found but a single tree and a group of wells. As they proceeded further to the southwest, they found long, low hills of sand at considerable distances from each other, but running in a parallel direction. There were seven of these chains of sand-hills, separated by narrow but somewhat fruitful valleys. Crossing the last of these on the tenth day of their journey, they came upon an immense plain, covered here and there with shrubs and brushwood, but without any trees of considerable size. This was the province of Ormah, one of the dependencies of the Wahabite kingdom. Here were frequent wells, and small streams which lost themselves after a time in the arid sands. West of Ormah they again encountered sand-hills, which extended to the highlands, and an opening or pass through both the hills and the mountain barrier of Aredh, along which a road is built which conducted them to the elevated plateau of Shaab, a number of miles in breadth. The mountain chain of Aredh is succeeded at the north by that of Towais, from which it is separated by the populous plain of Mahmed. Immediately at the foot of the Towais chain lies the territory or province of Sidayr, a narrow band of rich and populous country. Among the finest cities of this region visited by the travellers was Lidus or Sedus, a thriving, prosperous town, hidden in the midst of plantations of palms and roses. After examining an ancient column erected before the Mahometan era, the travellers turned southeast and entered Riadh, the Wahabite capital, after a journey of fifteen days on the back of camels from Kuait. By a series of observations they determined the position of Riadh to be $24^{\circ} 88' 34'' N.$ lat., and $40^{\circ} 41' 48'' E.$ long., from Greenwich. Lieut.-Col. Pelly had three interviews with the Sultan, whom he regards as one of the most remarkable of Oriental monarchs. At the first interview the conversation was confined mostly to phrases of etiquette, but the sovereign remarked that the configuration of his country was such as to interdict

any considerable intercourse with adjacent States, and that the Wahabites produced among themselves whatever they needed, and had no occasion or desire to cultivate relations of trade or intercourse with foreigners or foreign nations. In a subsequent interview, however, he showed himself more complaisant, and urged the colonel to visit all quarters of his kingdom. Finding that the subordinate officers of the government regarded him and his companions with covert hostility, and that his prime minister, the son of a negro and a Georgian slave, was particularly bitter against them, Lieut.-Col. Pelly deemed it best to return without delay to Bushire, and made his way almost due east through the fertile oasis of El-Ahsa, to the lower portion of the Persian Gulf.

In December, 1864, Signor C. Guarmani, a highly intelligent Italian traveller and explorer, thoroughly acquainted with the Arabic tongue and customs, left Jerusalem, under commission from Victor Emmanuel, King of Italy, to procure for him some Arabian horses of the pure Nedjed breed. He assumed the name of Kalil Aga, and passed as a Turkish Aga, travelling in the service of one of the Pachas of Constantinople. He explored with considerable thoroughness the kingdom of Djebel Shomer, visiting Hail or Kail, its capital, twice, and spending some time there, and penetrating into the Wahabite country as far as Oneiza the capital of the province of El-Kasim. On his return, having procured four stallions of great beauty, he encountered a large force of Bedouins of the tribe of Scererat, who attacked and plundered the caravan with which he was travelling, killing one of his horses. He reached Jerusalem on his return about the 1st of June, 1865. Neither of these explorers has traversed so much of the region of Central Arabia as Mr. Palgrave, but both have visited some portions which he did not. Guarmani, following the mountainous region near the boundaries of El-Hidjaz, about 150 miles west of Palgrave's route, avoided the great desert of Nefud, in which Palgrave came near losing his life. There is still a vast region south of Palgrave's route in the Wahabite kingdom unexplored, but much of it is undoubtedly desert.

Dr. J. G. Wetzstein, an eminent German geographer, has devoted two or three elaborate papers in the *Zeitschrift für Allgemeine Erdkunde* to the geography of Northern Arabia and the Syrian Desert; and availing himself of all the recent explorations of that region, he has given a more complete and satisfactory account of it than any heretofore published.

Syria and Palestine have been explored with great thoroughness during the past two years. M. E. G. Rey, one of the members of the French Exploring Expedition, during the autumn of 1864, made a very thorough examination of the chain of Ansaries, a part of the Lebanon Mountains, visiting its principal summits, Naby Motu, Naby Salek, and Sultan Ibrahim, which

he found of an average height of about 4,060 feet. M. Vignes, the commander of one of the vessels comprising the Lunyes Expedition, explored the Syrian Desert from Homs to Palmyra, discovered many extensive mines hitherto unknown, and has contributed to our knowledge of the character, manners, and customs of the Arabs of this desert. M. Vincent Guérin has made a careful survey of Mount Tabor, and has described, in the *Bulletin de la Société de Géographie*, its configuration, its ruins, and the magnificent panorama visible from its summit. He states its height as 2,470 feet above Lake Tiberias, 1,950 feet above the Mediterranean, and 1,800 feet above the plain of Esdraelon. The Baroness von Gertsdorff has communicated to Petermann's *Mittheilungen* a very full account of an exploring tour made with her late husband through Syria from Aleppo to the Euphrates. Our countryman, the late Rev. Dr. Edward Robinson, had prepared, and his literary executors have published, a "Physical Geography of Palestine." By far the most thorough and complete work on the physical geography, and especially the orography of Palestine, is the "Treatise of Herr C. W. M. Van de Velde on Palestine," the result of two years' exploration, published in Petermann's *Mittheilungen* for May, June, and August, 1865. Herr Von de Velde has, with commendable care and perseverance, ascertained the elevation above or depression below the sea level of 450 places in Palestine, giving in many instances the varying observations of several other explorers as well as his own, and has brought together a more complete view of the physical geography of the Holy Land than has ever previously been published, and has accompanied it with an admirable map.

Lieut.-Col. H. J. Stebnitzky, a Russian staff-officer of Tiflis, has been engaged in investigating the condition, area, and population of the *Caucasian provinces*, and reported, in 1865, to the Government and the Imperial Geographical Society the results of his explorations so far as completed—the area of the three Cis-Caucasian provinces at 88,909 square miles, and that of the seven Trans-Caucasian provinces at 84,959.5 square miles, making the whole area of the Caucasian Government 173,852.56 square miles. The population of Cis-Caucasia was 1,262,524, or 142 to the square mile; of Trans-Caucasia, 2,894,948, or 84 to the square mile, and of the whole 4,157,517, or 239 to the square mile. Of this population 2,185,157 (864,996 in the Cis-Caucasian, and 1,380,161 in the Trans-Caucasian provinces) were Christians, viz., 1,615,053 Greek Church; 56,601 other sects approximating to the Greek Church; 491,856 Gregorian or orthodox Armenians; 12,872 Armenian Catholics; 8,479 Roman Catholics; 5,777 Lutherans and Reformed Church. There were also 1,972,310 belonging to the non-Christian religions; of these 1,944,651 were Mohammedans, 16,188 Jews, and 11,521 Pagans. The cities and towns of the Caucasus are small.

Tiflis, the capital, has 60,776 inhabitants; Shamachi, in the province of Baku, has 25,148 inhabitants; Shusha, in the same province, 20,297; and Mucha, also in the same province, 20,533. Stavropol has 17,863, Jeisk 16,747, Alexandropol 14,395, Elizabethtol 15,191, Achal-zich 14,723, Baku 13,392, and Erivan 12,170. No other towns in the government reach a population of 12,000, and the entire town population is but 349,512.

The residences of the people are thus classified: cities and large towns 35, market-towns 9, colonies 15, villages 1,113, hamlets 6,838, Cossack stations 274, isolated farms 3,759, nomadic encampments 2,639. Lieut.-Col. Stebnitzky has of late been engaged upon the orography of the Caucasus, and has reported the results of his exploration of the eastern portion of the Trans-Kuban district bordering on the Black Sea. He has ascertained the height of thirteen points above the level of the Black Sea. This portion of the Caucasus is not of so great elevation as the northern and southern districts. The highest point recorded by him was the summit of the Pssegashka Pass, which is 7,083 feet above the Black Sea. The northern summits of the Caucasus range are much higher, some of them rising from 19,000 to 20,000 feet.

M. Viskovatow, a Russian geographer, has been for some years exploring this range, and has recently given before the Imperial Geographical Society of Petersburg an interesting account of the glacier of Devdorak, which descends from Mount Kasbek, one of the loftier peaks of the range, toward the defile of Terek. This defile is the only passage which can be traversed between the northern Caucasus and the lower Trans-Caucasian range, and is known as the military road of Georgia. The small river Devdorak has its source in the glacier, and falls into the Terek. The ice, snow, earth, and rocks descend from the lower borders of this glacier in frequent avalanches, and obstruct often for months with their *débris* the defile of Terek, sometimes blocking it up for a distance of twenty-five or thirty miles. From 1780 to 1830 there were six of these avalanches, and the periods which elapsed between them were quite regular. Since 1830 there had been but one, in 1852; and M. Viskovatow believes this to be owing to the receding of the glacier, which is smaller than formerly. Dr. Gustav Radde, a German naturalist, explored this part of the Caucasus in 1864, and has published an interesting account of its flora and fauna; and has also added to our knowledge of its river systems and the character of its mountains.

Mention has been made, in previous volumes of the ANNUAL CYCLOPEDIA, of the commission appointed by the Russian Government, to ascertain the present condition of the Sea of Azof, and the extent and causes of its increasing shallowness. M. Danilevski was put at the head of this commission, and although his investigations are not completed, he has made a

partial report, in which he announces, among others, the following conclusions: That the filling up of the sea is not so great as had been represented; but that it proceeds from two causes, the gradual elevation of the shores and bottom of the sea from geological changes, and the large quantity of silt brought down by the Kouban River, in its rapid descent from the Caucasus. The Don and the other rivers discharging their waters into the Sea of Azof, add very little to these deposits of sand. The delta of the Kouban has in the course of eight or ten centuries been transformed into several islands and a peninsula, and the process of upheaval has given to these islands a considerable height.

In Turkestan, the Russian power is ever pushing its way eastward. It has already absorbed nearly the whole of what formerly constituted Independent Turkestan—Khokand and its principal cities, Khokand and Tashkend, being its latest acquisitions, while at the eastern portion of Chinese Tartary, as well as along its western boundaries, it is constantly extending their forts and stations, and ere long will undoubtedly exercise its sway over the whole of this vast territory. That this will prove of great advantage, both to the inhabitants of these regions, and to the rest of the world, cannot be doubted, for the Russian administration is just and enlightened, and will be favorable to the development of the country. M. Charles Struve (son of the astronomer) explored, during the autumn of 1864, the Tarbagatai chain of mountains, and portions of the basin of the Tzaizan and the Irtysh. He reports that the Kirghiz Tartars of that region, hitherto wholly nomadic in their habits, have commenced the establishment of fixed villages, probably with reference to the Russian occupation.

Rear-Admiral A. Boutakoff, in 1863 and 1864, explored very thoroughly the whole navigable course of the Jaxartes, or Syr-Daria, a distance of above a thousand miles. The whole region bordering on this river is fertile, and would be productive if it was under Russian sway, for the only bar to its cultivation has been the frequent raids of the savage Kirghiz and other nomadic tribes.

M. Anatole J. Sponville, a French engineer who has spent the greater part of 1864, and the winter and spring of 1865, among the Siberian Kirghiz of the region north of the Syr-Daria, has given in the *Bulletin de la Société de la Géographie* a full account of the habits, manners, and customs of these nomadic tribes; and M. H. de Blocqueville, a French geographer, who has been engaged in an exploration of Turkestan, has, in the same journal, described the character and manners of the Turcomans, who are allied to the Kirghiz not only in race, but in their lawless and nomadic disposition, and has accompanied it by a good map of Southern Turkestan. M. Severtsov, a Russian geographer, has been engaged for some years in an exploration of the western Thian-chan chain

of mountains, between the Syr-Daria and the Tchouli Rivers, and has made many interesting discoveries, soon to be published, relative to the geography and geological condition of this lofty but hitherto little known region. M. Simonov, quartermaster on the staff of the Siberian military commander, has executed a map of the Soungari River, which he has explored. The Prince Crapotkin, of the same staff, has sent to the Imperial Geographical Society of St. Petersburg a map of a portion of the country lying on the river Argun. In the third volume of Dr. Radde's survey of Eastern Siberia, just published in Paris, he devotes much attention to the country of Sagan, lying between East Siberia and China. The culminating point of the mountain chain of Sagan, he says, is Munko-Sardik, in the extreme eastern portion of Sagan. It is about 12,600 feet in height, and from this central point mountain chains push out in three directions, N. E., E. S. E., and S. E. The narrative and observations of the brothers Schlagintweit, in their exploration of the Himalayas, is in course of publication.

India has been developing its agricultural and commercial resources rapidly, under the extraordinary demand for cotton. At a session of the Royal Geographical Society of London, Mr. Temple gave an interesting account of the basin of the Mahanuddy, a river discharging its waters into the Bay of Bengal below Outtack. Its delta is so obstructed by sand-bars as to render the entrance of ships into the mouth of the river impracticable, but the river itself and its affluents have 710 miles of navigable waters. The population of the basin exceeds 1,500,000, and the country is admirably adapted to the culture of cotton, only requiring a removal of the obstructions at the mouth of the river, or a short railroad, to bring it into the market. Ship-timber of great excellence is found in abundance near the banks of the river.

Dr. Friedmann, of Munich, has given, in the *Zeitschrift für Allgemeine Erdkunde*, a very full account of the geographical and commercial condition of the Dutch East Indies (now generally called Netherlands India) in 1861. By the census of that year, the population of the islands belonging to Holland was 17,589,039 persons, of whom 120,934 were stated to be Christians, and the remainder either Mohammedans or pagans. The military force consisted of 30,063 men, of whom only 11,466 were Europeans. The receipts of the Government for that year were in round numbers 58,900,000 florins, and the expenditures (some of them extraordinary) were 76,279,000 florins, making a heavy deficit, which was unusual. The agricultural productions of the islands were coffee, 901,347 piculs; sugar, 1,696,199 piculs; indigo, 441,721 Amsterdam pounds; tea, 1,956,469 Amsterdam pounds; cinnamon, 192,830 Amsterdam pounds; cochineal, 4,500 pounds; pepper, 394 piculs. The number of ships visiting the islands

during the year was 2,762, with an aggregate tonnage of 175,096 tons.

An expedition, under the direction of Dr. H. A. Bernstein, a Dutch geographer, spent the years 1860-'62 in exploring the eastern Moluccas, and made, in 1865, a very full report of the geography, geology, and zoology of these islands. They contributed to the Museum of Natural History at Leyden, from the islands, 181 mammals, 1,917 birds, 212 reptiles, 211 fishes, 588 mollusks, 10,215 insects, and 42 zoophytes.

A new volcanic island was discovered, nearly due east from the southern point of Formosa, in latitude 20° 35' 30" N. longitude, 145° 16' 30" east from Greenwich, on the 19th of March, 1865, by the ship *Veritas* from San Francisco. The island was of considerable size, and appeared to be of conical form, and at intervals emitted a thick smoke from its highest point.

AFRICA.—In *Egypt*, M. Lesseps is still attempting to push forward the Suez Canal; but though he has completed a small fresh-water canal, he has made very little progress in the Grand Ship Canal, so long and boastfully promised. Of this, which was to be one hundred and twenty miles in length, one hundred and eighty feet in width, and thirty in depth, not a yard is yet completed. A half mile is in progress, and may be finished this year, though the difficulties to be overcome from the hardness of the rock, the irruption of salt water, and the want of laborers, render this uncertain; but, under the most favorable circumstances, from twenty to forty years must elapse before its completion; a long time to wait—too long for the company who have undertaken it, and expended such vast sums of money on it.

The Nile explorations, under Mr. S. W. Baker, have established the fact that a large lake exists west of the Victoria Nyanza, which he has named the Albert Nyanza (Speke's Luta Nzige); that the Victoria Nyanza discharges its waters into this by the stream which Speke believed to be the headwaters of the Nile, with a fall of 1,238 feet in a distance of probably three hundred miles. The northern outlet of the Albert Nyanza is probably one of the branches of the Nile, but this is not yet quite certain; and the Asua, another of its affluents, has probably its origin in Lake Bahringo, far to the east, and crossing the equator. Baron von der Decken, the indefatigable German traveller, has failed in his attempt to reach the region of these lakes from Zanzibar, and at last reports was probably a prisoner and in great danger. He attempted to ascend the Juba, a large river of Eastern Africa, whose source was reported to be near the equator, far in the interior, having two steamers of his own. One of these was wrecked at the mouth of the river, but with the other he ascended three hundred and eighty miles into the country of the Sultan of Bendera, where, on the 25th of September, 1865, she struck upon a rock, and it was necessary to discharge her cargo. The baron went to the capital of the Sultan for assistance, and during his

absence (October 1st) his men were attacked by the natives, several killed, and the rest compelled to escape down the river, leaving the baron alone among the natives. They reached Zanzibar on the 24th of October, and an English ship was instantly despatched to aid in the rescue of the baron.

In *Western Africa*, M. du Chaillu, who had attempted again to penetrate into the gorilla country, made many interesting discoveries, but while at Monavo Kombo one of his men firing a gun to please the natives, accidentally shot two of them, when the savages set upon them and compelled them to fly into the forests, shooting poisoned arrows at them. Du Chaillu's men became panic-stricken, and, throwing away his apparatus and specimens, fled to the Ashira country. He had been wounded and was very ill, but finally reached the coast and returned to London. Several other expeditions are in progress—one northward from the Gabun, under the direction of a Mr. Walker; another southward, through the Sahara Desert, to the country of the Tuaricks, by Gerhard Rohlfs, of which we shall know more ere long. Dr. Baikie fell a victim to the African fever, when just upon the point of returning to Europe. Dr. Barth, the distinguished African explorer, is also dead. Dr. Livingstone has published the narrative of his discoveries, from 1858 to 1864, during the past year, and the relation is full of interest. Dr. Livingstone's brother, Charles, who had resided for some years in the United States, contributes a portion of the volume, and his descriptions of some of the wonders of that region of which the two brothers have been the principal explorers, possess a remarkable freshness and vividness. The Mosi-oa-tunya, or Victoria Falls, were partially described in his former volume, but in this they are portrayed with far greater fulness, and compared with Niagara, with which Mr. Charles Livingstone was familiar. In size and the height of the fall, as well as the character of the rock over which the water rushes, the African greatly surpasses the American cataract, the fall being over three hundred feet, and the river a full mile in width. The fall is through a wide crack in the solid black basaltic rock, and there is no projecting crag, so that the wall of rocks goes sheer and perpendicularly down from the lip of the fall.

The party ascended the river Shire three times, explored thoroughly the lakes Nyassa and Shirwa, as well as several smaller lakes, and ascertained the height of many of the summits of the Milanje range, which, from a distance, overlooks the Shire and Lakes Nyassa and Shirwa. Aside from this mountain range there are isolated mountains nearer to Lake Nyassa, four thousand feet or more in height; and above the junction of the Ruw with the Shire, and the wide marshy expanse called by the natives Lake Mukulu, but which the explorers named Elephant Marsh, looms up in the distance a majestic mountain, which Dr. Livingstone surnamed Mount Clarendon. Animal life

is abundant all over this region, crocodiles and hippopotami are found in great numbers in the rivers and lakes, and the marshes afford feeding grounds to large droves of elephants of great size. At Lake Mukulu the explorers saw eight hundred feeding at once. Fish of delicious flavor, and water fowl in thousands, inhabit the river Shire as well as the lakes, while birds of prey hover over the waters, and the wading birds seek their food in the marshes and near the river brink.

Dr. Livingstone departed again late in the year 1865, with an ample equipment, furnished jointly by the British Government and the Royal Geographical Society, for the region in which he has already spent nearly sixteen years of his life, in the hope of ascending nearer to the equator and exploring the Albert and Victoria Nyanza, and ascertaining definitely their relations to each other, to Lake Tanganyika, and to the source of the Nile.

In *OCEANIA* the explorations of the past year have been rather a confirmation of past discoveries than a development of new facts of interest. It has become settled that the interior of *Australia* is not an arid and treeless waste, but that, though portions of it lack water, other parts are traversed by large rivers and yield an abundant vegetation. M. Hüber has crossed the continent and explored the Upper Murray and Darling Rivers, and has brought home interesting and very full information in regard to the fruits, plants, and animals of that portion of Australia, as well as the natives, whose habits, customs, and religious views he studied with great care during a period of thirteen months. The great rat of Australia (*Mus Conditior*) he is the first naturalist who has fully described. He speaks of its flesh as affording an agreeable diet. He also discovered several new species of birds. In a subsequent journey undertaken in the summer and autumn (the southern winter) of 1864, he explored very fully the course of the Murray and the Darling. The former takes its course in the western slope of the Australian Alps, and its course is for the most part due west, but under the meridian of 140° it turns southward, and after crossing the Torrens Marsh discharges its waters into Encounter Bay. Its principal affluents come from the left bank, and are the Mitta-Mitta, the Owens, the Goulburn, the Loddon, and Murrumbidgee.

The Darling or Barwon River, itself a mighty stream, is also a tributary of the Murray, and receives numerous affluents. Both rivers are navigable for the greater part of their course. Dr. Müller started from Glendower, near Castlemaine, in the Victoria colony, with eight companions, on the 3d of July, on an expedition, well equipped, in search of traces of the missing Dr. Leichhardt. The new colony at the mouth of the Adelaide have found it necessary to abandon their location, in consequence of its unhealthiness, from the proximity of marshes and jungles.

GEORGIA. The result of the military operations in Georgia, at the close of the previous year, had been the capture of Savannah, and the defeat of the army of Gen. Hood in Tennessee. The success of these operations was announced to his troops by Gen. Sherman in the following congratulatory address:

Special Field Orders No. 6.

HEADQUARTERS MILITARY DIVISION OF THE }
MISSISSIPPI, IN THE FIELD, }
SAVANNAH, GA., January 8, 1865. }

The General commanding announces to the troops composing the Military Division of the Mississippi, that he has received from the President of the United States, and from Lieutenant-General Grant, letters conveying the high sense and appreciation of the campaign just closed, resulting in the capture of Savannah, and the defeat of Hood's army in Tennessee.

In order that all may understand the importance of events, it is proper to revert to the situation of affairs in September last. We held Atlanta, a city of little value to us, but so important to the enemy, that Mr. Davis, the head of the rebellious faction in the South, visited his army near Palmetto, and commanded it to regain it, as well as to ruin and destroy us by a series of measures which he thought would be effectual.

That army, by a rapid march, first gained our railroad, near Big Shanty, and afterwards about Dalton. We pursued, but it marched so rapidly that we could not overtake it; and General Hood led his army successfully far toward Mississippi, in hopes to decoy us out of Georgia. But we were not then to be led away by him, and purposed to control and lead events ourselves. Generals Thomas and Schofield, commanding the department in our rear, returned to their posts, and prepared to decoy General Hood into their meshes, while we came on to complete our original journey.

We quietly and deliberately destroyed Atlanta and all the railroad which the enemy had used to carry on war against us, occupied his State capital, which had been so strongly fortified from the sea as to defy approach from that quarter.

Almost at the moment of our victorious entry into Savannah, came the welcome and expected news that our comrades in Tennessee had fulfilled, nobly and well, their part; had decoyed General Hood to Nashville, and then turned on him, defeating his army thoroughly, capturing all his artillery, great numbers of prisoners, and were still pursuing the fragments down into Alabama. So complete a success in military operations, extending over half the continent, is an achievement that entitles it to a place in the military history of the world.

The armies serving in Georgia and Tennessee, as well as the local garrisons of Decatur, Bridgeport, Chattanooga, and Murfreesboro, are alike entitled to the common honor; and each regiment may inscribe on its colors at pleasure, the words "Savannah" or "Nashville."

The General commanding embraces in the same general success the operations of the cavalry column under Generals Stoneman, Burbridge, and Gillem, that penetrated into Southwest Virginia, and paralyzed the efforts of the enemy to disturb the peace and safety of the people of East Tennessee. Instead of being put on the defensive, we have, at all points, assumed the bold offensive, and completely thwarted the designs of the enemies of our country.

By order of Major-General W. T. SHERMAN.

(Signed) L. W. DAYTON, Aide-de-Camp.

On the 14th, Gen. Sherman issued a further order, authorizing the farmers of Georgia to bring into Savannah, Jacksonville, or Fernan-

dina, for the markets, beef, pork, mutton, vegetables of any kind, fish as well as cotton in small quantities, and to invest the proceeds in family stores, such as bacon, flour, groceries, shoes, clothing, and articles not contraband of war, and carry the same back to their families. He further added: "The people are encouraged to meet together in peaceful assemblages, to discuss measures looking to their safety and good government, and the restoration of the State and National authority, and will be protected by the National army while so doing; and all peaceable inhabitants who satisfy the commanding officers that they are earnestly laboring to that end, must not only be left undisturbed in property and person, but must be protected, as far as possible, consistent with the military operations. If any farmer or peaceable inhabitant is molested by the enemy, viz., the Confederate army or guerrillas, because of his friendship to the National Government, the perpetrator, if caught, will be summarily punished, or his family made to suffer for the outrage; but if the crime cannot be traced to the actual party, then retaliation will be made on the adherents to the cause of the rebellion; should a Union man be murdered, then a rebel selected by lot will be shot—or if a Union family be persecuted on account of the cause, a rebel family will be banished to a foreign land. In aggravated cases, retaliation will extend as high as five for one. All commanding officers will act promptly in such cases, and report their action after the retaliation is done."

The Confederate Legislature of the State assembled at Macon on February 11th. Governor Brown in his message said that the State had been left to her fate by the other Confederate States. He recommended the establishment of the militia system for home defence; but opposed the arming of the slaves, believing they were more valuable as agricultural laborers than they could be as soldiers. They did not wish to go into the army, and the principal restraint upon them was, the fear that if they were to leave, the Federal authorities would make them fight. If they were compelled by the Confederates to take up arms, they would desert by thousands. He said: "We cannot expect them to fight well to continue the enslavement of their wives and children, and it is unreasonable to demand it of them. When we establish the fact that they are a military people, we destroy our theory that they are unfit to be free, and when we arm them we abandon slavery."

After a short session, since become unimportant by the course of events, the Legislature adjourned. The progress of the Federal arms soon became irresistible. The invasion of Gen. Wilson was unobstructed. Early in April, West Point, Columbus, Griffin, and Macon, were captured and held by him. Governor Brown issued orders calling out all the militia between the ages of sixteen and sixty, but no force was raised. On April 30th, Gen. Johnston sent the

following despatch to the Governors of Georgia, South Carolina, and Florida :

GREENSBORO, April 30, 1865.

To his Excellency Joseph E. Brown, Augusta, Ga.; A. G. Magrath, Governor of South Carolina, Spartanburg, via Chester, S. C.; John Milton, Florida :

The disaster in Virginia; the capture by the enemy of all our workshops for the preparation of ammunition and repairing arms; the impossibility of recruiting our little army, opposed by more than ten times its number, or of supplying it except by robbing our own citizens, destroyed all hope of successful war. I have, therefore, made a military convention with Gen. Sherman to terminate hostilities in North and South Carolina, Georgia, and Florida.

I made this convention to spare the blood of the gallant little army committed to me, to prevent further sufferings of our people by the devastation and ruin inevitable from the marches of invading armies, and to avoid the crime of waging hopeless war.

J. E. JOHNSTON, General.

All further resistance on the part of the State was now at an end. The Governor issued a proclamation and called a session of the Legislature. But Gen. Gillmore, in charge of the Department which included Georgia, issued orders declaring the proclamation of the Governor to be null and void, that the blacks were free citizens of the United States and would be protected by the Federal Government in the enjoyment of freedom and of the fruits of their industry. Gen. Wilson, in a letter to the Governor, stated that he was instructed by the President to say to him : "That the restoration of peace and order cannot be intrusted to rebels and traitors; that the persons who incited the war and carried it on will not be allowed to assemble at the call of their accomplices to act again as a Legislature of the State, and again usurp the authority and franchises. Those who have caused so much woe, will not be allowed again to set on foot fresh acts of treason and rebellion. In calling the Legislature together again, without the permission of the President, you have perpetrated a fresh crime; and if any person presumes to answer or acknowledge your call, he will be immediately arrested."

The control of affairs in the State was thus held by the military authorities until it was subsequently relaxed on the appointment of a Provisional Governor.

The condition of the inhabitants of Georgia, and indeed of all the other Southern States where the desolation of war had been made, was one of great destitution and suffering. A writer from Augusta, May 24th, thus describes the views of the citizens :

This city is the only place of any magnitude South that was spared. And now let us hope for an indulgent Government. A kind and generous policy will be followed by general satisfaction at the South. The effort will be very happy, and will tend much to banish the bitterness of the late struggle, and revive the friendly relations of the sections. At present the people are in suspense—generally anxious and dejected, fearful of harsh measures. Emancipation has deranged labor somewhat, but not as much, I think, as was expected; and after a while I believe people will cease to feel any inconvenience, especially if wholesome legislation is had against vagrancy, etc. The people may be called in just that state of mind

when a very generous policy might be expected to produce the happiest results. They seem prepared for a radical course of treatment. A different application, announced promptly and frankly, would cause rejoicing throughout the land. Of one thing, however, all are assured, viz.: there will be but one Government, and none are hesitating to resume their allegiance to the "old flag, for better or worse." We are all "citizens of the United States," of one country, and a common destiny as a people. Secession is dead! And the irrepressible conflict has decided that slavery is dead!

Another writer about the same date says :

Passing Marietta, where the usual marks of destruction appeared, I was interested by the appearance of a crowd gathered about one of the few remaining business buildings. I began to make inquiries, indicating my character as just from above, in search of information, when they thronged about me and began the revelation of a degree of destitution that would draw pity from a stone.

Thomas H. Moore, of respectable and even cultured address, introduced himself as the agent for the county, appointed by the State, for the distribution of the supplies voted by the rebel Legislature to the people of North Georgia, after Sherman's passage. He said all these supplies had been long ago issued. He had himself, since, walked to Atlanta (having no horse), to procure more. A few hundred pounds had been furnished, which he was now distributing, but it amounted to a mere pittance, and he was obliged to reserve it for those who are already on the verge of starvation. Women daily—nay, hourly, come in from a distance of ten and fifteen miles afoot, leaving homes entirely destitute, in order to get a few mouthfuls to save the lives of their helpless children.

After him came slaveholders, the wealthiest in the county—one with sixty slaves, who complained that what had once made them the richest now made them the poorest. They had nothing to feed these people, without whose aid the crops could not be secured. Mr. — had told his negroes that if they would remain with him, now that they were free, he would compensate them, and share with them his land, and they were anxious to do so; but—and he called me aside to tell me this privately—the distributing officers refused to furnish the slaveholders, who, unless they could get aid, would, together with their negroes, starve. They all told me that no man in the country had more than two bushels of corn left. They besought me to help them if I could, and at their request I sent word back to Col. Adams, to be forwarded to Gen. Judah, that, if possible, supplies might be sent down at once by railroad to Kingston, from which point the citizens of the county would gladly team it themselves.

The commandant has mentioned a case that occurred yesterday. A poor woman came all the way into town on foot, from a distance of twenty miles, leaving at home a family of children who had had nothing to eat for twenty-four hours. Yet the most that could be done in answer to her appeal was to request the commissary, if possible, to supply her.

Another account says :

From a recent report made by order of the military authorities, it has been ascertained that there are 35,000 men, women, and children in the counties of Georgia immediately surrounding Atlanta, who are dependent upon the United States Government for support and preservation from death by hunger. In the counties of North Georgia there must be at least as many more, for at every post and headquarters of the United States forces hundreds of applicants apply daily for relief. To such an extent does this state of affairs prevail that it seriously incommodes the troops; and though every effort has been made to

relieve the sufferings of the people, yet vast destitution prevails among them.

An order has recently been issued by Gen. Thomas, ordering that several thousand bushels of corn be distributed among these poor people, which will prove of great benefit. Still, the evil increases day by day, by the arrival of hundreds of poor refugees from points north of here, especially from Indiana.

Another account from Atlanta, Ga., gives these details:

To get an idea of the immensity of the feeding establishments in this city I will give you some items. During the month of June, there were issued to about fifteen thousand recipients: ninety-five thousand pounds of breadstuff, and the same amount of meat, together with the proper proportion of salt, coffee, sugar, soap, candles, and other articles. Since the 1st of July, the increase of recipients has been very large. A large number of refugees, who are returning to their homes on Government transportation, also receive their subsistence here; and this addition has assisted very much to increase the amount of issue. Captain Seaton estimates the issue up to this date, nearly the amount issued the last month. By my own close observation the issue is daily twice as large as it was last month at the same dates. There are employed in the issuing house about ten clerks, who are kept on the run all day, and often at night; about twenty negroes, who assuredly do not find the work of this commissary department as easy a business as working in a corn-field, especially when they are caught stealing—a piece of wagwery which you know the “institution” is very fond of perpetrating. A large number of Confederate soldiers, lately discharged from Northern prisons, continue to arrive here daily, and they, too, are furnished with rations. Taking as an entire affair the business of this commissary post, it is the biggest thing I have met with in a long time. I am certain that, if what is done so patiently by Capt. Seaton and his hard-working assistants had been required of a like number of our Confeds, a few months ago, there is not a building in the South large or strong enough to have held the disbursing parties, for they would have—enough to have levelled the walls and blown the roof away. Discipline, and some other little peculiarities of human nature, make the difference. I was too stubborn a Southern soldier, however, to make any insidious remarks now, however much my maw may have suffered in the hungry times gone by, and which discomfort was caused by neglectful and selfish commissaries.

But before I close I cannot help but remark that it must be a matter of gratitude as well as surprise, for our people to see a Government which was lately fighting us with fire, and sword, and shell, now generously feeding our poor and distressed. In the immense crowds which throng the distributing house, I notice the mothers, and fathers, and widows, and orphans of our soldiers, who fought nobly—and how sadly—too often to the death, for our loved South. Again, the Confederate soldier, with one leg or one arm, the crippled, maimed, and broken, and the worn and destitute men, who fought bravely their enemies then, their benefactors now, have their sacks filled and are fed.

There is much in this that takes away the bitter sting and sorrow of the past. There is more than humanity in it, on the part of the provider; and the generous conduct will go farther to heal the wounds of the nation, than all the diplomacy and political policy of tricksters and office-seekers during centuries to come.

On the 17th of June, James Johnson, a citizen of Georgia, was appointed the Provisional Governor, to conduct the reorganization of the State. The proclamation of the President mak-

ing the appointment was similar in all respects, except the name of the State and Governor, and date, to that issued in the case of Alabama. (*See ALABAMA.*)

After his appointment, the Governor proceeded to address the citizens in various parts of the State, instructing them in the system of measures which it was proposed to adopt in order to reorganize the State Government, and asking their coöperation. He said that he had been appointed for the single purpose of enabling them to form a government, and that he was not authorized to appoint civil magistrates, and should not. He advised the people to take the amnesty oath, and thus prepare themselves to become citizens. They would be required to recognize, as an accomplished fact, that slavery had ceased to exist, and that its restoration under any form was out of the question. He said: “I do not propose, in this connection, to enter upon a lengthy argument to prove it. I simply state what is universally acknowledged by all writers on national law, that belligerents have the right to make captures of persons and property, and that they may make what disposition they please of the property captured. The vanquished are at the disposition of the conquerors, and may be disposed of as they think proper. Such is war, and it is a sin against God and humanity that it should be waged. We must submit to the result of the war. Congress, by the Constitution of the United States, has the power to give to the President the regulation of captures by sea and land, and the President, in the exercise of this power given him by the Constitution and by Congress, issued his proclamation disposing of their captures, declaring that all the negroes who were slaves in the revolted States should, by virtue of that proclamation, become emancipated. Such is my judgment of the law, and I believe the Supreme Court will so decide. The Constitution now to be adopted must recognize this fact, and the Convention soon to meet will be required to agree to the anti-slavery amendment of the Federal Constitution.”

He then answered the various objections urged to the amnesty oath, and drew a bright and glowing picture of the future prosperity which awaited the State. The late Confederate Governor Brown, who now withdrew from all official duty, also issued an address to the people, urging them to accept the fate thrust upon them by the fortunes of war, to support not only the Government of the United States but the administration of the Chief Magistrate, to take the amnesty oath and return to the Union in good faith, and do all in their power, as good citizens, to relieve the distressed, repair the damages which had resulted from the contest, and aid to restore permanent peace and prosperity to the whole country under the old flag, to which all must again look for protection from the Atlantic to the Pacific. The prominent men throughout the State, as also in other Southern States, expressed similar views, and

the current of popular feeling turned strongly in favor of resuming, at the earliest practicable moment, the most friendly relations with the people of the Northern States, and with the National Government.

On July 18th the Provisional Governor issued the following proclamation, prescribing the rules and regulations necessary and proper for the assembling of a Convention, etc.

To the People of Georgia :

Whereas, By the proclamation of Andrew Johnson, President of the United States, dated 17th of June, A. D. 1865, I have been appointed Provisional Governor of the State of Georgia, with instructions to prescribe, at the earliest practicable period, such rules and regulations as may be necessary and proper for convening a Convention of the people, composed of delegates to be chosen by that portion of the people who are loyal to the United States, and no others, and also with all the power necessary and proper to enable such loyal people of said State to restore it to its constitutional relation to the Federal Government, and to present such a republican form of government as will entitle the State to the guarantee of the United States therefor, and its people to the protection of the United States against invasion, insurrection, and domestic violence.

Now, therefore, I, James Johnson, Provisional Governor of the State of Georgia, as aforesaid, do, by virtue of the power in me vested as aforesaid, proclaim and declare :

1. That an election for delegates to a Convention will be held on the first Wednesday in October, A. D. 1865, at the different precincts at which elections are directed and authorized by law to be held for members of the Legislature.

2. That the thirty-seven counties in the State which, by law in force prior to the first of January, 1861, were entitled to two members of the House of Representatives, shall be authorized and entitled to elect each three delegates, and that the remaining counties shall each be authorized and entitled to elect two delegates to said Convention.

3. That no person, at such election, shall be qualified as an elector, or shall be eligible as a member of such Convention, unless he shall have previously thereto taken and subscribed to the oath of amnesty, as set forth in the President's proclamation of May 29th, A. D. 1865, and is a voter qualified, as prescribed by the Constitution and laws of the State of Georgia, in force immediately before the 19th of January, A. D. 1861, the date of the so-called Ordinance of Secession.

4. That any two freeholders, qualified to vote at such election as aforesaid, may act as managers of the election at each of the precincts as aforesaid ; and that in managing and superintending such election, they shall be governed by, and proceed under the laws of the State regulating and prescribing the election of members of the Legislature, prior to the 1st of January, 1861: *Provided*, That each of said managers, before entering on the duties prescribed, shall swear truly and faithfully to superintend and make return of said election, according to law as aforesaid, and the requirements of this proclamation.

5. That the delegates who shall be elected as aforesaid, shall assemble in Convention at the city of Milledgeville, at 12 o'clock, M., on the fourth Wednesday of October, A. D. 1865.

And whereas, The rebellion which has been waged by a portion of the people against the Government of the United States has, in its revolutionary progress, deprived the people of the State of all civil government ;

And whereas, They must remain, without civil officers, and the administration of civil law, until a State Government shall have been organized by the Convention called as aforesaid ;

And whereas, It is necessary, in the mean time, that domestic tranquillity be insured, and that the loyal people be protected in all their rights of person and property, I do further proclaim and declare :

1. That no individual, by virtue of his own authority, shall inflict corporal punishment on any person, for any real or supposed injury, whether such injury relate to person or property, and that in all such cases redress must be sought from, and given by, such military authority as may be invested with the jurisdiction over the cases.

2. That slavery is extinct, and involuntary servitude no longer exists. Hence no person shall have control of the labor of another, other than such control as may lawfully result from indenture, the relation of parent and child, guardian and ward, and the contract of hiring, freely and fairly made ; and that for a breach of duty, on the part of any one standing in these relations, the military authority will administer, in a summary manner, adequate and proper relief under the laws of the land.

3. That all riotous or tumultuous assemblages of people, and also all assemblages for unlawful purposes and unlawful objects, will be dispersed ; and to this end, if necessary, the military power of the United States will be invoked.

4. That the idea, if any such is entertained, that private property will be distributed or parcelled out, is not only delusive, but dangerous and mischievous ; and if any attempt should be made by any person or persons to effect such an object by violence or unlawful means, it will only secure to him or them speedy and merited punishment.

5. To the end that the people may qualify themselves as voters, it will, doubtless, be the pleasure of the commissioned officers in the service of the United States, to have the oath of amnesty administered under the rules and regulations prescribed by the Secretary of State of the United States ; and, in this work, I most earnestly desire and solicit the cheerful coöperation of the people, so that Georgia may speedily be delivered of military rule ; that she may once again regulate her own domestic affairs ; again enjoy the blessings of civil government, and be heard and felt by her Senators and Representatives in the councils of the nation.

Done at Milledgeville, the capital of the State, on this, the 18th day of July, in the year of our Lord 1865, and the eighty-ninth year of American Independence.

JAMES JOHNSON,

Provisional Governor of Georgia.

By the Governor :

L. H. BRISCON, Secretary.

To enable the people more easily to prepare themselves for the exercise of the rights of citizens, the Provisional Governor, on August 7th, issued a second proclamation. This authorized the ordinaries or clerks of the several counties to administer the oath of amnesty required by the President's proclamation to such persons as were entitled to take and receive the same. All the civil officers of the State who had taken the oath above mentioned, and who were not embraced in any of its exceptions, or if embraced, had received special amnesty, were also authorized to proceed in the discharge of the duties of their several offices according to the laws in existence prior to January 1, 1861, so far as they were not inconsistent with the existing condition of the State.

In the unsettled state of affairs at this time, the freedmen at a distance from the stations of the Bureau were placed under the local provost marshals by the following military order :

HEADQUARTERS DEPARTMENT OF GEORGIA,
OFFICE OF THE PROVOST MARSHAL GENERAL,
AUGUSTA, GA., August 7, 1865.

1. In the absence of civil courts, and in localities in which no commissioner or agent of the Freedmen's Bureau is located in the State of Georgia, it is ordered that all questions of wages and debts of every description arising between the freedmen and whites, and freedmen and freedmen, will be inquired into and decided by the local Provost Marshals and their assistants.

2. Contracts heretofore made by and between the white men and their former slaves will be strictly adhered to unless it appear that such contracts were procured by fraud or made under duress, and in all cases of fraud or duress a fair compensation will be collected and paid to the freedmen.

3. Where a planter has hired a former slave by the month for the season, and has driven him off, the freedman will be entitled to recover pay and fair compensation for subsistence from the time he began to work until January 1, 1866; but care must be taken to ascertain if the freedman has complied with his contract.

4. Where a freedman made a contract by the month for the season and refuses to remain, and quits work without the fault of the former master, he will not be entitled to recover wages for any part of the time; but great care must be taken to ascertain that the freedman had no excuse for leaving.

5. When a former master strikes, kicks, shoots at, or threatens to shoot, or commits any assault upon any peaceable freedman on his plantation and in his employ, it will be held by the Provost Marshal to be a violation of the contract by him, and the freedman may recover full pay and commutation to the end of his term; but the freedman will not be allowed to remain on the plantation after ceasing to work.

6. Provost marshals will take into consideration the number of non-workers on any plantation supported by the former master, in deciding what is fair wages for the freedman in the absence of a contract.

7. Vagrants, idlers, and loafers, without means of support, either white or black, will be arrested and severely punished, generally by hard labor on the streets of the towns and cities, and such other work as may be ordered, and in aggravated cases a ball and chain will be added. But persons out of employment and making reasonable efforts to secure employment will not be embraced in the classes herein named.

8. Any person feeling aggrieved by the decision of any provost marshal, by giving notice, may appeal within ten days to the Provost Marshal General at these headquarters. Provost marshals will keep a complete record of all cases tried by them, with all the evidence, and will furnish a transcript thereof to any person having an interest in any proceeding thereon and desiring to appeal.

9. Provost marshals will use reasonable discretion in deciding all cases, but it must be borne in mind that the rights of all men are equal under the law. The time when one man can reap the fruits of another's labor is forever past in the United States, and no person in Georgia will be allowed to do any act tending to restore the old order of things.

10. Provost marshals will collect the money found due in all cases tried by them, and which has not been appealed, and pay it over to the person to whom it is due; and if any person or persons shall neglect or refuse to pay such accounts, the amount will be made by the sale of property.

11. In the absence of agents of the Freedmen's Bureau, provost marshals will supervise the contracts to be made for the year 1866, and approve such contracts as are equitable and liberal to the freedmen. By command of Major-General STEEDMAN.

C. H. GROSVENOR, Provost Marshal and Brevet Brigadier-General.

The election of delegates to the State Con-

vention was held on October 4th. Universal harmony prevailed throughout the State. The people had apparently accepted the conditions imposed by the result of the war, and were desirous of a speedy readmission into the Union. At the public meetings candidates of talent and character were nominated, who were pledged to the repeal of the ordinance of secession, the abolition of slavery, and such amendments of the State Constitution as might be necessary under the new condition of affairs.

The Convention assembled at Milledgeville on October 25th, and was called to order by the Provisional Governor. More than two hundred and seventy delegates were present. The following oath was administered to the members:

You, and each of you, do solemnly swear, in the presence of Almighty God, that you will henceforth faithfully support, protect, and defend the Constitution of the United States, and the union of the States thereunder; and that you will, in like manner, abide by and faithfully support all laws and proclamations which have been made during the existing rebellion, with reference to the emancipation of slaves. So help you God.

Herschel V. Johnson, formerly a Senator at Washington, was chosen President of the Convention. James D. Waddell, an officer wounded in the Southern army, was chosen Secretary.

On the same day the Provisional Governor sent to the Convention a message relative to the affairs of the State. He stated that all the cotton belonging to the State had either been destroyed or its proceeds exhausted during the war. The railroads yielded no income, and all public institutions, educational and charitable, were ruined. The Penitentiary had been destroyed and its machinery carried off. Provision must be made for the confinement of criminals.

The Western and Atlanta Railroad, after having been, in the progress of the war, successively destroyed and rebuilt, fell into the hands of the Federal Government, which lately turned it over to the State, but in a most dilapidated condition. It would require half a million of dollars to make the repairs.

In order to prepare the State House for the reception of the Convention, money was privately borrowed from the citizens. The new Congressional apportionment reduced Georgia to seven Representatives. The appointment of Judges should be independent of the Executive.

A new organization of the Judiciary was needed, to secure independence and speed in the despatch of cases.

The public debt amounted to \$20,813,525, of which \$2,667,750 existed previous to the war, and \$18,135,775 have been created during its continuance. That latter debt was not obligatory on the State, neither legally nor morally, as the purpose sought to be accomplished was unconstitutional.

Georgia, as a member of the late Confederate Government, has ceased to exist as a State, and

all her acts while in rebellion were null and void, and the Convention must prohibit any acknowledgment now, or hereafter, of the war debt. Slavery was abolished, and Georgia was called on to give earnest promises to the world that this institution will never be revived.

On the 26th the Convention commenced its work in earnest. The following ordinance, repealing that of secession, and ordinances connected therewith, was reported, and subsequently passed:

October 30, 1865.

AN ORDINANCE to repeal certain ordinances and resolutions therein mentioned, heretofore passed by the people of the State of Georgia in Convention.

"We, the people of Georgia, in convention at our seat of government, do declare and ordain that the ordinance adopted by the same people in convention on the 19th day of January, A. D. 1861, entitled an ordinance to dissolve the union between the State of Georgia and other States united with her under a compact of government entitled the United States of America; also, an ordinance adopted by the same on the 15th day of March, in the year of our Lord aforesaid, entitled an ordinance to adopt and ratify the Constitution of the Confederate States of America, and also all ordinances and resolutions of the same adopted between the 16th day of January and the 24th day of March of the year aforesaid, subversive or antagonistic to the civil and military authorities of the Government of the United States of America under the Constitution thereof, be, and the same are hereby repealed.

(Signed) HERSCHEL V. JOHNSON, President.

Attest, J. D. WADDELL, Secretary.

J. JOHNSON, Provisional Governor,

The passage of this ordinance was reported by the Provisional Governor to the President, by whom the following reply was despatched:

EXECUTIVE MANSION, }
WASHINGTON, D. C., Oct. 23, 1865. }

To James Johnson, Prov. Governor, Milledgeville, Ga.:

Your despatch has been received. The people of Georgia should not hesitate one single moment in repudiating every single dollar of debt created for the purpose of aiding the rebellion against the Government of the United States. It will not do to levy and collect taxes from a State and people that are loyal and in the Union to pay a debt that was created to aid in taking them out and subverting the Constitution of the United States.

I do not believe the great mass of the people of the State of Georgia, when left uninfluenced, will ever submit to the payment of a debt which was the main cause of bringing on their past and present suffering, the result of the rebellion.

Those who invested their capital in the creation of this debt must meet their fate, and take it as one of the inevitable results of the rebellion, though it may seem hard to them.

It should at once be made known, at home and abroad, that no debt contracted for the purpose of dissolving the Union can or ever will be paid by taxes levied on the people for such purpose.

ANDREW JOHNSON,
President of the United States.

On the 28th an ordinance declaring the war debt void was referred. This ordinance met with much opposition, and was vigorously discussed. It was finally passed on November 7th by a vote of one hundred and thirty-three to one hundred and seventeen. The following is a report of some further proceedings of the same day:

The committee of sixteen offered a series of resolutions of thanks to his Excellency the Governor; also requesting him to forward a copy of all ordinances to the President, passed by this Convention. Adopted.

They also offered a memorial to the President, affirming that they had abolished slavery and complied with all the requirements, in order to become again a State with the rights and privileges of other States, desiring peace and harmony, and confiding in the good intentions of the President, etc.

Mr. Hill moved to recommit, so as to incorporate in the memorial the ordinance passed, declaring null and void the public debt.

Mr. Kenan saw no good reason why this should be done. Why place this in the memorial and no other? Why emblazon it to the world? and why tell President Johnson that we had by ordinance repudiated the war debt of Georgia? We have had enough of telegrams from the City of Washington influencing this body. It was humiliating enough to pass the ordinance without incorporating it in this memorial. He hoped the measure would not prevail.

Mr. Hill replied: The President would not consider it humiliating to place this in the memorial that we had abolished slavery.

Mr. Kenan.—That was required.

Mr. Hill.—The gentleman says that was required. Was not the measure spoken of required?

Mr. Kenan.—No, sir; in my opinion there has been no requisition.

Mr. Hill read from the memorial.

Mr. Kenan said that these telegrams were received in other States, including Georgia, and nothing was said by the President requiring repudiation. He had a pardon in his pocket for himself, and nothing in that pardon requires him to forfeit by his vote the honor of Georgia. He was a Union man five years ago in this hall, and when Georgia seceded he went with her, and "so help me God, if I had my way, we to-day would have been a separate and distinct Government."

He did not tell President Johnson in order to get a pardon that he was a Union man. He stood upon his merits. He had heard of applications for special pardon at the White House because men were using the plea that they were Union men. One party used this plea to obtain a pardon, whilst near him stood a young man of 21 years. The question was asked the Union man, "What did you do?" "Oh, I am for the Union." "Did you fight for it?" "No." Turning to the young man, "And you, sir, what have you done?" "Sir, I am a rebel, have fought for the South four years, received several wounds, and ask for a pardon." The President ordered his secretary to make out a special pardon for the young man, whilst the Union shrieker was left out in the cold. No, sir, I will never shield any responsibility in the plea of Union.

The Convention also passed an ordinance dividing the State into seven Congressional districts, containing counties and population as follows:

	No. Counties.	Rep. Population.
1st District	29	122,483
2d "	23	124,094
3d "	15	124,523
4th "	15	123,137
5th "	15	125,539
6th "	21	123,640
7th "	14	124,556
	131	869,501

Another ordinance was adopted, directing an election for Governor, members of the State Legislature, and of Congress, to be held on November 15th.

A resolution was also adopted to appoint a committee of five to prepare a memorial to the President for the release of Jefferson Davis and others. This committee made the following report, which was adopted by the Convention:

MILLEDGEVILLE, GA., Oct. 30, 1865.

To his Excellency Andrew Johnson, President of the United States:

The delegates of the State of Georgia, in Convention assembled, do earnestly invoke the Executive clemency in behalf of Jefferson Davis and Alexander H. Stephens, and of James A. Seddon, of Virginia; A. G. McGrath, of South Carolina; William Allison and David L. Yulee, of Florida, and H. W. Mercer, of Georgia, now confined as prisoners in Fort Pulaski, and of all other prisoners similarly circumstanced. Your Excellency has been pleased to restore Mr. Stephens to his liberty. He returns to the grateful people of his State as a solemn pledge of the magnanimity which rules the public councils, and his great name and influence will be potent to revive the amity of the past and to fructify the wise and generous policy which your Excellency has inaugurated. Emboldened by this example, impelled by the purity of our motives, and stimulated by the prayers of a numerous people, we appeal for clemency in behalf of the distinguished persons we have named. Restore them to liberty and to the embraces of their families, translate them from captivity to the light of freedom and of hope, and the gratitude of the prisoners will be mingled with the joyful acclamations which shall ascend to Heaven from the hearts of this people.

Mr. Davis was elevated to his high position by our suffrages and in response to our wishes. We imposed upon him a responsibility which he did not seek. Originally opposed to the sectional policy to which public opinion, with irresistible power, finally drove him, he became the exponent of our principles and the leader of our cause. He simply responded to the united voice of his section. If he, then, is guilty, so are we. We were the principals; he was our agent. Let not the retribution of a mighty nation be visited upon his head; while we, who urged him to his destiny, are suffered to escape. The liberal clemency of the Government has been extended over us. We breathe the air and experience the blessings of freedom. We therefore ask that the leader, who, in response to the democratic instincts of his nature, the principles of his party, and the solicitations of his section, became the head and front of our offending, shall not now be bruised for our iniquities or punished for our transgressions. Mr. Davis was not the leader of a feeble and temporary insurrection; he was the representative of great ideas and the exponent of principles which stirred and consolidated a numerous and intelligent people. This people was not his dupe. They pursued the course which they adopted of their own free will, and he did not draw them on, but followed after them. It is for these reasons that we invoke the Executive clemency in his behalf. His frame is feeble; his health is delicate—all broken by the storms of state. He languishes out in captivity a vicarious punishment for the acts of his people. Thousands of hearts are touched with his distress. Thousands of prayers ascend to Heaven for his relief. We invoke in his behalf the generous exercise of the prerogative to pardon which the form and principles of the Constitution offer as a beneficent instrument to a merciful Executive. We ask the continuance of that career of clemency which your Excellency has begun, and which alone we earnestly believe can secure the true unity and the lasting greatness of the nation. Dispensing that mercy which is inculcated by the example of our great Master on high, your name will be transmitted to your countrymen as one of the benefactors of mankind. The Constitution of our country, renewed and fortified by your measures, will once more extend its

protection over a contented and happy people, founded, as it will be, upon consent and affection, and "resting, like the great arch of the heavens, equally upon all."

The memorial in favor of Mr. Davis truthfully reflected the sentiments of a very large majority of the people of Georgia. A stronger support was tendered to him in his adversity than he had received in the height of his power.

Similar petitions relative to Jefferson Davis were prepared in several of the Southern States. An ordinance was also adopted which made it the duty of the Legislature to provide for the widows and orphans of the soldiers of Georgia who had perished, and for those soldiers who had been disabled. Another was passed, ratifying the acts of guardians, trustees, etc., during the war.

The State Constitution was entirely revised and adapted to the changes in civil and social affairs. In this instrument the emancipation of the slaves was expressly recognized, and the Legislature required to make regulations respecting the altered relations of this class of persons. The instrument in its revised form was unanimously adopted by the Convention. The number of slaves in the State in 1860 was 462,198.

The Convention also adopted a resolution requesting the Provisional Governor to order the formation of one or more militia companies, to be organized in each county of the State, to act as a police force, under the approval of the President. On the subject the following despatch was sent from Washington to the Provisional Governor:

WASHINGTON, NOV. 5, 1865.

To James Johnson, Provisional Governor of Georgia:

The organization of a police force in the several counties, for the purpose of arresting marauders, suppressing crime, and enforcing civil authority, as indicated in your preamble and resolutions, meets with approbation. It is hoped that your people will, as soon as practicable, take upon themselves the responsibility of enforcing and sustaining all laws, State and Federal, in conformity to the Constitution of the United States. ANDREW JOHNSON,

President of the United States.

Subsequently the Governor issued the following proclamation:

EXECUTIVE OFFICE, PROVISIONAL GOVERNMENT OF }
GEORGIA, MILLEDGEVILLE, NOV. 21, 1865. }

Whereas, The late Convention did ordain, that the Provisional Governor should provide for the formation of one or more volunteer companies in each of the counties of the State, to act as a police force, to suppress violence, to preserve order, and to aid the civil officers in the enforcement of the laws, under such regulations as might be consistent with the United States: Now, therefore, I, James Johnson, Provisional Governor of the State, do hereby authorize and request the people of this State to organize, according to law, in each of the counties of this State, a volunteer company, for the purpose of aiding the civil authorities in the execution of law and the suppression of violence.

And it is hereby further declared, that such companies, when so formed and organized, shall be auxiliary and subordinate to the civil officers; that they shall arrest no person, and search the house of no person, without a legal warrant regularly issued by

some magistrate having authority, and shall in no case inflict any punishment except by the judgment and direction of a duly qualified civil officer, having jurisdiction of the offence.

And *whereas*, it is desirable to have uniformity in command, and that there should be no conflict between the military authorities of the State and the United States, it is further declared that said companies, when formed within their respective counties, shall be under the control and subject to the military commanders of the United States commanding the District; and for a violation of these regulations, and for any other offence committed, shall be tried and punished according to the rules prescribed for the government of the army of the United States.

Given under my hand and the seal of the Executive Department at Milledgeville, on this the 21st day of November, A. D. 1865. JAMES JOHNSON,
Provisional Governor of Georgia.

Other ordinances and resolutions of local importance were adopted, and, after a session of thirteen days, the Convention adjourned. Previous to the adjournment, the following address to President Johnson was unanimously adopted:

To his Excellency, Andrew Johnson, President of the United States of America:

The people of the State of Georgia, now in Convention, having repealed all ordinances and resolutions, by them heretofore adopted, with a purpose to separate themselves from the United States, and to enter into another Confederacy, and having adopted a Constitution strictly republican, wherein the supremacy of the Constitution, constitutional laws, and treaties of the United States of America are distinctly affirmed, having therein recognized the emancipation, by the United States Government, of persons previously held as slaves in this State, and ordained in the fundamental law that neither slavery nor involuntary servitude (save as punishment for crime) shall hereafter exist in Georgia; and having, as they conceive, done all things necessary and proper on their part, to the full and complete restoration of their rights and privileges as a State, and as a member of the American Union, respectfully request that all needful executive and legislative measures be taken to effect such restoration as speedily as possible.

We, the delegates of the people, fully informed as to their purposes and desires, assure your Excellency that it is their fixed intention to perform their whole duty as citizens of the United States, that their desire is to live under the Constitution, in peace and harmony with the whole people, and to see sectional strife banished forever from the national councils.

We moreover express to you, sir, their entire confidence in your just and kind intentions toward them; and their anticipations of your conciliatory and trustful consideration of their acts and doings in this Convention.

The State officers and the members of a State Legislature were duly elected on November 15th, as provided by the Convention, and that body assembled at Milledgeville on December 4th. Nearly every county was represented on the first day of the session. An organization was at once effected, by the choice of William Gibson as President of the Senate, and Thomas Hardeman Speaker of the House. The President of the Senate, in his address to that body, said: "Having fought the war through and been conquered, we find the affairs of the State in a most deplorable condition; the whole system of labor sustained by our fathers through successive generations

wholly destroyed, and the capital of the country thoroughly exhausted. But it becomes your duty so to frame your legislation that, upon the ruins of the old, a new system may arise which will contribute to the advancement of Georgia in wealth, prosperity, and power. In order that this system should prove effectual, we must bury our prejudices in the past; we must conciliate the views of those from whom we now widely differ, and with whom we lately stood in hostile conflict. Let us so shape our legislation that while we guard with the utmost caution our interests at home, we shall win the confidence of our late enemies, but, we trust, soon to be our friends of a common country, with a common fate awaiting us all."

The Provisional Governor having been instructed by the President to retain his office until further notice, sent a message to the Legislature, recommending the passage of the amendment of the Federal Constitution, a change in the manner of conducting the State railroad, and one or two other topics of a strictly local interest.

On the next day the amendment to the Federal Constitution, relative to slavery, was brought forward in the House, and, under the suspension of the rules, was passed without debate, and by an almost unanimous vote. The amendment was taken up in the Senate on the next morning and passed. The following despatches from the late Confederate Governor Brown and the Provisional Governor were immediately sent to the President:

MILLEDGEVILLE, GA., December 6, 1865.

To his Excellency Andrew Johnson:

The Legislature has adopted the constitutional amendment, and will pass laws amply protecting freedmen in their rights of person and property, including their right to sue and be sued, and to testify.

J. E. BROWN.

MILLEDGEVILLE, GA., December 6, 1865.

To his Excellency Andrew Johnson, President:

The constitutional amendment has passed each branch of the Legislature.

The House passed a resolution instructing the Judiciary Committee to report a bill to protect persons of African descent in their persons and property, and also to allow them to testify in cases in which they may be interested.

J. JOHNSON, Provisional Governor.

To which the President replied as follows:

WASHINGTON, December 8, 1865.

James Johnson, Provisional Governor:

Your despatch received the 6th inst. Permit me to congratulate you and the Legislature on their action in adopting and ratifying the amendment of the Constitution of the United States abolishing slavery.

ANDREW JOHNSON, President United States,

The manner in which this despatch was received by the House, is thus described by a spectator: "This despatch was read amid profound silence and breathless attention; and the involuntary manifestation of mingled hope, disappointment, and relief which pervaded the whole house, and was expressed in every countenance, afforded a most remarkable and striking exemplification of the moral effect of the changed relation of our people to the national Govern-

ment. In their present position, misrepresented by enemies and misunderstood by friends at the North, members were in doubt as to what might be the purport of the despatch from the President of the United States; and when it was ascertained to be only a congratulatory recognition of their late action, the general feeling of relief was too manifest to escape the notice of the most casual observer. I have not before so sensibly realized what it is to be a subjugated, conquered people. If many hoped and expected that the despatch brought the President's recognition of the reorganization of the State Government, with his authorization of its perfection, by the inauguration of the Governor elect of the people, not a few entertained apprehensions that the communication might be adverse and of more serious import. If the hopes of the first were disappointed, nevertheless all were relieved by the knowledge that nothing worse had come from Washington, and the evidence of that feeling at the close of the reading of the brief missive might have been discerned, not only in the expression of every countenance in that hall, but, as I imagined, by the freer respiration which followed."

On the 10th the Provisional Governor sent a despatch to Washington, asking to be relieved from his duties, and that the Governor-elect might be allowed to enter upon his office. The President sent the following in reply :

WASHINGTON, December 11.

J. Johnson, Provisional Governor :

The Governor-elect will be inaugurated, which will not interfere with the Provisional Governor. You will receive instructions in a few days with regard to being relieved. Why can't you elect a Senator? I would issue no commissions to members of Congress: leave that for the incoming Governor. We are under obligations to you for the noble, efficient, and patriotic manner in which you have discharged the duties of Provisional Governor, and you will be sustained by the Government.

ANDREW JOHNSON, President.

The inauguration of Governor Jenkins took place on December 14th. In his address he presented the following views of the results of the war and the position of the freedmen :

In the recent remodelling of their Constitution, the people of Georgia have acknowledged the Constitution, laws, and treaties of the United States as the Supreme Law. This means something more than yielding of the contest, or an overture for restoration. It implies fidelity to the supreme law in all future legislative, executive, and judicial action, and in all future movement of the people *en masse*. It implies a recognition of duty to and interest in the whole country, as well as to and in the State of Georgia. It is of course predicated upon a reciprocal obligation on the part of those to whom this pledge is renewed.

The institution of slavery—the principal source of discord in the past—has been effectually eradicated from our social and political systems. It can never again disturb the harmony of our national deliberations, without which the Federal Union must be a curse instead of a blessing. If the whole people, repressing all promptings of sectional feelings and interest, will faithfully observe and obey the Federal Constitution, coming events may lift the veil which now covers recent demonstrations of Providence, and disclose to their rectified vision, in striking contrast,

ruin caused by human folly and renovation wrought by divine wisdom.

Let not our people yield to discouragement, in view of the tardy progress of reconstruction, or of the suspicion and distrust so palpably manifested toward them. Sustained by conscious rectitude, let them maintain with calm and resolute dignity the position they have taken, and await the result. A tempest of unsurpassed fury has swept over the land. The elements do not subside into their normal quiet instantaneously with the lull of the wind, the sleep of the lightning, and the hush of the thunder. The smoke of an hundred battles does not vanish in a moment. But the atmosphere will clear ere long; those who cannot now see how men who recently fought with such desperation against the United States, can so soon become its real citizens, will then look at us through a rectified medium. It will occur to them that valor and truth are twin sisters, born of magnanimity, whose womb never did nor never will conceive treachery. They will then remember and appreciate the historical fact, that the State now returning never conferred against the United States, until each for herself had in open day, and in the hearing of all mankind, declared herself separate from that power. And although they will still hold that act wrong in principle and void in fact, they will find in it no taint of duplicity. They will look in vain through all the sanguinary traces of war for the trail of the serpent. In due time consistency will command confidence, and sincerity, like the diamond of the first water, will assuredly win its own recognition. Then our too suspicious judges will marvel less at our approved fealty, than at their own tardiness in discerning it.

Be the process of reconstruction long or short, when consummated, our attitude will and must be that of strict fidelity to the Union, of equality with our associates, and of dignity sustained by our inner sense of unviolated integrity.

Respecting the freedmen, he said :

It is undoubtedly true that during all the years of his enslavement he has been marvellously kind, profoundly content with his condition; and what shall be said of his deportment during the last half decade of sad memories? Whilst our strong men were in the tented field, far away from unprotected wives and children, he cultivated their lands, tended their households, and rendered all servile observances as when surrounded by the usual controlling agencies. And since the fiat of emancipation, which he neither forced nor implored, although sometimes unsettled in his purpose, and inconstant in his service by contract (the natural results of a transition so sudden and so thorough), I take you all to witness that in the main his conduct has been praiseworthy beyond all rational expectation. Tell me not of instances of insubordination as a slave, and of indecorum as a freedman, that have transpired in certain localities or characterized particular individuals. These are exceptional cases, the general rule being quite otherwise. Do our own race render unvarying obedience to the mandates of law? Are our own offspring through the years of minority always subordinate to parental authority? Shall, then, the less cultivated African be held to a stricter accountability or be judged by a higher standard of moral rectitude? Tell me not the race is ungrateful. The assertion is against the truth of tradition and experience. I here declare that, in my judgment, their fidelity in the past, and their decorum under the distressing influences of the present, are without a parallel in history, and establish for them a claim upon our favoring patronage. As the governing class, individually and collectively, we owe them unbounded kindness, thorough protection, incentives by moral suasion, by appeals to their interest, and by just legal restraint to do right, that they may do well. Their rights of person and property should be made perfectly secure

so secure that they may realize their freedom and its benefits, and of it they should be encouraged and stimulated to make benefit. To this end the courts must be opened to them, and they must be allowed in the assertion and defence therein of the rights in civil and criminal cases, the testimony of their own race. As essential to their well-being, they should be guarded on the one hand against the crafty machinations of the designing, and on the other against the fatal delusion of social and political equality.

The condition of the State institutions, both charitable and educational, was represented as greatly depressed, and requiring the fostering care of the Legislature. The obligations of the State are comparatively small, and her future resources will be abundant.

On December 19th a despatch was sent to the Provisional Governor from the President, authorizing him to remit the conduct of the State affairs to the constitutional authorities. At the same time another despatch was sent to Gov. Jenkins, informing him of the instructions to the Provisional Governor, and tendering to the former the coöperation of the Federal Government, if necessary, in the discharge of his duties. Gov. Jenkins replied as follows:

MILLEDGEVILLE, Geo., Dec. 22.

Hon. W. H. Seward:

I have the honor to acknowledge the receipt of your telegram of the 19th inst., together with a copy of a communication to his Excellency James Johnson, Provisional Governor of Georgia. Be pleased to tender to his Excellency the President my grateful return for his recognition of the position in which the people of Georgia have placed me, and assure him of my fixed purpose to observe and obey as well the Constitution of the United States as the Constitution of the State of Georgia. Express to him, also, my thanks for the offered coöperation of the Government of the United States in effecting the earliest restoration and permanent prosperity of the State. Upon this coöperation our people build earnest hopes of a speedy return to their suspended relations with the other States of the Union.

I have the honor to be,

Very respectfully, your ob't servant,
CHARLES J. JENKINS, Governor of Georgia.

The Legislature subsequently passed a resolution regulating contracts with freedmen, and another regulating the mode of taking their testimony. This latter act makes free persons of color competent witnesses in civil cases where like persons are defendant, and in criminal cases where the offence is against the property or persons of freedmen. It provides also that where freedmen are the plaintiff and defendant, they may make and file any affidavit now allowed to citizens, which shall have the same force as if they were whites.

N. C. Barnwell was elected Secretary of State; John Jones, State Treasurer; and J. A. Burns, Comptroller General. On the 15th of December the Legislature adjourned to the 15th of January, 1866.

GERMANY, a Confederation of sovereign and independent States in Central Europe. The object of the Confederacy, according to the first article of the Federal Constitution, is "the preservation of the internal and external security of Germany, and the independence and in-

violability of the various German States." The organ and representative of the Confederation is the Federal Diet, consisting of plenipotentiaries of the several German States, and permanently located in the free city of Frankfort-on-the-Main. The administrative Government of the Federal Diet is constituted in two forms: 1st, as a General Assembly or Plenum, in which every member of the Confederation has, at least, one vote, and the larger States have two, three, or four votes each; and 2d, the Minor Council, or Committee of Confederation, in which the eleven largest States cast one vote each, while six votes are given to the smaller States, a number of them combined having a joint vote. The General Assembly decides on war and peace, on the admission of new members, on any changes in the fundamental laws or organic institutions; but in all other cases the Minor Council is competent to act both as legislature and executive. The presidency of the Federal Diet is permanently vested in Austria.

The present members of the German Confederation, the titles of the sovereigns, the population, according to the latest census, the number of votes cast by each member in the General Assembly (Plenum), and their rank in the Minor Council, may be seen by reference to *ANNUAL CYCLOPEDIA*, 1863, page 449.

The Federal army consists of 531,281 infantry, 92,300 cavalry, 59,485 artillery, and 12,979 pioneers.

In consequence of the separation of the duchies of Holstein and Lauenburg from Denmark, the King of Denmark has ceased to be a member of the German Confederation. As the fate of Holstein was at the close of 1865 not definitely decided, its vote at the Federal Diet was suspended. There are still three sovereigns members of the Confederacy who have possessions outside of the limits of Germany: namely, the Emperor of Austria, and the Kings of Prussia and Holland.

In the proceedings of the Federal Diet of Frankfort there has been for several years a marked alienation between the majority of the minor States, headed by Bavaria on the one hand, and Austria and Prussia on the other. The Government of Prussia being charged with the design of undermining and destroying the sovereignty of all the minor States, and of annexing those of northern Germany to Prussia, and those of southern Germany to Austria, it was the aim of Bavaria and the other minor States to vindicate and to strengthen the authority of the Federal Diet. During 1864 and 1865, it was especially the Schleswig-Holstein question which furnished constant material to this litigation. On December 1, 1864, Austria and Prussia proposed to the Diet that the "Federal execution" in the Elbe duchies should be terminated, and the troops of Saxé and Hanover be withdrawn. Bavaria proposed to refer this motion to the committee, but the Diet decided to take a vote upon it in one of the next sessions. Austria, by a circular, dated December

3d, endeavored to quiet the minor States on this subject, by declaring that the withdrawal of the Federal troops was not intended to be prejudicial to the validity of a competent decision of the Diet in the question of succession. On December 5th the Diet adopted the motion made by Austria and Prussia on December 1st, by nine against six votes, the latter being cast by Bavaria, Saxony, Wurtemberg, Hesse-Darmstadt, the Saxon duchies, Nassau, and Brunswick. On December 7th, the Federal Civil Commissioners, Von Koenneritz and Von Nieper, resigned, and the Federal troops began to evacuate the duchies. On December 17th, Saxony and Hanover announced to the Diet that the evacuation of Holstein was complete.

On December 12th the Bavarian Minister of Foreign Affairs, Von der Pfordten, issued a circular to the minor German States, explaining the policy pursued by the Bavarian Government on the German question, and on that of the duchies. The Prussian prime minister, on the other hand, on December 13th, sent a threatening note to the States which, on December 5th, had voted against the proposition of Prussia and Austria, declaring that if they (Bavaria and the other opponents of Prussia) had obtained a majority, Prussia would have deemed it necessary to consider the decision which would have resulted from such a vote, as a violation of the Federal pact, and that, in the opinion of Prussia, the design to enlarge the limits of the competence of the Federal Diet, would endanger the existence of the Confederation. To this despatch Bavaria replied on December 18th, vindicating for every German State the liberty of voting. Saxony also replied to the Prussian despatch on December 25th, denying to Prussia the right of asking any German State for the reason of the vote it cast, or of deciding the competence of the Diet, which right belonged exclusively to the Federal Assembly as the supreme authority of the Confederation.

On March 27, 1865, a resolution was proposed by Saxony and Bavaria, that Austria and Prussia should be requested to cede Holstein to the Duke of Augustenburg, and to communicate to the Diet their mutual arrangements in reference to Lauenburg. The resolution was adopted on April 6th, nine votes being given in favor of it, and six against it. The representatives of Austria and Prussia thereupon presented separate declarations. The principal points of the declaration of Austria were, that she was prepared to surrender to the Prince of Augustenburg her title to the possession of Holstein should Prussia agree to adopt a similar course; otherwise Austria would maintain her title to the duchies until a solution was arrived at in consonance with the interests of Germany. Prussia announced her willingness to come to an understanding on the subject, but such an understanding must indispensably depend upon a previous investigation of all claims to the duchies, and especially of her own. She would

maintain her right of possession until a solution had been arrived at in accordance with her own convictions, and satisfactory to the other parties interested in the duchies. In conclusion, the Prussian representative stated that Prussia could at once declare herself unable to hold out any prospect of realizing the expectations expressed in the resolution which had just been adopted by the Diet.

On November 4th the representatives of Bavaria, Saxony, and Hesse Darmstadt, proposed that Austria and Prussia should be requested, first, to convoke in Holstein, as soon as possible, a general assembly of representatives elected by the free votes of the inhabitants, in order that such an assembly may coöperate in a definite solution of the still-pending Schleswig-Holstein question; second, to take steps calculated to bring about the incorporation of Schleswig into the German Confederation. On November 18th the above proposal of Bavaria, Saxony, and Hesse Darmstadt, was, in conformity with the demand of Austria and Prussia, referred, by eight to seven votes, to the committee on Holstein affairs. The representatives of the two great German Powers declared that it was still their intention to summon the estates of the duchies, but that they reserved the proper moment for so doing. They further decline to give any positive answer to the question whether Schleswig should be incorporated with the German Confederation. Bavaria, Saxony, and Hesse Darmstadt thereupon declared that, with reservation of the competency of the Federal Diet, they renounced any intention of bringing the matter again before the Diet.

In consequence of the Convention of Gastein between Austria and Prussia (see GASTEIN), the committee of thirty, appointed by the assembly of delegates from the German Legislature, issued the following circular:

To all the members of popular representations throughout the country: "By the Gastein Convention the Governments of Austria and Prussia have violated in the most flagrant manner the clearest principles of right, and especially that of the duchies to settle their own future, only limited by the interest of the German nation. The measures which it was to be foreseen would follow this convention threaten, in addition to shaking the sentiment of right of the German people, to annihilate for years the material and moral prosperity of the duchies, freed from the Danish yoke by German blood. The undersigned committee considers itself, therefore, in duty bound to request the reassembly of the members of the German Diets, already unanimously determined by the special committee of the Schleswig-Holstein clubs, in order to discuss and resolve upon the best means of saving the condition of public right in those lands. The committee expect that the German delegates, who solemnly promised at the meeting of December 21, 1863, and by the protest handed in at the London Conference of April, 1864, to advocate the free right of self-disposal of the duchies and to support their rights generally, will now redeem this promise by their appearance at the new assembly. The undersigned accordingly invite all present members of German Diets to a meeting at Frankfort-on-the-Main, on Sunday, October 1st, at ten in the forenoon. A confidential preliminary meeting is to be held on Saturday, September 30th, in the evening."

The meeting took place on the appointed day, although Austria and Prussia, in threatening notes, had urged the Frankfort Senate to forbid it. The meeting entered a strong protest against the proceeding of the Austrian and Prussian Governments, and renewed the demand that the people of the duchies should have an opportunity to decide of their destiny. Austria and Prussia, in notes to the Frankfort Senate, intimated, that if other meetings of the kind were allowed in Frankfort, it would become the duty of Austria and Prussia to prevent it (see FRANKFORT). The Frankfort Senate unanimously protested against any right of Austria and Prussia to interfere in this matter, and was supported in this protest by the majority of the minor States, which reserved to the Federal Diet the right to decide what steps it might be necessary and legitimate to be pursued toward the Frankfort Senate. The two allies could not agree about ulterior measures. Prussia objected to an appeal to the Diet, as by so doing she would recognize its authority to interfere, and establish a bad precedent in the Holstein affairs; and Austria declined to proceed exclusively against Frankfort.

The Annual General Assembly of the National-Verein took place at Frankfort-on-the-Main on October 29th, when the following resolutions of the committee in reference to the political organization of Germany, and the solution of the Schleswig-Holstein question, were agreed to by a large majority: 1st. The National-Verein maintains its original programme that Germany should be constituted as a Federal State, the central authority of which should be transferred to Prussia upon condition that such transfer be sanctioned by a Parliament representing the whole German nation. 2d. The National-Verein declares that the settlement of the Schleswig-Holstein question can be brought about solely by a vote of the population of the duchies, the free exercise of which can only be limited by the common interests of Germany. It was further resolved that, should a German central authority not be formed, Prussia alone could effectually defend the northern frontiers of Germany. In conclusion, the National-Verein resolved that the convocation of the Schleswig-Holstein estates could no longer be delayed.

GILLISS, Capt. JAMES MELVIN, an officer of the United States naval service, and at the time of his death Superintendent of the National Observatory, born in the District of Columbia in 1810, died in Washington, D. C., of apoplexy, February 9, 1865. He entered the navy as midshipman, March 1, 1827, having enjoyed good previous advantages of education. He spent but little time afloat, his entire sea service amounting to only four years and seven months, his fondness and adaptation for astronomical studies having led to his being employed very early in that department of naval service. In 1838 he organized the first working observatory in the United States, and during the five

following years collected and published his astronomical observations, the first American work of the kind published. In September, 1842, Lieut. Gilliss was appointed to plan and superintend the construction of a naval observatory, which was completed and furnished in 1845. On the 16th of November, 1848, he was ordered to proceed to Chili to make observations for the determination of the Solar Parallax, and remained there three years. Through his influence a naval observatory was established in that country, and he completed a series of observations of great value, not only in regard to the Solar Parallax, but to the constellations of the Southern Hemisphere, and to earthquakes, and other subjects relating to the physical geography of Chili. His observations have been published by the Government in a series of quarto volumes. In 1858 he visited Peru to observe the total eclipse of the sun, which was most complete and protracted in that country, and in 1860 made the journey to Washington Territory for the same purpose. His observations in regard to both were of great importance, and went far toward settling several questions of interest in relation to the form and properties of the sun. On the departure of Lieut. Maury at the commencement of the war, Commander Gilliss was at once placed in charge of the Observatory, which he had constructed and equipped sixteen years before, his appointment bearing date April 22, 1861. This proved a beneficial change to the institution, which, under his charge, soon became one of the few first-class observatories in the world. He found a vast amount of work left in arrears by his predecessor, no reduction of the observations of the previous six years having been made. He applied himself to the work of bringing them up, and of adding new and valuable observations, with great industry, and perhaps with an assiduity which may have caused his untimely death. On the 16th of July, 1862, he was promoted to the rank of captain in the navy. He had won for himself a high reputation among the most eminent astronomers of the world, by his profound astronomical knowledge and his eagerness in the pursuit of his favorite science. Shortly before his death he had made an official report to the Secretary of the Navy, detailing the scientific observations made in various observatories of the world, under his auspices or at his request, to ascertain the parallax of the planet Mars, and the result as approximating the exact distance from the earth to the sun. He possessed a rare degree of mechanical ingenuity, and had contributed many valuable improvements to the instruments of astronomical science.

GILMAN, CHANDLER ROBBINS, M. D., an American physician, medical writer, and professor, was born September 6, 1802, at Marietta, Ohio, died at Middletown, Connecticut, September 26, 1865. His father and his grandfather, who received from Gen. Washington his commission as Judge, were among the earliest

settlers of that region whither they emigrated from New Hampshire. His mother was descended from the Puritans, being a daughter of the Rev. Chandler Robbins, the Congregational minister of Plymouth, Mass. Young Gilman was educated at Andover and Harvard College. He studied medicine in the office of Dr. Parrish, of Philadelphia, and graduated at the University of Pennsylvania in 1824, coming soon after to New York city, where all his active professional life was spent. At this period he was associated with his relative Charles Fenno Hoffman in the charge of the *American Monthly*, and in 1835 published two works, viz., "Legends of a Log Cabin," reminiscences of his western life, and "Life on the Lakes," a series of letters describing his journey to the Pictured Rocks of Lake Superior, to which himself and brother were the first white visitors for non-mercantile purposes.

He was elected Professor of Obstetrics in the College of Physicians and Surgeons of New York, in 1841, and continued in this position till his death, uniting with it, after the decease of Dr. Beck, the Professorship of Medical Jurisprudence. In this department he was soon acknowledged as an expert, and on few cases of interest was he not consulted by the ablest members of the Bar. In many he appeared as a prominent witness, and here his clearness of conception, ready knowledge and fearlessness of temperament, enabled him to sustain fully his own dignity and that of his profession. In private practice he endeared himself by his sympathy with the sufferings and anxieties of his patients, while he was much consulted by his professional brethren, and performed many important operations in obstetrics and surgical midwifery, in which his scientific knowledge and practical skill insured him a large measure of success. In lecturing he made no pretence to grace or elegance in measure and style. His attitudes were careless, his language unstudied, his sole aim was to instruct, but his lectures, for practical utility and correct scientific teaching, have never been surpassed. He had a taste for Natural History, great fondness for microscopic investigation; he spoke and read French and German; his classical knowledge was extensive and accurate; with the modern English classics he was thoroughly familiar, and most intimately acquainted with both Ancient and Modern History. He possessed a retentive memory, great aptitude of quotation, quickness of repartee, keen perception of humor, and colloquial powers of the highest order.

He prepared for the press Dr. Beck's "Lectures on Materia Medica," took charge of the two later editions of "Beck's Medical Jurisprudence," wrote "A Sketch of the Life and Character of Dr. J. B. Beck" in 1851; "The Relations of the Medical to the Legal Profession" in 1856; a "Medico-Legal Examination of the Case of Charles B. Huntington," translated from the German of Bischoff; "Tracts on Generation," with numerous contributions to

medical magazines, and one to Appletons' "Cyclopædia." In May, 1864, failing health induced Dr. Gilman to abandon the practice of his profession; he removed to Middletown, Connecticut, where he regained some degree of strength, but disease of the heart suddenly terminated his life on the evening of the 26th of September, 1865.

GLASS. Certain new products in the way of glass-making, as well as also certain principles relative to the structure of glass, its durability, etc., which have recently been noticed in the scientific journals, are deserving of mention in this place.

Crystalline Nature of Glass.—The surface of glass etched by fluorhydric acid presents a different appearance, according as the etching is done with the acid in the gaseous or the liquid form. Dr. C. M. Wetherill (*Amer. Jour. of Science*, January, 1866) disproves the hitherto accepted explanation of this difference, and of the ground-glass appearance in the former case—to the effect, namely, that in etching with the gaseous acid the products of decomposition remain in the corroded cavities. He states the result of examination with the microscope to be, that the gaseous acid corrodes the surface in minute and shallow cavities, in which after cleansing with water no other substance than glass is found; while the depressions are deeper and more irregular as the action has been more prolonged. The vapor must, therefore, apply itself to the glass in minute drops or vesicles, like those formed with moisture by antozone. The liquid acid, however, corrodes the whole surface with a certain uniformity; and examination of such surface, it is stated, reveals in every instance the crystalline nature of glass. The semi-opacity of the glass etched by the gaseous acid appears due solely to the influence of the irregularities of surface on the rays of transmitted or reflected light.

Leydolt first announced (*Wiener Acad. Bericht*, viii., 261) the discovery that glass is to some extent crystalline. His examination seemed to show that in all glass there is an amorphous matrix interspersed in less or greater degree with crystals; and that the distribution of the latter, not less than the general density and composition of the glass, has a marked influence upon its character and optical behavior. M. Daubrée, on the contrary, has asserted that the crystals discovered on the etched surface of glass are really deposited crystals of fluo-silicide of potassium, which then protect from corrosion the parts beneath them. M. Pelouze *devitrified* various kinds of glass, by exposing during 24 to 48 hours to incipient fusion, and afterward cooling slowly: the glass lost its transparency, turning to a porcelain-like mass, which contained numerous opaque acicular crystals. This product could be re-fused into glass, then produced anew from the latter; and so on, repeatedly. Later experimenters have, however, contradicted M. Pe-

lounge's conclusion, to the effect that in the transformation from transparent to devitrified glass there was no change of composition or weight.

The results of Dr. Wetherill's experiments, though presenting some points of difference, still confirm Leydolt's view, as to a crystalline structure in ordinary glass. Admitting the presence of deposited crystals in some cases, and the difficulty or impossibility of deciding in certain others, the author's conclusions are—that the window-glass examined contained crystals already formed, of which some are more soluble than their matrix in fluorhydric acid, and other perhaps less so; and that all the specimens of glass submitted to the action of fluorhydric acid yielded crystalline forms. Some of the observations appeared to show that crystals formed at first during the refrigeration of the glass, were subsequently broken by the operations of pressing, rolling, etc., to which the material had been subjected.

Solubility and Erosion of Glass.—M. Pelouze showed, some years ago, that when window, bottle, and other varieties of glass are reduced to fine powder and mixed with water, they are soon acted on, yielding often as much as 8 or 10 per cent. of their weight to the water if cold, and by boiling in water sometimes as much as 36 per cent.—the matter so separated being in many cases a definite silicate of soda. That powdered glass should so dissolve in water, while yet glass in large masses or in plates is in comparison so little acted on, the author explained by differences, in the respects of closeness, extent, and permanence of the liquid contact, in the two sorts of cases.

Dr. F. C. Calvert opposes to the hypothesis just named the fact that aqueous liquids, such as wine, etc., appear to exert very little action upon the internal surface of a bottle, though they may remain in contact with it for many years; and he suggests that a peculiar molecular condition of the surface of the glass, arising perhaps under the circumstances of its manufacture into plates or otherwise, or possibly from the atmospheric pressure, may be influential in enabling it to resist the action of water and aqueous liquids. He cites the apparently parallel facts, that the surface of polished steel, the rolled surface of wrought iron, and the skin of cast iron, resist the chemical action of both air and acids in a far greater degree than does the interior substance of the same masses. Still, admitting this view, there are many facts which go to show that the immunity of any glass and in any part from chemical action is *comparative* only, not absolute, and that different samples of glass possess in very different degrees the power of resisting such action. These conclusions have recently received new confirmation from the observations of M. Weber, now to be referred to.

Efflorescent and Deliquescent Sorts of Glass.

—A paper on this subject, by M. R. Weber, appears in *Le Technologiste* for August, 1864. It has long been observed that many sorts of

glass, especially when exposed to a moist air, undergo with time changes at their surface, their brightness and transparency being impaired, and the surface becoming covered with a thin iridescent layer, or even yielding minute scales, or showing cracks and fissures. Some sorts of glass show these changes in a high degree; but of other sorts the surface and transparency remain unimpaired for great lengths of time, and though little care is taken of them. The changes here referred to depend primarily and chiefly on a slow decomposition of the glass, under the influence of carbonic acid and other atmospheric agents; but, once set up on its surface, their effect is increased, and their occurrence often indicated, by the presence of moisture on the parts and the firmer adhesion of dust upon them.

That the more or less rapid decomposition of different sorts of glass is determined chiefly by their chemical composition, is placed beyond a doubt by such facts as that the ordinary *soluble glass*, which dissolves completely in 4 or 5 times its weight of boiling water, is essentially a compound of sand and potash, in about the proportions of 2 to 1; and that, in various glasses of commerce, the proportion of silice may vary from 45 up to 71 per cent. of the whole, that of the alkali from 3 to 22, and that of the lime from about 9 to 29 per cent. When deposits form on the surface of glass, and from its material, they have an alkaline reaction, and reveal alkalies also by spectrum analysis. The efflorescent product chiefly contains soda; the deliquescent, potash; and it is already safe to assign an undue proportion of alkali in its composition as a chief cause of the easy corrosion and poor quality of glass of certain sorts. Of course, glass thus defective in quality is little suited for use in windows or for mirrors; while for optical purposes it must be rejected.

MM. Vogel and Reischauer proposed to detect poor qualities of glass by exposing samples for several days to the action of a heated and concentrated solution of nitrate of zinc; but this and other proposed tests have the defect that the testing liquid removes more or less completely the product of its own action, and that, though the surface of the glass be actually attacked, the effect is not always evident on subsequent inspection. M. Weber accordingly adopted the plan (more fully described in his paper) of acting on a glass to be tested, in plates or other convenient form, with the fumes of concentrated chlorhydric acid. Having first cleansed the glass with great care, he exposes it during twenty-four to thirty hours to the acid fumes, and then shuts it up within a closet for twenty-four hours longer. Next carefully removing from the samples any ammoniacal vapors and dust, he examines the glass, first by transmitted light, and afterward, if necessary, by reflected light of oblique incidence. If, in the former manner, a whitish crust or deposit is detected on the glass, and which is thin, and

loose, or removable by the finger, the glass should be rejected. If no defect is thus made evident, the second method may be resorted to; and if at the same time a blunt knife-blade be drawn across the surface viewed, the slightest efflorescence that may be upon it will be rendered manifest. With the best qualities of glass no efflorescence is discoverable. The application does not unfit good glass for use or sale; and the author declares that by it he is able to distinguish with certainty a good and durable from a poor glass. The method can be applied to colored glass, except when, as in intensely red glass, the coloring material forms a large part of the entire weight. Still a good flint-glass (containing lead) is not appreciably corroded by the application. The author proposes further to investigate the subject, especially as to how large a proportion of alkali can be introduced into glass without detriment to its durability and value.

Coloration of Glass, as ordinarily manufactured.—M. J. Pelouze has been during some time past engaged in a series of experiments on the manufacture of glass, his papers—some at least of which had been presented to the Academy of Sciences—being published successively in the *Comptes Rendus*. Most of the experiments were performed in Siemens' furnaces, used in glass-making, at Saint Gobain. The crucibles used were generally of a very refractory fire-clay, of a composition for all practical purposes the same with the materials ordinarily contained in glass; though, to avoid every source of error, platinum crucibles protected by fire-clay were sometimes employed.

Observing that the presence of certain admixtures in the materials gave a decidedly yellowish tinge to the glass produced, the author experimented with a view to determine the cause of this result. He proved that the yellow color was not directly due to free silicium; and that it is imparted to glass alike by addition of carbon, sulphur, silicium, boron, phosphorus (introduced in phosphate of lime), or aluminium, and at a red heat even by introduction of hydrogen, however rigidly purified. Neither zinc nor arsenic produced the color. The production of the same tinge by addition of substances so unlike, led to the supposition that the coloration must be due in all the cases to some single cause. Finding, furthermore, that all commercial glasses—window, plate, table, bottle, and Bohemian—contain sulphates, as of soda, potash, and lime, M. Pelouze inferred that the cause sought must be the liberation, by reaction of one or other of the elements above named, of an alkaline sulphuret from sulphates present in the molten glass; and this view a variety of examinations and experiments served to establish. The sulphates in glass can come directly from use of the salts as a flux, or from presence of sulphate of soda as an impurity in the commercial carbonate. A glass from Pompeii was found to contain two per cent. of sulphate of soda. When hydrogen

was passed over plate glass containing much of this salt, and at a red heat, it produced at once a very deep yellow color. But the final proofs were that when the glass materials were first purified from sulphates, the addition of any of the elements already referred to failed to give the yellow color; and that this was again produced when into the pure materials an alkaline sulphuret was introduced.

M. Pelouze also alludes to the fact that the surface of window-glass, for many years exposed to the atmosphere, is frequently found corroded, and in part opaque, while examination with a magnifier shows it to be covered with a crystalline deposit; and he attributes the liability to such change largely to presence of the sulphates named, in the glass. He thinks a glass containing no sulphates would prove more homogeneous and less changeable than any at present known, and especially valuable for optical purposes. He accordingly prepared, by repeated crystallizations, a flux of carbonate of soda freed from all traces of the sulphate, and with 100 parts of this (dried), mixed 250 parts of white sand, 50 of pure carbonate of lime, and 2 of charcoal. The glass obtained by fusion of this mixture was perfectly colorless; and other samples were still so, in which boron, silicium, or hydrogen was substituted for the charcoal.

Coloration of Glass by Selenium.—Upon mixing selenium with the ordinary glass composition, but prepared with the purified carbonate of soda, M. Pelouze obtained a perfectly transparent glass, of a beautiful orange color inclining to red, and resembling certain varieties of topaz, essonite garnet, and hyacinth zircon (its hue the 5th orange-red $\frac{1}{10}$, 9th of Chevreul's scale). Upon varying the proportion of selenium from 1 to 3 per cent. of the mixture, the hue obtained was still always the same and of the same intensity. Thus, while it is proved that sulphur and selenium both directly color glass, it is also shown that the well-known analogies between the two extend to their reactions with alkaline and earthy silicates.

A New, or Chrome Aventurine.—The property in virtue of which the sesquioxide of chrome (chromium) imparts to fluxes, and especially to glass a green color, is under heat exhibited also by the bichromate of potash: this salt is, on heating, decomposed into oxide of chrome and neutral chromate of potash; while, in the fused glass materials, the latter is by reaction with silica decomposed into silicate of potash, oxygen, and oxide of chrome; so that under these circumstances, in the form of such oxide, all the chrome of the bichromate enters into the glass.

Using the glass mixture already mentioned, of sand 250 parts, carbonate of soda 100 do., and calcareous spar 50 do., M. Pelouze fused along with this in different trials, different proportions of the bichromate of potash, and with the following results: adding 10 parts of the bichromate, the glass melts and anneals well,

and is of a green color tinged with yellow; adding 20 parts, the glass worked and annealed as easily, and was of a very dark green, with minute spangles of sesquioxide of chrome visible in it; adding 40 parts of the bichromate, the fusion is much more difficult, and the green glass is filled with extremely brilliant crystals; while, with 50 parts, the fusion is extremely difficult, the crystals are confused, and the beauty of the glass impaired. The third of the proportions named may be taken as the most desirable: the resulting glass in this case contains from 6 to 7 per cent. of oxide of chrome, nearly one-half of it combined with the glass, and the other half free in form of scales or spangles.

This glass has been compared for beauty with the Venetian *aventurine*; and the suggested name for it, of *chrome aventurine*, M. Pelouze has retained. It is much more easily prepared than the Venetian glass; and while the last-named is only formed during annealing, the former exists already during fusion. Chrome aventurine sparkles in a strong light, being in this respect surpassed by the diamond alone. Its value is enhanced by its great hardness—much exceeding that of the Venetian, and still more that of common glass. Daubrée has detected among its crystals the regular hexagon, which belongs to the crystalline system of sesquioxide of chrome; while many of them closely resemble certain varieties of laminated oligistie iron ore, with which that oxide is isomorphous. The color of the new glass is the 3d yellowish-green, the 13th hue in Chevreul's chromatic circle. Lapidaries who have cut some specimens of it agree that it forms an important acquisition to their branch of manufacture.—Original paper in *Comptes Rendus*, October 16, 1865.

Restoration of the Stained Glass of Windows.

—It has long been a question whether the stained glass of windows of old cathedrals could be restored to its original brilliancy. M. E. Chevreul has lately shown that this can be done, having practically demonstrated it in the case of the windows of at least one church edifice—the famous “St. Germain des Prés,” of Paris. His process consists in removing the stained glass from the windows, and immersing it first, for several days, in a weak solution of carbonate of soda (sp. gr., 1.068), and next, after having washed it, for several hours in a solution of chlorhydric acid (sp. gr., 1.080). The glass being then washed again and dried, will be found as brilliant and beautiful as when it came from the hands of the manufacturer. The author finds that the dim and dirty appearance assumed in time by stained glass is due, especially in large towns, to the collection on the glass first of all of matters like those contained in smoke, which adhere to it by the agency of fog and rain, and become oxidized there; these matters thus changed serving in the next place as a cement by which various mineral particles, as those of chalk, gypsum,

oxide of iron, etc., become attached to the glass, and so further impair its transparency. His theory of the process he proposes is, that the alkali acts on and removes organic matters on the glass, and that the chlorhydric acid completes the removal of the mineral matters.

References.—Part V. of the extensive and very minute experimental researches of Mr. John M. Ordway, published at intervals during some years past, in the *Amer. Jour. of Science*, under the title of “Waterglass,” appears in that Journal, for September, 1865. The practical glass-manufacturer will also consult with profit two long articles republished from *Newton's London Journal*, of July and September, 1864, in the *Journal of the Franklin Institute*, numbers for December, 1864, and August, 1865, respectively—the former by Mr. G. H. Daglish, “On Machinery for the Manufacture of Plate Glass,” and the latter by Mr. Richard Pilkington, “On the Processes and Mechanical Appliances in the Manufacture of Polished Sheet Glass;” and also two articles appearing in *Le Technologiste*, June, 1865, one by M. H. Pohl, on the “Fabrication of Ruby Glass,” and the other by M. E. Bressins, on the “Preparation of a Gold-Powder for Gilding Glass and Porcelain.”

GOULD, HANNAH FLAGG, an American poet and author, born in Lancaster, Mass., in 1789, died at Newburyport, Mass., September 7, 1865. The family removed to Newburyport in 1800. Her father had been a soldier of the Revolution, and her mother dying young, Hannah became his constant companion, a fact which accounts, for the patriotism which inspired her earlier verses. In her youthful days she was known for her vivacity and wit. Her efforts were not marked by the inspiration of genius, or always by easy versification; but they were characterized by true thought, refined and tender emotions, and a pure, calm, healthful, moral tone, which made them favorites, and led to their frequent appearance in print, both at home and abroad. Miss Gould led a quiet life in the homestead where she dwelt for half a century—a life which would have been as secluded as it was unostentatious but for her genial hospitality and the many visitors and distinguished authors who sought her acquaintance. Her literary tastes never led her to neglect domestic virtues, or the courtesies of social intercourse. Miss Gould published three volumes of poetry; one in 1832, a second in 1836, and the third in 1841. In 1846 she published “Gathered Leaves,” a collection of prose articles. “The Dismal” appeared in 1850, composed of selections from her previously published poems, and from other authors, with some of her own not previously brought before the public. The “Youth's Coronal” was issued in 1851, and “Hymns and Poems for Children” in 1854. She was also a constant contributor to the periodical literature of the day.

GRAHAM, COL. JAMES DUNCAN, of the United States Topographical Engineers, born in

Virginia, in 1795, died in Boston, Mass., December 23, 1865. He entered the Military Academy at West Point in June, 1813, and graduated July 16, 1817, before "class rank" was established. Commissions were then granted only in the artillery service, and he received that of third lieutenant—a grade not now recognized. In October, 1817, he was promoted second lieutenant, in order that he might be made adjutant of the Military Academy, which position he held until February, 1819, and the following September was promoted first lieutenant. On the reorganization of the army in 1821 he was retained with the same rank, to date from June 1, 1821. He was in the following month transferred from the Fourth artillery, in which he had been serving since his retirement from the post of adjutant of West Point, to the Second, in which he remained for several years. It was not until 1829 that his speciality was perceived. He was then (January 15, 1829) brevetted captain, that he might enter the corps of Topographical Engineers, in which he has since remained. September 14, 1834, he was brevetted major of Topographical Engineers, and received the full commission in 1838. In 1839-'40 he was astronomer of the surveying party which, on the part of the United States, established the boundary line between the United States and the then new republic of Texas. In the latter year (1840) he was appointed commissioner for the survey and exploration of the northeast boundary of the United States, and was employed along the Maine and New York frontiers until 1843. In the same year, within a month after closing his surveys on the northeast boundary, he was ordered to duty as astronomer on the part of the United States for the joint demarcation of the boundary between the United States and the British provinces, under the treaty of Washington. This work employed him during the whole Mexican war, so that he was unable to take any part in the campaigns in that country. On the conclusion of this work, he was brevetted lieutenant colonel, the commission reading, "for valuable and highly distinguished services, particularly on the boundary line between the United States and the provinces of Canada and New Brunswick." In 1850 Col. Graham was employed for some time by the States of Maryland, Pennsylvania, and Delaware, to examine some disputed questions regarding the intersection of the boundary line of those States. He made a thorough survey of the line originally made by Mason and Dixon (and known to this day as "Mason and Dixon's line"), and published a voluminous report thereon. Though taking no part in the war with Mexico, he was prominently employed in the final settlement of the question resulting from it, and during 1851 was United States astronomer in the survey of the boundary line between this country and Mexico. On his return from the Mexican frontier, Col. Graham was ordered to Chicago,

and placed in charge of the erection of the custom-house at that point; and since 1864 his attention has been turned to improvements along the Atlantic coast. He made a survey of the harbor of Provincetown, and for some months was in charge of the work for the preservation of Boston harbor.

GREAT BRITAIN, or, THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. Area, 112,406 square miles; population, 29,334,788. Capital, London. Aside from diplomatic questions (for which see DIPLOMATIC CORRESPONDENCE) there were a few topics of interest in the relations of Great Britain and the United States in the year 1865. The death of Mr. Cobden on the 2d of April was deeply lamented in the House of Commons, and eulogies pronounced on his character by Lord Palmerston, Mr. Disraeli, and Mr. Bright. On the 1st of May Earl Russell, in the House of Lords, and Sir George Grey, in the House of Commons, moved an address to the Queen expressive of the sorrow and indignation with which the members of each house had heard of the assassination of Mr. Lincoln, which was voted unanimously. On this occasion Earl Russell stated that the Queen had written an autograph letter of condolence to Mrs. Lincoln, from "a widow to a widow." Public meetings, expressive of the grief and indignation of the people at the assassination, were held in all parts of the United Kingdom, and the sympathy between the two nations, who had for some years been gradually becoming estranged from each other, was to a great extent renewed. The close of the war in the United States led to congratulations from large bodies of citizens of Great Britain, and this with the certainty of the emancipation of the slaves, stimulated emigration from the United Kingdom to the United States to an unprecedented degree. Although this emigration was still as usual in large part from Ireland, the number of emigrants from England was greatly increased, and embraced very many of the better class of working people, who, bringing a moderate amount of money with them, sought homes in a land from which the only objectionable feature had now been removed. During the summer and autumn the depredations of the Confederate cruisers, and especially the reception and aid afforded in British colonial ports to the Shenandoah, was a matter of protracted correspondence between Mr. Adams, the U. S. Minister Plenipotentiary, and Earl Russell, the Foreign Secretary. This correspondence was renewed when the Shenandoah, six months after she was proclaimed a pirate by the United States Government, came into the Mersey and surrendered herself to a British man-of-war. The crew were discharged by order of the British Government, and the vessel given up to the United States authorities. The correspondence was renewed again, when, on the death of Lord Palmerston, Earl Clarendon became Foreign Secretary, and although it assumed a somewhat unpleasant tone, yet any

apprehensions of war to result from it were quieted by the declaration on the part of the United States Government, that it was not their intention to push the matter to extremities, inasmuch as the position of the British Government (which had declined arbitration or even a joint commission with full scope) was one which, in the event of a war with any other nation, would be found entirely untenable. For the principal points of this controversy see DIPLOMATIC CORRESPONDENCE.

In matters pertaining to the administration of the Government at home there were several important events. Among these were the passage of bills by Parliament, making Greenwich Hospital, which had hitherto been an asylum for such naval pensioners as had no other home, a hospital for the sick and infirm seamen who had served in the navy, and increasing the number and amount of the outdoor pensions, so as to encourage the great body of pensioners to find homes elsewhere. Another important bill passed by Parliament was one for conducting away and utilizing the sewage of London, so as to remove the unpleasant and unhealthy odors from the Thames, and at the same time provide for the use of that vast amount of fertilizing fluid upon the lands of the realm. The censure of the Lord High Chancellor, Lord Westbury, for his nepotism and laxity in regard to the public interests in pensioning Leonard Edmunds, a clerk of the Patents, etc., who had been guilty of defalcation, and also for his conduct in the Leeds Bankruptcy Case, passed the House of Commons unanimously, and led to the resignation of the chancellor. Lord Cranworth was appointed Lord High Chancellor in his place. On the 6th of July Parliament was dissolved, and writs issued for a new election.

The new Parliament elected in August comprised a much larger proportion of Liberals than the previous one, and among them some men of great distinction. Westminster, in the metropolitan district of London, returned, among its members, John Stuart Mill, a well-known metaphysician and writer on political economy, although in some particulars he differed openly from the views of his constituents. Thomas Hughes, another well-known literary man, and a liberal of the most advanced class, was also returned. Mr. Gladstone, Chancellor of the Exchequer, was defeated in Oxford, for which he had long sat, but was returned by the South Riding of Lancashire. On the whole, the complexion of the new House of Commons was such as to indicate the necessity of inviting some of the Liberals to join the Cabinet, and to render probable the success of moderate measures of reform in suffrage.

In July the cattle plague was introduced into the United Kingdom, and measures were adopted by the Privy Council for its suppression. (See CATTLE PLAGUE.) The cholera made its appearance in September at Southampton, and the Government immediately es-

tablished hospitals and took measures of precaution to check its ravages. (See CHOLERA.)

On the 18th of October Viscount Palmerston, First Lord of the Treasury and Premier of the British Government since 1855 (except a very brief period), died at his residence, Brockett's Hall, Hertford, after a very brief illness. (See PALMERSTON.) His death necessitated a recasting of the Cabinet before the assembling of Parliament; and Earl Russell being sent for by the Queen to reorganize the Ministry, succeeded, after some delay and difficulty, in forming the following Cabinet: First Lord of the Treasury and Prime Minister, Earl Russell; Lord President of the Council, Earl Granville; Lord High Chancellor, Lord Cranworth; Lord Privy Seal, Duke of Argyll; Chancellor of the Exchequer, Rt. Hon. W. E. Gladstone; Secretaries of State, Home, Rt. Hon. Sir George Grey, Baronet; Foreign, the Earl of Clarendon; Colonial, Rt. Hon. Edward Cardwell; War, Earl De Grey and Ripon; India, Rt. Hon. Sir C. Wood, Baronet; First Lord of the Admiralty, The Duke of Somerset; Postmaster General, Lord Stanley, of Alderley; President of Board of Trade, Rt. Hon. T. Milner Gibson; President of Poor Law Board, Rt. Hon. C. P. Villiers; Chancellor of the Duchy of Lancaster, Mr. Goschen.

Late in the autumn intelligence reached England of the alleged riot in Jamaica, and its severe and summary suppression by the governor of that colony, Gen. Edward John Eyre; but though there were strong suspicions of bad management, the facts were not fully brought before the people till January, 1866. A commission was, however, sent out to investigate the matter in December, Governor Eyre being suspended from the government of the colony meanwhile, and eventually ordered home for trial, and Maj.-Gen. Sir H. K. Storks appointed temporary governor. There was also, late in the autumn, considerable excitement in regard to an uprising of the Fenians in Ireland, and an invasion of that country by members of that brotherhood from the United States. Many arrests were made, and some of the leaders tried, convicted, and sentenced. (See FENIAN BROTHERHOOD.)

We subjoin the usual statistics of the United Kingdom for 1864 and for 1865 where they have been received.—I. FINANCE.—1. *Revenue and Expenditure*.—The revenue for the year, ending December 31, 1864, was £70,125,374 15s. 1d.=about \$350,500,000; of which Customs yielded £22,535,000=about \$112,500,000; Excise, £19,343,000=about \$96,550,000; Stamps, £9,468,000=about \$47,000,000; Property, or Income Tax, £7,999,000=nearly \$40,000,000; Post Office, £4,060,000=about \$20,000,000; Crown Lands (net) £307,500=about \$1,500,000; and the remainder was from miscellaneous sources. The expenditure for the same year was, £67,883,404 18s. 4d.=about \$339,500,000; of which £23,621,612 3s. 8d. or about \$118,000,000, was for interest and

management of the permanent debt, and £2,756,111 7s.=to about \$13,750,000 more for funded temporary loans, making the interest and management of the national indebtedness nearly \$182,000,000. The maintenance of the army cost £14,774,242 6s. 1d., or about \$73,870,000; and of the navy, £11,028,253 7s. 9d., or about \$55,100,000. For the year, ending September 30, 1865 (which is not the fiscal year), the revenue was £69,258,659, or about \$346,260,000.

The income tax was, prior to 1865, 7 pence per pound, with an allowance of £60=\$300 on incomes below £200=\$1,000. In 1865 it was reduced to 6 pence per pound, or 2½ per cent. In 1864, 308,416 persons paid an income tax, and 91 persons paid tax on an income of £50,000=\$250,000 and upwards. The amount of the national debt on the 31st of March, 1865, including the unfunded debt and terminable annuities, was £808,289,398=about \$4,041,446,000, a decrease of £4,940,736, or about \$24,000,000, from the preceding year.

2. *The Bank Note Circulation of the United Kingdom*, including the notes of the Bank of England, Private and Joint Stock Banks, and the Banks of Scotland and Ireland, for the month ending October 14, 1865, which was about £1,500,000 more than that of preceding months of the year, was £39,129,789, or about \$195,000,000. There were in 1864, in the United Kingdom, besides the Bank of England with its 11 branches, 140 private banks of issue, with 208 branches, 80 joint stock banks of issue, with 1,226 branches, 142 private banks not of issue, with 64 branches, and 62 joint stock banks not of issue, with 309 branches. The amount of coinage in the year 1864 was £10,088,859 18s. 11d., of which £9,535,597 was gold, £535,193 18s. 3d. silver, and £18,069 4s. 8d. bronze pennies, etc.

3. *Imports and Exports*.—The total imports of the United Kingdom for the year ending December 31, 1864, were £500,920,715, or about \$2,545,000,000; of this amount £274,863,024 was free of duty, and £226,057,691 subject to duty. The total declared value of British and Irish produce and manufactures, was £160,436,302, or about \$802,000,000. The value of the exports of foreign and colonial produce and raw material is not given in the reports.

4. *Navigation*.—The number of arrivals of British vessels in British ports during the year ending December 31, 1864, was 31,233, with a tonnage of 9,028,100 tons; the arrivals of foreign vessels during the same time were 23,490, with a tonnage of 4,486,911, making a total of arrivals of 54,723 vessels, and an aggregate tonnage of 13,513,011 tons. The clearances for the same year were, of British vessels, 30,545, with a tonnage of 9,173,575 tons; and of foreign vessels, 23,690, with a tonnage of 4,515,923, making an aggregate of clearances of 54,235 sailing vessels, and 13,689,498 tons. The number of sailing vessels registered in the United Kingdom, in the year ending December 31, 1864,

was 26,142, with a tonnage of 4,930,219; and of steam vessels 2,490, with a tonnage of 697,281. There were registered besides these in the British Colonies 12,157 sailing and steam vessels, tonnage 1,455,477, making the total number of British and colonial vessels, sailing and steam registered, 40,791, with a total tonnage of 7,082,977. In addition to these there were 216 foreign-built vessels (mostly American), with a tonnage of 128,761, registered at various ports of the United Kingdom.

5. *Imports of Cotton*.—The total amount of cotton imported in the year ending December 31, 1864, was 893,304,720 lbs., against 660,583,784 lbs. in 1863. Of this amount 214,703,304 lbs. were exported. Of the whole quantity imported, 14,148,064 lbs. came from the United States, more than double the amount received in 1863; 42,117,264 lbs. came from the United States (running the blockade) by way of the Bahamas and Bermudas; 25,539,024 lbs. from Mexico (nearly or quite all of it from the United States); 1,223,264 lbs. from the British West Indies; 6,500,368 lbs. from New Grenada and Venezuela; 38,017,504 lbs. from Brazil; 21,595,840 lbs. from the Mediterranean; 125,493,648 lbs. from Egypt; 506,527,892 lbs. from British possessions in the East Indies; 86,157,008 lbs. from China; 9,404,304 lbs. from Japan; and 16,581,040 lbs. from other countries.

II. *EDUCATIONAL STATISTICS*.—Aside from the great English Universities, and the local colleges, both of the Established Church and of Dissenting bodies in England and Wales, the Scottish, and some of the Irish Universities and the largely endowed foundation schools, there are several Universities and Colleges, and a system of National Schools throughout the United Kingdom, supported by the Government either wholly or in part. The appropriations for educational purposes are not large, however, as compared with those of the German States, or with those of the United States. For the National Schools of England, Wales, and Scotland the appropriation for 1865-'66 was £693,078=about \$3,465,000; for public education in Ireland, £325,583=about \$1,627,500. For the Universities, Colleges, and Theological Seminaries in Scotland and Ireland (including also an appropriation to the University of London, of £8,773), £38,280, or about \$191,000; the British Museum, £100,164, or about \$500,800. The sum of £161,841, or \$805,000, was appropriated to the Department of Science and Art; £23,336=\$116,500, to the National Gallery; and small sums ranging from £7,000=\$35,000 downwards, to scientific works and experiments, the International Exhibition at Paris, the Royal Geographical Society, the National Gallery of Ireland, the Royal Society of Ireland, etc. In Ireland the National Schools have proved more efficient and are more largely attended, proportionately, than in England. At the end of 1864 there were 6,263 schools in operation; the whole number of scholars on the rolls during the year was 870,401, the average

number on the rolls during the year was 575,486, and the average number in daily attendance 315,108. The annual cost of schooling per head was £1 2s. 6d.=about \$5.50, of which the parents or guardians paid only 2s. 6d. or about 60 cents. Of the children 81.60 per cent. were Roman Catholics, and 18.40 per cent. Protestants. Normal schools were maintained at an annual cost of about £9,000=\$45,000.

III. JUDICIAL STATISTICS of *England and Wales*. The constabulary force (county and borough police) of England and Wales, at the close of 1864, was 14,793; the Metropolitan, dockyard, and city of London police, 3,056. The total expense of the police and constabulary was £1,700,213=\$8,500,000; of which £1,268,714=\$6,343,500, was for salaries and pay; £125,764=\$629,500 for clothing and accoutrements; £78,655 for superannuations and gratuities; £33,931 for horses, harness, and forage; £36,067 for allowances and contingencies; £127,141 for station-house charges, etc., and £30,001 for miscellaneous charges. The Metropolitan police (6,682 men) cost £527,248=\$2,636,000. The average pay for the whole force, constabulary and police, was £55 10s. 6d. per man =\$277.60.

The total number of the dangerous classes at large in England and Wales, in 1864, was 116,749, of whom 101,303 were over sixteen years of age, and 15,446 under that age; 65,822 were males, and 50,927 females; 23,298 were known thieves and depredators, of whom 17,650 were males; 3,188 were receivers of stolen goods, of whom 2,560 were males; 28,094 were prostitutes, 1,292 of them under sixteen years of age; 30,237 were suspected persons, of whom 24,564 were males; 31,932 were vagrants and tramps, of whom 21,048 were males.

The number of prisoners in local prisons (not including debtors and military prisoners), 17,346 persons; in convict prisons, 7,975, and in reformatories, 3,186; the total number of persons of the dangerous and criminal classes in England and Wales was 145,256, a decrease of 10,129 from the returns of 1863. In London there is one criminal for 260 persons; the towns engaged in the manufacture of small and mixed textile fabrics, such as Norwich, Nottingham, Derby, Macclesfield, Coventry, Newcastle-under-Lyne, and Congleton, have 1 in 167; the cotton manufacturing towns, 1 in 136; the woollen and worsted manufacturing towns, 1 in 120; the hardware manufacturing towns, 1 in 117; the agricultural towns, 1 in 110; and the pleasure towns 1 in 79; a deterioration from the previous year when there was 1 in 81. In these pleasure towns the number of prostitutes reported is 1 to 231 of the population, an increase from the previous year; the commercial ports have 1 to 220; the agricultural towns 1 to 284; the towns of mixed textile fabrics 1 to 492; the cotton towns 1 to 536; the metropolis 1 to 560; the woollen towns 1 to 634, and the hardware towns 1 to 718.

During the year the police had information of 51,058 indictable crimes, and 28,734 persons were apprehended, a decrease of 1,153 crimes, and 1,676 apprehensions. Of those apprehended, 21,704 were males, and 7,030 females. The total number of convictions was 14,726, out of 18,256 committed for trial.

In the summary proceedings before magistrates, the number of cases was 440,913, of whom 352,809 were males, and 88,104 females; of these 300,731 (249,484 males, and 51,247 females) were convicted, and punished either by fine, imprisonment, or whipping; 100,067 were punished for being drunk and disorderly; 43,817 for larceny or attempts to steal; assaults, 94,374; malicious offences against property, 19,704; offences against the game-laws, 10,117; and vagrants, 29,648. The other offences were generally against local laws or corporation ordinances, laws relating to servants, apprentices, and masters; violation of license laws, nuisances and offences against health, violations of mutiny, poor law, and weights and measures acts. The total number of commitments to prisons during the year ending March 31, 1865, was 139,286, a decrease of 5,933; of these 104,373 were males, and 34,913 females. There were 45,192 recommitments; and of the total 1,173 males and 2,802 females had been committed more than ten times; 31,070 males and 13,362 females could neither read nor write; 54,830 males and 19,892 females could read a very little, and some of them write very imperfectly; 5,866 males and 854 females could read and write well, while 215 males and 19 females had had superior instruction, and there were 602 males and 296 females whose education could not be ascertained.

The number of reformatory schools in 1865 was 51, and the offenders in them were 4,349, 3,432 males and 917 females, of whom 1,007 (797 boys and 210 girls) were admitted during the year; of these 416 boys and 113 girls could neither read nor write, 340 boys and 74 girls could read and write imperfectly, 41 boys and 18 girls could read and write well, and the instruction received by 5 could not be ascertained. Of the whole 1,007, 58 were under 10 years of age, 77 under 11, 128 under 12, 190 under 13, 239 under 14, 219 under 15, and 96 under 16. The cost of support was £49,568=about \$247,500, of which 47,307 was paid by the Government treasury.

There are 29 industrial schools certified under acts of Parliament, containing during the year 1,027 children under detention as vagrants. These children are all under 14, and 56 were under 8 years of age, and 100 under 9. The cost of maintenance was £11,883=to about \$59,000, of which about £2,000 was contributed by the parents.

IV. VITAL STATISTICS. In *England and Wales* there were registered in 1864, 739,763 births, 10,364 more than the previous year, and the highest number yet reached in England. Of these 377,583 were males, and 363,-

170 females. The number of marriages was 180,263, being 6,895 more than the previous year; and there were 465,520 deaths, being 19,538 more than in 1863. Of the deaths, 253,882 were males, and 241,638 females. The oldest persons who died within the year were a man at Chelsea one hundred and nine years old, and a woman in the district of West Derby, (Liverpool), one hundred and twelve years.

In *Scotland*, in 1864, there were 112,445 births, of which 57,485 were males, and 54,960 females; and of the total number 11,069 were illegitimate. The number of marriages was 23,675; and of deaths 74,303, an increase of 2,882 over 1863. Of the deaths, 36,957 were males, and 37,346 females. In the rural districts the death rate was 1.84 per cent., the birth rate 3.24, and the marriage rate 0.55. In the town or city districts, the death rate was 2.85 per cent., the birth rate 3.86 per cent., and the marriage rate 0.87 per cent. The illegitimate births were 9.6 per cent. of the total births in the town districts, and 10.1 per cent. in the rural districts.

In *Ireland*, 136,643 births were registered in 1864, 94,075 deaths, and 27,376 marriages. The excess of births over deaths in Great Britain in 1864 was 282,385, and the total emigration from the country to America and the Colonies was 208,900.

GREECE, a kingdom in Europe. King: George I., second son of the King of Denmark, born December 24, 1845, elected "King of the Hellenes" by the National Assembly of Athens, March 18 (30), 1863. The area of the kingdom, since the annexation of the Ionian Isles, is about 19,340 miles; the population about 1,326,000 inhabitants. The capital is Athens, with 41,298 inhabitants. By a royal decree of December 8, 1864, the Ionian Isles were divided into four nomarchies, in order to assimilate their administration to that of Greece Proper, which is divided into ten nomarchies. In the budget of 1865, the receipts were estimated at 28,500,000 drachmas, and the expenditures at 27,000,000 drachmas; but the end of the financial year showed, instead of the expected surplus, a considerable deficit. The public debt (according to Kolb, *Handbuch der vergleichenden Statistik*, 4th ed., 1865) amounted to nearly 202,000,000 drachmas. The army, according to a vote submitted by the Government to the National Assembly in November, 1864, is to consist of 12,000 men. The fleet consists of thirty-two vessels, armed with one hundred and eighty-two cannons, besides two small steamers, which had hitherto carried the Ionian flag. The movement of shipping of Greece Proper, was in 1862 as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Foreign	5,228	606,526	4,961	618,573
Greek	5,236	471,981	6,248	
Total	10,464	1,078,507	11,209	618,573

The merchant navy consisted, in 1862, of 43,335 vessels, having a collective capacity of 275,318 tons.

The Constitutional Assembly of Greece was dissolved on November 24, 1864—the king having on the same day taken the oath to observe the new constitution. Shortly before (November 16, 1864), the National Assembly had complied with the demand of the king to repeal that article of the new constitution which required Roman Catholic priests to be Hellenic subjects. On the other hand, however, they refused, notwithstanding the objections of the king, to modify the article of the constitution providing for the mode of its future revision.

King George did not succeed in 1865 in forming a ministry able and strong enough to secure the confidence of the whole country and keep down revolutionary agitation. On March 14th Admiral Kanaris resigned the presidency of the ministry, and the king charged the Minister of the Interior, Comondouros, with forming a new cabinet.

In May the election of a new National Assembly took place, and resulted favorably to the Government. In opening the National Assembly, on June 9th, the king announced that his Government was engaged in concluding arrangements for the payment of the loan of 1832, guaranteed by the protecting Powers. This would enable them to meet at a subsequent period anterior obligations, and to raise the credit of the country. Several important bills were also announced.

In the latter part of October the Opposition having obtained a majority of seventy-five against sixty-nine votes on a question of confidence, the ministry resigned. M. Bulgaris having been summoned by the king to form a new ministry, declared that he would only accept the task on condition that Count Sponneck, the Danish adviser of the king, should quit Greece. The king refused this condition, stating that Count Sponneck did not occupy any official position. M. Bulgaris thereupon declined, and M. Deligiorgi accepted the task. But a few weeks later (November 15th) the Deligiorgi ministry resigned, and the ministerial crisis continued until the close of the year, several new cabinets being in succession formed and dissolved. On December 1st the Chamber decided by one hundred and twenty to twenty-six votes upon the revision of the articles of the constitution relating to the Council of the State. The Chamber abolished that Council by a great majority. Count Sponneck, yielding to the prevailing popular opposition to him, left Greece on December 1st.

The condition of the kingdom in the last months of the year seemed to be so unsatisfactory to the three protecting powers, France, England, and Russia, that they were seriously negotiating about the expediency of a joint intervention, involving, if necessary, the suspension of the Greek constitution.

GREEK CHURCH. No important change occurred during the year 1865, in the mutual relation of the branches of the Greek Churches to each other. In Austria, the Greek Church, which, in accordance with an imperial rescript of November 26, 1864, is henceforth to be officially designated as the "Greek-Oriental," instead of, as heretofore, the "Greek Non-United" Church, is now fully separated into two independent Archbishoprics, one for the Greek Slavi, and the other for the Roumanic nation. For the latter, Andrew Baron de Schaguna was appointed, in 1865, the first Archbishop.

The Moldo-Wallachian Church has been declared, by Prince Couza, to be henceforth wholly independent of and disconnected from the Greek Patriarch of Constantinople. Ecclesiastical communion remains perfect, as before; just as between the Church of England and the Protestant Episcopal Church of the United States. This declaration of ecclesiastical independence by the Church of the Principalities did not please the Sultan, and at his instance the Patriarch of Constantinople tried to retain his former subordinates. He despatched a bishop to Bucharest, to declare that the law of civil marriage, the secularization of convent property, and the institution of a National Church, lately decreed by Prince Couza, were contrary to the dogmas of the Greek Church, and involved the penalty of excommunication. Prince Couza, in reply, ordered the bishop to be reconducted to the frontier by gendarmes. The reorganization of the Church has since been completed, by the establishment of a National Synod; and, on the whole, the Church of the Principalities seems to be the most progressive of the branches of the Greek Church.

The movement toward a union between the Anglican and the Eastern Churches has many influential friends in Russia. The most important step which has yet been taken on the part of Russians in favor of this movement was the participation of several men of high position in a meeting held in London, on December 16, 1865, at which about 80 of the bishops and clergy of the Church of England were present. As far as the position of the Anglican participants is concerned, we have referred to the proceedings of this important meeting under the head of **ANGLICAN CHURCH**. Russia was represented on the occasion by Prince Orloff, Minister of Public Instruction in the Emperor's Cabinet, and Count A. Tolstoi, the representative of the Russian Government in the Holy Governing Synod, and author of a work on the Latin Church, together with the Russian Chaplain in London, the Rev. Mr. Popoff. Prince Orloff, in a letter to the "Moscow Gazette," gives the following account of the attitude of the Russian members of the meeting:

Having premised that I was speaking in a private capacity, I said that the Russian clergy, praying daily for the establishment of a common Christian Church, would be always inclined to promote it. In

proof of this I alleged that the study of the English language had been introduced into our ecclesiastical academies, and that our clergy would be prepared to sift privately all disputed points. I added, however, that the most holy Philaret, the Archbishop of Moscow, and lofty Patriarch of our Church, was of opinion that this was a grave and difficult question, which ought to be slowly matured, and, above all, investigated closely and minutely. In conclusion, I moved: 1. That works should be published in England setting forth the history, doctrine, and present condition of the Anglican Church, with a view to proving that it is not a Protestant but a Catholic Church, and, accordingly, related to the Eastern Church. I also remarked that the subject being altogether unknown to the Russian public, it ought to be explained fully and copiously. 2. That Anglican clergymen sympathizing with the cause should be stationed at Moscow and St. Petersburg. 3. That the matter should not be precipitated, or urged with too much eagerness or violence, but that we should trust in the Divine assistance rather than in the success of our human and short-sighted endeavors. What we had to do now was to prepare the ground by elucidating the question. The seed would grow up, and future generations, perhaps, would reap the harvest, if God willed it. Father Popoff, who delivered an eloquent speech, breathing the spirit of Christianity, expressed himself to the same effect. After him some clergymen spoke on dogmatical points. I omit quoting their opinions; they will be probably communicated by Father Popoff in his report to the Chief Procurator of the Holy Synod. They had no immediate reference to the matter in hand.

Before the close of the debates I rose again to declare that the Russian Church being but one of the five branches of the Eastern Catholic Church, the matter was all the more complicated, and that the subordinate members of our clergy were not at liberty to decide any ecclesiastical questions, being entirely guided by the rules and directions of their Church.

In a subsequent letter to the London "Times," Prince Orloff gave the following further explanations concerning this meeting:

It has been insinuated that I was obliged to excuse myself, in the eyes of my own countrymen, for having participated in the prayers with which the meeting opened and closed. The Eastern Orthodox Church has never forbidden its members from joining in any form of prayer with other Christians, more especially with those who pray for "the peace of the whole world and the union of divided Christendom." This insinuation is, therefore, totally devoid of foundation. The Archbishop of Canterbury never expressed any intention to me of sending bishops to Russia. It was rather a suggestion on my part that some learned churchman might be induced to go there whenever the idea of intercommunion should attain a greater development; for in 1864 an eminent member of the Church of England had expressed to me his desire of visiting Moscow in order to sound the opinions of the Russian clergy, but abandoned his resolution on hearing from me how few among them were acquainted with the English language, and how little the question of intercommunion had been agitated at that time.

The "Church Journal" of New York, a devoted advocate of the union movement, regards the part taken in this meeting by Russia as a step more important and significant than any thing that has been placed on record since the time of the Council of Florence. The indications increase that this movement may become one of importance. Our literary intercourse with Eastern Europe is, however, still so re-

stricted, that we are but imperfectly informed about the progress it has made in the Russian and the other Eastern Churches. The London "Pall Mall Gazette" has the following remarks on the history of the movement:

"The project of union, or rather intercommunion, between the Russo-Greek and Anglican Churches, is no new thing. The true author of the scheme was Peter the Great, at whose suggestion the English and Russian bishops entered into correspondence on the subject. The negotiations were protracted, through the inability of the Russian bishops to give satisfactory explanations in reference to the national practice of image worship, and on the death of Peter they were discontinued; a result or want of result, which has often been deplored by the orthodox Russians, and among them by Mouravieff, the historian of the Russian Church. The revival of the project of intercommunion is due, in a great measure, to the journal which distinguished itself during the Polish insurrection by its enthusiastic support of the historian's brother, the 'hanging Mouravieff,' of Wilna notoriety. Five years ago the present editor of the 'Moscow Gazette' published in the 'Contemporary Leaves' (one of several journals directed by him), a remarkable correspondence between the Rev. Mr. Williams, Fellow of a college at Cambridge, and Admiral Putiatin, who had then recently arrived from Japan to take the command of the Ministry of Public Instruction. The admiral sent to the 'Moscow Gazette' a letter he had received from Mr. Williams, pointing out the facility with which Russians might now send their sons to study at the University of Cambridge, and recommending the erection of a Russian church there, and the appointment of a Russian chaplain. Since then the 'Moscow Gazette' has on many occasions urged the desirability of bringing about a good understanding between the Russian and English Churches; and it was this journal that first published the account of the meeting held recently in London, at which Prince Orloff, Father Popoff, and a number of English prelates were present. Admiral Putiatin was well known in the Russian navy for his habits of devotion; but it is no calumny on Peter the Great to say that, in endeavoring to establish intimate relations between the two Churches, he was actuated less by religious than political motives. He wished to counterbalance, as much as possible, the influence of the Roman Catholic Church in Europe, and especially in Poland. The Russians attach much more importance to the London meeting than really belongs to it; and a writer in a St. Petersburg journal has come to the conclusion that the English tourists who visit St. Isaac's Cathedral do so from a pious wish to

make themselves acquainted with the ceremonies of the Russian Church."

The English Church papers which are in favor of the union movement, assert that the advances toward a union made by the Anglicans have met with a particularly favorable reception on the part of the Greek Bishops of Servia. The "London Churchman" expressed joy at being able to "record another instance of the disposition of the Servian Church to resume that Christian intercourse which is paving the way for complete recognition and intercommunion. Three clergymen from London, passing through Belgrade recently, were detained in that city on the Sunday. When the Archbishop knew this, he placed at their disposal the ante-chapel in his own palace for the purposes of holy communion, and supplied them with the necessary elements, altar lights, and other requisites. The Metropolitan expressed at the same time his great regret at not being able to be present in person at the celebration, in consequence of being obliged to go to Racovitza, it being, it would seem, a high festival, but he intrusted the carrying out of the matter to one of the Archimandrites, who remained with them throughout the office."

The "Levant Herald," an English paper published at Constantinople, having stated that the Archbishop of Servia had degraded the Archimandrite of Studenitz for administering the holy communion to an English clergyman, the "Churchman," of October 5, contradicted this report by the following statement:

"We are requested by the Rev. W. Denton to state that the report of the censure and degradation of the Archimandrite of Studenitz for administering the holy communion to a member of the English Church is wholly unfounded. The Archbishop of Belgrade has replied to Mr. Denton's inquiries as to the truth of the assertions in the 'Levant Herald,' and he states that the thought of degrading or censuring the Archimandrite had never entered into his mind. We possess information which leads us to believe, that before long the Servian Church will take a more formal step toward intercommunion with the Anglican Church."

As regards the Church of the kingdom of Greece, a correspondent of the "London Churchman" stated that the Holy Synod was "ready to acknowledge as valid the baptism of the Anglican Church, when intercommunion shall be realized." The "Hemera" (the Day), a journal which has a wide circulation in Greece, the Ionian Islands, Turkey, and Egypt, published, in 1865, a series of letters from Dr. Fraser on the Constitution of the English Church, and on her Synods and Liturgy, which seemed to awaken considerable interest in the question among the Greek people.

H

HABEAS CORPUS. The question of the power to suspend the writ of *habeas corpus*, called forth opinions from some of the leading lawyers of the country; and, among others, Hon. Horace Binney, of Philadelphia. In considering the question, it is stated in reference to a pamphlet from his pen, that "Mr. Binney regards as of more than doubtful constitutionality, the act of Congress of March 3, 1863, which gives the President power to suspend the privilege "in any case," without qualification of cause or offence; and which suspends all judicial proceedings on writs of *habeas corpus* after a certificate oath by the keeper of the prison, that the prisoner is detained by authority of the President, without any return of the body of the prisoner, or of the cause of imprisonment. Nor do the Executive Proclamations of 24th September, 1862, and 15th September, 1863, commend themselves any more to his judgment as true constructions of our fundamental law.

"Mr. Binney argues that the benefits of this writ cannot, under any circumstances, be denied except to persons engaged in rebellion or invasion, and that the warrant of arrest should itself assign the cause—treason, generally, or suspicion of treason—some high misdemeanor against the majesty of State. Speaking of the power to suspend the privilege, and to look at any arrest, Mr. Binney says that the Judicial power cannot be altogether displaced or superseded by it; though it may be so far abridged as only to maintain the rights of persons under a limitation which confines the Judiciary to the forms of things rather than to their substance. He argues that the Judicial Department is competent to inquire, not indeed into the particular grounds of the suspicion of treasonable design charged, or to judge whether the imputation upon the party imprisoned be well or ill founded in fact or probability, but to see that the power has, at least ostensibly, been exercised within the constitutional limit."

The extent to which the arbitrary arrest of citizens without benefit of the writ of *habeas corpus* was carried, is indicated by the records of the Provost Marshal's office of Washington, which shows that from June, 1861, to January 1, 1866, the cases of some thirty-eight thousand prisoners have been reported at that office. Out of this vast number the Old Capitol Prison shows upon its record that it has housed for longer or shorter periods sixty-five hundred prisoners of war, forty-five hundred real and fancied offenders against the State, and twenty-five hundred deserters and bounty jumpers.

Even in cases where the writ was granted, there was sometimes difficulty in securing the production of the party under arrest in consequence of his removal before the service of

the process. Mr. Cheshire, of Brooklyn, was tried by court-martial on a charge of malefiance in office, found guilty, and sentenced to imprisonment in the Albany Penitentiary; he was taken to the place of confinement in August, and a writ requiring the production of his body on the 7th of that month, before Judge Lott, was served on the Superintendent of the Penitentiary, General Pillsbury. Gen. P. immediately telegraphed the fact to E. D. Townsend, Assistant Adjutant-Gen. U. S. Army, but receiving no answer within the succeeding few hours, he took the train for New York, with a view of consulting the U. S. District Attorney, and also to see Judge Lott, his purpose in this being to ask of the Judge a delay of one day in making return to the writ. While thus engaged, on Monday morning, the 7th inst, he received a telegram from his Deputy Warden, informing him that the prisoner had been removed from the penitentiary, by virtue of an order from the War Department, directing Deputy U. S. Provost Marshal Frederick Townsend to take him into close custody and convey him to Fort Warren, there to be confined until the expiration of his sentence, unless otherwise ordered.

A somewhat similar case occurred in New York. Under an act of Congress passed March 3, 1863, providing for discharge, on application, of State prisoners, against whom no indictment has been found, Bickley, the leader of the Knights of the Golden Circle, applied for discharge from Fort Lafayette. Before the order to show cause in the matter was made by Judge Betts, he had been removed from Fort Lafayette to Fort Warren. The order to show cause was directed to General Dix, as the commandant of the Eastern District, within whose limit both Fort Lafayette and Fort Warren were, and on their hearing the point was raised in his behalf that the court had no jurisdiction to order the discharge of a prisoner held in the District of Massachusetts.

Judge Betts sustained the objection, holding that the court of this district had no power to make an order which is operative in Massachusetts.

In May an order was issued from the War Department which directed as follows:

That in all cases of sentences by military tribunals of imprisonment during the war, the sentence be admitted, and that the prisoners be discharged.

The Adjutant-General will issue immediately the necessary instructions to carry this order into effect.

By order of the President.

(Signed) EDWIN M. STANTON,
Secretary of War.

The case of Col. L. C. Baker, who had been indicted for false imprisonment, and found guilty on the trial of the same in the Criminal Court of the District of Columbia, came up for

review before the Supreme Court of the District on a motion for a new trial. The defendant was charged with false imprisonment, in having placed in custody Dr. Stewart Gwynne; he pleaded in justification of the act, the orders of the Secretary of the Treasury, and relied on the act of March 3, 1863, chapter 81, providing that any order of the President or under his authority, made during the rebellion, should be a defence to any action for arrest, imprisonment, etc., done by virtue of such order. Judge Wylie, who tried the case, instructed the jury that the order of the Secretary was no defence, and that under the act nothing short of a written order of the President would suffice (see ANN. CYC., 1864, p. 424). Carter, C. J., in giving the opinion of the court in the case, in the Supreme Court, February 2d, and granting a new trial, held, that the orders of the Secretary were, in point of law, the orders of the President, and that under the provisions of the statute they were a justification in the case for the acts charged; and further, that the statute did not contravene the provisions of the Constitution securing the right of liberty without due process of law, holding that to be a guaranty against arrest in time of peace and not in time of war, and on the further ground that in the District, Congress was the Executive law-making power; it could declare what should be a justification for acts committed therein. Judge Wylie, in an able decision, dissented from the ruling of the court granting a new trial.

Judge Smalley decided differently in the case *Walker vs. Crane*, in the U. S. Circuit Court in Vermont. The case at issue involved the constitutionality of the act passed by Congress on March 3, 1863, providing that "any order of the President, or under his authority, made at any time during the existence of this rebellion, shall be a defence in all courts to any action or prosecution, civil or criminal, pending or to be commenced for any search, seizure, arrest or imprisonment," etc. The Judge held that the section of the act of March 3, 1863, quoted above, was in violation of the Constitution of the United States, and afforded no protection for acts done under the authority of that section; also, that the opinion of Whiting in regard to the construction of that act was erroneous; and that, martial law not having been declared in Vermont, the civil law remained in full force, and was not subordinate to military authority.

A verdict was rendered in Buffalo against General Scroggs, late Provost Marshal of the Buffalo District, at the suit of Charles P. Davis, for false imprisonment. An action was brought in the Supreme Court at Boston, Mass., by Leonard Sturtevant vs. N. H. Allen. The plaintiff alleged that in August, 1861, the defendant accused him of being a traitor to the Government, saying "he is a traitor and secessionist," in consequence of which he was arrested and confined in Fort Lafayette, occasioning loss of health and prop-

erty. The jury rendered a verdict for the plaintiff for \$32,550 (!) damages, on the trial of the cause in May.

William B. N. Cozzens, a citizen of Pennsylvania, was arrested in a public square in Philadelphia, on the 29th of June, on an allegation that he had been convicted by a court-martial of some offence. A writ of *habeas corpus* was allowed by Justice Thompson, of the Supreme Court. The respondents refused to obey the command of the writ or make any return thereto, and an attachment was issued against them; the service of the attachment was forcibly resisted, and the case was adjourned for the day. All of the parties, however, subsequently appeared, and after argument, Judge Thompson rendered his decision, as follows:

The petition sets forth many grievances. This man was arrested, taken to the Old Capitol Prison, deprived of money and property belonging to him, notified through newspapers that he was to be tried, and that he was tried, and that there had been some finding somewhere. All that is outside of the case. I have nothing to do with it here. But there is something for me to consider, and I have acted upon it. He states that he is not guilty of a criminal offence, and that he has been deprived of his liberty. Upon that this return is made. On this return I am to judge, and on nothing else.

The return to this writ of *habeas corpus* is that the relator, as a private citizen, was arrested, and held under the authority of the President of the United States. The return is in accordance to the Act of Congress of March 3, 1863, that wherever the privilege of the writ of *habeas corpus* is suspended by the President under the authority of the act, no officer shall be compelled to produce the body of the person in custody; but upon certificate under oath that the person is detained under the authority of the President, proceedings under the writ shall stay. The section authorizes the President during the present rebellion, whenever the public safety required it, to suspend the writ of *habeas corpus* as it is provided, and that suspension remain in force so long as the rebellion continued. On this return there arises the important question whether on the 29th of June last the rebellion continued or not. This question I am to determine. It is a fact to be judicially determined, like any other fact that comes under judicial cognizance. The privilege of the writ of *habeas corpus* is the sacred right of every citizen, and we are to observe the strictest scrutiny of any act that threatens to deprive him of it. We have plainly before us the fact that the power of suspension is granted only for the continuance of rebellion. It ceases with the rebellion; and I think and shall so decide, that the courts are bound to give the citizen his right under the privilege. Then there is the one thing to decide. What shall be the evidence of the end of the rebellion? This must be such as is necessary to prove any other fact. I think that we have abundant evidence that the rebellion no longer continues.

The abundance of evidence was then set forth tersely and clearly by the Judge, concluding with the assertion, "I cannot doubt the fact; we all know it, and thank the Good Providence that there is no war in the land." Why, then, should the right of the citizen, limited and controlled by the existence of the war, be limited and controlled when the war has ceased? This being so, the authority of the President merely, waiving all other considerations that bear upon this subject, is not a sufficient warrant for the arrest of a citizen. And when a warrant is issued for the arrest or search of any person or place, for probable cause, it must be supported by oath or affirmation; and there being no oath or affirmation here

charging the crime or offence, nor warrant pursuant to it, to authorize the arrest, the warrant in this case, therefore, is unauthorized, and the relator is entitled to be discharged.

This decision is not one that conflicts as between the civil and military authorities of the country. It is an important clause of our Constitution and right, that the military shall in all cases and at all times be in strict subservience to the civil power, and it will, doubtless, be as agreeable to the military authorities that there should be a return to the normal condition in this respect, as peace happily reigns, as to the civil authorities themselves. On this simple fact, considering the return, and no more, I discharge this claimant. I do not go into the question whether Congress has the right to put into the army contractors or others. It is not necessary to this decision. I must discard all considerations that have been suggested arising out of the fact that Mr. Cozzens has been tried by a military tribunal. It would have presented a different question had it been returned here that he was in execution under the finding of that court. I hope, however, most earnestly hope, now at the end of the long terrible war we have just passed through, that the President of the United States will do speedily what I think he ought to do, refuse his sanction to all trials of offences that are not purely military, and let the citizen be again returned to the tribunals to which he is accustomed to answer, and there to receive the punishment of which he shall be found to be guilty. I make no decision on this question, for the question of trial is not returned as the reason for the arrest, nor will it, therefore, be proper for me to notice it. The return is based simply on the power of the President to order the arrest under the authority of the suspension of the writ of *habeas corpus*. Therefore, the decision in one great question, must, in my judgment, decide all questions of this kind. That is to say, the time allowed the President to exercise this power is at an end. The bow of peace spans the whole country, and that was to be the sign that all should be secured in their rights hereafter. I have, I believe, nothing further that it is necessary to add. I have thought with a great deal of care on this subject. I have approved the calm and dispassionate manner of the discussions, that was becoming the gentlemen engaged on both sides. I am obliged, therefore, to order the release of the relator.

Cozzens was accordingly discharged, and the case thus ended.

No case has arisen concerning the suspension of the writ of *habeas corpus*, which gave rise to more comment and created greater interest than that in reference to Thomas C. A. Dexter in the U. S. Court of Alabama, before Judge Richard Busted. The facts of the case are stated as follows: R. F. Andrews, Esq., counsel for Mr. Dexter, presented a petition setting forth the grounds on which action was requested, and praying that the writ might issue to Gen. Woods and to Col. Brooks, provost marshal, in whose custody it was alleged Mr. Dexter was held. The writ was allowed, returnable November 22d. On that day proof of the service of this writ on Gen. C. R. Woods, and on Hunter Brooks, the provost marshal, was made, and Judge Busted asked if either of the respondents was present. Neither of them appearing, the Judge caused proclamation for them to be made, and the crier called out the name of each three times. Mr. Andrews stated that Gen. Woods and Col. Brooks had each made a return to the writ, and read to the Court the return of Col. Brooks, as follows:

HEADQUARTERS DEPARTMENT OF ALABAMA, }
OFFICE PROVOST MARSHAL GENERAL, NOV. 21, 1865. }
Respectfully returned. I am acting under military orders from Maj.-Gen. C. R. Woods, commanding this department.

I do not recognize the authority of Judge Busted, and therefore decline to respond further to the writ.

HUNTER BROOKS

Brevet Lieut.-Col. and Provost Marshal General.

The following return was made by Maj.-Gen. Charles R. Woods:

HEADQUARTERS DEPARTMENT OF ALABAMA, }
MOBILE, ALA., NOV. 22, 1865. }

By way of return to the within writ, I, Brevet Maj.-Gen. Charles R. Woods, of the United States volunteers, commanding the Department of Alabama, respectfully show that the said Thomas C. A. Dexter, in said writ named, is imprisoned and detained by me, by authority of the President of the United States, and of Maj.-Gen. George H. Thomas, commanding the Military Division of Tennessee. That by the order and proclamation of the President of the United States, the writ of *habeas corpus* is suspended in the State of Alabama, and that consistently with the orders of my military superiors, the President of the United States, and Maj.-Gen. Thomas, I cannot produce the body of said Thomas C. A. Dexter before any civil tribunal, and protesting due respect for the Honorable the Court of the United States for the District of Alabama, I decline to obey the writ, or to make any other or further return.

CHARLES R. WOODS, Brevet Maj.-Gen.,
Commanding Department of Alabama.

Judge Busted then asked the counsel if he had any motion to make, whereupon Mr. Andrews argued that both the returns were wholly defective and insufficient, and moved in conclusion for an order directing Gen. Woods and Col. Brooks to make a further and full return to the writ.

The Judge said in answer: "I agree with what counsel has said touching the insufficiency of these returns. That of the provost marshal is not insufficient only, it is disrespectful to the Court. It is not proper in making an answer to a writ of *habeas corpus* to deny the authority of the officer issuing the writ. This is no part of a return. I can but hope that an officer in the military service of the United States of the rank of the respondent Brooks, is not guilty of intentional disrespect to the courts of the United States, and that the language in which he couches his return is the result of his ignorance of what was proper in the premises. If I supposed that the matter complained of proceeded from viciousness, it would be my duty to order that he show cause to-morrow morning why he should not be proceeded against as for contempt. I choose the charitable construction, and pass it over with these observations. The motion that he make a further return will not be granted. It is unnecessary, because in what he calls his return he says he is acting under orders from Gen. Woods, his department commander, and because in the return made by Gen. Woods he assumes the responsibility of the imprisonment of the petitioner.

"The motion will be granted as it respects the return made by Gen. Woods. This return is altogether insufficient. It does not comply in any essential with the requirements of the

law. The writ of *habeas corpus* is the people's writ of right. When issued out of a United States Court the practice upon the return to it conforms to the practice of the Supreme Court of the State in which the district court is situated. It is of the essence of the writ that the body of the petitioner be produced with the return, if the respondent have his custody. The statutes of Alabama require—indeed the statutes of all the States require—that the body of the petitioner be produced before the officer issuing the writ when return is made to it, and that if the party is detained under a writ, warrant, or other written authority, a copy thereof must be annexed to the return and the original produced to the court. In all these respects the return of Gen. Woods is defective. He claims to hold the petitioner 'by authority of the President of the United States and of Maj.-Gen. George H. Thomas.' This authority should be produced.

"This part of the return to the writ made by Gen. Woods which informs the courts that 'the writ of *habeas corpus* is suspended in Alabama,' may be treated as surplusage. The General is evidently a better soldier than lawyer. This Court cannot suppose that an officer of the high military grade of Gen. Woods intended to instruct the Court upon the law of the case, and the very full disclaimer of any disrespect for the authority of the Court which the General makes in his return is in marked and satisfactory contrast to the course pursued by an officer of subordinate rank."

No other return was made by Gen. Woods, and an attachment was issued against him as for contempt, Judge Busted delivering the following opinion:

The writ of *habeas corpus* is more than a century older than the political organization of our country. It was wrested from Power when it was at its meridian, by Freedom when in its infancy. Deprived of it, the citizen is a slave, and Government a despot. Although the vast majority of the people know little of the struggle out of which this priceless boon was born, the writ is familiar to them as their daily life, and the sign to them of sure deliverance from unjust restraint. Its behests may not ordinarily be denied without wounding Liberty herself and pensioning her upon Tyranny. In our own land the cases are very few in which the privilege of the writ can lawfully be suspended, and the organic law itself stands guard over the sacredness of the remedy it is designed to secure. The men who made the revolution of 1776, understood too well the value of the writ of Habeas Corpus to leave it to the mercy of mere intendment, or in the gift of discretion or caprice. It is secured to the people of these States as a constitutional right, and who interrupts the enjoyment of the right, except in the cases and specially plainly enumerated, violates the law of the land and is guilty of a high crime. Above all others he is guilty, whatever his rank, who, himself, a servant of the law, attempts to embarrass its administration or divert its benefits from those who claim them. "The privilege of the writ of *habeas corpus* shall not be suspended unless when, in cases of rebellion or invasion, the public safety may require it." This is the mandate of the Constitution of the United States of America, so directly stated that he who runs may read. It is obligatory on us all. Nor the Executive, nor the Legislature, nor the Judiciary can increase, or lessen, or alter its manifest scope.

The language of the mandate is aptly chosen and full of significance. It leaves untouched the great writ itself. The privilege of its use, the right of demanding its benefits and exercise, may be held in abeyance in cases of rebellion or invasion, but even then only when the public safety requires it. A state of rebellion or invasion is a condition precedent to the suspension of the privilege. These, or either of these may exist, and still no necessity arise for its suspension. It is only when either of these exists, that the power to interfere with the writ vests, and even then this power may only be exercised when the public safety requires it. Of the necessity for its exercise, the Government judges *after* the facts exist out of which grows the right to suspend the privilege of the writ.

The question that first confronts us in this inquiry is, do either of the precedent conditions exist upon which the power to interfere with the office of the writ of *habeas corpus* is founded, and how are we to determine this? The invasion of a public enemy or the existence of a domestic rebellion, are patent facts in current history, of which Courts may take judicial cognizance, and the judicial officer who should affect ignorance on these subjects would not gain much credit for any thing save uncommon obtuseness. That no "invasion" of our country has occurred or now exists, is as true as that none is likely to take place. Individuals, anxious to become citizens of the Great Republic, will in the future, as they have in the past, seek our shores and join their fortunes with ours, but the idea of an invasion by an organized enemy, is as chimerical as the experiences of Munchausen, and as empty as the South Sea bubble. Clearly the right to suspend the privilege of the writ of *habeas corpus* has no foundation in any "invasion" of the country. "The public safety" is not endangered from this cause.

Does a "rebellion" exist here? is the next pertinent inquiry, and this must be met and answered precisely as the question of invasion is met and answered. That is to say, the same general rules for determining if invasion exists, are those for determining if rebellion exists.

It is sadly true that a rebellion has existed in our country—a rebellion so vast in its proportions that belligerent rights were accorded to it by several of the leading Powers of the earth, and to subdue which required years of time, more than a million of men in arms, and millions upon millions of treasure—a rebellion that shook the earth and threatened to engulf an empire. Happily for this people, happily for their history and their posterity, happily for humanity and liberty, that rebellion no longer exists. Our fertile fields, lately barren and fruitless, are again rewarding the husbandman's toil; our ships, so long flapping idle sails, are again navigating the waters; our storehouses and shops, heretofore silent as the grave, are again resounding with the noise of trade and commerce. In all the broad land that constitutes our country there is not an organized opposition to the Government. No forces hostile to it deny its authority. The nation's flag dominates every acre of the nation's demesne. There is now no rebellion here. Let us devoutly thank God!

These views are fortified by the act of Congress of March 3, 1863, entitled "an act relating to Habeas Corpus, and regulating Judicial proceedings in certain cases," which act authorizes the President to suspend the privilege of the writ of *habeas corpus*, and also by the proclamation of the President of the 15th of September, 1863, suspending it. The Congressional enactment and the proclamation issued by its authority, each recognizes the principle that there is no power in the Government to suspend the privilege except as set forth by the Constitution, and each, in express terms, provides that the suspension so decreed shall not continue longer than the rebellion.

The first section of the act declares "that during

the present rebellion, the President of the United States, whenever in his judgment the public safety may require it, may suspend the privilege of the writ of *habeas corpus* in any case throughout the United States or any part thereof."

In conformity to this law, and in the exercise of his judgment, President Lincoln, on the 15th of September, 1863, six months subsequently to the passage of the act of Congress, issued his proclamation suspending the privilege of the writ throughout the United States, in certain specified cases; such suspension to continue throughout the duration of the said rebellion, or until by a subsequent proclamation the proclamation of September should be modified or revoked.

This alternative language clearly looks to and was intended to provide for the immediate restoration of the privilege of the writ whenever "the public safety did not require its longer suspension;" and this, even although the rebellion should continue after its restoration, as it did in all the time that elapsed between the passage of the act of Congress authorizing the President to suspend it, and its actual suspension.

It is very important, in this connection, to observe that the proclamation specifically enumerates the persons and cases to be deprived of the benefits of *habeas corpus* during the continuance of the rebellion, or until the withdrawal or modification of the proclamation. These are—

Where, by the authority of the President, any military, naval, or civil officer of the Government, held persons in custody as, 1st, prisoners of war; 2d, spies; 3d, aiders or abettors of the enemy; 4th, enrolled, drafted, mustered, or enlisted officers, soldiers, and seamen, belonging to the land or naval forces; 5th, deserters; 6th, persons amenable to military law, or to the rules and articles of war, or the rules prescribed by authority of the President for the regulation of military and naval services; 7th, persons resisting a draft; 8th, any other offence against the military or naval services.

As to all other classes of citizens, there has been no general suspension of the writ of *habeas corpus* under the authorization of the act of Congress. In one or two individual cases, the writ has been specially suspended by order of the President.

I am additionally fortified in the views I have expressed, by the proclamation of the President appointing a Provisional Governor for Alabama, and by the acts which he thereby authorizes and directs to be performed. Among other things, the United States District Judge for the Judicial District in which Alabama is included, is thereby directed to "proceed to hold courts within said State in accordance with the provisions of the act of Congress." Is any one weak enough to suppose that the President of the United States would order the civil courts to resume their functions in a State in rebellion against the Government, and denying and fighting against its authority?

This proclamation was issued in July last, and as if to place the matter beyond cavil, the President on the 25th of August, 1865, issued another proclamation removing all existing restrictions on trade with the States then recently in rebellion, and allowing the importation into these States of articles which heretofore had been declared contraband of war. Need it be argued that if rebellion existed in Alabama, the Government would not authorize munitions of war to be brought into the State; or can there be much better evidence than this last named proclamation affords, that the President regards the rebellion ended within her borders?

On the 2d day of September, 1865, "General Orders No. 33," issued from the headquarters of the Department of Alabama, by the direction of the respondent, Major-General Charles R. Woods. In these "Orders" the rebellion is spoken of as a thing of the past, and, *totidem verbis*, the restoration of the authority of the United States over the late rebellious States, is an-

nounced with much emphasis, and it is therein also declared that in every county of the State of Alabama, "Judges and Sheriffs have been appointed, and are, and for weeks have been in the exercise of their functions." And yet this same military commander, on the 22d day of November, 1865, as an excuse for his refusal to obey the process of the Courts of the United States, says, "The writ of *habeas corpus* is suspended in the State of Alabama!"

On the 28th day of October, 1865, the President of the United States issued a proclamation to the people thereof, appointing "the first Thursday of December next, as a day of National Thanksgiving to the Creator of the Universe" for the deliverances of the American people from the terrible calamities of domestic strife. In one of the preambles to this proclamation these words occur: "It has pleased Almighty God, during the year which is now coming to an end, to relieve our beloved country from the fearful scourge of civil war, and to permit us to secure the blessings of peace, unity, and harmony."

The President of the United States, and, in virtue of his office, the Commander-in-Chief of its army and navy, thus officially announces the restoration of domestic tranquillity.

In a letter dated at Washington, on the 10th day of the present month of November, the Lieutenant-General of the United States writes over his own signature as follows: "However we may have differed from our Southern brethren in the events of the last four years, we have now become one people, and with but one interest." This language of the Nation's chosen Military Chieftain, certainly does not favor the idea that Gen. Grant knows of the existence of such a state of public disorder as would justify the suspension of the privilege of the writ of *habeas corpus* in Alabama.

There being then neither "invasion" nor "rebellion" to menace "the public safety," it follows that the privilege of the writ of *habeas corpus* cannot now be suspended, and the citizen must be fully protected in his right to invoke its aid.

The case of the petitioner comes within the principles I have stated; and even if it were true that the proclamation of the 15th of September, 1863, is still in force here, this case is not within the class of cases or persons against whom the privilege of the writ was suspended by that proclamation. In his petition, the allegations of which are not controverted, he states that he is not, and has not been for any time, or in any manner, connected with the land or naval forces, or the militia, when called into the military service of the United States; that he is a "citizen of the State of Massachusetts, and has never voluntarily given any aid, countenance, support, or adhesion to any government, power, authority, constitution, or cause, inimical or hostile to the United States; but has been habitually and steadily loyal to them and to their cause and government." That in May last he "came to the State of Alabama as Supervising Special Agent of the Treasury of the United States," under certain acts of Congress, and that he performed the duties of such office until about the first day of November, 1865. That on the 7th day of November instant, he was arrested by the order of Major-General Charles R. Woods, commanding the United States forces at Mobile. That no affidavit accusing him of crime has ever been made, and no warrant for his arrest issued by any magistrate having jurisdiction of offences against the laws. That he has had no hearing, and has not been informed of the nature of the charge against him; but that he is enabled to state that "it arises entirely upon some supposed misfeasance or non-feasance of duty in his office of Supervising Agent of the Treasury Department. That he offered bail for his appearance before any Court having jurisdiction of the alleged offence, which was refused by the military commander."

Such in substance and often in terms, is the petition upon which the writ was issued, and upon the

assumption of the truth of the matters therein set forth, this case presents some very remarkable features.

In this connection it is proper to observe that on the hearing of the matter the counsel for the petitioner filed with the papers herein, what purported to be the charges and specifications against the petitioner, served upon him after the allowance of the writ. That these are not under oath, but merely subscribed by Hunter Brooks, as Provost Marshal of Mobile, and that all of these charges and specifications are only accusatory of the petitioner as an appointee of the Government to an office, which, by no possible construction, can be held military or naval in its character, and for malefeasance in which, he is not, in any degree, liable to military discipline.

I have already adjudged the return made to this writ by Brevet Major-General Charles R. Woods as wholly insufficient, and directed this respondent to make a fuller return. This he refuses to do. The responsibility of breaking the laws of the land is his, and the consequences of his contumacy must be borne by him. My own duty in the premises is easily discharged. It is my office to determine whether the petitioner is or not, unlawfully restrained of his liberty. In the present case I have no doubt that his imprisonment is unlawful, and I decide that the petitioner, Thomas C. A. Dexter, is entitled to, and must be discharged from the custody and restraint of the respondent Woods, and from all military custody and restraint. But in view of the fact that no appointment of a United States Attorney for this District of Alabama has yet been made, and having before me these accusations of a grave offence alleged to have been committed by the petitioner against the United States, I order and direct that Brevet Major-General Charles R. Woods forthwith bring the said Thomas C. A. Dexter before me, to the end that he may give bail, with sufficient sureties, in such sum as shall be fixed by this Court for his appearance in the Southern District, at such times and places therein as he shall be required by either the United States Judge, or the United States District Attorney for this District, to answer any complaint or indictment which may be preferred against him touching the matters alleged in the charges and specifications served on him by Provost Marshal Hunter Brooks, and which are on file in this Court.

An attachment against Gen. Woods was issued and served, and the following answer made thereto on the next morning:

To the Hon. Richard Busted, U. S. District Judge:

The undersigned, Charles R. Woods, in the military service of the United States, and Brevet Major-General of volunteers, commanding the Department of Alabama, in answer to an attachment issued against him by your Honor, and served upon him by the United States Marshal, and returnable this 11th day of December, 1865, respectfully says:

That no further proceedings under the said writ of attachment should be had against him, because he says there has not been at any time any intention upon his part to treat with disrespect the authority or process of the Courts of the United States or the Judge thereof.

That the first return made by the undersigned to the writ of *habeas corpus* issued to him to produce the body of the said T. C. A. Dexter before your Honor, was intended to be such a compliance with the exigence of said writ as would discharge the duty that the undersigned owed to his military superiors, and also to the laws of the land.

As it respects the second return made by the undersigned to said writ he says, that before it was ordered to be made, a military commission had been convened for the trial of the said T. C. A. Dexter, and the said return was intended to convey respectfully to the Court the official knowledge of this fact, and was not in any way intended to be disrespectful to the Judge presiding.

The undersigned further says, that he believed himself fully justified in his refusal to produce the body of the said T. C. A. Dexter in Court, or to stay the proceedings of the military commission, so convened by him as aforesaid, and if he had acted otherwise, would have violated his duty of obedience to the orders of the President of the United States and Major-General George H. Thomas, commanding the Military Division of the Tennessee.

The undersigned here annexes a copy of the orders under which he is acting in this matter, and produces now here the originals of said orders, for the inspection of the Court.

All of which is respectfully submitted,
CHAS. R. WOODS, Brevet Maj.-Gen.

HEADQUARTERS, NASHVILLE, ——— 15.
Brevet Lieut.-Col. Hunter Brooks:

I send you the following telegram from the President of the United States, for your information and instruction in the investigation into the alleged frauds, committed by pretended Treasury agents and officers of the army. Send your report through General Woods:

WASHINGTON, August 14, 1865.

To Maj.-Gen. Thomas, Nashville:

I have been advised that innumerable frauds are being practised by persons assuming to be Treasury agents, in various portions of Alabama, in the collecting of cotton, pretended to belong to the Confederate Government. I also understand that they are connected with the commander of post at Montgomery. I hope you will appoint some efficient officer under your command to proceed, and examine, and ascertain the facts, and if any parties shall be found, whether connected with the Treasury or Military, that you will deal with them in the most summary manner, and report the names of the persons engaged in each transaction and each case. Mr. Dillon, Treasury Agent, will be in town in a few days, and will confer with you upon that subject, and especially Gen. Hatch, at Montgomery.

(Signed) ANDREW JOHNSON.
President United States.

Official and true copy.
FRED. H. WILSON, Ass't. A. G. Gen'l Dep't Ala.

JACKSON, MISS., Nov. 21, 1865.

Maj.-Gen. Chas. R. Woods, Commanding:

You are right to decline to give up Dexter. He is now being tried strictly in accordance with the law of third of March, 1865.

Official and true copy.
(Signed) GEO. H. THOMAS, Maj.-Gen.
FRED. H. WILSON, Ass't Adj't Gen'l Dep't Ala.

WAR DEPARTMENT, WASHINGTON, Nov. 26, 1865.

Maj.-Gen. Geo. H. Thomas:

The Commission having Dexter's case under consideration, will proceed to make a thorough and speedy examination of his case, and make such decision as the proof will justify.

If Gen. Thomas left Mobile, forward this despatch to Gen. Woods.

(Signed) ANDREW JOHNSON,
President United States.

Official and true copy.
FRED. H. WILSON, Ass't Adj't Gen'l Dep't Ala.

This paper was read amid the profound attention of the audience. On the conclusion of its reading, the Court inquired of Mr. Andrews whether he had any motion to make. The counsel then briefly adverted to the circumstances of the case, and said he scarcely knew what motion to make in the premises. That he thought the best disposition that could be made of the whole matter was to leave it to the discretion and control of the Court, confident that whatever judgment was rendered

would be a wise adjustment of the vexed questions.

Judge Busteded thereupon delivered the following opinion:

The answer of Gen. Woods to the warrant of attachment issued in this matter is satisfactory. Situated as this officer is, and with the explanations offered for his course, he ought to be excused for his refusal to obey the mandate of the Court. The first duty of a soldier is obedience to orders, and it now appears General Woods has acted in strict and disciplinary subordination to those who have a lawful right to require his literal compliance with their commands. For this he should be praised by them rather than censured by me. The attachment against him will therefore be vacated, and without costs. But while acquitting Gen. Woods, I cannot, even by implication, consent to what I consider an encroachment of the Executive Department of the Government upon one of its coordinate branches. It is worse than useless for the Courts to attempt the exercise of their functions if the President not only allows but directs disobedience to their authority and process.

In the language of a learned juriconsult: "The citizen lives under the protection and is subject to the requirements of a written fundamental law. No department of the National or any State Government can lawfully act otherwise than according to the powers conferred or the restrictions imposed by that instrument. If the citizen believes himself to be aggrieved by some action of either government which he supposes to be in violation of the Constitution, and his complaint admits of judicial investigation, he must be heard on that question, and it must be adjudicated, or there can be no administration of the laws worthy of the name of justice."

I frankly own the embarrassment put upon me by the action of the President in this case. His proclamation of July, 1865, appointing a Provisional Governor for this State, *inter alia*, provides that the District Judge of the United States shall proceed to hold courts in this State, in accordance with the acts of Congress.

Before I left New York, in November last, I agreed with Gov. Parsons, who was then in that city, about to go to Washington, that he should inform the President of my purpose to open the courts, and that if in the opinion of the President it was not discreet to do so, upon my receiving a telegram to that effect from Gov. Parsons, directed to me at Mobile, I would postpone holding them until such time as the President should determine the civil authority might, with advantage to the public interests, be put in course of exercise here. I deemed it my duty, as it was my pleasure, to secure, so far as I could, the utmost harmony of action between the various departments of the Government.

Upon my arrival in Mobile, I received a telegram from Gov. Parsons, dated at Washington, which runs as follows:

"To the Hon. Richard Busteded:

"The courts will be held.

"LEWIS E. PARSONS,

"Provisional Governor."

I presumed this telegram was transmitted after consultation with the President, and at once prepared to discharge such of the duties of my office as might be required. Application was shortly afterwards made to me to issue a writ of *habeas corpus* in the case of a person who, it was alleged, was wrongfully imprisoned by the military authorities at this city. The petition in the matter makes out as clear a case for relief as can be imagined, and I allowed the writ. The officer upon whom it was served refused to obey its requirements, on the ground that he had express instructions from his military superiors to assume and maintain jurisdiction in the case. Various judicial orders followed the granting of the writ, all of

which were disregarded. None of the allegations in the petition were controverted, and at this hour their truth remains upon the records of this court wholly unchallenged.

These, taken as admitted, left me no option as to my course. I was obliged to and did order the discharge of the petitioner from military arrest, but, to save the Government harmless, directed his transfer to the civil authorities, to the end that he might be put under sufficient recognizances to answer any indictment or complaint which might be preferred against him. This order was also disregarded, and the petitioner's counsel then moved for a writ of attachment against Gen. Woods, which was issued accordingly, and was made returnable in two weeks from the date of its allowance. In the interim I saw Gov. Parsons at Montgomery, who informed me that before the telegram was sent to which I have referred, he conversed with the President, and told him of our interview in New York, and that I was on my way to this State to hold the National Courts as directed by the act of Congress, and that the President expressed the opinion that it was proper for me to do so.

This summary brings us to the answer of Gen. Woods to the writ of attachment, read and filed this morning. From this answer and the papers annexed to it, and the proceedings herein, four things are now made distinctly apparent. First, it appears that the original arrest and imprisonment of the petitioner was by virtue of a direct order of the President himself without the intervention of the chief or any officer in any of the executive departments. The telegram under which the arrest was made is signed "Andrew Johnson, President of the United States." Secondly, it appears that the continuance of the petitioner's imprisonment, although pronounced to be unlawful by the courts, is by express personal instructions from the President. His telegram to Gen. Thomas, in reply, I presume, to one sent him touching this case, is also signed "Andrew Johnson, President of the United States." Thirdly, it appears that Gen. Woods should not be held to answer criminally in this case, for refusing obedience to the writ of *habeas corpus*. Fourthly, it appears that the imprisonment of Dexter is not for any of the causes in respect of which, and that he is not himself one of the persons as against whom the privilege of the writ of *habeas corpus* has ever been suspended. If he is guilty as alleged, his offence is malversation in a purely civil office, and it will hardly be contended that the public safety now requires the trial of an offence against the Treasury to be by a military tribunal. Courts-martial are the necessary, but mere adjuncts of a war establishment. Civil judicatories are the appropriate and chosen tribunals established by law, not more for the punishment of the guilty, than the protection of the innocent.

It is under the circumstances thus briefly recapitulated, that this unseemly conflict between the military and the civil authorities has been provoked. I claim exemption from any responsibility for it. And as in our land, no public man and official station is or ought to be beyond the public watchfulness, and as with us, all place and power are held in trust for the people, I deem it due alike to them and to myself, to make the foregoing statements of fact. And upon behalf of the judicial office, I respectfully protest against the act of the President, and assert that the trial of the petitioner Dexter cannot lawfully proceed in any other than the way established, and according to the forms prescribed in the Constitution of the United States; a scrupulous reverence for, and obedience to which, is at once the knightliest and most patriotic service that either citizen or government can render to the country.

The following proclamation, restoring the writ in some portions of the United States, was issued on December 1st:

Whereas, by the proclamation of the President of the United States of the fifteenth day of December, one thousand eight hundred and sixty-three, the privilege of the writ of *habeas corpus* in certain cases therein set forth was suspended throughout the United States; and whereas the reasons for that suspension may be regarded as having ceased in some of the States and Territories;

Now, therefore, be it known that I, Andrew Johnson, President of the United States, do hereby proclaim and declare that the suspension aforesaid and all other proclamations and orders suspending the privilege of the writ of *habeas corpus* in the States and Territories of the United States, are revoked and annulled, excepting as to the States of Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas, the District of Columbia, and Territories of New Mexico and Arizona.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington this 1st day of December, in the year of our Lord one thousand eight hundred and sixty-five, and of the Independence of the United States of America the ninetieth.

ANDREW JOHNSON.

By the President:

WILLIAM H. SEWARD, Secretary of State.

(See MILITARY COMMISSIONS.)

HAGANY, REV. JOHN B. D. D., a Methodist clergyman, born in Wilmington, Delaware, August 26, 1808, died in New York, June 28, 1865. He united with the Methodist Church about the year 1828, and commenced the work of an itinerant minister in 1831. In the following year he was received into the Philadelphia Annual Conference, and was stationed at Port Deposit, Maryland. From 1833 to 1850 he was stationed successively at Elkton, Md., Easton, Md., Burlington, N. J., Kensington, Pa., Pottsville and Minersville, Pa., Philadelphia, Ebenezer, Middletown, and Cantrell's Bridge, Delaware, and at Trinity, Philadelphia. In 1851 he was transferred to the New York Conference, and stationed at Vestry St., New York city, and subsequently at Mulberry St. In 1856 he was at Yonkers, and in 1858 was transferred to New York East Conference and stationed at Sands Street, Brooklyn. In 1860 and '61 he was transferred to the New York Conference and stationed at St. Paul's, afterwards at Bedford Street, and finally at Thirtieth Street, New York, where he closed his labors. In this protracted ministry of thirty-three years he was signally blessed. To him the ministry was not a profession, but a divine vocation. His familiarity with the elder and greater writers of Methodism was a constant surprise to all who knew him, and his apt quotations from Wesley or Fletcher showed that the writings of these great founders had been wrought closely into the texture of his thinking. His studies in the literature of the last century gave character to all his ministrations, imparting to them a finish which contributed largely to his success. On the last Sunday of his life, he preached to his congregation from the text, "Let me die the death of the righteous, and let my last end be like his." Not having finished his discourse, he announced that he would conclude it the next time he preached. The fol-

lowing Wednesday, while reading a portion of a published sermon to his wife, he dropped the book, and, leaning his head upon his hand, expired.

HALIBURTON, HON. THOMAS CHANDLER (Sam Slick), a well-known English author, died at Isleworth, aged 68 years. He was born at Windsor, Nova Scotia; was educated at King's College, and admitted to the bar in 1820. He was elected a member of the House of Assembly, and in 1829 was appointed Chief Justice of the Court of Common Pleas. In 1840 he became a judge of the Supreme Court, but two years after resigned the office and went to England, where the remainder of his life was passed. In 1859 he was elected Member of Parliament for the borough of Launceston, which he continued to represent on Conservative principles until the dissolution of Parliament in July, 1865, when, owing to the infirm state of his health, he was not a candidate for reelection. He was a frequent and fluent speaker, but was more widely known by his writings both in Europe and America. His earliest literary undertaking was a series of letters entitled "Lucubrations of Sam Slick, the Clockmaker," which he contributed, in 1835, to a weekly newspaper of Nova Scotia, exhibiting, in a tone of good-natured railery, peculiar features of the Yankee character. These letters were subsequently collected in a volume, and they have been several times reprinted. Soon after his settlement in England he produced a second series, under the title of "The Attaché; or, Sam Slick in England," in which British society is amusingly depicted; and to this a third series was eventually added, but its success was not so great as that of the earlier volumes. Besides these, his best known works, Judge Haliburton published "Historical and Statistical Account of Nova Scotia;" "Letters to Lord Durham;" "Bubbles of Canada;" "The Letter-Bag of the Great Western;" "The Old Judge; or, Life in a Colony;" "Rule and Misrule of the English in America;" "Nature and Human Nature;" "Wise Saws;" etc. He also edited several works, including one on the "Settlement of New England." In 1858 Judge Haliburton received the degree of D. C. L. from the University of Oxford.

HAMBURG, a free city of Germany. According to the new constitution of 1861, the legislative power is vested in the Senate and the "Bürgerschaft" (Council of Burghers). The Senate consists of eighteen members, nine of whom must be lawyers, while of the other nine, at least seven must be merchants. The senators are elected for life; but they may tender a resignation after having served for six years. The Senate chooses annually among its own members a first and a second Burgomaster. First Burgomaster for 1865, Dr. F. Sieveking; second Burgomaster, A. W. Lutteroth-Legat. The "Bürgerschaft" consists of one hundred and ninety-two members, of whom eighty-four are chosen by the

general direct elections, and the others by different corporations. The new constitution grants full religious liberty and makes military duty obligatory on every citizen.

Hamburg has an area of one hundred and thirty-five square miles, and in 1860 a population of 229,941 inhabitants, of whom 175,683 lived in the city (134,022) and the two suburbs, St. George and St. Pauli. At the previous census of 1858, the population had been 222,379. In the "Budget" of 1865, the receipts and expenditures were estimated at 4,293,756 thalers. The public debt, on December 31, 1863, was 22,742,382 thalers. The contingent of Hamburg to the Federal army is 2,163. The value of imports* amounted, in 1864, to 773,016,770 marcs banco,† and in 1863 to 738,665,510. The movement of transmarine shipping in 1864, was as follows: Entered, 5,012 vessels, together of 465,909 lasts (1 last=6,000 pounds); cleared, 5,006 vessels, of 463,074 lasts. The merchant navy consisted, at the close of 1864, of 530 vessels of 79,380 lasts.

HAMLINE, LEONIDAS LENT, D. D., an ex-Bishop of the Methodist Episcopal Church, born in Burlington, Hartford County, Conn., May 10, 1797, died at Mount Pleasant, Iowa, March 23, 1865. His parents were reputable members of the Congregational Church. His father, Mark Hamline, whose ancestors were French Huguenots, was remarkable for decision and energy of character, for moral integrity, and for his strong Hopkinsian views of Christian doctrine. He was a New England farmer on a small scale, teaching school a part of the year. It was a grief to him that his means did not justify educating this son according to his wishes. The parents of Mr. Hamline early designed him for the ministry, and shaped his education as far as possible to this end. Of his early life little can be said. He was very precocious, amiable, and obedient. His habit of intense study was formed very early. On arriving at the age of manhood his high standard of qualification for the Christian ministry was such, that he felt he had not an experience in the divine life that authorized his entering upon the duties of the holy ministry, as designed by his parents, and instead thereof studied law, and became an honorable member of the bar in Ohio. In 1828 he was impressed as never before with the solemn verities of the Christian faith, and from this time dated the period of his conversion. The same year he entered the ministry of the Methodist Episcopal Church. After a successful ministerial career in various parts of Ohio, under the direction of the conference of the M. E. Church, he was removed to Cincinnati, where, in the exercise of his clerical functions, and co-editor of the "Western Christian Advocate," and in 1840 as editor of

"The Ladies' Repository," he remained nearly eight years. His person was commanding, his voice musical, his manners engaging. In the pulpit he was self-restrained, self-possessed, and grave in his attitude, utterances, and tones, showing mingled humility and dignity. His style was faultless, but to say this is not enough, it was charming, it had clearness, energy, purity, and elegance. His sermons were finished. Of Bishop H. one of his peers says: "His rhetoric was faultless, his logic was carefully constructed, yet always sparingly, often brilliantly logic all ablaze. He rarely delivered a discourse which might not have been printed word for word as it fell from his lips, and safely submitted to the critical eye. His manners were courteous and his spirit kind, and although he often unbent, he never lost his dignity." In 1844 he was elected Bishop of the Methodist Episcopal Church. As a presiding and executive officer he was popular and successful, but under the pressure of disease and infirmities, which in his estimation disqualified him for the arduous duties and heavy responsibilities of the episcopacy, he resigned that position in 1852. Having an ample fortune he devoted his last years, as far as his health would allow, to literary and religious studies and the interests of the Church. Besides many other charities he devoted \$50,000 in one month to two colleges. He was the subject of much physical suffering during the last few years of his life, but his resignation to the Divine will, and expressions of holy trust, were often singularly triumphant and sublime. His last words were, "O children, this is wonderful agony, but it is nothing to what my Saviour endured for me on the cross."

HANOVER, a kingdom belonging to the German Confederation. King Georg V., born May 27, 1819, succeeded his father Ernst August on November 18, 1851. The area of the kingdom is 14,600 square miles; population, in 1861, 1,888,070, in 1864, 1,923,492; increase in three years, 1.88 per cent. According to their religious denominations, 1,584,767 belonged (in 1864) to the Lutheran Church, 98,010 to the Reformed, 226,009 to the Roman Catholic, 12,424 to Judaism, and 2,282 to different Christian sects. The capital is Hanover, which had, in 1864, 79,649 inhabitants. The receipts in the "Budget" of 1865-'66 were estimated at 20,786,950 thalers; the expenditures at 20,748,016 thalers; expected surplus, 38,879 thalers. The public debt, on January 1, 1864, amounted to 48,018,274 thalers. The regular army consists of 26,938 men. The merchant navy was composed in 1863 as follows:

	No.	Lasts.*
Sea vessels.....	841	60,143
River vessels.....	2,765	80,758
Steamers.....	13	579
Total.....	3,618	91,480

* One last=6,000 pounds.

* From the United States 13,283,290; from Great Britain, 252,577,680 marcs banco.

† Banco means the value of money at a bank as distinguished from its current value. At Hamburg banco is worth about 33½ per cent. more than currency. A marc banco is equal to about thirty-five cents in United States money.

In the questions of German politics, the Government of Hanover sides usually with Austria and Prussia against the majority of the minor States.

HARMS, Rev. Louis, a Lutheran pastor and reformer, born in Hermannsburg, in the kingdom of Hanover, in 1823, died in that town in December, 1865. His father was pastor of Hermannsburg, a parish in one of the poorer districts of Hanover, surrounded by a barren heath, from which the poor farmers were accustomed to force a scanty living. The population numbered thirteen or fourteen thousand, and there was at least the usual amount of intemperance, and other vices, and pauperism in the community. Educated at the University of Heidelberg, he had been aroused from the spiritual deadness of the Orthodox Lutheranism of Hanover at that period, and though warmly and intensely attached to the doctrines and teachings of the Lutheran Church, he was determined, in his own ministry, to infuse into it a vigorous and earnest spiritual life. He succeeded to the pastorate of Hermannsburg on the death of his father in 1848, and from that time forward, though not possessing a vigorous constitution, he was one of the hardest working men in Europe. He prayed much and often. While other people were asleep at midnight, he was engaged in earnest prayer. He sought, above all things else, to reach the hearts of his people. For this purpose he studied their character, their language, and their habits, and their temptations. His sermons made little parade of learning and did not smack of the University. They were plain, simple expositions of Scripture in the language and adapted to the understanding of the common people; and his illustrations and imagery, though pure and chaste, were drawn from the events and objects of every-day life. In this mastery of the language of the common people he greatly resembled Martin Luther. Everybody understood him, and he knew the road to every one's heart. He preached often and long, sometimes two hours, and often three times a day; yet no one seemed to weary. His large church was always crowded, aisles and all. Many would stand during the whole service for want of room. His sermons were like mirrors, in which the people saw themselves portrayed in their true character, and often in a light which would cause them to weep. He had also evening services during the week, for the study of the Scriptures, something entirely new in Hanover, and these were as fully attended as the services on Sunday.

This was no sudden excitement or excess of labor to be followed by a season of apathy and sluggishness. He was a man of great thoroughness and system, and whatever he undertook he carried forward with the utmost resolution and persistence throughout his whole career. Having showed his people their sins, and led them to repent and break off from them, he watched over them, and brought them constantly under

such influences as would serve to keep them in the right way. He was specially earnest and careful in the training of the young. His parochial school was a model of organization, and both in its intellectual and religious training was surpassed by no school in Hanover, and perhaps by none in Germany. He often examined the children on religious subjects himself, and with a thoroughness and insight into their characters which was very remarkable. His profound scholarship, especially on Biblical topics, exhibited itself by its results rather than by any parade of learning.

As a result of his extraordinary zeal and his abundant labors, it was stated in 1862, fourteen years after he commenced his pastorate, that there was not a house in Hermannsburg where there was not regular family worship, morning and evening; there were no absences from church unless in consequence of sickness, and there was not a drunkard, pauper, or habitually vicious person in the town. But the most extraordinary of Pastor Harms' labors were those connected with the foreign missions established by him in the southeastern coast of Africa. In 1849 he became convinced that the spiritual life and advancement of his flock demanded religious labor outside of the boundaries of their parish, and he began to preach on the duty of bearing the gospel to the heathen. Some twelve of his own parishioners offered themselves as missionaries, when they should have undergone suitable instruction and training. Pastor Harms' brother, also a minister, undertook their training, and a house was set apart for them, which became thenceforth, in some sort, a theological seminary. Others soon after volunteered for the work, and were received. The next point to be settled was the selection of a missionary field, and after some correspondence with the missionary societies of the Continent, none of which seemed fully to sympathize with his enterprise or purposes, he resolved to establish an independent mission, and at first fixed upon the fierce tribes of Eastern Central Africa, as those most in need of the humanizing and Christianizing influence of missionary labor. It was necessary to engage a passage for his missionaries, and the necessary implements of industry and such household comforts as they required. The missionaries were but few of them preachers, the remainder being teachers, artisans, farmers, etc., whose principal qualifications for the work were devoted piety and earnest zeal for the culture and moral and religious improvement of the savages among whom their lot might be cast. Hermannsburg is an inland town on the Lünenburger heath, and they were compelled to resort to the great port of Hamburg in the hope of obtaining a passage to the desired scene of their labors. As they could find no vessel bound to that portion of the East African coast, or willing to take them thither, Pastor Harms thought it best to build a ship of their own. They did so, and on the 28th of October, 1853, the first party of missionaries set

sail for their field of labor. On arriving off the coast of Zanzibar, they found the Portuguese authorities unwilling to show them any favor, and the native tribes so ferocious, that they were compelled to seek elsewhere for a field of labor. They finally landed on the southeast coast of Africa, among the Caffres, near the Zulu country. Here for a time they had a severe struggle. The native language was difficult to acquire, and the natives themselves either hostile or insolent; but in the end the patience, perseverance, and piety of the simple-hearted Hermannsburgers won the day. They have now besides their principal station, which they have named New Hermannsburg, fifteen or more out-stations, and about two hundred in all of the parishioners of Pastor Harms have migrated thither. Large numbers of the natives have gathered into villages and come under the influences of civilization, and many of them have become Christians. This mission, though on many accounts an expensive one, requiring from \$30,000 to \$50,000 a year for its support, was wholly sustained through the efforts of Pastor Harms. All his people were accustomed to contribute toward it according to their means, and a small amount was received from voluntary donations from abroad. To diffuse information on missionary subjects among his people and afford a ready channel of communication between them and their foreign missionaries, Pastor Harms established a monthly missionary periodical called *Missionsblatt*, which he edited, and which attained a circulation of 14,000 copies per annum. But his excessive labors proved too severe for his enfeebled frame, and for the last three years he had been affected by frequent illnesses, which eventually proved fatal.

HAYTI, a negro republic in the West Indies, occupying the west portion of the island of San Domingo, and divided from the Dominican republic on the east by an irregular line drawn from the mouth of the river Anses-à-Pitre or Pedernales, on the south coast to that of the river Massacre, which flows into the bay of Manzanilla, on the north coast. Its territory, corresponding to that of the ancient French colony, extends between latitude 17° 55' and 19° 55' north, and longitude 71° 52' and 74° 38' west, and, including the islands of Tortuga, Gonaive, etc., contains 10,091 square miles, divided into six departments, subdivided into arrondissements and communes. The population is estimated at about 700,000. The chief towns are Port au Prince, Cape Haytien, Gonaives, Cayes, Jacmel, and Jeremie. Port au Prince, or Port Republicain, is the capital and principal seaport. It is situated at the head of the bay of Gonaive, and has about 25,000 inhabitants. Gonaives, sixty-five miles northwest, is situated at the northeast extremity of the same bay. Cape Haytien, or Cape Français, is the principal port on the north coast. Jacmel and Cayes are the chief ports on the south and Jeremie on the north shore of the southwest peninsula; and on

the same peninsula are found Baint, St. Louis, and Tiburon, the last at the extreme southwest of the island, and facing on the bay of Gonaive, the ports of Goave and Bon. St. Nicholas is situated at the extremity of a deep bay formed by the cape of the same name and the mainland of the northwest peninsula.

The government of the republic is based on the constitution of 1843; the sovereign power is recognized to be in the people, and is exercised through an elected President. The Legislature or National Assembly consists of a Chamber of Commons and a Senate, the former composed of one or more representatives from each commune, elected for five years, and the latter of six members from each department, elected for nine years. At present the number of Senators is thirty-six, and that of Representatives fifty. The judicial power is vested in a high court of cassation, being the highest tribunal of appeals, with superior courts in the capitals of departments, and subsidiary and primary courts in the arrondissements and communes.

President of the Republic: Gen. N. F. Geffard, elected 1858.

In the budget for 1864 the receipts were estimated at 38,710,800 (Haytien) dollars,* and the expenditures at 37,331,811; surplus, 1,378,989.

The commerce of the island during the years from 1860 to 1863 was as follows (value in piastres fortes):

	Imports.	Exports.
1860	8,737,000	8,638,900
1861	8,998,463	8,585,000
1862	10,456,745	11,728,600
1863	9,936,642	14,748,000

The imports from the United States were, in 1863, 46 per cent., and those from Great Britain 30 per cent. of the whole amount.

The movement of shipping was, in the years from 1861 to 1863, as follows:

	1861.		1862.		1863.	
	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.
Entered.....	676	124,280	850	154,735	815	187,217
Cleared.....	675	121,924	843	155,493	800	184,368
Total.....	1,351	246,204	1,693	310,228	1,615	371,575

In the beginning of May, 1865, an insurrection broke out in the northern part of the republic, at the head of which was Gen. Turin Salnavet. On May 9th a provisional government was organized, and on May 10th the rebels took possession of Cape Haytien without opposition from the government troops, not a gun being fired by either party. The towns of Gonaives and St. Mary were also taken by

* Haytien dollars (*gourdes*) are paper money of changing value. In 1863, 12.25 Haytien dollars were equal to one piastre forte—one Prussian thaler, or sixty-nine cents in American money.

* Turin Salnavet, in July, 1864, had attempted to assassinate one of President Geffard's ministers. He was condemned to death by a court-martial, but escaped to San Domingo.

the rebels. On May 20th President Geffrard issued a proclamation granting complete amnesty to the inhabitants of the northern and northwestern provinces, including all officers and men belonging to the military or naval forces who might surrender to the legitimate authorities, the members of the provisional government being alone excluded from the benefits of the amnesty. The sections continuing in rebellion against the government were by the same proclamation declared in a state of siege, subject to martial-law, and to be considered as public enemies. In another proclamation, dated May 27th, the President appealed earnestly to the people and the military to use every effort to speedily crush the rebellion.

Soon two columns of rebels abandoned their leaders and went to the ranks of Gen. Papailleur, commanding the government forces; their renewed allegiance being signified by enthusiastic cheers for President Geffrard. Gen. Marrisset, commanding a force of loyal troops, in advancing to attack the town of Plaisance, held by the rebels, was met by a white flag and cheers for Geffrard; and interpreting these symptoms as the preliminaries to the submission of the insurgents, he proceeded with a few men in advance of his corps to receive the seeming flag of truce, when the rebel party fired upon him, killing him instantly. Infuriated by this act of treachery, the national forces charged upon the rebels, and speedily routed them with great slaughter.

At the beginning of June the rebels, everywhere defeated, were shut up in the town of Cape Haytien. All the members of the provisional government soon disappeared, except Gen. Salnave, who kept the city at the head of about six hundred men until November. He captured one of the best blockading steamers, which occurrence greatly increased his power of resistance.

On October 23d the insurgents had a naval engagement with the British gunboat *Bulldog*. Some Haytiens had taken refuge in the British consulate at Cape Haytien; and the chief of the insurgents demanded that they should be given up to him. A refusal was returned by the consul, but they were taken by force from the consulate, and immediately shot. The *Bulldog* lying in the port, her commander, Capt. Wake, made remonstrances, which were treated with insolent neglect. He then opened fire on one of the forts, but his ship ran aground during the engagement; and he was compelled to blow her up, and to escape with his crew in his boats to a steamer belonging to President Geffrard's government.

This accident hastened the end of the rebellion. On the 7th of November the British steamers *Lily* and *Galatia* arrived from Jamaica, bringing the English Consul General, St. John, from Port au Prince. The rebel leaders, fearing the probable object of their visit, at once sent commissioners on board to learn what conditions were to be proposed to them. These

were none other than the immediate delivery of Gen. Salnave and Mr. Delorme, their head and front. Knowing full well the fate reserved for them, it could hardly be supposed these leaders would voluntarily give themselves up. So they declined the honor, but at the same time replied that as they were unable to offer any resistance, they would quietly give up the city. All efforts at conciliation having failed, fire was opened on the morning of the 9th from both steamers on the water batteries and all the forts held by the rebels, which were soon demolished. After some three hours' bombardment of Fort Madeleine, it was assaulted by Geffrard's troops, and taken without bloodshed, the garrison having evacuated it the night previous, after spiking the guns. All the other forts had been abandoned at the same time, and the guns spiked. Gen. Salnave, having made up his mind at once of the hopelessness of his position, as soon as he learned that the British guns were to be turned upon him, wished to give his devoted adherents a chance to seek their safety in flight and to do the same himself. Together with most of the leaders, he took refuge on board of the American steamer *De Soto*, which conveyed them to the neighboring Dominican port of Monte Christi.

During the bombardment, and before Geffrard's troops entered the city, some desperate characters set fire to the principal quarters, and all the most valuable retail shops and dwellings around the market and in the Rue Espagnole were soon reduced to ashes. They also tried to destroy the foreign warehouses on the seaside, but without success, as these were saved from fire, though not from pillage, having been mostly broken open and plundered of every thing they contained, particularly the houses of such persons whose occupants were known to be hostile to the rebellion. These were completely gutted, furniture of every description being thrown into the streets and broken up by the mob.

In opening the Chambers, President Geffrard delivered an interesting speech, in which, after recapitulating various projected reforms, he mentioned the following facts with regard to education: "Public instruction has received fresh developments. A small theological college, where superior education is imparted, has been founded at Port au Prince. At the same time two establishments have been created which promise happy results: one is a school directed by the Brothers of Christian Instruction; and the other a school conducted by the Sisters of the Order of St. Joseph de Cluny. These two institutions have about 300 scholars. Our other scholastic establishments have been augmented to the number of eighteen new schools, and the number of scholars from 14,600 has been increased to 15,697. In Europe we have eighteen students in the colleges at Paris and Versailles, and twenty placed in a grand theological college. The Haytien people, the guide of the African race in the paths of civili-

zation, is destined to prove to the other nations that the descendants of that race are not inferior to the other races disseminated on the face of the globe."

HERRING, JOHN FREDERIC, an English painter, born in Surrey in 1795, died at Tunbridge, Kent, September 23, 1865. His father was a London tradesman, an American by birth. From an early age young Herring displayed a taste for painting, but his juvenile efforts were confined to the filling in of coach panels and shop sign-boards. The first impulse toward that department of art in which he obtained so much success, was given in the enthusiasm with which he witnessed a race for the St. Leger, at Doncaster, to which he went at the age of eighteen in search of employment. For several years after this the laborious occupation of a stage coachman, between Wakefield and Lincoln, and subsequently between London and York, was varied by assiduous application in the portraiture of the animal he drove; and so successful was he in this, that at the instigation of friends he was led to devote himself entirely to art, and obtained in a short time a name and reputation in animal painting second to no artist in England. For thirty years he took the portraits of the winners of the Doncaster St. Leger, and painted a large number of racers and racing scenes for eminent patrons of the turf. He painted for the Queen some of her favorite horses, and executed similar commissions for exalted personages in foreign countries. Mr. Herring's paintings have been extensively engraved, and his popularity has been much increased thereby. Among the number may be mentioned "The Members of the Temperance Society," "The Baron's Charger," "Feeding," "The Country Bait," "The Farmer's Pet," "Quietude," "Duncan's Horses," and "Pharaoh's Chariot Horses."

HESSE. The name of three German States. I. The Electorate of Hesse-Cassel. Elector: Friedrich Wilhelm I., born August 20, 1802, succeeded his father, Wilhelm II., on November 20, 1847. The area of the Electorate is 4,430 square miles. It is divided into four provinces: Lower Hesse, Upper Hesse, Fulda, and Hanau. The population was, in 1861, 738,476; and, in 1864, 745,063; increase during three years, 0.89 per cent. The capital is Cassel, with (1864) 40,228 inhabitants. The annual receipts are estimated in the "Budget," for the financial period from 1864 to 1866, at 5,108,310 thalers; the expenditures at 5,452,980 thalers.

In no part of Germany has the conflict between the Government and the people been more animated and protracted than in Hesse-Cassel. On December 31, 1864, the Diet, with all votes save two, declared themselves bound by their oaths, in case there should be no improvement in the public affairs, to protect the country against a further neglect of its welfare.

As the Elector has entered into a morganatic marriage, and his children have therefore no right

of succession, the Electorate will after his death fall to a branch line.

II. The Grand-duchy of Hesse-Darmstadt. Grand-duke: Ludwig III., born June 9, 1806, succeeded his father on June 16, 1848. The country is divided into three provinces: Upper Hesse, Starkenburg, and Rhine-Hesse. Area: 3,761 square miles. Population in 1861, 856,907; in 1864, 853,315. As to religion, in 1861, 599,563 were members of the United Evangelical Church; 224,038 Roman Catholics; 28,999 Jews; 4,307 members of other denominations. Capital, Darmstadt, 29,225; largest city, Mainz, 42,704. Yearly receipts, as estimated in the "Budget" for the financial period from 1863 to 1865, 9,292,963 florins; yearly expenditures, 9,031,835. Surplus, 261,128. Public debt, exclusive of railroad debt, about 3,100,000 florins. The regular army consisted, in 1864, of 11,700 men. In questions of German politics, the Government of Hesse-Darmstadt went hand-in-hand with Bavaria and Saxony in opposing the policy of Austria and Prussia.

III. The Landgravate of Hesse-Homburg: Landgrave Ferdinand, born April 26, 1733; succeeded his brother Gustav, on September 8, 1848. Area 135 square miles. Population, in 1864, 27,374, among whom there were 7,412 Lutherans; 4,950 Roman Catholics; 1,005 French Reformed; 694 German Reformed; 1,138 Jews. The receipts, in the "Budget" for 1865, are estimated at 500,520 florins; the expenditures at 441,166; expected surplus, 59,354 florins. The army consists of 366 men. Hesse-Homburg is the only State in Germany which has no constitution; the one formed in 1848 having again been abolished in 1852. After the death of the childless Landgrave, the little country will be united with Hesse-Darmstadt.

HETHERINGTON, WILLIAM M., D. D., LL. D., a clergyman of the Free Church of Scotland, born in Dumfriesshire, Scotland, died at Glasgow, May 23, 1865. In early life he worked as a gardener both in Scotland and England, which occupation he abandoned in order to prepare himself for the clerical profession, and this he did so effectually that he became exceedingly popular both as a preacher and a writer. Soon after being licensed to preach the Gospel, he was appointed assistant in Hamilton, to the late Dr. Meek, whose daughter he married. In 1836 he was presented by Lord Torphichen, to the parish of Torphichen, in Linlithgowshire, of which he was minister at the time of the disruption. In 1857 when the Assembly came to fill the chair of the Free College of Glasgow, called into existence by the munificence of Dr. Clark, of Wester Moffat, Dr. Hetherington was appointed, on the motion of Dr. Hanna, one of the professors of divinity, which charge he ably filled until laid aside by illness. For two sessions his lectures were read by clerical friends, with the approbation of the college committee; but there being no hope of ultimate recovery, the Assembly of 1864 made permanent provision for the

management of his class by the appointment of Dr. Islay Burns as his colleague and successor. Among his other labors, Dr. Hetherington acted as editor of the "Free Church Magazine," a periodical that enjoyed a wide and deserved popularity under his *régime*, from its commencement till about the year 1848 or 1849. He was the author of a "History of the Church of Scotland," a "History of the Westminster Assembly," and various other works.

HILDRETH, RICHARD, an American author, and late United States Consul at Trieste, born in Deerfield, Mass., June 22, 1807, died at Florence, Italy, July 11, 1865. His father was an eminent Congregational clergyman, and, at the period of his son's birth, was preceptor of the flourishing Academy in Deerfield. Being fitted for college at Phillips' Exeter Academy, his father having removed to that town, Richard graduated at Harvard in 1826, having proved himself a successful student of the prescribed course, without, however, entirely confining himself to it. Besides his extensive readings in history, political economy, and ethics, he became familiar with the whole body of Greek and Latin authors in their original languages. He then entered the office of Theophilus Parsons, afterwards Dane Professor in the Law School of Cambridge, where his remarkable power of close and long-continued application excited the astonishment of all who knew him. In 1827, during Mr. Hildreth's residence in Newburyport, his literary life took its commencement in a series of articles contributed to a magazine then lately started in Boston by Mrs. Sarah Jane Hale. Not long after he became a contributor to Willis' "Boston Magazine"—the first editorial experiment of that popular writer; and still subsequently to Joseph T. Buckingham's "New England Magazine."

In July, 1832, while practising the legal profession in Boston, he was induced to accept the post of editor of the "Boston Atlas," the exponent or organ of Rufus Choate, Caleb Cushing, and other rising politicians, who were then associated together, and for several years Mr. Hildreth's connection with the new paper gave it a decided preëminence among the political journals of New England. His articles were remarkable for the vehemence of their tone, the closeness of their reasoning, their elaborate historical illustrations, and the point and vigor of their diction. If strongly partisan in their spirit, it was impossible, with his earnest nature, to have been otherwise. His perceptions were clear, his convictions of an iron strength, and he hated compromise. His love of controversy was also innate and genuine; it had the force of a passion.

Ill health, in the autumn of 1834, compelled Mr. Hildreth to seek a residence on a plantation at the South, where he lived for about a year and a half, and wrote the story of "Archy Moore," subsequently, in 1852, republished in an enlarged form under the title of "The White Slave." During the summer of

1836 Mr. Hildreth employed his pen in translating from the French of Dumont a work under the title of "Bentham's Theory of Legislation." He also at the same time wrote a "History of Banks," and passing the winter of 1837-'88 in Washington as correspondent of the "Boston Atlas," returned to the editorial chair a warm supporter of the election to the Presidency of Gen. Harrison.

Abandoning journalism, Mr. Hildreth next published his "Despotism in America," and in 1840, for the benefit of his health, again had resort to a warmer climate. During a three years' residence at Demerara, in British Guiana, he acted successively as editor of two newspapers published in Georgetown, the capital of the country, and also found time to write his "Theory of Morals," published in 1844, as well as the "Theory of Politics," printed in 1853. Mr. Hildreth then turned his attention to completing his "History of the United States." This afforded him constant occupation for seven years, during which he wrote little else. The first volume was issued in 1849, and the entire work in the three succeeding years.

The composition of this work had been a favorite purpose with Mr. Hildreth for many years before its actual commencement. His study of American history, without reference to the original sources in public records and other manuscript authorities, had been extensive, if not profound; his habits of research were methodical and accurate; and his fidelity to what he deemed the true functions of the historian was vigilant and alert. Although, from perhaps a deliberate purpose, he had avoided all ornament and elegance in style, the work may justly be considered the most accurate, faithful, and well-digested history of the United States ever published. For several years previous to his acceptance of the consulship at Trieste, Mr. Hildreth was a resident of New York, and during that time was a frequent contributor to the columns of the "Tribune" and the "New American Cyclopædia," and the amount of literary drudgery which he performed while suffering from feeble health attests his singular mental vigor and activity. His industry was a perpetual marvel. With him, mental labor was not a recreation, but a passion. His memory was capacious and exact, and his knowledge of American politics, of legislation, and of legal decisions was both extensive and accurate. In his personal character, Mr. Hildreth had the credit of habitual austerity. He had no morbid love of gaining friends, no cowardly fear of making enemies, always expressing himself honestly without regard to consequences; still, to his intimate friends he daily revealed a disposition of true modesty and sweetness. Having busied himself in his comparatively leisure hours with the writing of his "Japan as it Was and as it Is," his health shortly afterwards entirely gave way, which, in addition to the severe attacks of mental depression to which he had always been subject, prostrated him

utterly. In 1861 he received the appointment of United States Consul at Trieste, being then by the dying bed of his eldest sister, through whose earnest and tender solicitations he was, after much doubt and fear, induced to accept the position, and left her grave to embark for Europe. His wife and son accompanied him, and under the sunny skies of Italy he for a time recovered a good measure of his former health. But it soon again gave way under the pressure of his official and still continued literary labors. During the summer of last year he became almost insane, and recovered his mental consciousness only to sink gradually away into the arms of death.

HILL, Lieut.-Gen. AMBROSE POWELL, an officer in the Confederate army, born in Culpepper County, Va., in 1824, killed in the assault on Petersburg, Va., April 2, 1865. His father was for many years a leading politician and merchant in Culpepper County. The future lieutenant-general entered the Military Academy in 1843, and graduated with fair standing in his class in 1847, in the same class with Gen. Burnside. There being no vacancy, he received the brevet rank of second lieutenant in the first artillery, and on the 22d of August of the same year attained a full second lieutenantcy. He was promoted to be first lieutenant in September, 1851, and in 1855 to be captain. In November of that year he was appointed an assistant on the United States Coast Survey, in which he continued till March 1st, 1861, when he resigned his connection with the regular army; and when Virginia seceded from the Union, he sought and received an appointment from Gov. Letcher as colonel of the 13th regiment of Virginia volunteers. He was attached to Johnston's army, and stationed at first at Harper's Ferry, and in the battle of Manassas, or Bull Run, came in with Johnston's troops in season to turn the issue of the battle. At Williamsburg, in May, 1862, he held the rank of 'brigadier-general, and distinguished himself as a gallant fighter in that battle. For his bravery in this battle he was made major-general, and on the 25th of June, 1862, formed one of the council of war held in Richmond. He took part in the battle of Mechanicsville on the 26th of June, and in the succeeding battles of what is known as "The Seven Days," he was a prominent actor, and gained a brilliant reputation for bravery and skill in the handling of his troops. He was actively engaged in the battles of Cedar Run, or Cedar Mountain, in the Groveton or second Bull Run battle, in the attack near Centreville on the 30th of August, at Chantilly, and in the campaign before Washington, in which Gen. Pope was the Federal commander. On the 14th of September, 1862, he captured Harper's Ferry, and made a forced march to Antietam Creek, where he arrived in season to take part in that severe but indecisive battle, and on the 19th repulsed the Federal troops, who crossed the river in pursuit of the rebels, with heavy loss. In the

battle of Fredericksburg, December 13, 1862, his division formed the right of Jackson's force, and fought desperately, finally repulsing the Federal troops. At Chancellorsville, in May, 1863, his division formed the centre of Jackson's command, and participated in that flank movement by which Hooker's right was so effectually crushed. When "Stonewall" Jackson received his death wound, the command devolved on Gen. Hill, who was himself severely wounded soon after. For his gallantry in this battle he was made a lieutenant-general, and placed permanently in command of one of the three great corps into which the army of Virginia was divided. On the 1st, 2d, and 3d of July, 1863, he led his corps in the severe battle of Gettysburg, and though successful the first day, was unsuccessful on the second and third. In the autumn of 1863 he was concerned in the affair at Bristoe Station with a part of his corps, but was repulsed with serious loss. In the great battles of the spring of 1864, Gen. Hill was, next to Gen. Lee, the most prominent actor in the army of Virginia. On the 5th of May, from 2 p. m. till long after nightfall, he was engaged in a most desperate but indecisive conflict, and the early dawn would have found him in a position of extreme peril had not Longstreet's corps been brought up to reinforce him at 2 a. m. The fighting of the 6th of May was very severe, and in this Hill took a full share, but it was no more decisive than that of the previous day. In the movement toward Spottsylvania, Hill aided by his counsel, but his corps was not engaged. In the battle of Mechanicsville, Hill's corps sustained the brunt of the attack, and under his eye fought with great heroism. In the battle of the 3d of June, at Cold Harbor, the corps was at first in reserve, but supported the other corps before the battle was over. On the 22d of June his corps and Longstreet's repulsed the attempt of the Federal troops to gain possession of the Weldon Railroad, and drove them back with severe loss. At the explosion of the mine on the lines of Petersburg, on the 30th of July, in the engagement at Reams' Station, on the 25th of August, in the battle of Hatcher's Run, October 28-30, and the subsequent movements in that vicinity, in December, 1864, and February, 1865, Gen. Hill led his corps with great ability, and in almost every instance repulsed the Federal troops. When the final attack upon the South Side Railroad and the defences of Petersburg came (March 29-April 2), Gen. Hill was active and indefatigable in his exertions to repel the Federal attack, and on the 2d of April, for the possession of the works in front of Petersburg, his corps was opposed to the 6th, 9th, and part of the 25th Federal corps, almost single-handed, and then, as always, exposing himself to fire without hesitation, he was instantly killed by a rifle-shot, and as time was pressing, the evacuation of the city being determined upon, was buried the same day.

HOLLAND. (*See* NETHERLANDS.)

HOLSTEIN. (*See* SCHLESWIG-HOLSTEIN.)

HOOKER, Sir WILLIAM JACKSON, F. R. S., an eminent English botanist and Director of the Royal Gardens, born in Norwich, England, 1795, died at Kew, August 12, 1865. From his early boyhood he devoted himself to botanical pursuits, and with so much success that he was eventually appointed Regius Professor of Botany in the University of Glasgow, where he greatly endeared himself to the students, not only by his ability as a lecturer, but by his kind and genial disposition. With knapsack upon his back and a collecting case at his side, he practically taught his pupils the science he so much loved. In 1809 he visited Iceland, and gave subsequently an account of the botany of that region in his "Tour in Iceland." In 1832 he was removed to a wider sphere of usefulness, being appointed Curator of Kew Gardens, which he may almost be said to have created. In 1835 he was knighted, and in 1845 received the degree of D. C. L. from the University of Oxford, on the nomination of the Duke of Wellington, then the Chancellor. Besides innumerable articles in magazines and reviews, Sir William was the author of "The British Flora," "Flora Borealis Americana," "Icones Filicum," "Genera Filicum," "Musci Exotica," "Muscologia Britannica," etc., and

also the botanical portion of the work of Admiral Beechey's account of his voyage of discovery in the Arctic regions. Sir William Hooker was a member of nearly all the learned and scientific societies both upon the Continent and in America.

HUNGARY, a country of Europe, formerly an independent kingdom, subsequently united with Austria. Before 1849 Hungary embraced, in a constitutional sense, besides Hungary Proper, Croatia, Slavonia, and the Hungarian Litoral (coast land on the Adriatic), and in its widest acceptance also Transylvania, the Military Frontier, and Dalmatia, with an aggregate population of about 15,000,000. In 1849 all these dependencies were detached. Some counties of Hungary Proper were annexed to Transylvania, others were set apart to form the new crown land of the Servian Waywodeship and Banat, and the remainder was to form an Austrian crown land and province. In the most limited sense the crown land would have contained about 9,000,000 inhabitants.

The recent history of Hungary cannot be understood without an acquaintance with the diversity of the races inhabiting the countries belonging to the Hungarian crown. According to the last Austrian census of 1857, the race statistics of these countries were as follows:

	German.	Northern Slav.	Southern Slav.	West'n Roumans.	Eastern Roumans.	Magyars.	Other Races.
Dalmatia.....			360,310	45,000			1,813
Hungary.....	1,221,714	2,097,917	598,625		1,171,676	4,333,987	456,948
Croatia and Slavonia.	24,470	6,590	811,757	487	50	12,770	7,693
Transylvania.....	200,864	1,763	880		1,104,329	517,577	102,312
Military frontier....	33,400	9,820	865,877	400	140,826	4,900	2,349

It will be seen from this table that the Magyars are the predominant race, but that the combined non-Magyar nationalities have a large majority over the Magyars.

The year 1865 marks a turning-point in the relation of Hungary to Austria. The unflinching resistance of the Hungarians to the Diploma of October 20, 1860, and the Patent of February 26, 1861, by which the Government of Austria endeavored to consolidate all the crown lands into one empire, caused, at length, the Government to yield, to abandon the policy of centralization which had hitherto been pursued, and to enter upon a policy of federation, in accordance with the wishes of the Hungarians and most of the non-German crown lands. On September 20th, the Emperor published the celebrated Rescript, by which the efficiency of the Patent of February 26, 1861, was suspended. (*See* the text of the Rescript, under AUSTRIA.) Simultaneously with the Rescript the following documents were published for the more immediate use of the countries appertaining to the Hungarian crown:

Letter of Convocation.—We, Francis Joseph I., etc., etc., animated by the sincere desire for the happiness of our subjects, by strengthening with the royal unction the solemn coronation and promul-

gation of our royal diploma the ties uniting us to our dear kingdom of Hungary, we shall open anew the field presented to us by the possibility of deliberating with the estates and representatives of the country, and by passing with them salutary laws upon the affairs of our countries belonging to the crown of St. Stephen, our glorious apostolical predecessor, upon the just, equitable, and desirable solution of the pending political questions, and upon the assimilation of the constitutional rights of our dear kingdom of Hungary with the existence and unavoidable exigencies of the power of our empire. For this purpose, and also to deliberate according to the desire of our paternal heart, after the happy solution of the above-mentioned questions, upon others concerning the public welfare, the protection and promotion of the material and intellectual interests of the country, we convoke a general Diet in our royal free city of Pesth for the 18th December of this present year, and with God's help will open and direct it in person. In consequence of which, etc.

Rescript to the Royal Government of Hungary.—We, Francis Joseph I., etc., animated by the earnest desire of our paternal heart to bring about a happy solution of the constitutional questions, and others of high importance, bound up with the material and moral welfare of our dear kingdom of Hungary, and which equally apply to the vital conditions of the entire monarchy and the interests of the country, we have convoked the Diet of Hungary for the 10th of December, 1865, in our royal free city of Pesth, and have resolved to apply the electoral law approved by our sanction of January 7, 1861. In virtue of our royal sovereign power, we allow the

committees of the counties and the representatives of the royal free towns, dissolved by our autograph letter of November 5, 1861, to meet in place of the county assemblies appointed by article 5 of the law of 1848, in order to form the electoral districts and the central electoral commissions. We therefore hereby desire you earnestly to take without delay all the legal measures necessary to carry out the elections.

Given at our capital of Vienna, September 18, 1865.
(Signed) FRANCIS JOSEPH.
(Countersigned) GEORGE VON MAILATH.

At the recent electoral campaign, three parties were in the field. Firstly, the *Old Conservatives*, under the leadership of Zsedenyi, who, before 1848, went hand in hand with the Government against the Liberals and Radicals. The leader of the party thus defined the programme for the coming Diet:

1. The historical privileges and the integrity of the Hungarian crown must be upheld, and with them the rights of the Hungarian Diet.
2. The Diet must be completed in accordance with Law 5 of the year 1848 (it provides for a proper representation of the people), and with Law 7 (it relates to the union between Hungary and Transylvania).
3. As the laws of 1848 form the legal basis of the Hungarian Constitution, they can only be altered by the mutual consent of the crown and the nation.
4. The differences between Hungary and the other provinces of the empire must be settled in accordance with the stipulations of the Pragmatic Sanction.
5. There must be an independent and responsible Government.

Secondly, the liberal-constitutional or "Address-Party," under the leadership of Deak and Baron Eötvös. They received the latter name because they proposed and carried at the last Diet of 1861 an "address" to the "King" Franz Joseph, in which the latter was recognized as a ruler of Hungary, upon condition of his fulfilling the duties imposed upon him by the constitution of the country. Their chief organ is the Pesth "Naplo." The views of this party are thus explained by Baron Eötvös, in a speech to his constituents:

It is high time that Hungary should seriously endeavor to come to an understanding with her sovereign, but her representatives must be careful not to lose sight of three things: 1. They must not forget that Hungary with the *partes adnexæ* (Transylvania, Croatia, Slavonia, and Dalmatia) is a perfectly free and independent country. 2. They must strenuously uphold the fundamental principles of the Constitution, and take care that Hungary has as great a share as the other parts of the monarchy in the management of the general affairs of the empire. At the same time they must take care not to lose sight of the fact that Hungary, by means of the sovereign, is united to the other parts of the Empire. The very laws which guarantee our independence indissolubly unite Hungary and Austria, and the common interests of the inhabitants of the two countries render it necessary that they should live together in peace and harmony. 3. The representatives of the Hungarian nation must neither interfere with, nor infringe on, the constitutional rights of the inhabitants of the western part of the empire.

At a meeting of the leaders of this party, they designated the following as the chief features of their political programme:

There must needs be for the two countries (Austria and Hungary) one and the same minister for foreign affairs. The two countries must also have one and

the same minister of war, but the Hungarian Diet will only grant to the common army a number of recruits, which number will be determined during the next session. As Hungary cannot possibly allow the Austrian Reichsrath to legislate for her, the two countries cannot have one and the same chief of the finance department. Hungary will take on her shoulders a due share of the national debt, say about two-fifths of it, and will also annually contribute a certain sum toward the expenditure of the war department. There can be no question of the formation of a senate for the management of those matters which concern both countries, "as the Hungarian Diet must treat directly with the sovereign or his representative." The Hungarian laws of the year 1848 were drawn up in a great hurry, and require revision, "but the thing must be done in a legal way. That is, the laws must be changed by the Hungarian Diet, and not by means of an imperial patent. The Hungarian Diet will not be complete unless Transylvania be represented in it, that principality having been incorporated with Hungary in the year 1848."

The third of the political parties of Hungary is the Radical-constitutional or the "Resolution" Party, receiving the latter name from the circumstance that they proposed at the Diet of 1861, instead of an "address," a simple "resolution," plainly declaring the rights and grievances of Hungary. Both the Resolution Party and the Old Conservatives mitigated their distinctive party-principles, and all the three parties agreed upon some of the most important points to be demanded from the Austrian Government. On the other hand, all agreed in highly eulogizing the Rescript of September 20th, and in manifesting a readiness to come to an understanding with the Emperor of Austria. The election resulted in the return of a majority of the members of the "Address" party.

The Hungarian Diet was opened by the Emperor on December 14th, at the palace of Ofen. His Majesty, after greeting the assembled deputies, spoke of the hindrances which had hitherto prevented an adjustment of the relations between the Emperor and Hungary, and of obstacles to be removed. The difficulties which had hitherto arisen were chiefly owing to the different points from which the two parties set out; on the one side forfeiture of rights, and on the other unbending maintenance of rights, as of an uninterrupted lawful inheritance.

The Emperor said he took his stand on the Pragmatic Sanction,* which guarantees the autonomic political and judicial administration of Hungary, as well as the inseparable union of all the lands of the Hungarian crown. The reciprocal position of the lands of the Hungarian crown is therefore to be regulated before all things by the meaning of the Pragmatic Sanction. For this reason the Diet of Transylvania had been summoned to revise the laws of

* The "Pragmatic Sanction" was drawn up by Karl VI. in order to secure to his only daughter, Maria Theresa, the succession contrary to the former law of Hungary, which proclaimed succession in the male line only. It was submitted to the Diet of Hungary in 1723, and only accepted with the express stipulation that that country, and all the lands connected with it, should retain their complete independence as they had possessed it of old, being ruled according to their own laws and customs, which were to be confirmed by every monarch before his coronation.

union; the Hungarian Diet would also be called upon to consider thoroughly the statutes of 1848, relating to the same subject. As to Croatia, the Emperor called attention to what had been said concerning Hungary in his Rescript at the opening of the Diet at Agram, and expressed a wish that both countries might come to an agreement on the matter.

First and foremost, however, it was important that special attention should be paid to the treatment of those interests common to all the lands of the monarchy. Much is said of these in the Pragmatic Sanction, but many changes have taken place since the date of that instrument, and modifications in the treatment of those interests must necessarily be made. Constitutional rights have been granted to the other lands of the imperial realm.

The nature of these interests had been set forth in the October Diploma, and a common constitutional treatment of them was most imperatively required for the sake of the unity of the realm and its continuance as a strong power, to which all other considerations must be subordinate. Regulations for this treatment had been set forth in the February Patent; but, as that had been much objected to, and the Emperor was only anxious to bring about an agreement founded on a general recognition of its necessity, he had suspended the February Patent by that of September.

Both the October and February Diplomas would be laid before the Hungarian Diet for examination and acceptance; and he hoped that if modifications were introduced, they would be made in conformity with the primary and vital requirements of the realm.

In close connection with this matter stands a revision of some of the laws of 1848, to the formal validity of which no objection is made, but the execution of which cannot take place, nor the oath to maintain them be taken, until they have been divested of their prejudicial bearings. When this has been done, the inaugural Diploma may be made out, and when the coronation has taken place, propositions tending to the welfare of the country will be laid before the Diet.

The Emperor referred to the difficulty of the task, and the heavy responsibility attending its accomplishment. He spoke some words expressive of confidence in the members of the Diet, and gave utterance to a hope that with the blessing of the Almighty their task would be brought to a happy termination, and then declared the Diet to be opened. The effect of the speech was good, and great enthusiasm prevailed. All parties, without any exception, expressed the greatest satisfaction with it.

On December 20th the Chamber elected Charles Szentivanyi President by 179 out of 229 votes, and Count Julius Andrássy first Vice-President by 185 out of 211 votes. Both belong to the "Address" party. On December 21st the new President and Vice-President addressed the House. The former confined himself to a few

words, saying that a dangerous doctrine—the doctrine of the forfeiture of the special rights and privileges of the kingdom of Hungary—had been set aside; that the Pragmatic Sanction, to the satisfaction of all the Hungarians, had been reintegrated, and that it would serve as the basis of the statute laws of Hungary and of the hereditary (German) provinces of the empire. The Vice-President made a longer inaugural speech, in which he said that the western portion of the empire should be convinced that the rights of Hungary are in unison with the interests of the empire, but that parliamentary centralization is opposed to those rights. "Our aim," continued Count Andrássy, "should not be the triumph of Hungary, but the consolidation of the power of Austria. I trust that Hungary will keep in view the rights of majesty and the material interests of the empire." The sitting was then adjourned till the 10th January.

The present Upper Chamber of the Hungarian Diet, according to the "Pesth Hirnök," is composed of no fewer than 729 members. They are: Four members of the Imperial family (the Archdukes Albrecht, Joseph, and Stephen, and the ex-Duke of Modena), 27 Roman Catholic and Greek Catholic archbishops and bishops, 10 archbishops and bishops of the Oriental Greek Church, 11 high dignitaries (Reichsbannerherren), 37 lord-lieutenants of counties, 430 counts, and 188 barons. Ten bishops, two barons, one lord-lieutenant, and fifteen other persons who have seats and voices in the Upper House, sent in excuses for their non-appearance.

The Transylvanians, on December 14th, at their Diet at Kolosvar (Klausenburg), assented to the annexation to Hungary. By an imperial Rescript, dated December 25th, the Diet was summoned to send representatives to the Hungarian Diet, for the purpose of assisting in the revision of the first article of the Transylvanian laws of 1848, which relates to the union of the grand principality with the kingdom of Hungary. In a second Rescript the Emperor orders the Transylvanian authorities to begin with the elections as soon as possible. In consequence of some territorial changes made since 1848, Transylvania was to send seventy-three deputies to the Hungarian Diet, instead of sixty-nine, as before. The Upper House of the Hungarian Diet was also to be reinforced by a number of Transylvanian "Regalisten"—persons of note—who received royal letters patent, authorizing them to sit and vote in the Chamber of Peers.

The Diet of Croatia was opened on November 12th. The Government commissioner, who acted as representative to the King on this occasion, communicated to the Diet the October Diploma and the February Patent, and requested that body to take into consideration the question of a parliamentary union of Croatia and Austria. He also announced that the Emperor of Austria would be crowned as King of Hungary and Croatia, and invited the Diet to send

representatives to the ceremony. He further stated that the question of the future regulation of the Dalmatian administration would be discussed only after the definitive settlement of

the future constitutional relations of Croatia to the central Austrian Government. At the close of the year the Diet had not taken any definite action.

I.

ILLINOIS. From the State census taken June 30, 1865, it appears that the population amounted to 2,151,007, a gain of 439,056 since the census of 1860. No returns were received from seven counties, and their population has been given as it was in 1860. The estimated gain in these counties is 19,113, making a total gain of 458,169. The increase in Sangamon County is 15,999, or forty-nine per cent. The population of Chicago was 178,539, a gain of 68,000 since the last census.

The assessed valuation of the real and personal property in the State for 1865 was \$391,683,284—\$34,894,231 more than for the preceding year, and \$8,000,000 less than the exceedingly high valuation of 1857.

The Legislature met on the 31st of December, 1864, the day to which it had been prorogued by Governor Yates. Both Houses were Republican. Governor Yates, in his message, which was a lengthy one, gave the following statement of the financial condition of the State:

Purchased and paid off by the State, with the Central Railroad fund, from December 1, 1862, to December 15, 1864, State indebtedness—

Principal.....	\$375,983 41
Interest, arrears of interest, etc.....	80,158 98

	\$906,147 39

Total.....	\$11,178,564 45
------------	-----------------

The amount derived from the two mill tax on the assessment of the year 1863, applicable to the

dividend on State indebtedness, presented to the Auditor January 1, 1865, was \$600,000, which, added to the amount extinguished with the Central Railroad fund, made an aggregate of \$1,795,000 since December 1, 1862. The seven per cent. of the gross earnings of the Central Railroad for the years 1863 and 1864, paid to the State, amounted to \$705,908.62. On the 1st of January, 1866, the State debt was \$10,651,714.31, showing a reduction during the year 1865 of \$526,850.14.

In his message the Governor recommended the creation of a Bureau of Agricultural, Mechanical, and Commercial Statistics.

Richard Oglesby was inaugurated Governor for four years. The Legislature adjourned at the close of the month of January, not having transacted business of any general interest. Richard Yates was elected Senator for six years, receiving sixty-four votes to forty-three for James C. Robinson. At the election held for county officers in November, 1865, Union tickets were elected in twenty-two counties hitherto Democratic, while none were gained by the opposition.

The manufacturing establishments in the State are in a prosperous condition, and new ones are being added to their numbers. Prominent among them are the American Watch Factory, and the Milk and Beef Condensing Establishment at Elgin, and the Pottery Works at Peoria. Owing to the high and fluctuating taxes on spirits, most of the distilleries were closed, and the enormous corn crop of 1865 remained unused. Corn sold for ten cents a bushel, and it was used to some extent for fuel, being found to be cheaper than wood.

The cotton crop of the State for the year is estimated at 5,000,000 pounds, or 10,000 bales, being an enormous increase over the crop of 1864. This cotton is produced principally by negro labor. On an average, one thousand pounds of unginned cotton were raised to the acre, amounting, at ten cents per pound, to \$100 an acre. The seed sells at retail for twenty-five cents per bushel—a quantity was sent to St. Louis for manufacture into oil. It is now regarded by the farmers as the surest and most profitable crop in the southern part of the State.

On the first of November the drill in the new Artesian well at Chicago penetrated a vein of pure water, which flowed steadily, at the rate of 600,000 gallons a day. The water is clear, sparkling, and pure; and though but nine feet from the other well, has no trace of sulphur, and has a temperature of about fifty-eight de-

gress Fahrenheit. The exact depth of the well at the time water was struck was 694 feet 5 inches. The diameter of the bore from the surface to the bottom is five inches. Fragments of the rock last penetrated were brought to the surface, and closely resemble Athens marble. Traces of iron are discernible immediately above this rock. The surface of the ground on which the well is located is two or three hundred feet below the level of the surrounding prairie. While in the first well the stratum of Joliet marble passed through was over one hundred feet thick, in the second well, only nine feet distant, it was over two hundred feet in thickness. The water has a head of about one hundred feet above the level of the city. It is proposed to enlarge the new well to eight inches in diameter, for the purpose of power, and also to enlarge the old well to twenty inches. During the months of November and December the water from the new well was permitted to flow into ponds covering an area of twenty-five acres, in order to obtain a supply of ice, and 12,000 tons have already been stored. The well was bored in accordance with directions given by Spiritualists, on whose charts it was marked down that water would be struck at a depth of seven hundred feet.

On the 17th of April Crosby's Opera-House and Art building was inaugurated. It has a front of one hundred and forty feet, and four stories high, is of Athens marble, and in the modern Italian style. The theatre has an auditorium 86 by 95 feet, and 65 feet high, finished in the composite style. Three thousand persons can make their exit in from three to five minutes. The building cost \$400,000, and occupied a year in erection.

On the 30th of August the Chamber of Commerce building was dedicated. This fine edifice, constructed by the enterprise of the Board of Trade of Chicago, cost \$400,000. The main building is 93 feet wide, 181 feet deep, and 100 feet high. The main hall used by the Board of Trade is 143 feet by 89, and 44 feet from floor to ceiling. It receives light through eighteen colored windows, and is adorned with paintings, frescoes, etc.

Attention having been called to the evils to be apprehended from the discharge of the sewers into the Chicago River, an act was passed by the Legislature on the 16th of February, providing for the completion of the Illinois and Michigan Canal, upon the plan adopted by the State in 1836, which was to make a cut through the ridge dividing the waters of the Mississippi and its tributaries from those of the lakes deep enough to cause the waters of Lake Michigan, to permanently flow into the Desplaines, and finally into the Illinois River. The effect of this would be that twenty-four thousand cubic feet per minute of Lake Michigan water would flow through the city, carrying away all impurities, and absorbing all noxious gases. The length of the work to be done is twenty-six miles. The present level of water in the canal

is eight feet above low water in the lake, and the canal is to be cut down to nine and a half or ten feet below ordinary water in the lake. The work commences at Bridgeport, five miles from the city, and terminates at Lock No. 2 on the summit. The work was let on the 26th of September, for \$997,641.45. The earthwork contains 2,425,865 cubic yards, and the rock-work 364,649 cubic yards. The work is to be finished by the 1st of September, 1868, or the contractors are to forfeit twenty per cent. of the work already completed, to the city of Chicago.

The work on the Lake Tunnel has been steadily continued, and its completion is expected in October, 1866. During the year the seven cylinders at the crib were forced down to their places. They are nine feet in diameter, and were forced down by screws, a pressure of sixty tons being required to drive them through the hard clay. This work was completed on the 31st of November, and operations were at once commenced on the shaft. At each end nearly twelve feet per day are being excavated. The tunnel has been carried out from the shore end 4,280 feet. The soil passed through is a hard blue clay, interspersed with pebbles. It is necessary, however, for the masons to keep close up, or the clay would begin to flake off, and in a short time the water would be admitted. A shaft is to be extended sixty feet eastward from the crib, with the view at some future time, as the harbor fills up, of carrying it a mile further out, to renew the supply of fresh water.

The total cost of the buildings erected in the city of Chicago during the year was \$7,510,000. The valuation of property, real and personal, is \$64,709,177.

The following table exhibits the total amount of flour, and fine and coarse grains, shipped from Chicago during the year:

Flour, barrels.....	957,569
Wheat, bushels.....	6,928,653
Corn, ".....	24,277,221
Oats, ".....	8,773,403
Rye, ".....	717,795
Barley, ".....	460,210

From the first of April to the close of the year there were received 262,374 head of beef cattle, against 279,383 for the same period for the previous year, and 459,871 live hogs.

The losses by fires during the year amounted to \$1,205,006; insurance, \$942,142.

The election held in the State during the year was for the choice of local officers. In the various counties the Republicans retained the control of all which they held during the previous year, and gained twenty in which the opposition had at the previous election chosen the local officers.

The division in the Legislature of the State according to political associations was as follows:

	Senata.	Houaa.	Joint ballot.
Republicans.....	14	51	63
Democrats.....	11	34	46
Republican majority,....	3	17	20

INDIA, BRITISH, a dependency of Great Britain in Asia. By the act 21 and 22 Victoria, cap. 106, called "An Act for the better Government of India," sanctioned August 2, 1858, all the territories formerly under the Government of the East India Company are vested in the Queen. One of the English Secretaries of State, called the Secretary of State for India, is invested with all the powers heretofore exercised by the Company or by the Board of Control. The Secretary is assisted by a Council of State for India, consisting of fifteen members, of whom seven are elected by the Court of Directors from their own body, and eight are nominated by the Crown. The Executive authority in India is vested in a Governor-General or Viceroy, appointed by the Crown, and acting under the orders of the Secretary of State for India. Governor-General in 1865, Sir John Laird Mair Lawrence, Bart., born March 4, 1811, appointed Governor-General of India, November 28, 1863. The salary of the Governor-General of India is £30,000 a year, exclusive of allowances which may be estimated at £10,000. Under the Governor-General the Government is executed by a Supreme Council, sitting in Calcutta, consisting of five ordinary and from six to ten extra-ordinary members. The ministry is divided into the departments of Foreign Affairs, Finances, Interior, Military Administration, and Public Works, and the ministers form part of the Supreme Council. The ministers, the members of the Supreme Council, the Executive Governors, and Lieutenant Governors of the various territories and provinces, are appointed by the Governor-General. The total revenue for the year 1863-'64 was £44,613,632; the expenditure, £44,534,685; surplus, £78,347. The revenue for the year 1864-'65, as provisionally returned, was £46,284,106; expenses, £46,628,249; revenue for 1865-'66, as estimated in the "Budget," £46,488,760; expenses, £47,186,930; deficit, £698,170. The debt of India, according to a return issued by the Secretary of State for India, in September, 1864, was £116,721,122; but this included £2,031,970 capital of railway companies remaining in the Home Treasury, and, on the other hand, did not include the charge for the dividend on the £6,000,000 capital stock of the East India Company, which is subject to redemption by Parliament under the act of 1833.

The area of the British dominions in India is estimated at 933,722 square miles; and the estimates of the population vary from 135,000,000 to 200,000,000. The English population amount to only 125,945, of whom 84,083 are connected with the army. The actual strength of the army was, on April 30, 1862, 78,174 Europeans, 125,918 natives: total, 204,087. The imports from India into the United Kingdom were, in 1864, £52,287,869; the exports of home produce from the United Kingdom to India, £19,895,145.

At the end of the year 1861, the Master of

the Rolls, the Chief Justice of the Common Pleas, Sir E. Ryan, Mr. Lowe, Mr. Justice Willes, and Mr. J. M. Macleod were appointed commissioners to prepare a body of substantive law for India. The first instalment of the labors of these commissioners, in the form of the law of succession and inheritance applicable to all Christians and others who wish to adopt it, was passed. It is remarkable as being in advance of English legislation, by abolishing the distinction between movable and immovable property, and allowing married women to retain their own property. The machinery of the Small Cause Courts, which have proved most popular, and in some cases self-supporting, was improved in such a way as promises to afford litigants securities for justice without the delay and expense of appealing. The act, so much discussed the previous year, for abolishing the grand jury in the presidency towns, and providing circuit courts and special juries for the trial of European offenders in the interior, was passed. The peculiar position of the 150,000 Parsees in India was cared for, after years of discussion, by creating matrimonial courts in which a high court judge, aided by Parsee delegates, will hear suits relating to marriage and divorce.

Finally, the legislation of the year was marked by a most comprehensive measure for the management and preservation of Government Forests due to the labors of Drs. Clegborn and Brandis. India now enjoys as enlightened and practically useful rules for the preservation of her great nurseries of timber and fuel, as any European power, while private rights are not ruthlessly interfered with as in some despotic countries.

One of the most remarkable proofs of the advancing civilization of India is the rapid increase of railroads. It appears from the last annual report (1865) of Mr. Juland Danvers, the Government director of the Indian railway companies, that the system of guaranteed railways comprised, in 1865, a length of 4,917 miles, of which 3,186 were open for traffic. The net profits in the year ending the 30th of June, 1863, on 2,151 miles of railway, amounted to £690,834; and to £915,077 in the year ending the 30th June, 1864, on 2,489 miles. The number of passengers conveyed in the latter year was 11,781,683, compared with 9,242,540 in the former. The total expenditure of capital on the lines which were, in 1865, open, or in course of construction, amounted on the 1st of May, 1865, to £54,941,029. The expenditure was estimated at £5,000,000—about £1,800,000 to be expended in England, and £3,350,000 in India. The total amount estimated to be required for the undertakings would reach £77,500,000. The number of shareholders at the end of the year 1864 was 29,303 in England, and 777 in India, the latter number consisting of 384 Europeans and 393 natives. There were also 6,453 debenture holders. Up to the end of 1864 the Government had advanced

£13,160,539 to the railway companies for guaranteed interest, but about £3,300,000 had been paid back out of the earnings of the railways, leaving nearly £10,000,000 still due to the Government.

Very interesting information on current Hindoo literature is given by Garcin De Tassy, member of the French Institute, and professor of Hindoo language and literature at the Imperial School of Living Oriental Languages at the "Bibliothèque Orientale" of Paris, in his last opening discourse of the "Cours de Hindustani." According to De Tassy, journalism flourishes in the country. A new weekly periodical has lately appeared at Agra, entitled *Bahrat Khand Amrit*, a name of genuine Oriental style, meaning "Ambrosia for India." It has a significant religious design. Its founders recognize, in principle, the divine origin of the Vedas, and enforce their practical teachings, but aim to recall their coreligionists to the purity of the ancient faith. A native society seems to have charge of it, and have issued a book against the "Prodigality of Weddings" and other festive occasions. They appear to be a school of Hindoo Puritans. They have challenged controversy, and have been answered by a publication at Delhi called *Mufid Anan*, "that which is useful to men." A new weekly has appeared at Mirat, called the *Najm Ulakhbar*, "the Star of News." Its field is one of the most important northwestern provinces, and it is an example of European journalism springing up in the densest Oriental life. In Madras flourishes the *Jami Ulakhbar*, "Record of News;" and recently has been commenced there the *India Times*, in four native languages, including the Hindostan, Tamil, Telugo, etc. These periodicals are conducted by native scholars. They are but examples of the rapidly advancing journalism of the country. "In fine," says De Tassy, citing a high authority, "native journalism surges on all sides in India, displaying ability and no small acquaintance with English journalism and literature generally. It is independent of the British Government, but defends it ably." Englishmen are acquiring important influence over the native mind by their Hindoo scholarship. For example, Mr. Palmer, of Cambridge University, is the foreign correspondent of the *Awadh-Akhbar*—the Hindostani *Gazette* of Oudh. His proficiency in the language, it is said, astonishes the natives, and an Englishman, Mr. Kempton, has given to them a "romance," *Dastan i Jarnila-Khatun*—"History of the Princess Jarnila," said to be remarkably well done. A Mussulman literary society has been established at Calcutta, under the auspices of Ahmad Khan, who has become noted as author of a "Commentary on the Bible" against Colenso, and also a "Description of the Monuments of Delhi." Ahmad calls upon his countrymen to study and appropriate all the learning of the European nations. At Lahore some spirit is shown in behalf of female educa-

tion, the greatest want of India. Baba Khan Singh, an influential native, takes the lead of it. Several books have appeared lately in its behalf. There are native poets singing in the land. *Figan-i Delhi*—"The Lamentations of Delhi," are a collection of poems by different writers, on the last insurrection; and the devastation of the ancient Mogul capital, issued from a publishing house called *Akmal Ulmatabi*—"The most perfect of printers." Quite a catalogue of recent miscellaneous volumes, averaging about five hundred pages, is given by M. de Tassy. Among them is a work in two volumes on natural philosophy; a tale entitled "The Book of Emotion," on the history of the two brothers Bhogwan das and Gapol Ram; a new Persian Grammar; a Manual of Letter-Writing, called "The Key of Enjoyment;" a History of the Prophets, entitled "The Garden of Adam;" a History of Mohammed, called the "Zephyrs of the Gardens;" and "Marvels of the Inhabited World," a description of voyages. In fine, an intellectual fermentation has begun in India, which promises important results. The periodical press can hardly fail to stir up and "modernize" the mind of the country.

Religious reform movements continue to make progress among the Hindoos. The *Indian Mirror* states that there are now fifty-four Brahma Somajes in India, of which fifty are in Bengal, two in the northwestern provinces, one in the Punjab, and one in Madras, under the name of Veda Samajum. Nearly all these have their representatives in the Representative Council, a body established for the purpose of uniting all the Somajes for the furtherance of Brahmic or deistic knowledge. The Calcutta Somaj has been established nearly thirty-six years, and those of Krishnagur, Dacca, and Midnapore, for nearly twenty years. More than twenty-five have been established within the last ten years. For some time past eight Brahmos have been regularly working as "missionaries."

The war with Bhootan, which had begun in 1864, continued in 1865. The year opened with a series of successful attacks by the Bhooteas, headed by Tounso Penlow, upon the principal frontier posts, which the English had taken at the close of 1864 so easily, as to be lulled into security. Owing to the selection of a post from which the water could be cut off, the cowardice of the Sepoys, and the incapacity of Col. Campbell, for which he was called on to resign, the English evacuated Dewangiri on the extreme right, and abandoned two guns. So the English were driven out of Tayagou, in front of Bala, with serious loss. This was the first week of February, and there was still time for the English to hurry troops to Poonakha and triumphantly finish the war. This Sir John Lawrence wished to do, it is believed, but the military necessity for retaking Dewangiri prevailed. A large Sepoy force was kept all the long hot and rainy seasons chiefly in the Terai marshes, where it died, as English soldiers

perished in the Crimean winter. Fully one-third of the entire force was *hors de combat* from malaria, and there was hardly an officer not expecting to get an appointment somewhere else. When the season for resuming military operations came, after enormous expenditures, a peace was signed at Buxa, on November 11th, which was unanimously condemned throughout India, and by all classes, and humiliating and unsatisfactory in its guarantees for the future. The Indian Government is to pay to Bhootan, not only the old "tribute," as the natives call it, but double the sum, or £5,000 a year. Tounso Penlow, who, by insulting the British ambassador, occasioned the war, and who alone fought against the English, was no party to the treaty, and it was regarded doubtful whether the Deb Rajah, a mere boy whom he appointed, or the Paro Penlow, his defeated rival and enemy, could succeed in inducing him to submit.

The continuing progress of the Russians in Central Asia, created nowhere so much alarm as in British India. No one in India doubted that it was the policy of Russia to make the frontier of her empire in Central Asia march with the English. A grave apprehension was entertained of the consequences of such an advance of Russia, in exciting the hopes of disloyal Indians and distracting the attention of England in another European war. To obtain information superior to the meagre facts received from the newswriters in Cabul, and contained in the drawers of the English Ministers in Teheran, the Government of India despatched three intelligent native officials, as pedlars, to Bokhara, Khiva, and Khokand, independently of each other, and by different routes. But Sir John Lawrence refused to give any assistance to the envoys from the despoiled khan of Khokand, who visited Simla and Lahore, or to allow a party of English officials who volunteered for the duty to accompany them on their return to their own country.

A complication with the neighboring authorities of Netherlands India, arose from the latter seizing the principality of Assahan, on the northeast coast of Sumatra, in defiance, as the English maintain, of the treaty rights of both its ruler and England. The merchants of Penang regarded this as such a danger to their trade, that they addressed a vigorous remonstrance to the Governments of India and England.

The Crimean War ten years ago transferred to India the trade of Europe in jute, fibres, and seeds, and at once added enormously to the wealth of Eastern India. The American war four years ago gave India, for a time, the virtual monopoly of the supply of cotton. Contemporaneous with these events, the gold discoveries were affecting seriously the value of the precious metals all over the world; and the rapid progress of railways in India, larger in extent and in the magnitude and solidity of their works than any in the world,

not only attracted sixty millions sterling to the country but caused the influence of commerce to penetrate into the remotest hamlets of the producing districts. In the ten years ending April, 1865, Bombay exported to the United Kingdom 53,368,464 cwts. of cotton, valued at £98,727,141. Looking only at the four years of the American war ending on the same date, Bombay obtained £78,094,563 for 12,627,164 cwts. exported to the United Kingdom alone, or £82,386,724 for 13,344,788 cwts. exported to all places. In the year before the war 1860-'61, Bombay got only £6,978,700 for 355,500,000 pounds of cotton. Last year, the last of the war, she got 30,333,333 sterling (£30,375,076), for little more than the same quantity, or 380,500,000 pounds, at the average rate of twelve annas and nine pie per pound, instead of two or three annas at which she used to sell it. In four years Bombay has received 82,500,000 pounds sterling for what, but for the American War, would have given her only a quarter of that sum. This wealth culminated in the past year, of which it is by far the greatest fact. Nor was this prosperity confined to the Western Presidency. All the ports partook of it in a diminished because healthier ratio. The whole trade of Bombay in 1864-'65 was £79,791,891 in value; that of Bengal was £45,441,738 or five millions more than the preceding year; that of Madras £17,494,356; that of British Burmah £8,819,754, a great but permanent increase; and that of Sindh £5,244,715. Thus the whole sea-borne trade of India, omitting the Straits Settlements, was £156,792,454 in value, or a third of that of Great Britain.

INDIANA. The regular session of the Legislature of Indiana convened at Indianapolis on January 5th, 1865. The House of Representatives, in which the Republicans had a small majority, was organized by the election of John N. Pettit as Speaker; but the Senate, being composed of an equal number of Republicans and Democrats, remained unorganized until the 9th, when the Lieutenant-Governor assumed his seat as presiding officer. On that day, also, Oliver P. Morton was inaugurated Governor. The regular sessions of the Indiana Legislature are biennial, and limited by the Constitution to sixty-one days, which proved in 1865 too short a period for the perfecting and passage of a number of important bills. That the time spent on these unperfected measures might not be lost to the public, an act was passed, providing that the unfinished business of any regular or special session might be transferred to the next special session of the same Legislature, to be there disposed of in the same manner in which it would have been in the session in which it originated. In accordance with this act, Gov. Morton, by proclamation, summoned the Legislature to meet in special session on November 13th, 1865, that being the only method of pushing to completion the unperfected measures of the regular session. The Governor's message was delivered on the

14th. It entered elaborately into the subject of providing for the payment or renewal of the State debt; recommended the establishment of a home for disabled Indiana soldiers and seamen, a bureau of emigration, separate schools for colored children, and the repeal of the statute excluding negro testimony. He also urged an amendment of the Constitution, basing representation on the number of voters, and sustained the reconstruction policy of President Johnson.

The amount of the public debt of the State at this time, consisting of two and a half and five per cent. registered stocks, was \$7,418,960.50, divided as follows:

Five per cent. Stock.....	\$5,842,500.00
Two and a half per cent. Stock.....	\$2,076,460.50
Total.....	\$7,418,960.50

In the hands of the Commissioners of the Sinking Fund, and in the State Debt Sinking Fund, the State held \$1,382,880.17 of this amount, leaving outstanding in the hands of the creditors of the State the amount of \$6,036,080.33, of which \$4,107,792.33 were five per cents, and \$1,928,288 two and a half per cents. The face of the stock or the certificates of indebtedness provide that "this stock is redeemable at any time after twenty years from the 19th day of January, 1846, at the pleasure of the State, and until redeemed is transferable upon surrender in the city of New York, in books provided for that purpose by the agent of the State there resident, by endorsement thereon, and according to such other rules and forms as are and may be prescribed for that purpose. And for the payment of the interest and redemption of the principal aforesaid the faith of the State of Indiana is irrevocably pledged." As the twenty years referred to would expire on January 19th, 1866, the question arose as to the interpretation of the words "at the pleasure of the State." The Governor was of the opinion that while the State is not bound to pay the principal of this debt on the 19th day of January, 1866, or be considered in default, yet that she is not at liberty to postpone the payment of it indefinitely, but is bound to make provision to pay the debt within such reasonable time after the twenty years as may comport with the original understanding of the parties, the ability and condition of the State, as left by the war, the faithful performance of her contracts, and the preservation of her good name.

The Governor also showed that by the 1st of May, 1866, enough money could be accumulated in the hands of the Commissioners of the Sinking Fund, and in the State Debt Sinking Fund, to purchase State stocks of the value of \$2,650,000, which would reduce the amount in the hands of the State creditors to \$3,386,080.33. The public debt of Indiana would then stand as follows:

Two and a half and five per cent. stock.....	\$3,386,080.33
War Loan Bonds.....	433,000.00
Vincennes University Bonds.....	66,685.00
Floating Debt, estimated at.....	100,000.00
Total Debt.....	\$3,990,765.33

The Legislature passed an act issuing in place of the public stocks then in existence, four millions of six per cent. State bonds, and absorbing the balance by means of the funds in the hands of the Commissioners of the Sinking Fund, and in the State Debt Sinking Fund. The board of Sinking Fund Commissioners was abolished, and its business transferred to the Auditor and Treasurer of State, and the State Debt Sinking Fund was established with authority to pay the principal and interest of the two and a half and five per cent. bonds. Another act provided for the distribution of the interest of the Sinking Fund for the support of the common schools, which would add from two hundred and fifty to three hundred thousand dollars annually to the funds previously provided for maintaining the public schools.

Although the Constitution prescribes that an enumeration of the white inhabitants of the State over twenty-one years of age, shall be made every six years, no such enumeration has been made since 1853; and, consequently, no new apportionment, which is also required to be made periodically, has been possible. The result is that many counties which have increased rapidly in population during the last ten or twelve years, are now very inadequately represented. To provide a remedy for this, an act was passed requiring such enumeration to be made in the year 1866, and thereafter at each recurring period prescribed by the Constitution. The law enacted at the last regular session, by which a State tax of thirty cents on each \$100 of taxable property was levied for the support of soldiers' families, for the years 1865 and 1866, was repealed as to the latter year. The proceeds of the tax of 1865, less five per cent. thereof, are to be retained in the treasuries of the counties where collected, and after the first day of March, 1866, become a part of the general county funds. The law under which the tax was levied, set apart \$100,000, to be expended, under the direction of the Governor, for the relief of sick and wounded Indiana soldiers in hospitals. This would amount to about seven per cent. of the amount likely to be realized from the three-mill tax; and in anticipation of its collection, the Governor borrowed considerable sums for that purpose. These loans are to be refunded out of the five per cent. reserve fund, and the residue is authorized to be expended by the Governor, in his discretion, for the relief of destitute, disabled, wounded, or sick Indiana soldiers who may need such relief, and he is required to report the amount and manner of such expenditure to the next General Assembly.

Although no attempt was made at this session of the Legislature to repeal that clause of the organic law of Indiana which prevents negroes from entering or residing in the State, an important modification was made in the law disqualifying them from testifying as witnesses on account of their color. The House of Representatives passed a bill utterly repealing all

such disqualifications; but the Senate having passed a bill, originating with itself, making all colored persons competent witnesses, except such as have come or may hereafter come into the State, in contravention of the Constitution, the House was induced to accept the latter rather than run the risk of no bill whatever passing.

From the report of the State Auditor, dated August 10, 1865, it appears that the net amount apportioned to the several counties of the State, under the act creating a fund for the relief of soldiers' families, was \$1,648,017.99, and the actual amount apportioned to 203,724 beneficiaries was \$8.08 each, making the total sum of \$1,646,089.92. This apportionment is made on the following basis:

The total valuation of the real and personal property in the State, as returned in 1864, was.....	\$516,905,999.00
Which, at 80 cents on each \$100 valuation, will yield.....	1,550,417.99
Polls, at \$1 each.....	197,000.00
Total receipts, should the tax be collected, Deduct Governor's Military Contingent Fund.....	\$1,748,017.99
	100,000.00
Net amount to be apportioned.....	1,648,017.99
Actual amount apportioned to 203,724 beneficiaries, at \$8.08 each.....	1,646,089.92
Remainder.....	\$1,928.07

In making the apportionment each mother, wife, or widow, is counted as four; each motherless child as two, and all other children as one, and the number in each county is the aggregate of those thus estimated. Each child, therefore, if none of the enumerated had "otherwise sufficient means for their comfortable support," would be entitled to receive 67 cents per month; each motherless child, \$1.34 per month; and each mother, wife, or widow, \$2.70 per month.

The number of troops furnished by Indiana during the war amounted to 195,147; reduced to a three years' standard the aggregate would reach 152,288. Governor Morton places the total number at over two hundred thousand, although he gives no figures. In November, there were still in the service twenty-one regiments of Indiana troops, viz.: eighteen of infantry and three of cavalry.

By the laws of Indiana, the common school revenue is required to be apportioned semi-annually among the several counties of the State. The apportionment for April, 1865, showed that \$671,794.07 were divided among 566,333 children between the ages of 5 and 21, making the distributive share to each \$1.18. The report of the succeeding August showed a total sum of \$171,245.48 distributed among 552,233 children. The special session of 1865 passed an act providing for a State normal school, the location of which has not yet been determined; and also for the establishment of an agricultural college at Bloomington. An attempt to provide for schools for colored children by general taxation proved unsuccessful, the Senate, by a vote of 34 to 5, declaring that it was opposed to taxing white men's property for the benefit of negroes' children.

In August, a Harbor Convention was held at Michigan City, with reference to the enlargement and improvement of the harbor at that place. The estimated cost of the improvement is \$300,000, about half of which has been pledged by private subscription. Measures were adopted to apply to Congress for aid in completing the work, on the score that it was a national undertaking.

In May, 1865, sentence of death, in accordance with the finding of a general court-martial, was pronounced against William A. Bowles, Stephen Horsey, and Lambden P. Mulligan, citizens of Indiana, who had been found guilty of treasonable designs against the Government during the war. A respite was obtained for them, but before it was granted an application for a writ of *habeas corpus* had been made in the United States Circuit Court sitting in Indianapolis. In consequence of a division of opinion, the matter was certified to the Supreme Court at Washington, where it now awaits a decision. They were subsequently pardoned by the President.

The elections in Indiana, in 1865, were for local officers only, and resulted generally in favor of the Republicans. In the latter part of the year, Governor Morton left the country for the benefit of his health, turning over the government to Lieut.-Governor Conrad Baker.

INDIANS. (See TERRITORIES, U. S.)

INDIUM. To the notice already given of this new metal (ANNUAL CYCLOPEDIA, 1863), it may here be added that MM. Reich and Richter, in continuing their researches, have succeeded beyond question in effecting its separation, and have examined it and some of its compounds. Having obtained the metal by reducing it from its oxide upon charcoal by means of the blow-pipe, they find it soft and ductile, white, not easily tarnished, resembling tin in appearance, but melting at about the same point with lead, and marking with even a clearer trace than the latter on paper. Its oxide resembles that of thorium; and its chloride gives the blue line of great intensity. Indium is found also in the zinc obtained from the Freiburg ores. One account met with makes the specific gravity of indium 7.277, and its equivalent 37.07. According to Dr. C. Winkler, the specific gravity is 7.362, and the equivalent (probably) 35.9.

INSURANCE. The general results of the Fire Insurance business throughout the State of New York, and in the country at large, for the year 1865, have not been favorable. The Life Insurance business has become much larger than in former years, and more profitable.

Five new Life Insurance Companies have recently been organized in the State of New York: 1. The New York State Life Insurance Company, of Syracuse, with a capital of \$100,000. 2. The American Popular Life Insurance Company, of New York City. 3. The Provident Savings and Life Insurance Company, of New York. 4. The Atlantic Mutual Life Insurance Company, of Albany, with a capital of \$200,000.

5. The Protection Life Insurance Company, of New York. The vast increase of life insurance in the United States within the last few years affords room for many new companies, and it is hoped that with their increase the benevolent principles of life insurance will be more and more widely spread among all ranks of society, and thus afford the surest provision for the comfort of those left behind that can possibly be adopted.

There were only eight insurance companies brought out in England during the past year, and three of these, though in a measure new, were old companies launched under a new form. Several insurance companies were registered which have not, for various reasons, been brought before the public. The titles of these new corporations are, the Accidental and Marine Insurance Company, Boiler Insurance Company, Financial Insurance Company, General Provident Assurance Company, Hercules Insurance Company, Insurance Corporation of Great Britain, Scottish Commercial Fire Insurance Company, Sea and River Marine Insurance Company. They represent paid-in capital to the amount of £395,000.

At a recent meeting of the New York Board of Fire Underwriters, the subject of fixing uniform rates of insurance, after a protracted discussion, was referred to a committee, who will report such measures as may be deemed fair for the preservation of the companies and protection of the parties insured. Of fifty-eight companies represented, all but four voted in favor of an advance. When the last tariff of insurance rates was agreed to, there were then, as now, a few companies who from various causes were unwilling to consent to a general advance. Had that tariff been strictly adhered to, the balance-sheet of many companies would now, without question, present a more creditable appearance, although possibly so much business might not have been transacted. The present low and insufficient rates are the almost sole cause of the deficiency of many of the companies; and to such companies, whose stockholders will be called upon to make up deficiencies for a further continuance of business, an entire suspension is recommended as the wisest thing for all concerned, unless an adequate advance

in prices of insurance is made at once, and when made, strictly adhered to. The entire insurance business of New York and elsewhere must and will eventually be done with only those companies whose strict adherence to paying rates makes them a certain guaranty in event of loss.

Abstract Accounts of the Capital Stock of the Fire Insurance Companies of the State of New York for the year ending December 31, 1865:

Chartered Capital paid up.....	\$31,157,000
Total Assets, Dec. 31, 1865.....	44,906,675
Net Cash Premiums received in 1865.....	19,655,023
Total Income.....	22,847,420
Losses paid in 1865, incurred before, \$1,156,752	
Losses paid in and for 1865.....	12,702,645
Total loss incurred in 1865, as reported.....	13,859,397
Amount of reinsurance as estimated by Companies.....	15,262,971
Total expenditures for 1865.....	6,253,416
Expenses, exclusive of taxes, losses, and dividends.....	22,271,132
Total liabilities, including estimates for reinsurance as returned, but excluding profit scrip.....	5,307,216
Net surplus over liabilities, exclusive of paid-up capital.....	8,841,023
Net amount of Fire Risks written in 1865.....	5,663,053
Amount of Fire Risks in force at end of 1865.....	2,571,346,204
Amount of stock dividends paid in 1865.....	1,668,573,807
Rate of expenses to income 23.22 per cent.	2,624,769

It will be seen from the following statement that the total disasters exceed those of either of the last five years. In fact, no season since 1854 has equalled this in marine losses, although the increased strength of our Marine Insurance Companies will render the loss comparatively light to them. The following is a summary of disasters reported at New York during the last five years, including total and partial:

	Steamers.	Ships.	Barks.	Brigs.	Schooners.	Total.
1861.....	49	232	182	163	822	953
1862.....	44	293	319	139	825	1,010
1863.....	71	340	317	206	474	1,308
1864.....	46	280	119	165	290	900
1865.....	75	197	260	357	591	1,480
Total five years	235	1,282	997	1,065	2,002	5,651

The amount of loss during 1865 is \$20,000,000, distributed in great part between New York, Boston, Philadelphia, and other American underwriters, whilst a portion will fall on owners and foreign underwriters. The following statement will show approximately the value of the losses each month for five years, with the totals:

ESTIMATED AMOUNT OF LOSSES FOR 1865, COMPARED WITH OTHER YEARS.

	1861.	1862.	1863.	1864.	1865.	TOTAL.
January.....	\$2,989,600	\$1,825,600	\$1,430,200	\$1,650,000	\$960,000	\$8,796,400
February.....	2,403,700	1,529,200	1,175,000	2,850,000	673,000	8,130,900
March.....	2,648,500	1,840,800	1,340,000	1,460,000	1,947,000	9,736,300
April.....	1,617,550	1,416,300	1,950,000	1,330,000	944,000	7,757,350
May.....	2,825,600	1,735,700	2,100,000	960,000	740,000	8,861,300
June.....	923,500	960,000	2,230,000	650,000	560,000	5,323,500
July.....	923,500	647,000	1,800,000	1,850,000	620,000	5,849,500
August.....	576,900	425,000	1,250,000	1,870,000	1,590,000	5,574,900
September.....	956,450	616,000	1,560,000	750,000	940,000	4,822,450
October.....	700,850	1,412,000	1,075,000	1,230,000	2,875,000	6,842,850
November.....	1,314,500	1,716,000	950,000	1,660,000	4,620,000	10,260,500
December.....	1,100,000	1,964,000	1,750,000	1,956,000	2,960,000	9,780,000
Totals.....	\$18,930,650	\$16,590,600	\$18,610,200	\$17,766,000	\$19,289,000	\$91,156,450

IOWA. The election of a Governor and Legislature in Iowa in 1865 gave rise to an animated political canvass during the summer and autumn, the main question involved in which was the extension of the elective franchise to the colored population of the State. In August a soldiers' convention, which was largely attended, met at Des Moines, and nominated a State ticket, composed of officers recently in the national service, and headed by the name of General Thomas H. Benton for Governor. As the convention was ostensibly called and controlled by opponents of colored suffrage, it passed strong resolutions against the adoption of such a measure, and issued an address to the "soldiers of Iowa who are opposed to negro suffrage," urging them to support the candidates nominated by it. The Democratic convention, which assembled at the same time and place as the above, made no nomination, but endorsed the candidates and resolutions of the soldiers' convention. In a letter accepting the nomination, General Benton avowed himself a Republican, and an opponent of negro suffrage, on the ground that the period had not arrived for so radical a change in the political organization of the State, and that such a change would prove, under existing circumstances, detrimental rather than beneficial to the colored race.

The Republican Convention renominated Governor Stone for office, and among other resolutions adopted one in favor of making the elective franchise conditional only upon loyalty to the Constitution and the Union, and recognizing the equality of all men before the law. An additional resolution, recommending an amendment to the Constitution of the State, so as to give the elective franchise to colored men, was adopted by a large majority.

The election took place on the second Monday of October, and resulted in the return of William M. Stone by a majority of about 16,500 over General Benton. The remaining candidates on the Republican ticket received majorities of 20,000 and upwards. Governor Stone received a smaller majority than his associates on the Republican ticket, from the fact that he was more strongly committed than they in favor of negro suffrage. The Legislature elected stood as follows:

	<u>Senate.</u>	<u>House.</u>	<u>Joint ballot.</u>
Republicans	43	83	126
Democrats	5	15	20
Republican majority,.....	38	68	106

The total amount received into the treasury during the fiscal year ending November 4th, 1865, was \$977,825.10, and the amount expended for all purposes during the same period was \$952,739.42, leaving a balance in the treasury of \$25,085.68. During the war a tax of but two mills on the dollar was levied for State purposes, and a total indebtedness of only \$300,000 was incurred, which was for military expenditures soon after the outbreak of hostilities. The total amount of State revenue derivable

from a general levy of two mills, and from other sources for the ensuing biennial period, is estimated at \$1,311,005.87, and the disbursements at \$794,923.65, leaving a probable balance of \$516,079.22 to the credit of the State. The debt of the State is exhibited in the following table:

Borrowed from permanent School Fund.....	\$122,295.75
Loan payable January, 1868.....	200,000.00
War and Defence Bonds, payable in 1881.....	300,000.00
Total State debt.....	\$622,295.75

In respect to the number of troops raised by her during the war, the record of Iowa is a highly honorable one. Not only were all her quotas promptly filled by volunteers, but on January 25, 1865, she was credited by the provost marshal general with an excess of 12,080 men over all calls. At the convention of State Adjutant-generals held in Boston in July, 1865, the representative of Iowa reported the whole number of men furnished for different terms of service, of all arms, at 72,348, leaving five regiments and one battalion uncredited. According to the returns of the provost marshal general the aggregate of men furnished by the State was 75,860, which is equivalent to 68,182 men reduced to a three years' standard. By an official statement rendered in October last it appears that the total amount of claims of the State against the United States for expenses incurred in raising and equipping troops, which are properly chargeable against the General Government, is about \$616,739.07, of which \$20,825 had been allowed, \$430,326.70 suspended, and \$165,589.23 disallowed. Against these claims the United States are entitled to a credit of \$484,274.80 on account of direct Federal taxes and money advanced in settlement of military disbursements. A final settlement between the State and General Government has yet to be made.

The population of Iowa, according to the census of 1863, was as follows:

Total number of whites.....	700,842
Total number of blacks.....	1,320
Total population.....	702,162

According to the census of 1865, the population is as follows:

Total number of whites.....	751,125
Total number of blacks.....	8,607
Total population.....	759,732

This report does not include returns from the county of Winneshiek. The census having been taken in the early part of the year, the emigration which set in largely after the termination of the war is necessarily excluded. The total population at the commencement of 1866 was estimated by Gov. Stone at 775,000, an increase of 100,000, or about 14 per cent. over the United States census of 1860. From the returns of the census taken the following statistics are derived: The blind number 259, deaf and dumb 376, insane 613. The total number of dwelling-houses in the State is 114,351.

The number of acres of land enclosed is 5,827,053. Number of miles of railroads finished, 793. Value of agricultural implements and machinery, \$7,707,027; value of manufactures, \$7,100,465. The principal agricultural products are: of spring wheat, 7,175,784 bushels; winter wheat, 116,965; oats, 15,928,777; corn, 48,471,133; potatoes, 2,730,811; rye, 662,388; and barley, 950,696 bushels. The number of tons of hay from tame grasses is 225,349 tons; from wild grasses 713,119 tons. The tobacco crop yielded 753,626 pounds. The women of Iowa in the year 1865 made 14,538,216 pounds of butter, and 1,000,738 pounds of cheese, the yield of 310,137 milch cows.

The schools of the State are in a flourishing condition, and out of 324,338 enumerated school children in 1865, there was an average attendance of 119,593 against 117,378 in the previous year. The University of Iowa, established at Iowa City, opened in 1866, with a largely increased attendance in its several departments. Connected with it is a medical school at Keokuk, and it is proposed by the Governor to add to it a law school, to be located in Des Moines, the capital of the State. During 1865 a Normal department, for the education of teachers, was added to the University. The permanent school fund, of which the Constitution of Iowa makes the State the perpetual and responsible guardian, was originally distributed among the counties and loaned to individuals. The evils of this practice were soon apparent, in a material diminution of the fund. Through the incompetency and mismanagement of county officers a large amount remains unaccounted for, notwithstanding strenuous efforts on the part of the State Auditor to adjust the differences between the sums charged to counties, and the amounts accounted for in their returns. The Legislature of 1864 endeavored to provide for the gradual return of the school money to the State treasury; but by leaving it discretionary with the County Supervisors to return or reloan their part of the fund, failed of accomplishing its object. It is now recommended by the Governor to provide that the county treasurers shall pay over this fund to the State treasurer for safe investment in United States securities; and he further suggests that the outstanding State bonds shall be redeemed with this fund, and that in lieu thereof bonds bearing the same rate of interest and payable to the school fund shall be executed, the principal to be redeemable at the pleasure of the Legislature. "By adopting the plan here suggested," he says, "we could, within reasonable time, liquidate our entire indebtedness by transferring it to ourselves, paying the schools of the State, instead of strangers, the interest accruing thereon, and at the same time make a safe and permanent investment of this sacred fund."

The crops of Iowa in 1865 were generally abundant, and that of corn was so much beyond the demand for home consumption, that in those parts of the State where timber is

scarce, and the facilities for conveying crops to market unfrequent, it was employed as fuel. Seventy bushels of corn in the ear, which are the equivalent of a cord of wood, cost but \$7, while wood, cut and sawed, is worth \$9.50 a cord. Not only is the corn, therefore, cheaper, but it gives, it is said, considerably more heat than the same bulk of wood, or even of coal. This, however, can only be considered an anomalous and temporary employment of this great staple of food, which will cease whenever the country is opened to commerce.

In the latter part of the year the members of the bar of Lee County, Iowa, sent to President Johnson a series of resolutions adopted by them, endorsing his position on the reconstruction question, to which the following answer was returned:

EXECUTIVE MANSION,

WASHINGTON, D. C., Dec. 26, 1865. }

GENTLEMEN: The resolutions unanimously adopted at a meeting of the members of the Bar of the District Court of Lee County, Iowa, held at the December term, have been received by the hands of the Honorable Secretary of the Interior, and have afforded me much gratification. Carefully framed, and the formal expression of men whose profession has made them familiar with the laws and political institutions of the land, the resolutions cannot fail to have a salutary influence in upholding the great principles of our Government, so essential to our success as a nation.

Encouragement and approbation from such a source, at this peculiar time, inspire me with confidence and a determination to pursue the policy indicated in my annual message to the Thirty-ninth Congress.

Deeply sensible of the kind wishes of the legal profession of Lee County, Iowa,

I am, gentlemen, very respectfully yours,

ANDREW JOHNSON.

To PHILIP VIELE, Chairman, and J. H. CRAIG, Secretary, etc., Fort Madison, Iowa.

ITALY, a kingdom in Southern Italy; present king, Victor Emmanuel, March 14, 1820; succeeded to the throne of the kingdom of Sardinia in virtue of the abdication of his father on March 23, 1849; assumed the title of King of Italy on March 17, 1861. Their apparent to the throne, Prince Humbert, born March 14, 1844. The new ministry appointed on December 31, 1865, was composed as follows: General Della Marmora, President and Minister for Foreign Affairs; Signor Chiaves, Minister of the Interior; Signor Scialoja, Minister of Finance; Signor Defalco, Minister of Public Worship and Justice; Signor Jacini, Minister of Public Works. The Legislature consists of two Chambers, a Senate and a Chamber of Deputies. The Senate consists of the princes of the royal house, and an indefinite number of members above 40 years old, who are nominated by the king for life. The Chamber of Deputies consisted, in 1865, of 443 members.*

Italy has an area of 98,075 English square miles, and, according to the census of January 1, 1862, a population of 21,776,953. The largest cities of the kingdom are Naples, 447,065 in-

* See some further details on the election of the Chamber of Deputies in ANNUAL CYCLOPEDIA for 1864.

habitants; Turin, 204,715; Milan, 196,109; Palermo, 194,463; Genoa, 137,986; Florence, the capital, 114,363. In the "Budget" for the year 1865, the receipts were estimated at 669,438,563 lire,* and the expenditures at 873,635,600 lire. Deficit 204,197,037 lire. The public debt amounted on December 31, 1864, to 4,405,625,976 lire (nominal value of capital). The army, in 1865, was 222,321 men on the peace footing, and 494,800 men on the war footing. The number of war-vessels was, in July, 1865, 106, armed with 1,468 guns. The commerce, in the years 1862 and 1863, was as follows: In 1862, imports, 729,922,000 lire; exports, 392,497,000 lire. In 1863, imports, 777,158,000 lire; exports, 434,196,000 lire. The movement of shipping inclusive of coasting vessels, was as follows: Entered, 119,604 vessels; tonnage, 8,385,381. Cleared, 120,704 vessels; tonnage, 8,235,515. The merchant navy, in 1862, consisted of 16,552 vessels, having an aggregate tonnage of 682,886.

The publication of the Papal Encyclical of December 8, 1864, threatened in January, 1865, to bring on a conflict between the bishops and the Government; but the latter wisely put an end to the complication by issuing a decree (February 13th), authorizing the circulation of the Encyclical, its accompanying syllabus, and Cardinal Antonelli's circular—reserving, however, the rights of the State and crown, and without admitting the propositions contained in those documents which might be contrary to the institutions and legislation of the country.

The difficulty of solving the conflict between the Government of Italy and the national aspirations of the Italian people on the one hand, and the inflexible claims of the Papal Government and the Catholic Church on the other, called forth, as in former years, a considerable number of able works. None of these attracted more attention than one by the Duke de Persigny, the intimate friend and adviser of Louis Napoleon. His book, which is addressed to President Troplong, of the French Senate, records the impressions made on his mind by his visit to the Holy City. He is angry at the obstinacy of the Pope and the cardinals, but holds to the theory that it is possible to reconcile the Holy See with Italy. He expresses himself favorable to the consolidation of the kingdom of Italy, scouts the idea that a new kingdom of 24,000,000 of souls beyond the Alps can in any way be dangerous for France, and releases the Italian people from any "gratitude" to their liberators. He thinks it a French interest that the kingdom of Italy should be constituted, for the sole reason that the mere fact of its existence disarms Austria for any aggressive purposes; but he unhesitatingly pronounces against Rome being the capital of Italy. He argues that, although some time ago the Italians wanted Rome, because they thought it essential to prevent divisions

and jealousies between other great cities of Italy, that is not the case now, and the Italians know it. He insinuates that Victor Emmanuel has accepted Florence as his definitive capital. He fully adopts the theory that Rome belongs to the Catholic world, and, acting upon this idea, he threatens the Pope very considerably. He narrates that in a conversation with some high Papal functionaries in Rome, he told them roundly, that they were quite under a delusion if they thought to frighten France by making the Pope run away. France, he said, would scrupulously withdraw her troops at the time fixed upon by the convention, and would care nothing for the Pope's absenting himself. But, he said, "nothing would be easier than to organize Rome in such a way as to reconcile the interests of the Holy See with the Italian sentiments of the population. In concert with the Catholic powers, and with Italy herself, France would establish at Rome a Provisional Government to administer the States of the Church in the Pope's name, and to make all necessary reforms and arrangements in his absence."

The condition of Southern Italy continued to be deplorable, the brigands carrying their operations on in the most impudent and unblushing manner. In March, they carried desolation into the provinces of Frosinone and Velletri. From Mr. Ainslie Murray, and another English gentleman, who fell into their hands, a sum equivalent to £8,000 of English money was demanded, and similar sums were exacted from other wealthy prisoners. In the latter months of the year the French troops, in conjunction with the Italian soldiers, adopted vigorous, and, it seemed, efficient measures for destroying the brigands.

The proceedings of the Parliament which was in session on the opening of the year 1865, did not present many points of interest. The Chamber of Deputies, on March 13th, adopted a bill abolishing the penalty of death for crimes committed under the common law, by 150 against 91 votes, but maintaining it in the military and naval codes, and in the laws against brigandage. The Senate, however, on April 22d, rejected the bill. The bill introduced by the Government for the suppression of religious corporations was withdrawn; but the ministry, at the same time, announced that the concession of the *exequatur* to ecclesiastical benefices would be suspended, and that the Government would soon bring in another bill for the reform of the religious bodies.

The news of the assassination of President Lincoln was received by the Italian Government and Parliament with manifestations of profound sympathy. The Italian Chamber of Deputies was draped in black on the 27th, and would continue so for the three following days in mourning for Abraham Lincoln. The Minister of Finance moved, and the Chamber agreed, to send an address to the American Congress, expressing the grief of the country and the House at Mr. Lincoln's assassination.

* 1 Lira—19 cents.

On March 6th the Pope addressed an autograph letter to the king, requesting the latter's consideration of three points, namely, the return of the bishops to their sees, the nomination of other ecclesiastics to fill the vacant sees, and the admission of the titular ecclesiastics already appointed by the Holy See without the consent of the Italian Government. The ministers were unanimously of opinion that this letter should be followed up, and decided to send, in compliance with the request of the Pope, a layman to Rome, to confer upon the three points above mentioned, and to endeavor to come to some agreement. The mission was intrusted to the Commander Xaverio Vegezzi, with the Cavalier Advocate Giovanni Maurizio as colleague. The instructions confided to them established, before all, that no political question was to be introduced at the conferences; which would also exclude any subject not connected with the three points above mentioned, and particularly any matter which might be within the competence of the legislative power. In the second place, the instructions declared that, while in the course of the conferences on subsequent negotiations, it was not necessary to touch upon the recognition of the Italian Government on the part of the Holy See, in order that the conferences and negotiations should not lose their true character of an arrangement concerning interests entirely religious and spiritual; yet it could not, and ought not, to be allowed, either in the whole or upon any special point, that these conferences and negotiations should imply the negation *de facto* of the existence of the kingdom of Italy. The instructions relative to the three points were—that those bishops would be restored to their sees whose return would no longer be a cause of the disturbance of public tranquillity, and who would undertake to observe the laws of the State, and cause the same to be observed by their clergy; that among the vacant sees those only would be filled up which it might be determined to maintain on the future diocesan circumscription of the kingdom; that the presentation of the prelates would be made by the king, with the preliminary agreement of the Holy See, and that this presentation would be stated in the act of appointment, and the bulls which would be submitted to the royal exequatur; and, finally, that some of the titular ecclesiastics already nominated would be admitted from grave motives of public order and political expediency; others would be admitted not falling under these exceptions, provided the Holy See granted the translation to other sees of the prelates nominated to sees which it might be determined to suppress, and that their presentation by the king be stated in the bulls, which would also be submitted to the royal exequatur. The negotiators arrived in Rome in April. Finding the Papal Government disposed not to request the return without distinction of all the absent bishops, they made it understood that the Italian Government would renounce their

resolution of imposing particular conditions upon their return. And as the Pope had not disavowed the expediency of a new circumscription of the dioceses of the kingdom, they did not feel bound to insist upon the precise number of the sees to be left vacant or filled up. Moreover, the Pope not displaying any marked dislike to enter into the views of the Government relative to some of the bishops already nominated, the negotiators testified the desire of the Government to facilitate to the Pope the means of securing the conditions of all the others in a suitable and honorable manner. Difficulties were raised on the part of the Pope respecting the exequatur for the bulls nominating the bishops and relative to their oath, and the negotiators therefore returned to the seat of their Government, to obtain new instructions. The Italian Government deemed it inexpedient to grant the demands of Rome concerning these two points, as they only vindicated to the Italian Government a right which Italy has held in common with nearly all the Catholic States. The negotiators were therefore instructed to insist on the oath of the bishops and the royal exequatur, being, however, authorized to make concessions as to the form. They returned to Rome in June, but then no longer observed the conciliatory disposition which they believed they had discovered on their first visit. The propositions relative to the oath of the bishops and the exequatur were rejected, and this led to the non-pursuance of the negotiations upon the other points; only it was stated that the Italian Government would not depart from their resolution to consent to the gradual return of those absent bishops who could be restored to their sees without danger of public disturbance, since this was viewed as being only a measure of interior order, which had already been previously determined upon by the Government itself. After this the negotiators returned from Rome, and resigned their mission. The official report made (July 8th) by the prime minister, La Marmora, to the king, on the progress and failure of this mission, closes with this important hint: "The day, perhaps, may not be far distant when the so much desired separation of Church and State will bring with it the complete separation of religious and spiritual from political interests, to the common benefit of both Church and State, and particularly to the advantage of Italy, which, from their confusion, has suffered such long and severe trials."

A royal decree, issued on September 7th, dissolved the Italian Parliament, ordered new elections to take place on October 29th, and convoked the Chambers for the 15th November. A circular addressed by the Minister of the Interior to the Prefects, sets forth the policy the Government intended to pursue. The circular announced that shortly after the assembling of Parliament the ministry would bring forward a measure for the suppression of religious bodies, and the readjustment of ecclesiastical property. This measure would ameliorate the position of

the clergy in the country districts. In the division of the ecclesiastical wealth a portion would be assigned to elementary and middle-class education, and a portion to the communes where religious bodies reside, for works of public utility and for educational purposes. The ministry would also bring forward bills for reforming the system of primary, secondary, and superior instruction. The deficit in the budget for 1864 would amount to about 280,000,000*f.*, if an attempt were not made to reduce the expenses and increase the receipts. The Government would propose a modification of the tax upon incomes not derived from landed property. They would also continue the policy of assimilating the laws of the country, and would introduce bills for promoting the development of the national wealth, and for the modification of the register stamp tax.

A notable feature in the electoral campaign was the active participation of the "Catholic Party" (called by their opponents "Black Party," "Codini," etc.), who had generally abstained from voting at former elections, at least so far as the annexed countries were concerned. This party, who saw all the changes of 1859 with regret, was subdivided into two well-marked sections by a very important line of demarcation. On one side of it were those who absolutely refused to accept or be reconciled to the dynastic changes which have become *faits accomplis*, who were still dreaming of, and laboring for, restorations, and who, utterly refusing to recognize the present constitution of Italy as in any sense a legitimate government, declined to take any part in the elections. The more practical section of the "Black" party admitted the *faits accomplis* to be such, "content," as one of their spokesmen expressed it, "with having taken no part in bringing them about." These men worked hard at electioneering, and directed their efforts to the salvation of the Papacy, its remaining fragment of temporal power, and to the cause generally of the Church in Italy.

The advanced Liberals, "Party of Action," "Radicals," "Reds," etc., who would fain use violent and immediate means for carrying out those changes to their ultimate results, and for the completion of Italian unity and independence by the acquisition of Rome and Venice, and who are especially hostile to the French Emperor and French influence as being the main obstacles in the way of reaching that consummation, were also divided into two well-marked sections; distinguished, these also, by their abstinence, or the reverse, from the elections and the work of electioneering. The extreme Red party, the men of the "Unità Italiana," friends of Mazzini, who deny that the unity and independence of Italy can be completed by, or under the House of Savoy, who abominate monarchy, and hope for the fall of that which exists in Italy, refuse to meddle in any way with the elections. The other, and the more important section of the Left, consist of those who perhaps would fain have seen the reconstitution of

Italy accomplished under the form of a republic instead of under a monarchy, but who on their side are willing to accept the present order of things, to take the oaths necessary to be taken by a member of the Chamber, and who direct their efforts to driving, as far as may be possible, the political and governmental action of the country toward the accomplishment of that completion of Italian unity and independence which all, except a few "Austriacanti," equally sigh for, but which those on whom the responsibility of governing rests think cannot safely be attempted by the means which the men of the Left would fain use.

The Government party, "Moderate Liberals" (also called "Malvi," because the leaves of the malva are used as a common lenitive, and are held to be anti-febrile and anti-energetic), was, of course, divided, like all Government parties, into those who are Government men *quand même*, supporters of those in power, and men of a more independent stamp whose seat is in the moderate centre of the Chamber, because their opinions properly place them there. Beyond this distinction, inasmuch as it is from this third political section that Ministers and Cabinets must be chosen, there were of course a number of factions, distinguished by preferences for individual chieftains. Ricasoli, Ratazzi, Minghetti, had all, as might be expected, their special friends and supporters among the large body of the moderate party.

At the election, the Catholic party met with a crushing defeat, only about a dozen of their members being elected. The Radicals, on the other hand, were eminently successful; for while they had numbered no more than about 50 in the preceding Parliament, they mustered more than 120 tried partisans in the new, besides finding among the Government party a fraction ("Third Party") which was found ready to combine with them in some important questions to defeat the ministry. Garibaldi was elected in three places, Naples, Andria, and Corleto. Three of his officers, Generals Bixio and Fabrizzi, and Colonel Cairoli, were also returned, each for three colleges. Nicotera, another of his followers, and his former dictators in Sicily, Crispi and Mordini, were elected for two districts each. Mazzini, notwithstanding his avowed hostility to the monarchical principle, came near being elected in Genoa.

The session of the new Parliament was opened on November 18th by King Victor Emmanuel in person, who delivered the following speech:

When I opened Parliament in the city which was the first guardian of Italy's destinies I always spoke words of encouragement and hope, and my words have always been followed by prosperous events. It is with the same confidence that I speak to you here, where we also shall be able to vanquish all obstacles for the complete vindication of our autonomy. My Government welcomed, from deference to the Papacy, and for the satisfaction of the religious interests of the majority of the population, the proposals for negotiations, which it broke off

when it judged that they might be prejudicial to the rights of the crown and the nation. Time and the force of events will solve the questions pending between Italy and the Papacy. We must remain faithful to the Convention of September, which France will completely carry out within the appointed time. Henceforth it will be easy to wait. The situation has much improved.

The king then alluded to the good relations existing between Italy and the powers of Europe and North and South America, and spoke of the recognition of Italy by Spain, Bavaria, and Saxony. He then continued:

The Latin nations, united by fresh ties, are acquiring a community of interests and aspirations with the noble people of Germany, thus causing ancient prejudices and rancors to disappear. Italy will take her place among the great States of Europe, coöperating in the triumph of justice and liberty. Liberty has produced favorable results at home; the administration, public works, the laws, and the army have been assimilated with results which in other countries have required the work of generations. This is a good augury for the future. The ministry will bring forward bills to complete the assimilation of the laws of the kingdom, and others relating to the education of the poorer classes, the improvement of the public credit, and the execution of works of public utility. The principal difficulty is to bring about an equilibrium of the finances without impairing the organization of the military and naval forces. It is painful to me that fresh sacrifices must be asked of my people, but its patriotism will not be found wanting. We shall divide the taxes as equitably as possible, reducing at the same time the public expenses as much as lies in our power. Italy must free herself from the ruins of the past. You will deliberate upon the separation of the Church and State, and the suppression of the religious bodies. Nothing will destroy the national work. A complete change is taking place among the peoples of Europe. The future belongs to God. If fresh combats should become inevitable, the sons of Italy will rally around me. If the force of civilization prevails, the wisdom of the nation will know how to profit by it in order to maintain intact the rights and the honor of Italy. We must advance frankly in the path of the national policy, and we are certain of your concurrence. Confiding in the affection of my people and the valor of the army, I will not fail in the great work which we must transmit complete to our descendants.

On December 6th the Chamber of Deputies elected Signor Marini, the candidate of the Government, to the office of president by 141 votes out of 273 members voting, after two ballots between him and Signor Mordini, the candidate of the Left. As the ministry found that they would not control, in all important questions, a majority of the House of Deputies, they tendered their resignation, which, as was announced to both Chambers on December 21st, was accepted by the king. On the same day the Chamber of Deputies adopted the pro-

visional budget for 1866, by 173 against 23 votes, with an amendment reducing the period of its application from three to two months. It also approved the proposal of Signor Mancini for a Parliamentary inquiry into the public administration. Full information concerning its relations to Rome and Austria was communicated by the Government to the Chamber of Deputies on December 12th, by presenting to them the instructions given to the Italian authorities on the Roman question. According to these instructions all attempts to violate the present frontier are to be prevented. There being but little probability of a good understanding prevailing between the Italian and Papal troops, all idea of acting in concert with the latter in order to combine operations against brigandage is to be abandoned; nevertheless, mutual information can be given with a view to suppressing the brigands and tracing their crimes. A circular, dated November 25th, was also laid upon the table of the Chamber of Deputies, addressed to the Italian agents abroad, in which are set forth the difficulties existing as to the renewal of diplomatic and commercial relations with Austria in consequence of the Venetian question. There would only remain for Austria and Italy to negotiate informally, thereby engaging the policy of the two Governments solely with regard to the improvement of their commercial relations, but thus far Austria had not taken up that ground. This document also mentions certain steps lately made by the Venetian authorities for the renewal of commercial relations only with some of the Italian provinces, to which the Italian Minister had replied by declaring that no difference of custom-house system could be made between the provinces incorporated with the kingdom by the treaty of Zurich and those incorporated by the Plebiscite. The kingdom of Italy was formally recognized by Spain in July, and by Saxony and Bavaria in November. All the States of Europe and America have now recognized the new kingdom except the Pope, Austria, and a few of the minor German States.

The withdrawal of the first of the French troops from Rome began in November, 1865, and the French Government repeated its intention of carrying out the September Convention concerning the evacuation of Rome. It offered, at the same time, its services to the Pope for the reorganization of the Papal army. The Italian Government gave new assurances of its determination not to attack the Papal territory, and not to allow any volunteers to enter it with hostile intentions.

J

JAMAICA, one of the Great Antilles, and the principal of the British West India Islands in the Caribbean Sea, between lat. 17° 40' and 18° 30' N. and lon. 76° 15' and 78° 25' W., about

90 miles south of Cuba. The island is divided into three counties, Middlesex, Surrey, and Cornwall, and has an area of 6,400 square miles.

At the last census of Jamaica, in May, 1861,

the white population was 19,816 in number, being in the proportion of one white to thirty-two black or colored. Since that time some thousands of Indian coolies have been introduced into the island as laborers. The total population in 1861 was, 441,264, while thirty years ago it was only 35,000. The number of children in schools was returned at 26,167 in 1863; the returns for 1861 had shown the exceptionally large number of 40,670, but that was the census year, and it is supposed that returns were taken in that year which included Sunday schools. The island is the seat of an Anglican bishop, whose diocese extends over the Bahamas and Honduras. Commerce is not in a flourishing condition. The cultivation of the staple exports has fallen off from six hundred sugar plantations to three hundred, and the 60,000 hogsheads of sugar formerly produced, have decreased to 30,000.

Jamaica has been several times the scene of negro insurrections. On the 22d of February, 1745, about 900 negro slaves were detected in a conspiracy to destroy all the white inhabitants of the island. In 1795, the Maroons, a community of fugitive slaves who had obtained permission to settle in the northern part of the island, revolted and were not reduced to subjection until March 11, 1796. The most alarming outbreak, however, took place on the 22d of December, 1831, when the island was placed under martial law, and most stringent measures and numerous executions followed.

A fourth insurrection broke out in October, 1865, and, though it was at once suppressed, was attended by circumstances which produced an intense excitement not only in the island, but in England and the whole civilized world. For several years the condition of the majority of the people in Jamaica had been very wretched. In 1864, the Baptist Missionary Society of England sent their Secretary, Dr. Underhill, to Jamaica, to make a report on the decline of the Baptist missions. Dr. Underhill extended his researches to the condition of the island in general, and in a famous letter, dated January 5, 1865, and addressed to the Colonial Minister of England, described the pitiful state of affairs, and pointed to those reforms which, in his opinion, were indispensable to save the island from ruin. The Colonial Minister, Mr. Cardwell, sent the letter to Gov. Eyre, of Jamaica, who had it published in the papers of the island, together with a request to all local authorities to report to him on the condition of their several districts. The agitation produced by this publication was intense. Excited mass meetings of the colored population were held in a number of places, to give expression to their grievances and demands. The most prominent leaders of this agitation were Mr. Gordon, a colored member of the Colonial Assembly, and Paul Bogle, a colored Baptist preacher. Mr. Gordon stated the grievances of the native population in a letter to Mr. Cardwell, the Colonial Secretary, as follows:

JAMAICA, March 24, 1865.

To the Right Honorable Edward Cardwell, M. P.,
Secretary of State for the Colonies, &c.

SIR: I have to bring to your notice, on behalf of the people of this country, the following facts, which are submitted as grievances:

The House of Assembly, as at present constituted, by reason of the restrictions in the election law (which has been amended only to a very limited extent), cannot be said to be a fair representation of popular rights; therefore it becomes more for the mother Government to exercise that vigilance which in former times so greatly tended to the protection of the lately emancipated classes, and it is much to be regretted that such is not continued to be the case.

From gross mismanagement, and for wasteful purposes, the taxation of the country is increased, without corresponding benefit to the general community. A flagrant illustration of this may be found in the history of the "Tramroad" affair, which besides having involved the country in a heavy expenditure of money, creating additional taxation, has also, by interfering with the principal public road, caused serious loss of stock to the passengers, and irritated the minds generally of the people who traffic on this thoroughfare. We here find a sample of the ruinous consequences of misconducting public affairs: but ere this is got over, the Governor, in his opening speech, recommends a project for a "slip dock," which work, if at all necessary, is of a speculative nature, and such as a company may be encouraged by the Government to undertake, but certainly it is not for the public to adventure, nor one for which the people should be taxed. The island has no navy which requires such an undertaking, and therefore it can only be considered as a strictly commercial enterprise. But how then are the people to be taxed for this purpose? As well may any other company more necessary and likely of success be taken up by the Government, such as a "soap manufactory," "a sugar refinery," an "agricultural bank," or a "rail-road to Old Harbor."

The great question is, is it constitutional to tax the people for speculative enterprises? and is the island prepared to undertake the duties of private companies, and to conduct a slip dock, with all its contingencies and doubtful results, in the face of absolute expenditure likely to involve not only a present but a future loss and increased taxation upon the people? It is a laid down principle that no government is justified in acting in this manner. It is contrary to sound political economy, and its tendency is evil; yet we find that, even without detailing estimates or statements of annual expenditure and income, the Governor has sanctioned such a measure, which having been opposed when first introduced into the Assembly, was withdrawn, and subsequently brought forward at the end of the session, when the quorum was reduced to nine—hardly that number being present—and passed, as it were, to the surprise of the good sense of the country. This is a measure which, if allowed to take effect, will create new heart-burnings in the minds of the inhabitants generally, and is a great public wrong.

A bill of a most objectionable nature was passed under circumstances similar to those stated above; it is to inflict corporal punishment for "petty offences." This is a measure unparalleled in the present history of British legislation, and is so degrading and wicked in its tendency as to create feelings of alarm. A public meeting has already been held against it in Kingston. A copy of the resolutions I shall send, and I believe other meetings or memorials are intended. The penal clauses of this bill are confined to second convictions—but for what offence? A shrub, a reed, or plant, in an unenclosed or enclosed land, &c. It will not be hard in a country like this to find a second offence, which may be of a comparatively innocent nature, tortured for malignant purposes. While this is intended to operate for minor

offences, the greater evils of society—forgery, burglary, cattle-stealing, etc.—are all left out, so that this measure is strictly one aimed against the lower classes, who, just now, are in a state of great destitution. And, honorable sir, if you could only behold them, I opine that your feelings of compassion would be aroused to mercy and relief instead of the infliction of corporal punishment, which is death or next to it; and I fear the indignation which may arise from this evil measure will be such as to have serious consequences. Representations unfounded and uncharitable, may be wickedly made against the peasants of this country, but in good truth they are as peaceable, civil, and well-disposed as any people can well be, and their character cannot justly be unfavorably compared with those of the laboring classes of Great Britain, the continent of Europe, or America. What they require is what has been neglected—attention to their sanitary improvement and education, parochial asylums for orphans and adults, and relief to some extent from the excessive taxation on the necessary articles of food and clothing, which in its tendency produces that destitution which leads here as in other countries, to a great extent, to petty larcenies. These are the points which should have been attended to, but which are lost sight of, for the debasing purpose of the whip, as if that will instil principles of morality, or supply the mental and bodily wants of a poor suffering community.

I do trust that, after due reflection, you may be led to consider the measure in its odious and injurious light. It seems to me an evil of the greatest magnitude, and shows to what extent inconsiderate feelings still exist in Jamaica.

But the manner in which the bill passed the Assembly is discredit to the Government, as may be seen by the division on the question, and by which you will perceive it did not pass with the feeling of the country. The members of the Government, after allowing it to remain on the table of the House for nearly three months, did not give any intimation of its being put up, but seized upon an opportunity, and in two hours passed about four bills of a most important nature, at the same time suspending all the rules of the House in order to put them through all their stages within this time; this did not seem to be a creditable proceeding. A bill was also passed on the same occasion and under similar circumstances, to reestablish a district prison at Port Maria. This bill also provides that hard labor shall include the "treadmill," "shot-drill," and "crank."

Immediately after the emancipation, the treadmill was introduced into use in this island; but soon it was discovered that its severities and tortures, as exercised here, were diabolical, and the Governor of the island, as well as the Colonial Secretary, determined that it should be abolished, and not one was allowed to be used or even to remain in the prison; yet we find after a lapse of thirty years, when we had a right to expect better things, a British Government sanctioning such a thing. But this said Port Maria is really the grave of Jamaica. During cholera its population was nearly entirely swept away by that disease, and Dr. Milroy, the skilful medical inspector sent from England by the Government, condemned it, above all other places in the island, as most unhealthy and death-like; and yet we find that the prison which was abolished is again to be reestablished, with the iron shackles to which the unfortunate prisoners have been consigned by the present Governor, with hard labor.

From the injurious atmosphere of Port Maria, a transfer of patients had frequently to be made to the public hospital of Kingston. From the depreciated health to which the prisoners must be reduced at Port Maria, many of them will leave the prison, forever after to be worthless and a tax on society. When it is remembered that many are sent to prison for very minor offences, under many cases wrongfully, and under long sentences, by erring judgment and

unlearned justices, it does seem that it is a most cruel proceeding. I feel it a bounden duty to bring these subjects to your notice. The consequences I cannot control, but I sincerely trust that notwithstanding any explanation which will, no doubt, be tendered by the Governor on these remarks, the facts only of the points may be considered. I have a conscientious assurance that I intend no undue reflections, and only write from the stern obligations of a sense of justice and common humanity.

I have the honor to be, sir, your obedient servant,
G. W. GORDON.

In the beginning of October, in the district of Morant Bay, in the eastern portion of the island, an attempt was made to expel the negroes from certain uncultivated lands, of which they had taken possession. This called forth great indignation, and when, on October 7th, a negro was tried on account of this affair before the court of Morant Bay, a mob of negroes collected, threatening to liberate him. The court ordered the arrest of the leader of the mob; but the negroes overpowered the police, and prevented the arrest. On October 9th, the court issued writs for the arrest of twenty-eight negroes, charged with having participated in the riot. The police at first did not succeed in accomplishing their object, but on the following day effected the arrest without resistance. On October 11th, when the prisoners were to be brought before the court, a new riot broke out. A number of volunteers who had been called out were overpowered, and many of them, together with several magistrates, massacred, and the court-house burned. According to an official statement of the Governor, the number of whites killed was sixteen, and wounded eighteen. In several adjoining districts, the negroes likewise rose and plundered the plantations. But as far as known, only two persons were killed.

The Governor, on being informed of the disturbance, at once proclaimed martial law in the insurgent district, ordered out troops, and sent the war-vessel *Wolverine* to Morant Bay. He hastened himself to the scene of the insurrection, and arrived at Morant Bay on October 18th. He despatched several columns of troops into the interior, and as he found every thing quiet in Morant Bay, he went, on October 15th, on board the war-vessel *Onyx* to Port Antonio, situated about twenty miles west of the scene of insurrection. There also he found every thing quiet; and in a despatch to the British Colonial Minister, dated October 16th, he represented the rebellion as "overtaken, arrested, and hemmed in." On October 16th the Governor returned to Jamaica, and as, by this time, six war-vessels had assembled in the waters of Jamaica, and two regiments of regular troops with a large number of militia and volunteers were at his disposal, besides a considerable force which was immediately expected from Barbadoes and other islands, he did not deem it necessary to proclaim martial law in Kingston.

While on his way to Morant Bay, the Governor claimed to have received cogent proofs of the guilt of Mr. Gordon, the above-men-

tioned member of the Assembly, as one of the chief instigators of the rebellion. Gordon was a resident of Kingston; he had not been absent from that place during the disturbances; he was in Kingston when he was arrested; no attempt was made to disturb the peace in Kingston; all the courts were in the uninterrupted exercise of their functions—nevertheless, the Governor deemed himself justified in ordering Gordon to be brought on board the *Wolverine*, and in conducting him to Morant Bay for the purpose of having him there placed before the court-martial. When he arrived in Morant Bay, he found—as he himself states in a despatch to Mr. Cardwell—the rebellion “crushed.” The columns of soldiers who had been sent into the interior returned, and reported that they had not met with armed resistance, that they had not lost a single man, but shot and hung, without the least form of trial, hundreds of persons suspected of being implicated in the rebellion. Notwithstanding, Gordon was placed before the court-martial, and found guilty. The evidence brought forward against him, stated that Mr. Gordon had been seen on a Sunday at a certain chapel at which Paul Bogle, the so-called rebel leader, worshipped; that somebody had said that Mr. Gordon had sent word for the people of a certain district in the parish to hold a meeting; that certain placards in blank had been found in Mr. Gordon’s portmanteau; that a placard headed “The State of the Island” (in which there was not a single word of disloyalty or sedition), had been penned by Mr. Gordon; that he had used some strong language in a meeting of the people he had some weeks before addressed in the parish of Vere; and that he had written a letter to one Chisholm, advising him, with reference to the sufferings of the people, to “pray to God for help and deliverance.”

Mr. Gordon protested solemnly against having had knowledge of or part in the plot. Nevertheless Gov. Eyre sanctioned the finding of the court-martial, and Gordon was hung on October 23d. At the close of October the number of those shot and hung either by the soldiery without trial, or by order of the court-martial, was reported as reaching 2,000.

On November 7th the session of the Jamaica Legislature was opened; the Governor in his opening speech described a startling state of things. Society in Jamaica, he said, was on the brink of a volcano, and had been so for some time past, owing to the systematic political agitation of which the late George William Gordon had been the leading spirit. There was not a district throughout the country, he asserted, in which disloyalty and sedition were not rampant, and murderous intentions on the part of the blacks openly expressed. He justified the extreme measures he had adopted in dealing with the outbreak, on the ground of the imminence of the danger. In their replies to the speech, both the Legislative Council (the upper Chamber), and the House of Assembly (the representative branch), endorsed the Gov-

ernor’s views on this point without the slightest qualification; but two or three days after they had done so, the latter agreed to a resolution calling upon the Governor to furnish the House with the evidence upon which he had arrived at such a conclusion. During the debate upon the motion several members expressed the opinion that the House had acted precipitately in endorsing the Governor’s statement, and ventured to doubt its correctness. The Governor told the House, in reply, that the best proof he could adduce of the truth of the statement was the fact that it had been endorsed by the House itself, but added that he had been induced to make the statement from information contained in letters that he had received from persons of position and influence living in different parts of the island, all of which agreed in stating that the blacks were in a very excited state, and were assuming a very threatening attitude toward the whites and the colored people.

No sooner had the usual preliminary matters of form been got through in the House of Assembly, than the Government introduced, through its organs in that body (styled members of the Executive Committee), several measures of a most extreme character. Of these, the most notable were a bill to remodel the political constitution of the colony, and a bill to regulate places of worship. The former provided for abolishing the present House of Assembly and Legislative Council, and substituting therefor a single Chamber, to consist partly of elected members and partly of nominees of the Crown to be appointed by the Governor. Under this measure the blacks are almost entirely disfranchised, as the qualification for the franchise is fixed at the payment of £5 per annum of direct taxes, and few of the negroes are possessed of sufficient real estate to be assessed at that sum. The bill deprives the negroes of all political power—excludes them from all share in the government of the country. The House passed the measure without delay, and sent it up to the Council, where it was pushed through in several stages, after which the Governor lost no time in assenting to it. The bill was passed with a suspension clause—that is, it was not to take effect as law until the pleasure of the Queen of England respecting it should have been ascertained.

The bill for regulating places of worship throughout the island, raised such a storm of indignation among the dissenters that the Government made haste to withdraw it before it had reached the second stage in the House. It provided for the registry of all dissenting places of worship under penalty, and required the payment of a registration tax annually.

When the first news of the revolt of the blacks arrived in England, accompanied by accounts of horrible atrocities said to have been committed by the negroes, the measures of Gov. Eyre were not severely criticized, but this feeling became greatly modified as the whole of

the circumstances attending the insurrection became better known, and were more fully analyzed. The Government deemed it necessary to suspend Gov. Eyre, and appointed Sir H. K. Storks as Captain-General and Governor-in-Chief of Jamaica during the prosecution of certain inquiries about to be instituted respecting the late disturbances, and for such further time as her Majesty might see fit. The new Governor, together with Mr. Russell Gurney, the Recorder of London, and Mr. John Blossett Maule, the Recorder of Leeds, constituted the "Jamaica Commission" for the conduct of the inquiry. At the same time a private "Jamaica Committee" was organized, "in order to watch the progress of the official inquiry to be instituted by the Government; to bring about a searching Parliamentary inquiry into the past and present condition of Jamaica; and to provide Mrs. Gordon and others who may have unjustly suffered from the proceedings of the civil and military authorities in Jamaica with competent legal assistance to conduct their several cases before the commission." The chairman of the committee is Mr. Charles Buxton, M. P., and among the members are Mr. J. Stuart Mill, M. P., Lord Alfred Churchill, Mr. Bright, M. P., Sir Thomas Powell Buxton, Professors Cairnes and Goldwin Smith, etc.

In February, 1866, the English Government published three Blue-books of "papers relating to the disturbances in Jamaica." The first comprises a correspondence between Governor Eyre and the Colonial Office, ranging from January, 1865, up to the period of the Morant Bay massacre (October 11th). It also embodies the celebrated letter of Dr. Underhill, besides certain documents of a later date than last October, but not immediately bearing on the rebellion or its suppression. The second contains as many as sixty-one despatches from Gov. Eyre to Mr. Cardwell, with many enclosures; and thirty-three despatches from the Colonial Secretary, eighteen of which are addressed to Governor Eyre, and the remainder to Governor Sir H. K. Storks. Of those given in the second Blue-book the first despatch from the Governor of Jamaica is dated October 20, 1865; the last December 9th. Mr. Cardwell's first communication was written on November 17th, and his last to Gov. Eyre on December 16th; his last to Sir H. K. Storks was dated January 1st.

In a despatch, dated October 23d, Gov. Eyre writes that it was evident the "rebellion" had been instigated by the language and writing of persons in a better sphere of life, chief of whom was Dr. Underhill and some of the Baptist ministers in Jamaica. Under these circumstances he (the Governor) had deemed it right to examine the letters coming by the last English mail for certain Baptist ministers. One of these letters from Dr. Underhill to the Rev. J. Henderson, of Montego Bay, Gov. Eyre enclosed, and he quoted from it the following passage: "In Jamaica the people seem to be overwhelmed with discouragement, and I fear that they are

giving up in despair their long struggle with injustice and fraud." To such expressions as these Gov. Eyre attributes the outbreak, and he adds: "If nothing can be done to stop at home the pernicious writings such as I refer to, and if Jamaica is to be retained at all, it will be necessary to pass a law in the colony authorizing the deportation of all persons who, leaving their proper sphere of action as ministers of religion, become political demagogues and agitators."

Extracts from Mr. Cardwell's despatch, dated November 17th (the day after the receipt of the first account of the outbreak), were laid by Governor Eyre before the Jamaica Legislature, and published in the colonial journals. But the Governor omitted some of the most important passages of the despatch. "No doubt," Mr. Cardwell says in his despatch, "you will have much further intelligence to communicate to me hereafter on the subject of the measures of severity to which you have felt it necessary to have recourse. If you had time, in forwarding those enclosures, to make yourself acquainted with all their contents, it will have been evident to you that they contain many passages which will require to be explained as soon as there shall be sufficient leisure for the writers to explain fully the proceedings to which they relate. * * * * I entirely agree with you that measures of severity, when dictated by necessity and justice, are in reality measures of mercy, and do not doubt it will appear that you have arrested the course of punishment as soon as you were able to do so, and have exerted yourself to confine it meanwhile to ascertained offenders and cases of aggravated guilt. I observe with pleasure the hope you express, that if no further outbreak occurs you will, in a short time, have been able to proclaim a general amnesty, except to actual murderers."

Governor Eyre's rejoinder is apologetic throughout. On November 23d Mr. Cardwell writes again, asking for explanation of certain statements (made by various officers as to their doings in killing and flogging negroes), and adding that, without satisfactory explanation, "the severity inflicted will not appear to have been justifiable." Mr. Cardwell also asks for copies of the proceedings of the court-martial, and full particulars generally. On the same day Mr. Cardwell wrote a special despatch requiring from Gov. Eyre the reasons for his assertions as to Mr. Gordon, and the proofs of his guilt. The fact of his removal to Morant Bay, where martial law prevailed, is pointed out, and the despatch concludes: "I desire also to see it clearly established that he was not executed until crimes had been proved in evidence against him which deserved death; and that the prompt infliction of capital punishment was necessary to rescue the colony from imminent danger, and from the horrors of a general or wide-spread insurrection, and the repetition elsewhere of such a slaughter of the white and

colored colonists as had taken place in the eastern part of the island."

On December 1st Mr. Cardwell writes as follows: "In your despatch of the 20th October, you say that you cannot doubt that the rebellion of the negroes in Jamaica is in a great degree due to Dr. Underhill's letter, and the meetings held in connection with it. That letter was originally addressed, not to discontented persons in Jamaica, but to me; and was by me forwarded to you for your report. I am desirous to know whether it was by your sanction that it first obtained publicity in Jamaica, and if not, what, so far as you know, were the circumstances under which it became the cause of agitation."

On the same day Mr. Cardwell wrote, alluding to the despatch from Gov. Eyre, dated October 23d, and says that while it was in the discretion of the island authorities to open letters arriving from England, it is to be hoped no further interception of letters will take place, and it is added that only in very exceptional cases could such a course be justified. Gov. Eyre is instructed to send the letters he has stopped to the persons to whom they are addressed, unless serious mischief would follow such a course. The despatch concludes: "However reasonable may be the apprehensions which you express as to the general effects of injudicious and inflammatory language upon an excitable and imperfectly instructed people, it is not easy to see what steps can be taken for the prevention of the evil. The measure which you suggest is not one to which I should wish you to have recourse. The repression of overt proceedings might lead to secret proceedings not less, but more dangerous; and the banishment of persons who are known, and may be made responsible to the law, might have the effect of devolving their influences upon persons who are more obscure and less amenable to observation."

The next despatch was as follows:

DOWNING STREET, December 1, 1865.

Sir: In a recent despatch I called your attention to passages requiring explanation in the reports of officers employed against the insurgent negroes, and to the absence of the minutes of proceedings of courts-martial, which one of the despatches addressed to you by Maj.-Gen. O'Connor had purported to enclose. I have now received your further despatches, but they do not contain any minute of the evidence taken by the courts-martial. No doubt the extreme pressure of business, consequent on the insurrection, and attendant on the meeting of the Legislature, must account for the absence of these enclosures, and render your present reports in some points incomplete. I assign to this cause that many important points are still unexplained, on which it is necessary that her Majesty's Government should be in possession of all the information that can be given. I enclose a copy of a letter from the Admiralty, with a copy of a despatch from Commodore Sir Leopold McClintock, dated the 8th November. This officer states that it will be impossible to ascertain the total loss of life in the insurrection, but that 1,500 would perhaps be a moderate computation; that, at the date of his letter, arrests were being daily made, and the prisoners sent to Morant Bay, and a large proportion of

them hanged. I enclose also extracts from a report made by Lieut. Adcock, of the 6th Regiment, dated 25th October, and transmitted to Lord de Grey in a despatch from Maj.-Gen. O'Connor, of which I enclose a copy, dated the 7th November; and I enclose an extract from a newspaper of a letter purporting to have been written by Capt. Ford, in command of the St. Thomas-in-the-East irregular troop. These extracts, equally with those accompanying my despatch of the 23d November, require explanation. I should be glad to learn that the letter in the newspaper is not authentic, and if any official reports have been made by Capt. Ford I should wish to be furnished with copies of them. And in reference not only to the particular reports adverted to in this and in my former despatch, but to the proceedings generally, I am desirous to point to the topics which, in the opinion of her Majesty's Government, demand your report:

1. The number of persons tried, and of those sentenced by courts-martial, specifying the charge and sentence, and whether or not the sentence was executed, and under whose authority, and whether minutes were taken of the evidence on which the sentence was found in each case: all minutes of evidence so taken to be appended to the return. The return should show also at what places and times respectively the offences were charged to have been committed, and the accused persons were arrested or captured and tried, specifying in each case whether the offence was committed before or during martial law, whether the arrest or capture was made during martial law, and in a place to which martial law extended; and if the person accused was arrested or captured in a place to which martial law did not extend, and removed to a place to which it did extend, there to be tried by martial law, and for an offence not committed during and under martial law, it should be stated by whose authority this was done, and whether under the advice of the Attorney-General.

2. Whether any persons were hanged, flogged, or otherwise punished without trial; and if so, by whom and under whose authority in each case, specifying the name, sex, color, and quality of the persons punished, the nature and date of the punishment, and the nature and date of the offence, and the grounds on which it was assumed to have been committed.

3. The number of persons, so far as can be ascertained, who were shot in the field or in the bush, their name, sex, quality, and color, and whether adults or children, specifying in all cases whether they were resisting or flying, whether armed or unarmed, and if armed, with what weapons, whether such as are used only for purpose of offence, or such as are used also in agricultural or other peaceful occupations.

4. Whether any and what oral or written instructions were given to officers in command of detachments sent in pursuit of rebels, whereby they might know on what evidence or appearances, other than hostile action or attitude, they were to assume that those they might meet with were rebels; and whether those officers, or any of them, were led by their instructions, or otherwise, and without authority induced, to assume that all persons flying or hiding from pursuit, or all persons found with plunder, or all persons leaving their labor on plantations were to be regarded as rebels and shot when met with. Copies of all instructions should be furnished.

5. Col. Fyfe being the only officer mentioned as employed with the Maroons, whilst divers parties of the Maroons appear to have been sent in various directions out of the immediate observation of Col. Fyfe, was there any and what control exercised over the operations of those parties, and what was it expected that the nature of those operations would be; and of what nature, in point of fact, did those operations prove to be?

In your despatches, in the addresses of the Legislative Council and House of Assembly, and in the reports of the naval and military officers engaged in the suppression of the insurrection, the loyalty of the Maroons in resisting and defeating the efforts of the rebels has been spoken of in terms of grateful commendation, no doubt sincerely felt and well deserved; and I observe one of the measures now to be proposed to the Legislature by one of the members of your executive committee is entitled "A Bill to employ the Maroons as a permanent Auxiliary Militia Force." I have, however, been greatly concerned to find in the enclosed despatch from Sir L. McClintock the following statement: "At least 800 were shot, chiefly by the Maroons, who entered with fierce zeal into the bush hunt after rebel negroes." I have to request your immediate attention to this subject. I trust it will appear that Sir L. McClintock has been misinformed, and that an impression so unfavorable to the employment of the Maroons—an impression which I certainly should never have derived from your despatches and those to which I have above referred—will not turn out to have been well founded. It appears from your speech to the Legislature, and from the addresses of both its branches in reply, that you and they were of opinion that there had existed a wide-spread and diabolical conspiracy to murder the white and mixed races, and amongst those races themselves this opinion would appear to be almost universal. Proofs of this conspiracy were adverted to as existing, but they are not to be found in the papers yet sent home. I request that you will furnish me with them as fully and completely as you can without delay. In making these inquiries, I beg to be understood as directing your attention to the principal points on which I desire to be informed, and not as prejudging any person concerned in any proceeding. I have, etc.,

EDWARD CARDWELL.

In reply, Gov. Eyre wrote:

As the various officers who were engaged in command of detachments during the rebellion are now more or less scattered, and the chief in command, Brig.-Gen. Nelson, is absent from the colony, it is possible that some delay may take place before all can be referred to, and thus some of the information sought may not be procurable at once. I will, however, transmit to you whatever reports or explanations may reach me as quickly as possible after receiving them, without waiting until the whole are ready. In the mean time I forward a report from Col. Eyre, in command of the Maroons, in reference to the very extraordinary allegations made against them in Sir L. McClintock's official report to the Admiralty. I can only say that until I saw that despatch I never heard even the most distant rumor that the Maroons had behaved in the way alleged, and I cannot imagine upon what data Sir L. McClintock based his opinion: I have written to Vice-Admiral Sir J. Hope to request he will call upon Commodore Sir L. McClintock to explain the grounds upon which his statement was made, but there is little probability of my receiving it in time for the present mail. In colonial communities fabrications and exaggerations of the grossest kind are constantly being circulated either for sheer wantonness, from a desire to appear important in the eyes of those to whom the statements are made, or from worse motives. These *accusations* are very generally circulated by the local press, and often obtain currency and credence at a distance; but an officer in Sir L. McClintock's position ought not to take notice of any such unauthorized rumors, or embody in an official report opinions conveying such injurious reflections upon a race which had so recently rendered such valuable service to the colony without being very sure that his opinions were well founded. That improprieties or acts of wrong have been committed during the existence of martial law I do not doubt. It was only to be expected this

should be so, but I trust it will be found eventually that these instances have been comparatively few, and have either been unknown to and unsanctioned by the officers immediately in command, or have taken place under the pressure of circumstances which, if not justifying, may, at least in some degree, palliate the irregularities committed. In reviewing the acts of the military and naval authorities in dealing with any rebels who were found in arms or in summarily disposing, after trial by court-martial of those who were taken prisoners, it is necessary to bear in mind that there were no prisons or gaols to which to send prisoners, and that some five hundred men were engaged in quelling a rebellion in districts, St. David, St. Thomas-in-the-East, and Portland, tenanted by a population of some forty thousand, and comprising upwards of five hundred square miles of country. Nor must it be forgotten that nearly the whole of this population, if not in actual rebellion, was sympathizing with the rebels, and taking no steps to arrest its progress or aid the authorities. It was impossible, under such circumstances, that they could either take charge of and guard any large number of prisoners, or make long delays to institute more formal trials. The administration of summary justice became a necessity, and any hesitation would have been fatal to the success of the military operations. Whilst regretting the necessity of, and deploring the evils unavoidably resulting from such a course of action, I do not see how it could have been avoided.

Further information enabled Gov. Eyre to add a postscript as follows:

Sunday, December 24th.

Since writing this despatch I have received an express from the Admiral containing Sir L. McClintock's explanation. You will be glad to learn that his opinion rested on no better grounds than mere rumors or unauthenticated reports and newspaper statements. I trust this instance will show how little to be depended upon information or opinions are when expressed by persons not having the opportunity of personal knowledge or of referring to authentic reports, and when the grounds are not given upon which such information or opinions rest. No doubt the tone and terms used in some of the reports by officers engaged in the field are not such as could have been wished, considering the grave events to which they relate; but great allowances must be made for the circumstances under which these reports were written, when harassed and worn out by the duties and anxieties of the day, and whilst the minds of the writers were still freshly impressed with the atrocious occurrences that had then so recently taken place, and which might again occur in other districts at any moment. But it is very hard that our soldiers and sailors, whose courage, zeal, and exertions have been the saving of Jamaica, should be so misrepresented and traduced, as I see they are, by a large section of their countrymen at home, who know nothing of the dangers or difficulties which had to be surmounted, or of the pressing necessity which existed for the most prompt and decisive action. I have now only to thank you for the confidence you have been pleased to express, pending further information, in my own character and in that of the military and naval officers concerned. As regards myself, I rest upon the conviction that I did my duty faithfully in not shrinking from undertaking a responsibility which few men would have accepted, and in doing which I was quite aware of what the consequences would be, so far as regards misrepresentation and vituperation, on the part of a very powerful party at home; but which action, on my part, I believed to be, and still believe to have been, essential to the preservation of Jamaica. I do not pretend to have acted within the strict trammels of the law, no man could under such circumstances; but I do not doubt being able to justify myself fully

to her Majesty's Government, and those who are willing to take an unprejudiced view of all the circumstances and events. As regards the military and naval officers, I feel assured that they will be able fully to explain and justify occurrences which, from being insufficiently narrated, at present may appear to be of a somewhat doubtful character; and if in some of the details unavoidable irregularities or improprieties have occurred, the general nature of the operations will be found to have been just and necessary, and consistent with the high character so deservedly enjoyed throughout the world by British soldiers and sailors. I must ask your indulgence for any shortcomings in my correspondence, or for any omissions to transmit any documents which you may have thought ought to have reached you, as well as for the delay which must necessarily take place in procuring for you replies to the inquiries which you have made. During the existence of the rebellion there was no time to examine critically the hurried reports which were submitted to me for a very hasty perusal, and I had no reason for supposing that any unjustifiable acts were being committed. I have also stated in former despatches that nearly all these reports were transmitted to you immediately on their receipt, and that I had no copies of them, or any opportunity or time for referring to them again until the receipt of your despatches made it necessary for me to call for fresh copies. For the last ten weeks I have had an overwhelming pressure of work arising from the rebellion, and from the arrangements having to be made for the safety and tranquillity of the island; from the labors incidental to a most important session of the Legislature, under which a total alteration of the constitution has been effected; from all the ordinary current business of the island, and from the correspondence connected with the subordinate Governments of British Honduras and Turks Island. There has scarcely been a day, Sundays even not excepted, that I have not labored from ten to sixteen hours, and often have been called up in the middle of the night to do so also. This pressure and the anxiety attending my position have seriously affected my health, and I am sure that you will therefore view favorably any deficiencies which may have occurred in my correspondence relative to the late occurrence.

The third series of despatches is less important than the second. Gov. Eyre transmits two more addresses to himself from the inhabitants of the parishes of Manchester and Trelawny, referring to the riot at Morant Bay as a diabolical rebellion, and his replies, in which he states that these addresses will show her Majesty's Government that the foul aspersions of the English press are undeserved. He also forwards a despatch signed by five Missionaries of the Wesleyan, London, and Baptist Societies, in which, after expressing their unfeigned attachment to the Queen's person, the petitioners say: "We deeply lament the lawless and ferocious outbreak, which, as your Majesty must have been given to learn, took place in the eastern district of this island in the month of October last," and readily acquiesce "in the righteous condemnation and punishment of all who were wickedly concerned in it." At the same time, however, having been pained by the rumored cruel and barbarous proceedings of some of those who were engaged in the suppression of the riot, the petitioners implore the Queen that she "may be graciously pleased to direct a full and impartial investigation, by a special commission from England, to be made into the

matter, and also into the reasons for the allegation that there is scarcely a district or a parish in the island where disloyalty, sedition, and murderous intentions are not widely disseminated, and, in many instances, openly expressed, and that a seditious and disloyal spirit pervades the entire island."

In another despatch, Gov. Eyre, referring to Mr. Cardwell's inquiries respecting the manner in which Dr. Underhill's letter obtained publicity in the colony, denies Dr. Underhill's statement that he (Gov. Eyre) published it, and states that it is not surprising, considering the number of persons in whose hands the letter was placed for remark by the Governor, a copy should have got abroad.* The despatch covering the memorial of the missionaries, dated January 8th, is the last bearing Gov. Eyre's signature. On the same day Sir Henry K. Storks encloses the proclamations he issued on assuming office.

The despatches from Mr. Cardwell are fourteen in number, and are chiefly interesting on account of their enclosures. Among the latter is a letter to Mr. Cardwell from Mr. F. A. B. Vinen, complaining that he was arrested at Kingston without warrant or reason assigned, that not a semblance of a charge was ever made against him, that he was kept in prison, his health injured, and his practice broken up, and all this although he had carefully held aloof from public affairs. In two other despatches Mr. Cardwell disallows two Acts of the Jamaica Legislature, one establishing whipping as a punishment for larceny, and another enabling magistrates to "apprentice" persons under the age of sixteen convicted of petty larceny. Mr. Cardwell transmits to Sir Henry K. Storks a copy of a petition to the Queen from the inhabitants of the parish of St. Thomas-in-the-East, dated five weeks before the riots which broke out there, and which is as follows:

ST. THOMAS-IN-THE-EAST, Sept. 5, 1865.

To the Queen's Most Excellent Majesty:

We, your Majesty's most dutiful subjects, the freeholders of St. Thomas-in-the-East, Jamaica, having been informed that your Majesty has been pleased to investigate in the state of this island by some informations have been laid before the throne, upon which investigation the planters complain that the black people are lazy, and will not work, unto which we most humbly beg to implore your Majesty's attention to our humble communication. The planters give us thirty chains for our day's task, which we are unable to finish. We must state that when we were slaves we never had such heavy work, and after having finished those number of chains, with the expectation at the end of the week to obtain the amount of 6s., we generally gets 1s. 6d. to 2s. 6d. for the whole week's pay, which can't purchase us one day's food. Can this support our family? The island has been ruined, consequently, of the advantage that is taken of us by the managers of the estates. Another subject, which we most pitifully begs to implore your Majesty's attention. Whenever we have a case which may be taken before the planter magistrates they gives us no satisfaction whatever, but combines

* The Jamaica newspaper in which the letter first appeared, stated that it had received it from one of the custodes.

with each other and takes away our rights. We must humbly beseech your Majesty that it may please your Majesty to appoint a stipendiary magistrate to sit at every court-day, as may enable us to obtain satisfaction. We have also to state that consequently the island has been abolished, all the sugar estates, coffee mountains, feeding and grazing farms, that were in cultivation in former days, have been thrown up, which has actually brought a famine upon the lands. There are many young persons that were from respectable connections have suffered very great adversities by not having to do, whereas if all those properties were in cultivation they could have had something to do. We pray that it may please your Majesty's grace to send the Americans to cultivate those thrown up properties, as may enable us to get something to do. All we ask is, that your Majesty may be pleased to consider over the state of this island, and render the poor some assistance. And that your Majesty's life may be long spared, and that the blessings of those ready to perish may rest on you. This is the sincere wish of your most humble petitioners.

(Signed)

ANDREW ROSS.

(And thirty-nine others).

JAPAN, an empire in Eastern Asia. The name of the Mikado is only known by the imperial princes. He resides at Miaco, in the principality of Kioto. The name of the Tycoon, or Temporal Regent, is Mino Motto; his residence Yeddo. The population is estimated at from thirty-five to forty millions of inhabitants.*

The Paris "Moniteur de l'Armée" gives the following information concerning the Japanese army: "The Japanese army is composed of two distinct elements, comprising:—1. The troops maintained by the feudal chiefs termed Daimios, for the purpose of defending their domains; and 2. The troops maintained by the Tycoon, which constitute the imperial army properly speaking. The number of the Daimios having troops in their service is 200, and these troops form an effective force of 370,000 infantry and 40,000 cavalry. These constitute the federal army, and are placed at the disposition of the Tycoon whenever the independence of the country is menaced. The imperial army usually maintained by the Tycoon was supposed to be 100,000 infantry and 20,000 cavalry, but its effective force did not in reality exceed half that number. The present Tycoon has, however, reorganized it. It will henceforth comprise 80,000 men—in infantry, cavalry, artillery, and engineers. The infantry will be divided into regiments, they will manœuvre like our soldiers, and will also be armed *à la Française*. A certain number of Japanese officers and subalterns have been instructed by us at Yokohama, and are now going to instruct their countrymen."

The European settlements, during the year 1865, made marked progress. According to an English paper published in Japan, the Japan "Herald," a railroad, with a locomotive engine and tender, is now in operation on the Bund, at Nagasaki, and excites a great deal of attention

among the Japanese, who come from far and near to see it. The Prince of Satsuma has planted 40,000 mulberry trees during the past year, a significant fact, which shows his estimation of foreign commerce. He is also making considerable preparations for the improved manufacture of sugar at the Loo-choos, and is reported to have engaged a Scotch overseer to the works there, and imported the latest improved machinery. If reports be true, the local Daimios in the southern portion of Japan are all anxious to open their ports to foreigners, and to give them every encouragement and protection in their trading operations. In Yokohama a chamber of commerce was formed. Letters from that city describe changes made during the past twelvemonth as having been very great. That which was cultivated ground ten months before is now built over with camp huts and hospitals. Latterly the Japanese have made a good carriage road for the English, six or seven miles long, and there may be seen every afternoon all the *élite* of the place, riding, driving, or walking. Six months before there was not a carriage to be seen. The French Government decided to establish in Yokohama an arsenal.

According to a report of the British Consul, the value of the imports and exports of the three ports opened to foreign trade was, in the year 1863 and 1864, as follows: Imports for 1863, £755,871; exports, £1,667,741. Imports for 1864, £1,879,757; exports, £2,788,004.

The movement of shipping was, in 1863, as follows: Entered, 170 vessels (100 British, 40 American, 18 Dutch, 8 German, 7 French, 2 Russian); together, of 64,328 tons: Cleared, 168 vessels, of 61,210 tons.

The relations of Japan to the foreign Powers underwent, in the latter part of the year 1865, a most important change, which was expected to be the final death-blow to the exclusive anti-foreign policy of the Japanese Government. The representatives of Great Britain, France, and the Netherlands, being unable to obtain the fulfilment of former treaties, and their ratification by the Mikado, a fleet, consisting of five English, four French, and one Dutch vessels left Yokohama, on November 1st, for the Inland Sea. The British, French, and Dutch Ministers accompanied the expedition. The following account of the progress and result of the expedition is taken from the "Japan Market Report," which declares to have received it from an unquestionable source: "The Tycoon and his government had information (more or less) of the intention of the foreign representatives to visit Osaka. On the arrival of the fleet, the Tycoon was at Kioto, awaiting the final orders of the Mikado respecting Nagato. On the very day on which the foreign ships dropped anchor off Hiogo, he received a *djeen baori* (war dress) and a *tatchi* (war sword). The foreign ministers at once sent officers to Osaka to take to the Gorogio letters, in which were stated the requirements of the treaty

* For further information concerning the Government, commerce, etc., compare Art. JAPAN in the ANNUAL CYCLOPEDIA for 1864.

powers, viz.: 1st. The ratification of the treaties by the Mikado. 2d. The opening of Osaka and Hiogo. 3d. The revision of the tariff. Two or three days afterwards the members of the Gorogio came themselves to Hiogo, and had an interview with our ministers. After relating what had been done to induce the Mikado to sanction the treaties, after having repeatedly asserted that without this sanction the execution of the treaties was almost impossible, they added the declaration that the question was a very dangerous one, on account of the hostile feelings entertained by many toward foreigners. At the close of a very long conference, the Gorogio promised to add their exertions to those of the Tycoon, and spare no trouble to obtain this sanction, which, they said, was 'as necessary to the Tycoon himself as to the foreigners.' Accordingly, the following day high officials were sent to Kioto; and meanwhile the officers of the various legations were at work at Osaka, busily employed in explaining and illustrating the intentions and fixed resolutions of the representatives. Our ministers considered that a prompt and energetic diplomatic action was requisite to effect the desired end. The Gorogio called again, and agreed with the ministers that the utmost efforts of the Tycoon and his government were indispensable, and that no time should be lost in discussing the matter with the council of the Mikado. Ten days were then given for a final reply. Whilst these negotiations were going on at Osaka, Kioto was in an indescribable state. Emissaries of the Daimios rushed in to counter-order the departure of the Tycoon. The Ronins made horrible threats against the life of the Tycoon, and even of the Mikado himself. The Mikado begged that the men-of-war should be removed at once, and declared he would not sanction the treaties. He then ordered the removal of Abe Bouno no Kami and Matsmai Idzumi no Kami from the Gorogio, and took from them their title of Kami. These two Daimios were ordered at once to retire to their dominions, and to express their regret for the favor they had shown to the foreign cause. The Tycoon and his government were stupefied at this unexampled audacity of Kioto; they thought that from such an act to the deposition of the Tycoon by the Mikado the distance was small. Osaka and Kioto were in a state of revolution. The foreign representatives were informed of all these changes, but they became more determined than ever, encouraged by the Tycoon and his ministers. A letter, which we hope we shall be permitted to publish in a few days, was to be sent to the Mikado. In this letter the Tycoon offered to retire, and begged that the Tyconate might fall into the hands of Stots-bashi, and the command of the army he intrusted to his relatives, the Daimios of Owari and Kichou. In order to prove to the Mikado and his court that he was in earnest, he ordered the eight Japanese steamers, at anchor before Hiogo, to move at once to Osaka, to be

ready to convey him to Yeddo. Happily this letter was stopped, and the Tycoon was told that it was a shame for himself, and a disgrace to his ancestors, to abdicate, when he was at the head of an army numbering 300,000 men—and to yield to a miserable faction, tyrannizing over the Mikado and his council. Another most remarkable document, which we shall probably be hereafter authorized to publish, was at once prepared and despatched to Kioto. In this masterpiece of Japanese literature the Tycoon entreats the Mikado to give his sanction; and, to support his diplomatic note, he moved with 34,000 of his best troops to Fouchimi, about eight miles from Kioto. There he sent for some members of the Mikado's council; but the reply was, that the emissaries of hostile Daimios and the Ronins were in such a rage that it was unsafe for them to undertake the journey. The Mikado, indeed, gave the Tycoon to understand that his presence was necessary to protect his own sacred person. The Tycoon at once proceeded to Kioto, with 2,000 troops, ordered some Daimios' officers, apparently Ronins, and in the employ of high members of the Mikado's council, to be apprehended, and assembled all the representatives of the Daimios actually at Kioto. The excitement was great—the crisis fearful. The officers of the legations sent to Osaka, on a special mission, met only the stern and sorrowful faces of the Tycoon's followers, all more or less ready to perform the hara kari, should the Tycoon be compelled to retire. This painful excitement lasted three days. The representatives of the four powers, almost hourly informed of the state of affairs, were during all this time busily engaged day and night. The Japanese fleet was now ordered to leave Hiogo and Osaka, and take refuge in the Bay of Youra. The crisis was hourly approaching. The member of Gorogio, Ogasawara Iki no Kami, throughout the whole of the night of the 22d November discussed with thirty-six deputies of the Daimios the question of the sanction of the treaties. He succeeded in persuading them; but there were invisible enemies round the Mikado, and he himself feared for his life. At last, all the members of the Gorogio, the great metisks and high officials of the Tycoon, with Stots-bashi at their head, called on the Mikado, and prostrated themselves at his Majesty's feet. The Mikado was moved; but messages containing threats were brought in every minute, and the Sacred Emperor was still hesitating, when all the high officers declared they would die at once, should they not obtain what they had been sent for. Stots-bashi went so far as to take hold of the sleeve of the Mikado, respectfully swearing that he would not loosen his hold until his Majesty sanctioned the treaties. Finally, Kuambaku, the first officer of the Mikado, was directed to bring him the Book of the Irrevocable Wills—and the sanction was given. The change was instantaneous. Where all was fear and distrust, confidence and resolution became triumphant.

All congratulated each other on the issue of their patient labors—all expressed the strongest confidence in the future, and they could well say with the utmost truth, 'We have accomplished a good and a great work.'"

The accuracy of some parts of the above account has been questioned by some of the English papers of China and Japan, and later reports from Japan state that it was even doubted whether the Mikado had really ratified the treaties at all; but the Governments of England and France officially announced the fact, and seemed to be determined to enforce, if necessary, the treaties.

The representatives of the foreign Powers in Japan expected that the opening of the ports of Osaka and Hiogo would prove to be of more consequence than all the other privileges conferred by the treaties. Osaka is a very large town, covering a semicircle of nearly ten miles, at the eastern end of the Su-Wo Nada, or Inland Sea of Japan, and at the mouth of the river Engawa, which runs down from Miaco, the residence of the Mikado. Large white palaces, surrounded with trees, are scattered through it, and the thick line of junks constantly pressing into the river indicates that its trade is already very great. It is the port of Miaco, and by far the largest commercial emporium in Japan; but large vessels would have to anchor a considerable way off the shore, and would be exposed to the winds blowing up the Inland Sea. There are too many Daimios residing in this city, and the native population is too dense, to render it a desirable place of residence for foreigners. Hiogo is situated in a small protected bay at the feet of some fine mountains on the north shore of the Su-Wo Nada, and about twelve miles distant from Osaka. Large vessels can anchor off it, within biscuit-throw of the

beach; and were the bay only a little larger few places in the world would be more convenient for shipping and transshipping goods. The climate is exceedingly healthy, and the beautiful series of sea lakes in the neighborhood will afford fine opportunities for yachting.

One of the results of the above expedition is said to have been a more accurate knowledge of the true authority of the Tycoon, who, it is said, is not *the*, or *a*, Temporal Emperor of Japan, but a Daimio, who holds an hereditary office and rank, which has been for two hundred years vested in his office. He is almost always a son-in-law of the Mikado, a distinction of which only a few in Japan can boast. Being now able to negotiate on a clear basis, and having approached so near the capital of Japan, the foreign representatives expect greater stability in trade, as well as general advancement for the future.

Two new embassies were sent, in 1865, to Europe. The one to France, consisting of six members, was represented by the Paris "Pays" as coming to visit the arsenals, and study the questions relating to the armament and defence of forts, as well as to purchase all that is required for the arsenal which is to be established by the Tycoon at Simonosaki. The other, sent to England by the Prince of Satsuma, consisted of two officers of high rank, an interpreter, and eleven young men of good family and education, who are to remain in England for some years, in order to acquire a knowledge of the English language, and an insight into the literature, arts, and sciences which form such important elements in European civilization. For this purpose they were placed in the care of Professor Williamson, of the London University, under whose able guidance their studies were at once begun.

K

KANSAS. The Legislature of Kansas met on January 12, 1865, and was organized by the choice of Republican officers in both branches by large majorities. Samuel J. Crawford was at the same time inaugurated Governor for the term ending in January, 1868, succeeding Thomas Carney, the previous incumbent of the office. The only elections held during the year were for members of the Legislature, which resulted largely in favor of the Republicans. More than half of the successful candidates, it is said, were persons who had served in the late war. In January the Legislature reelected James H. Lane U. S. Senator for six years from March 4, 1865.

The liabilities of Kansas for the year ending November 30, 1865, were as follows:

Amount of 7 per cent. bonds.....	\$204,000 00
" 6 per cent. funding.....	54,400 00
" 7 per cent. military.....	93,000 00
" 6 per cent. bonds, refunding taxes...	89,675 00
State warrants outstanding.....	50,455 92
Territorial warrants.....	10,962 11
Military.....	5,920 69
Penitentiary bonds.....	50,000 00
Total.....	\$517,413 73

The resources of the State at the same date were—

Liabilities for the year ending November 30, 1865.....	\$517,413 73
Amount of uncollected State tax.....	\$101,536 74
Territorial (uncertain).....	71,050 83
State military expenditures, General Government.....	100,000 00
Taxes levied for 1865.....	216,756 79
Due from General Government.....	12,352 00
Funds in the treasury.....	26,079 21
Territorial funds.....	85
	<hr/> 527,776 42

Balance of resources..... \$10,863 70

The State Auditor's estimate of current expenses for the year 1866 was \$93,738.10. The interest on the public debt and sinking fund, amounting to \$43,351.86, added to this, would make an aggregate of \$137,089.46 to be provided for.

In May, 1865, a census of the State was taken as a basis for a new apportionment. In all the counties but three, from which complete reports had not been received at the close of the year, the population was 135,807 against 100,749 in

1860, showing a gain of 35,058 in five years. In four counties there was a slight decrease of population; all the others showed an increase, varying from nearly a hundred per cent. in Leavenworth and Douglas Counties to two or three per cent. in Davis and Marshall. The above figures, however, do not adequately represent the population of Kansas at the present time. Since the census was taken the greater part of the volunteer soldiers from the State have returned to their homes, and the annual immigration, larger than for several years, is also to be taken into account. From these sources and from the natural increase, it is fair to suppose that the population has received sufficient accessions to bring it up to 150,000, a gain of fifty per cent. over the census of 1860.

Kansas furnished to the war seven regiments of infantry and nine of cavalry, and three batteries, all composed of white troops; also two colored regiments of infantry and one colored battery, making an aggregate of 19,584 men, classified as follows:

Original enlistments.....	13,881
Recruits.....	4,864
Veterans.....	777
Veteran recruits.....	40
Recruits in veteran organizations.....	173
Drafted men.....	102
Substitutes.....	258
Total.....	19,584

In addition to these, 228 men were enlisted in organizations not belonging to the State in 1865, bringing the aggregate of enlistments up to 19,812; and there were 3,190 men belonging to other States enlisted in Kansas organizations, which makes the grand total 23,002 men, equivalent to nearly a fourth part of the entire population at the commencement of the war. The entire vote of Kansas in 1861, as shown by the returns, was 11,971, and the entire vote by the returns of 1864 was 20,835, whence it appears that the State furnished nearly double as many soldiers for the war as the entire voting population in 1861, and almost as many as shown by the returns of 1864. On this subject Gov. Crawford remarks: "The State has furnished the Federal army more troops in proportion to her population than any other State in the Union; and the entire militia was always in readiness for immediate action in the field, and was all engaged in rendering efficient service in repelling the rebel army under Price from our border; and upon several occasions regiments and independent companies were in actual service, defending the border and frontier." A partial report of a Board of Commissioners appointed "to audit claims arising out of the Price raid in 1864," gives the following amounts:

Services rendered by regular and irregular militia.....	\$177,817 04
Material furnished.....	80,818 94
Transportation.....	14,846 46
Damage sustained.....	91,770 83
Miscellaneous.....	32,687 77
Total.....	\$396,941 04

The geological survey of Kansas by Professor

Swallow had not at the close of 1865 extended far beyond the southern and eastern portions of the State, but the results of his partial examinations indicate resources which can scarcely fail within a few years to build up a prosperous commonwealth. The soil is of a richness unsurpassed in any part of the territory of the United States, and capable of many years' culture before being exhausted; and the climate is healthy, and well calculated to cure many of the diseases prevalent in the Eastern States. The popular impression that a sufficient quantity of rain for agricultural purposes does not fall in Kansas is asserted to be entirely erroneous. From records kept at the military posts it appears that during the last forty years there has been a sufficiency of rain except in 1860; and the drought of that season would have been less severely felt had Kansas been provided, like the older States, with a surplus of food from former years. The coal formation of the State is of great extent and richness. One vein alone, having an average thickness of six feet, extends over an area of 17,000 square miles, and it is estimated will yield a hundred thousand million tons. There are besides this a number of others ranging from one to five feet in thickness. The central and western portions of the State contain apparently inexhaustible beds of gypsum, varying from fifteen to one hundred feet in thickness, and the value of which is incalculable. Of not less importance than the coal veins are the beds of iron ore which underlie a large portion of Kansas, and which are capable of producing a fine quality of metal. In several rivers in the southern part of the State which were explored by Professor Swallow, the crude ore had washed out from the banks and was scattered in their beds in enormous quantities. Kansas has also rich deposits of lead, and in several counties traces of petroleum have been discovered.

With a view of developing these great agricultural and mineral resources, the people of the State are now actively employed in establishing railroad communications with the Eastern and Pacific States. By the close of the year nearly fifty miles of the eastern division of the Union Pacific Railroad, which commences at Wyandotte, at the mouth of the Kansas River, and is destined to connect with the main line in western Nebraska, were completed. Surveys have been extended to the one-hundredth meridian, a distance of about three hundred and eighty-one miles, and there is now a party in the field making surveys of the Smoky Hill route, who are to extend their labors to Denver City, about five hundred and eighty-one miles from the eastern terminus of the road. The Atchison branch of the Union Pacific road is also well under way, and the first forty miles, it is supposed, will be completed by May 1, 1866. In addition to these enterprises, projects are already advanced for lines terminating at Galveston, on the Gulf of

Mexico, and Santa Fé. The troubles incidental to the first settlement of Kansas, the exigencies of the late civil war, and more recently the disturbances caused by the neighboring Indian tribes, have hitherto prevented the execution of any of these projects; but it is supposed that they will now be prosecuted with a degree of vigor which will insure their completion at no distant day. In aid of these enterprises a bill proposing to divide five hundred thousand acres of land, given to the State by Congress, among three railroad companies, has recently been introduced into the Kansas Legislature.

An important branch of industry in Kansas promises to be the production and manufacture of wool. A large portion of the State is well adapted to sheep-raising, and so profitable has this already proved that woollen mills are now in process of erection in Atchison. In addition to the stock now in the State, it is estimated that during 1866 from 75,000 to 100,000 sheep will be imported from various parts of the Eastern and Middle States.

Besides the great capabilities of Kansas for agricultural purposes, stock-raising, and wool-growing, she has another source of wealth, in relation to which but little is known, in the salt springs, which exist above Fort Riley, in the valleys of the Republican, Solomon, and Saline Forks. So abundant are these surface brines, and of such uncommon strength, as sensibly to affect the quality of the large streams of water which run through those valleys and empty into the Smoky Hill. These salines, which are of great benefit to the stock-raiser, whose flocks and herds require no salting, as in the Eastern States, have their centre, probably, near the confluence of the Solomon and Smoky Hill. This fact, however, can be determined only by sufficient borings. While the strength of the brines in this section has not as yet been tested from the wells beyond the influence of fresh water, there is little doubt as to their great strength and purity at a limited depth below the surface. This is evident not only from the geological features of the country, but from the great strength of the surface brines, and also from the incrustations of pure salt on the top of the ground, covering hundreds of acres, from three-eighths to half an inch in thickness. These remarkable formations come from brine oozing up from below, and not from surface flowings. The whole subsoil seems thoroughly impregnated with a constant upward tendency, so that crystallization succeeds crystallization on the removal of the salt already formed. Ordinary wells in this region, sunk from 25 to 30 feet below the surface, produce a brine more than three times the strength of sea-water, and from which a salt of remarkable purity is obtained. Chemical analysis proves that the brines of Kansas contain less than four percent. of impure matter, showing in this particular a marked superiority over those of New York, Michigan, and other States. The dryness of the climate is also a favorable circum-

stance in aid of the successful manufacture of salt by what is now considered the cheapest and best method, evaporation. From these facts the conclusion is evident that Kansas is destined to become one of the greatest salt-producing States of the Union.

Early in October a convention of colored men met in Leavenworth for the purpose of memorializing the Legislature to submit to the people the question of striking the word "white" from the suffrage clause of the constitution. A resolution was framed to that effect, and the Convention adjourned to meet at Topeka in January, 1866. The Rev. Mr. Twine, a member of the Convention from Atchison, was in favor of asking the Legislature to submit the question in such form as to make intelligence the standard of qualification of suffrage among the colored people. He said he was satisfied that the loyal people of the country were ready to do justice to the colored people, but he did not want to admit to the ballot-box men of color who were wholly uneducated, and who were so ignorant as to be unable to comprehend the duties of citizens. He believed it to be not only the duty of the colored people to modify their action on the suffrage question in this form, but it was policy for them to do so; they would reach the object aimed at far sooner than by asking that all colored men should be admitted to suffrage without reference to their fitness to exercise that high privilege.

KENTUCKY. The effect of the war upon the population of the State of Kentucky is shown by a decrease. Official returns from the various counties previous to the war, made the number of the white males above twenty-one years to be 191,391. The number of white males between eighteen, and forty-five years, called the "Enrolled Militia," numbered 137,211. The returns of the population at the beginning of the year 1865 showed the number of males over twenty-one years to be 169,749, and those between the ages of eighteen and forty-five 103,401; being a diminution in the former case of 21,642, and in the latter, representing the military strength, 33,810. This increased diminution of the latter is accounted for in part by the absence of the soldiers in the Federal armies at the time when the returns were prepared, and by the number who joined the Southern armies, which was estimated between fifteen and twenty thousand.

The enrolment of 1863 by the United States authorities of white males between the ages of 20 and 45 years numbered 112,742; and in 1864 numbered 113,410. The enrolment of "colored" males between the ages of 20 and 45 for 1864 numbered 20,083. Making an aggregate within the military age, of white and "colored" males, of 133,493.

The muster-rolls of the Adjutant-General's office make the number of men furnished by the State to the Federal armies, most of whom were three years' men, to be 63,975 white soldiers, on an enrolment of 113,410. The rolls

in the same office further show that 20,488 colored troops were mustered into the Federal service from the State. In addition, about 5,000 were enlisted preparatory to being mustered in; making the aggregate of colored troops 25,488. The increase in the colored troops above the enrolment was attributed to the disregard of age in their enlistment. Color was considered a sufficient qualification.

Thus, with a white and black population, between eighteen and forty-five years of age, amounting to 133,742, the State contributed to the Federal armies 89,413. Apart from this force, there were employed in the service of the State for various periods 13,526 militia, or State troops.

During the progress of the war, Kentucky expended in aid of the Federal Government, \$3,268,224. Of this sum there had been refunded to the State by the close of 1865, the amount of \$1,109,230. Leaving a balance in favor of the State of \$2,159,994. From this amount there is to be deducted the sum of \$713,695, being the State's proportion of the direct tax laid by act of Congress in 1861. Thus making the final balance against the United States \$1,553,353. In addition to these sums, the State expended nearly one million of dollars in maintaining home troops for local and State defence.

Notwithstanding these extraordinary expenditures, the public debt of the State on October 10, 1865, was smaller than on the same date in 1859, as appears by the following statement:

Amount, October 16th, 1859, of original State debt.....	\$5,698,356 80
Amount of military debt.....	2,212,000 00
Making.....	\$7,910,356 80
Amount of original State debt redeemed.....	\$861,010 00
Amount of military debt redeemed.....	1,795,000 00
Making.....	2,656,010 00
Leaving State debt outstanding and unpaid 16th October, 1865, Of this there is military debt...	\$417,000 00
Original State debt.....	4,887,346 80
	<u>5,254,346 80</u>
Military debt as above.....	\$417,000 00
Military loan from Sinking Fund.....	200,000 00
Military loan from Enrolled Militia.....	20,000 00
Military loan from Farmers and Bank of Kentucky.....	140,000 00
Total military debt, 28d November, 1865.....	<u>\$777,000 00</u>

To meet this indebtedness, the resources of the Sinking Fund are estimated by the Auditor at \$7,510,487.

The assessment of taxable property in the State has steadily declined from 1861 to 1866, until the aggregate depreciation reaches \$109,046,461. This decline has been ascribed to the destruction of slave property, to the reduced rates at which property was held at the date of assessment, owing to the insecurity of person

and property, and to the immense amount swept away by the movement of armies in the State. This steady decline in the value of taxable property is strikingly shown by the following statement from the Tax Commissioners' books:

YEAR.	Land.	Value of Land.	Town Lots.	Value of Town Lots.	Slaves over 16.	Total Slaves.	Value of Slaves.	Horses and Mares.	Value of Horses and Mares.	Mules.	Value of Mules.	Jennies.
1861.....	21,709,858	\$224,056,010	47,471	\$51,508,004	99,483	218,724	\$88,704,682	398,227	\$22,087,718	95,582	\$5,094,521	5,181

STATEMENT CONTINUED.

A system of measures for the reorganization of the militia was commenced during the year. It was intended that each county shall organize a company of good men who would be ever ready to support the civil authorities when any occasion might require their services.

At the commencement of the year many circumstances existed which produced an unsettled condition of affairs in the State. The guerrilla bands were active, notwithstanding the efforts of the Federal authorities to expel them. The question of emancipation was still undecided, and the tendency of the military operations in the State was to demoralize the slave and render him worthless to his master; thus, from interest, bringing him to the side of emancipation. The railroads, especially of the State, were at this time all in the hands of Government agents, and every negro was allowed to pass over them to the borders of the State. The political parties were without organization or a system of policy to be pursued. The Union Convention, which assembled at Frankfort on June 4th, requested the representatives of the State in Congress to vote in favor of the Constitutional amendment abolishing slavery, and expressed its opinion that the slave code of the State should be revised, repealed, or modified so as to be in accordance with the state of affairs in Kentucky. In February Maj.-Gen. S. G. Burbridge, who had been in command of the Federal forces in the State, was relieved, and Maj.-Gen. John M. Palmer appointed to succeed him. The former was in sympathy with the extreme radical men, who were very much displeased at the change. But it was made on other than political considerations, and in compliance with an application from the Governor and Legislature. The State troops had proved most efficient and successful in hunting down guerrilla bands, and met with success where the Federal troops had failed. This success was explained by saying that in fighting guerrillas it would not answer to adhere to the regulations which governed an army. A different school of tactics was required. The outlaws must be fought on their own principles. The soldier educated in his profession feels perfectly lost while engaged in "bushwhacking," which requires a thorough knowledge of the country and great despatch in movements. The retiring General opposed these State organizations, and was not sustained by the Government in his opposition.

The great evils resulting from guerrillas and internal disorders is more clearly manifested by the action of the State Legislature, which appointed a committee to proceed to Washington, to confer with the President and Secretary of War on the defence of the State. Their report was made on February 14th, in which they relate their conference with the Federal authorities. The President and Secretary of War manifested every reasonable desire to extend to Kentucky the protection which the committee desired, and requested plans to be submitted. The committee proposed to raise State troops for the destruction of guerrillas and the pacification of the State, on the ground that the citizens generally were unarmed, and the victims daily of rapine and murder. Discharged soldiers could not go home through fear of being

robbed and murdered. If the militia of the State were called out for the purpose, it was proposed that the Federal Government should arm, equip, supply, and pay them, and a Federal commander should be appointed over them. Again it was proposed that the troops already raised under the sanction of the Secretary of War, should be retained in the service and not disbanded, and Gen. Burbridge had ordered that in future the commander of the district should "be inhibited from interfering with, or controlling any portion of the militia of the State, when in the service of the State, at the expense of the State, and under the provisions of its constitution and sanction of the State Laws." The reply of the Secretary was that a plan for the military administration of the State and for the necessary protection of the people, was a subject to which the attention of the department was earnestly devoted, and no effort would be spared to accomplish the desired object. He further added: "It is obvious that without a concurrence of the Federal and State authorities, little can be done by the Federal Government to relieve the troubles in Kentucky, which, if they do not originate in, appear to be greatly aggravated by, domestic disputes and controversies. While no efforts will be spared, on the part of the Federal Government, to conform its views and action to the pressing exigencies presented by the state of affairs in Kentucky, it is hoped that there will be a cordial disposition to aid those efforts by the State authorities and the people."

The Legislature of the State, however, in March, adopted an act for reorganizing the militia, which it divided into three classes: 1. The active militia; 2. The enrolled militia; and 3. The militia of the reserve. The latter was composed of all white males less than eighteen and over forty-five years of age, and such persons as were otherwise exempt from service in the enrolled militia, and were liable to be called into service only in case of extreme danger.

The active militia was styled the "Kentucky National Legion," and was composed of all companies organized under the act. It was organized into companies, battalions, regiments, and brigades, and could be called into active service by the Governor at any time during the continuance of the war, in case of actual or threatened invasion, or apprehended insurrection and obstruction of the execution of the laws.

The enrolled militia consists of all able-bodied white male residents or citizens between the ages of eighteen and forty-five, except members of the active militia and such persons as are exempt from military service by the laws of the United States or of the State, to be enrolled by the assessor in each county, and recorded by the county clerk, who should, prior to the 1st day of September in each year, make return to the adjutant-general, stating the number of the enrolled militia in the county, and a list of such of them as were members of the active militia. On every enrolled militia-man who does not

become, within ten days after the passage of the act, a member of the active militia, there should be assessed in lieu of military service the sum of five hundred dollars annually, to be collected as the county levy, and to be paid into the State treasury, to be kept as a distinct militia fund. This act was repealed at the extra session in May.

Subsequently, on April 29th, Gen. Palmer issued the following order:

HEADQUARTERS OF THE DEPARTMENT OF KENTUCKY, }
April 29.

The functions of the civil courts in this Department being, to a certain extent, suspended by martial law, makes it the duty of every officer to be scrupulously observant of public and individual safety, and to afford, as far as possible, complete protection to the people.

The power of arrests will hereafter be sparingly exercised, and directed against the real offenders. There is no justice in pursuing foolish people for a foolish word. There is no longer in this Department, hostile to the Government, an organization which deserves to be characterized as a military band. Those patrolling through the country are simply guerrillas and robbers, and are to be treated as such. They will be allowed to surrender for trial.

The people of this Department are to be protected without regard to color or birthplace. Complaints reach these headquarters of the beating of women for claiming the benefit of the amnesty oath, and the act of Congress freeing the slaves of all persons who have been in rebellion against the Government of the United States; and who have aided the rebellion against the Government of the United States; and who have aided or given any comfort to those in rebellion; and the joint resolution freeing the wives and children of enlisted men, and others who have acquired the right under the laws, the executive proclamation, and military orders.

All such persons are under the protection of the Government. Colored people within the laws, resolutions, proclamations, and orders referred to, are free; and, whether free or not, are to be protected from cruelty and oppression in all cases.

When the state of the country and the organization and rules of civil tribunals will permit them to enforce justice, offenders against the local laws will be handed over to them for trial.

In no case, however, will any person or court be allowed to deprive any one of his or her liberty under the acts, resolutions, proclamations, and orders above referred to, or to harass, by persecution or otherwise, those who may desert the enemy, in earning a support or maintaining their rights.

By command of Maj.-Gen. JOHN M. PALMER.
J. BATES DICKSON, Captain, A. A. G.

The disturbance from guerrillas, however, continued until the surrender of the Confederate armies; and on May 1st the old command of Gen. John Morgan surrendered to Brig.-Gen. E. H. Hobson, at Mount Sterling.

The force consisted of about one thousand men and one hundred and five officers, and was commanded by Col. Giltner. For some days they held out against Gen. Hobson's terms, demanding to be received and treated as prisoners of war, to retain all private property, horses, side-arms, etc., to take no oath to support the Government, but return to their allegiance to the United States Government whenever the Confederate Government should no longer claim an existence, or the right to re-

move to some other country, claiming a safe transit thereto.

These terms Gen. Hobson declined to grant, and they not being exactly in a position to dictate terms, finally surrendered unconditionally. The officers, however, were allowed to retain their side-arms. The men appeared as if they had seen hard service, scarcely one having a complete uniform. An order was also issued by Maj.-Gen. Thomas, offering the same terms as those upon which Gen. Lee surrendered. It produced the desired effect. The leaders, Patterson and Norwood, surrendered at Decatur, Ala., on May 3d, and Gen. Roddy accepted the same terms. Col. Malone, at the head of a considerable command near Clarksville, Ky., and afterwards at Springfield, also Harper, in the vicinity of Gallatin, took advantage of the same order. In a short time the invaders entirely disappeared.

On the return of disbanded Southern soldiers to their homes in Kentucky and other States which had resisted the South, the question was at once raised, "whether the Confederate officers and soldiers surrendered under the terms agreed upon by Gens. Grant and Lee had a right to return to their homes in loyal States." The terms of surrender provided for the surrender of arms, the paroles to be given by the officers, etc., and said, "This done, each officer and man will be allowed to return to their homes, not to be disturbed by the United States authorities so long as they observe their parole and the laws in force where they may reside." Nothing is said in this agreement about the locality of the homes of the officers or men. But the Secretary of War soon submitted to the Attorney-General (Speed) this question for his opinion. In reply, he says:

The rebels were dealt with by Gen. Grant as belligerents. As belligerents their homes were, of necessity, in the territory belligerent to the Government of the United States. The officers and soldiers of Gen. Lee's army, then, who had homes prior to the rebellion in the Northern States, took up their residences within the rebel States and abandoned their homes in the loyal States; and when Gen. Grant gave permission to them, by the stipulation, to return to their homes, it cannot be understood as a permission to return to any part of the loyal States.

This was followed by the following order from the War Department:

General Order No. 63.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, April 24, 1863.

The attention of all commanders of military divisions, departments, districts, detachments, and posts, is drawn to the annexed opinion of the Attorney-General, which they will observe, and regulate their action in accordance therewith.

By order of the Secretary of War.

W. A. NICHOLS, A. A. G.

By taking the oath of allegiance the force of the order was set aside, and finally caused no practical restraint.

But the disorganization of labor continued. The inevitable tendency of events was steadily toward emancipation. The negroes were prac-

tically free, although this freedom was unsanctioned by the State. The master could no longer hold his slaves or depend upon their labor for a single day, hence producers could not estimate their crops or pursue agriculture with any certainty. Becoming restless and dissatisfied the slaves would forsake their homes and direct their steps toward the Federal headquarters at Louisville, as the Mecca where freedom might be found. Thus they became outcasts and wanderers. The cities and towns throughout the State were, in the spring, crowded with these refugees from labor, and the numbers still continued to increase. The inhabitants found themselves unable to feed the large surplus population suddenly thrown upon them, and want and suffering soon began to appear, and to be followed by demoralization and crime. By enlistment over 22,000 of the most valuable slaves in the State had gone into the Federal service, and recruiting officers were actually at work to gather up the few thousands of this class still remaining. Even old men and boys were found to be fit for duty in invalid regiments, and were taken, in March from seventy to one hundred men enlisting daily. At this time General Palmer issued the following order:

General Order No. 10.

HEADQUARTERS DEPARTMENT OF KENTUCKY, }
LOUISVILLE, KY., March 12, 1865. }

The General commanding announces to the colored men of Kentucky that by an act of Congress passed on the 3d day of March, 1865, the wives and children of all colored men who have heretofore enlisted or who may hereafter enlist in the military service of the Government are made free.

This act of justice to the soldiers claims from them renewed efforts, by courage, fortitude, and discipline, to win a good name to be shared by a free wife and free children. To colored men not in the army it offers an opportunity to join freedom for themselves and their posterity.

The rights secured to colored soldiers under this law will, if necessary be enforced by the military authorities of this Department, and it is expected that the loyal men and women of Kentucky will encourage colored men to enlist in the army, and, after they have done so, recognize them as upholders of their Government and defenders of their homes, and exercise toward the helpless women and children made free by this law that benevolence and charity which has always characterized the people of the State.

By command of Maj.-Gen. PALMER.

J. P. WATSON, Captain and A. A. G.

At the same time camps of rendezvous for the reception of colored recruits were established at Bowling Green, Covington, Henderson, Maysville, Smithland, Columbus. At an average of five persons, wife and children, per man, there were from three to five hundred made free daily through the instrumentality of the army.

This state of facts was presented as an argument for the adoption by the State Legislature of the amendment to the Federal Constitution abolishing slavery. It was said that the adoption of this measure would quiet the minds of the negroes. Those who had forsak-

en their homes would return, and those still at home would remain to till the soil. While in a state of transition, the present disturbed relations of capital and labor must continue, but by freeing the slaves at one blow and getting at the bottom of the question, it would end. A reorganization of labor could then be made on a new basis. It was further urged that it was clearly the intention and policy of the Federal Government to make every black person in the country free, and to secure to every one his own body and his own labor; and the sooner Kentucky made up her mind to accept the new order of things and to establish labor upon a free and paid basis, the better it would be for her.

In reply, it was admitted as one of the facts wrought out by the war, that slavery must end, and that the proposed amendment to the Constitution was the most direct, practical, and legitimate mode by which to escape the existing and impending evils of an interregnum in labor, a dearth in industry, and a suspension of production. But by thus acting, the people of Kentucky would have to give up what they valued at many millions of dollars, and to overcome the educated habits and prejudices fostered by the country. Kentucky had contributed her proportion with all the Northern States to the war. The emancipation of slaves cost those States no sacrifice of interest, no immolation of habits, no conquest of prejudices, no disturbance of social relations, no breaking up of economical arrangements, no inconvenience or loss whatever. Besides the direct loss to Kentucky, she also incurred the perils, inconveniences, and additional losses which ever result from the sudden breaking up of long and peacefully established social and economical relations and interests.

Notwithstanding all considerations of a military, civil, social, or economical nature that had been raised up, the Legislature of the State, on February 23d, refused by resolution to adopt the amendment. The resolution was sent to Gov. Bramlette for his approval, which he declined to give, as he considered the action of the Legislature complete without his assent, and that the question would only be remitted to their successors. He believed that the amendment would continue an open question until it was finally ratified, and added:

The destruction of \$108,000,000 of slave property by the direct and indirect action of our Government, our unyielding fidelity to our Government, and loyal submission of our people to such action, though we could see no real necessity for or benefit to be derived from such destruction to our national cause, would constitute such strong claim upon the justice and magnanimity of the Congress of the United States as to justify the reasonable expectation that an appropriation would be made to free Kentucky immediately and forever from this disturbing question.

The act of Congress of February 24, 1864, entitled every Union master whose slave enlisted, a compensation of three hundred dollars. This sum was to be awarded by a commission

which "the Secretary of War shall appoint." In pursuance of this law, commissions were appointed for Delaware and Maryland, but none for Kentucky. In January, 1865, the Senate of the United States adopted a resolution making inquiry respecting the appointment of these commissioners as provided; and in response to that resolution, Secretary Stanton said, that, while appointments had been made for Maryland and Delaware, "in the other slave States, by the President's direction, no appointments have yet been made."

The act further provided that the compensation should be paid out of the commutation fund, which in December, 1865, amounted to more than twelve millions of dollars.

The emancipation question continued to be the most exciting topic of discussion in the State, until it was finally settled by the ratification of the constitutional amendment by the number of States required to make it valid. The effect of the agitation, together with the military measures of the Government, upon the value of slave property, caused a decline from \$34,179,246 in July, 1864, to about \$8,350,000 in July, 1865. This was the result of the returns on the books of the tax assessors. On the other hand the friends of emancipation urged as follows:

As to the effect of emancipation in Kentucky, no argument can be so convincing as the rapid increase in the value of real estate in the State of Maryland and the District of Columbia since the abolition of slavery there.

The value of the land in Maryland has enhanced already to an extent that more than compensates for the pecuniary value of the slaves emancipated; and in the city of Washington the increase in the value of real estate and taxable property since the abolition of slavery in the District of Columbia, has been unparalleled and unprecedented. Nor is this prosperity merely apparent and attributable to the inflated condition of the national currency, as some are ready to charge. The gold valuation of real property in the city of Washington is now more than fifty per cent.—perhaps a hundred—greater than it was four years ago. Such also will be the effect in Kentucky. Nor is any thing to be feared from the temporary disturbance to the labor system of our State which the extinction of slavery will effect. The laws of labor, like the laws of trade, will regulate themselves. The freed slave must have bread, and to get it he must work. He will work where his labor is most in demand and best requited, and the cost of his labor to his employer will be much less than it ever has been to his owner. The examples of the States of Indiana, Ohio, and Illinois, where negroes have long performed a large part of the unskilled labor of the city and the country, may be cited in proof of this. Negroes have never been drones upon society there, and they never will be here.

The State election was held on August 7th. The issue was between those who advocated the amendment of the Federal Constitution abolishing slavery, who were termed Unionists, and those opposing the amendment, who were termed Conservatives. The latter, at one of their conventions to nominate a candidate for Congress, thus expressed their views:

That no power has been delegated by the Constitution to the Government of the United States to

emancipate the slaves of any State; that such power is, therefore, reserved to the States respectively, or the people; and that we, as Kentuckians, claim the same right on this subject which has been heretofore exercised by the non-slaveholding States, constituting a part of the United States, and a part of our National Government and Union, and that we are now unwilling to delegate any such power to the Government or Congress of the United States, or in any manner to place it in the power of that body to prescribe the terms upon which the slaves of Kentucky shall be emancipated, and determine the social and political rights they shall enjoy. We are, therefore, decidedly opposed to the adoption and ratification of the amendment recently proposed by Congress to the Constitution of the United States, granting powers to the National Government on the subject of slaves and slavery in the United States.

That the enlistment of slaves to serve in the armies of the United States, and compelling them to serve, is the taking of private property for public use, and for which the Constitution requires that a just compensation shall be made, and we cannot perceive the justice of that policy on the part of the Government which continues the enlistment of slaves when vast armies of white men are about to be discharged; nor can we perceive the justice or the humanity of the policy which congregates thousands of negro women and children, at different posts and camps in Kentucky, to be supported at public expense, when the wives and children of white soldiers actively engaged in putting down the rebellion have not been in any manner provided for.

At the Union Convention at the capital for the nomination of a State treasurer, Gen. Palmer, the Federal military commander, was present, and made an address as follows:

You will receive the assistance of the General Government in the proper use of the Government patronage. I am authorized to say, that I know it is true, that the Administration desires that its powers will be employed for the support of the true Union party of this State. But that patronage must be directed and controlled by you.

The next point is, you will be protected all over the State of Kentucky. To secure this, there must be an active political organization, to the support of which these forces can be directed. It must be active in all parts of the State; and I take it upon myself to say, and I say what I know to be true, that wherever in this State of Kentucky, during the coming canvass, the true, earnest Union men wish to appear and to speak, they shall be protected in speaking. The time has passed, in this country, when free speech is to be understood as the liberty of mouthing treason. If I desired an inscription upon my monument, after I have passed from this earth, it should be, "Here lies the champion of free speech." But that free speech does not imply that the traducer of the Government, and the defamer of the principles upon which it is founded, shall be protected in his lying utterances.

There are a certain class of questions that men may discuss, but there are questions that do not admit of discussion. You have the right to discuss the principles of the Government, and you have the right to freely criticise the actions of every public man, but you have no right, either with the bayonet or with a lying, slanderous tongue, to stab the vitals of the Government; and when the recording angel shall, at the last day, inquire into the conduct of men with respect to the deeds done in the body, the darkest and blackest recorded there will be the lying villainies embodied in words uttered by the friends of the traitors who have brought this war upon the country. I would not judge a man very closely by what he said. I would give him the benefit of a literal construction in the matter of words, but my idea is

that a man has no right to utter treason, not believing it, nor to utter treason, believing it. In one case he is simply a liar, and in the other he is a traitor. In either case those in power owe it to the loyal people of this State that his mouth shall be closed.

The freedom of elections will be maintained in this State. I am for the right of free suffrage to every man who has the right to exercise it. But there are some men who have forfeited that right. I understand that a gentleman from down the river, whose first name is that of the man who sat at the rich man's table, says that he has got the law so passed that shoulder-straps cannot interfere in the elections. Well, the shoulder-straps that would interfere illegally, ought to be taken off. It is true that once in a while the public safety is the law, and it may be necessary to lay the military hands gently upon traitors, that they may not get the advantage of the Union men; but that is an exception, just as the exercise of the right of self-defence is an exception in the case of individuals. The rule is, that the freedom of elections must be maintained and the laws of elections must be enforced. By the laws of your State certain classes of men are not entitled to vote. They are bound to keep the peace; and I am in favor of their continuing in bonds. I would propose that these bonds shall operate in the nature of naturalization laws.

The following order was also issued by the same commanding officer:

HEADQUARTERS DEPARTMENT OF KENTUCKY, }
LOUISVILLE, KY., July 26, 1865.

GENERAL ORDERS No 51.—The near approach of an important election, to be held in all the counties of the State and Military Department of Kentucky, renders it proper in the judgment of the General commanding to require all officers commanding troops to give to the officers of the State, charged by law with the duty of conducting elections, and to the legal voters of the State, the most complete protection.

Martial law prevails in the Department of Kentucky, and certain classes of persons are especially under military surveillance and control. These are:

1. All rebel soldiers, whether paroled or not, and without regard to the fact that they have or have not taken any of the oaths prescribed by law, or executive or military orders, or have registered under orders from the headquarters of the Department of Kentucky.

2. All guerrillas and others who, without belonging to regular rebel military organizations, have taken up arms against the Government, or have in any way operated against the Government or people of Kentucky, or any other State or Territory.

3. All persons who, by act or word, directly or indirectly, gave aid, comfort, or encouragement to persons in rebellion. This applies to all persons who have voluntarily acted as scouts or spies for rebel or guerrilla forces; who have voluntarily furnished any rebel force or person with information, food, clothing, horses, arms, or money, or have harbored, concealed, or otherwise aided or encouraged them.

4. All deserters from the military or naval service of the United States who did not return to said service or report themselves to some provost marshal within the sixty days limited in the proclamation of the President of the United States, dated the 11th day of March, 1865; and all persons who deserted from the military or naval service of the United States after the 3d day of March, 1865, and all persons duly enrolled who departed the jurisdiction of the district in which they were enrolled, or went beyond the limits of the United States to avoid any draft. All persons who were, or have been, directly or indirectly engaged in the civil service of the late so-called Confederate Government, or of the so-called Provisional Government of Kentucky, or who have in any way voluntarily submitted to either of said

pretended governments—all agents or contractors with or for either of the said pretended governments—all such persons are disqualified from voting by the laws of the State of Kentucky and the act of Congress of March 3, 1865. All persons of the classes aforesaid are required to abstain from all interference with elections, and will, if they shall in any manner interfere therein, by voting or attempting to vote, or by persuading any other person to vote, or by appearing at the polls, be at once arrested and held for military trial.

It will be given to the civil authorities to enforce the laws and to preserve the peace. Any person who shall counsel, advise, or encourage any judge of any election, or any other person, to disregard or disobey the law, as declared in the proclamation of the Governor of the State, will be at once arrested. The peace of the country can be secured only by obedience to the law.

By command of Maj.-Gen. JOHN M. PALMER.

E. B. HARLAN, Capt. and A. A. G.

Official: BEN. W. SULLIVAN, Lt. and Act. A. A. G.

Gov. Bramlette also issued the following proclamation:

COMMONWEALTH OF KENTUCKY, EXECUTIVE DEPARTMENT, }
FRANKFORT, KY., July 19th, 1865. }

To the Officers of Elections:

The purity of the elective franchise can only be preserved by a faithful enforcement of the laws governing the same. For their enforcement the officer will be held responsible. Every free white male citizen, twenty-one years of age, who has resided in Kentucky two years, and whose residence has been in the district where he offers to vote for sixty days preceding the election; and each male white citizen who, not having two years' residence in the State, but has resided one year in the county and sixty days in the precinct where he offers to vote, next preceding the election, is entitled to vote; provided he has not expatriated himself and lost the elective franchise by coming within the provisions of the following act:

CHAP. 509.—An Act to amend Chapter 15 of the Revised Statutes, entitled "Citizens, Expatriation, and Aliens."

SECTION I. *Be it enacted by the General Assembly of the Commonwealth of Kentucky,* That any citizen of this State who shall enter into the service of the so-called Confederate States, in either a civil or military capacity, or into the service of the so-called Provisional Government of Kentucky, in either a civil or military capacity, or having heretofore entered such service of either the Confederate States or Provisional Government, shall continue in such service after this act takes effect, or shall take up or continue in arms against the military forces of the United States or the State of Kentucky, or shall give voluntary aid and assistance to those in arms against said forces, shall be deemed to have expatriated himself, and shall no longer be a citizen of Kentucky; nor shall he again be a citizen, except by permission of the Legislature, by a general or special statute.

SEC. 2. That whenever a person attempts, or is called on, to exercise any of the constitutional or legal rights and privileges belonging only to citizens of Kentucky, he may be required to negative, on oath, the expatriation provided in the first section of this act; and upon his failure or refusal to do so, shall not be permitted to exercise any such right or privilege.

SEC. 3. This act to be of force in thirty days from and after its passage.

All persons challenged as coming within the provisions of this law should be required to take the following oath, prescribed by my predecessor, and which is in conformity with the law:

OATH. You do solemnly swear that you have not, since the 10th day of April, 1862, been in the service of the so-called "Confederate States," or in the "Provisional Government of Kentucky," in either a civil or military capacity, and that you have not given, directly or indirectly, voluntary aid and assistance to those in arms against the Government of the United States, or the State of Kentucky, or those who were intending to join the armed forces of the so-called "Confederate States," and that you will bear true and faithful allegiance to said Governments of the United States and State of Kentucky; so help you God.

Absence from the place of residence in the service of the country, or from any other cause where no intention existed to change the residence, will not exclude from voting if present at the election precinct where his residence is on the day of election.

Absence without any purpose of changing the residence, keeps the residence of such person in his voting precinct.

Loyal men throughout the State are requested to report to the Governor any disregard of the expatriation law, either upon the part of officers or citizens, giving the names of the offenders, that they may be proceeded against for such violation. The officer who shall fail to discharge his duty, as prescribed by law, or the citizen who, not being entitled to vote, shall do so in violation of law, should be promptly reported, that the proper steps may be taken for his punishment. These plain words are spoken, that none may act upon the supposition that they will be permitted with impunity to disregard the laws made to guard and protect the purity of the elective franchise, or override the lawfully established sovereignty of the people.

The military authorities will assist the civil officers in the enforcement of these instructions, if any attempt be made to violate them, upon application to the officer nearest in command.

THOS. E. BRAMLETTE, Governor.

The result of the election was, that in the Legislature parties formed a tie in the Senate, while in the House the Conservatives had a majority of sixteen. Of nine members of Congress elected, five were Conservatives and four Unionists. The popular vote for these members was divided as follows: Conservative, 57,562; Unionist, 54,008. The Conservative, candidate, James H. Garrard, was elected State Treasurer.

There were many complaints of the interference of the military with the election, of which a Union paper in Cincinnati, the "Commercial," thus remarked:

It is not becoming that a file of soldiers shall stand before the polls, and that officers of the army of the United States shall hold lists of those who are proscribed, made out by irresponsible persons, and prevent them from approaching the ballot-box. That this was done in Kentucky, there is ample and conclusive evidence; and the flavor of this business is too nearly that of the border ruffian outrages in Kansas, to permit it to be passed in silence by any honest journalist. * * * * *

Persons competent to testify—those familiar with the people—conversant with all the facts and in full sympathy with the Union cause—assure us that in Kenton and Campbell Counties there were many of the best Union men who did not go near the polls, scorning to cast a vote under military surveillance.

The acts of interference with the election were subsequently investigated by the grand juries in several counties in compliance with the laws of the State. Indictments against military officers and others were found in several counties, and in one the number of indictments exceeded a hundred.

Other difficulties arose between the military and civil authorities. In order to relieve some of the towns of the crowds of blacks, Gen. Palmer ordered all common carriers to transport all colored applicants upon the presentation of a pass from the military and a tender of the fare. The laws of the State meanwhile

prohibited, under heavy penalties, the transportation of slaves. This order opened a passage across the Ohio River for large numbers of slaves. In another case the Judge of the City Court of Louisville ordered a slave to be sent to the workhouse, under a law of the State, "until his master should give bail that he would not be suffered to go at large and hire himself out as a free man." Whereupon an order was issued by Gen. Palmer to the keeper of the workhouse, requiring him to release the slave, upon the ground that in the then existing unsettled condition of slavery in Kentucky, the master was practically relieved from his obligation to the law, inasmuch as the penalties of the law were not then ordinarily enforced against the master himself; and further, that as the master had lost his interest in the slave, the confinement of the latter would be perpetual. On another occasion, where the Mayor of Lexington had issued, on October 17th, an order threatening legal proceedings against the owners or claimants of the slaves who had congregated in that city, the General instructed his subordinate in command at Lexington, as follows: "You will inform the Mayor of the city of Lexington that you are instructed to protect the people of his city from the violence he invites; that no portion of them can be seized and removed from that city at the mere will of persons who may choose to call themselves 'owners and claimants;' that, without discussing the question whether there is in point of law any person in the State who can truthfully be called the owner of any other person, that the discharged soldiers and wives and children of soldiers now in the service of the country, are under the special protection of the military authorities, and all the people of the State are presumed to be free, and will be protected as free until orders are received to the contrary.

"It is not our business to suggest the proper policy to be pursued toward these often imaginary congregations of colored persons claimed to be slaves, but I venture to say that if the skill and energy which is employed in devising safe methods of harassing them, was directed to their protection, and finding employment for them, 'the evil' would become of far less 'magnitude.'"

These facts, with many others which are unimportant here, except as they serve to illustrate the condition of affairs in the State, led to an application by the Governor to the President for the removal of Palmer, but without success. A suit was also commenced against the latter in the name of the State, for aiding slaves to escape. This suit, however, was dismissed by the Judge, Johnston, on the ground that the requisite number of States had adopted the Constitutional amendment before the indictment was found, therefore all criminal and penal acts of the Legislature of Kentucky relating to slavery were of no effect.

The following order was also issued by Gen. Palmer on the adoption of the amendment:

HEADQUARTERS DEPARTMENT OF KENTUCKY, }
LOUISVILLE, KY., December 7, 1865. }

The General commanding announces that, though the fact has not been officially announced, enough is known to warrant the statement that the amendment to the Constitution of the United States prohibiting slavery has been ratified by the Legislatures of three-fourths of the States, and is, to all intents and purposes, a part of said Constitution.

Whatever doubts may have heretofore existed on the subject, slavery has now ceased to exist in Kentucky; and with it fall all the laws of the State heretofore in force intended for its support.

General Orders Number thirty-two (32) and Forty-nine (49), and all other orders from these headquarters relating to the issuing of passes to colored people, having become unnecessary, are therefore rescinded. From henceforth colored people will be under the protection of the general laws of the land, and if the owners or operators of boats or railroads shall disregard their undoubted right to travel at pleasure, upon conforming to reasonable regulations, they are advised to apply promptly to the courts for redress. By command of

Maj.-Gen. J. M. PALMER.

E. B. HARLAN, Captain and A. A. G.

WM. W. LEVERETT, A. D. C.

Martial law had been in force in the State by the proclamation of President Lincoln, of July 5th, 1864. On October 12th, 1865, President Johnson revoked that proclamation and restored the civil authority by the following proclamation:

Whereas, by a proclamation of the 5th day of July, 1864, the President of the United States, when the civil war was flagrant, and when combinations were in progress in Kentucky for the purpose of inciting insurgent raids into that State, directed the proclamation suspending the privilege of the writ of *habeas corpus* should be made effectual in Kentucky, and that martial law should be established there and continued until said proclamation should be revoked or modified:

And *whereas*, since then the danger from insurgent raids into Kentucky has substantially passed away:

Now, therefore, be it known that I, Andrew Johnson, President of the United States, by virtue of the authority vested in me by the Constitution, do hereby declare that the said proclamation of the 5th day of July, 1864, shall be, and is hereby modified, in so far that martial law shall be no longer in force in Kentucky from and after the date hereof.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this twelfth day of

October, in the year of our Lord 1865, and of [U. S.] the Independence of the United States of America the ninetieth.

By the President. ANDREW JOHNSON.

WM. HUNTER, Acting Secretary of War.

The removal of martial law led to the following correspondence:

LOUISVILLE, KY., October 15, 1865.

Hon. E. M. Stanton, Sec'y of War, Washington, D. C.:

Since the abrogation of martial law, no colored persons are allowed to cross on the ferry-boats on the Ohio River unless known to the ferry-man to be free. Not more than one in a hundred can cross. What shall I do?

JOHN M. PALMER, Major-General.

Official—E. B. HARLAN, Capt. and A. A. G.

LOUISVILLE, KY., October 16, 1865.

Hon. E. M. Stanton, Secretary of War:

On yesterday ferry-boats across the Ohio refused to carry colored persons on passes issued under Department Orders No. 32.

I have ordered the post commandant here to compel them to do so. The alarm amongst the negroes upon the report of the withdrawal of martial law, of which I have no official information, renders this course necessary. Am I right? Immediate.

(Signed)

JOHN M. PALMER,

Major-General Commanding.

Official—E. B. HARLAN, Capt. and A. A. G.

WASHINGTON, October 20, 1865.

Major-General Palmer:

Your despatches in respect to ferry passes have been very maturely considered, and it is not perceived that the Department can properly interfere.

(Signed)

E. M. STANTON, Secretary of War.

WASHINGTON, October 20, 1865.

Major-General Palmer:

Major-General Thomas having reported in favor of your retaining the command in Kentucky, and approving your administration of the department, the President has approved his report and overruled the application made for your removal.

By order of the President.

(Signed)

E. D. TOWNSEND, A. A. General.

On November 4th, a session of the newly elected Legislature convened. The Governor urged the adoption of the Constitutional amendment, but it was again rejected. The act of expatriation was repealed, and all persons affected by it were restored to their original rights. The condition of the freedmen and their rights became a subject of consideration at a later period of the session in 1866. The authority of the Freedman's Bureau in Nashville, was immediately extended over this class of persons.

The charitable institutions of the State, such as the Eastern and Western Lunatic Asylums, the Feeble-minded Institute, the Deaf and Dumb, and Blind Asylums, continued in operation through the war, but with their means crippled and benefits impaired. The Eastern Lunatic Asylum, whose report is before us, treated during 1865 three hundred persons, being an increase of twenty-four over the previous year. In their experience, the most effectual means of limiting the number of the insane, is to provide ample room for their treatment, which should be commenced without delay. Almost all recover who are submitted to treatment within the first six months. In the experience of the Feeble-minded Asylum, it is found that all of this class are capable, with judicious treatment, of some improvement, however slow it may be, while many can be taught useful trades, and thus enabled at length to support themselves.

KING, DAN., M. D., an eminent physician and author of Rhode Island, born in Mansfield, Conn., January 27, 1791, died at Smithfield, R. I., November 13, 1864. Making a choice of the medical profession, he prepared himself for it by the requisite studies under Drs. Adams and Swift, of Mansfield, and by attendance upon medical lectures at New Haven, and at the age of twenty-four entered upon its practice in the town of Preston, in his native State. After spending five years here and in Groton, he removed to Charlestown, R. I., where he continued for eighteen years devoted to his

profession, and during this period so won upon the respect and confidence of his townsmen, as to be elected to the highest civil offices in their gift. As a magistrate, and as a member of the General Assembly, he served his fellow-citizens from 1828 to 1834, inclusive. These seven years of his political life embrace the period in which efforts were begun and prosecuted to procure the substitution of a liberal Constitution in place of the old Charter. Mr. Dorr was at this time a member of the General Assembly, and with him Dr. King was a prominent actor among those who were the advocates of a new Constitution, and the extension of the right of suffrage. With Mr. Dorr, he took a leading part in the organization of the Suffrage Party. By a convention of this party he was nominated for first senator, at a time when there were only ten State senators, and they elected by general ticket. This was evidence of the high estimation in which he was held by his political friends. Subsequently he was nominated by the same party for Congress. From this time, his active career as a politician ceased. The Dorr War (so called) came on not many years after. In that he took no part. He entirely disapproved of taking up arms to force a Constitution upon unwilling men, even a minority. While in political life, and in office, though chiefly engaged in the cause of a new Constitution, and the extension of suffrage, yet he gave attention to other important and worthy objects. He was an active friend of the remnant of the Narraganset tribe of Indians. He and Mr. Benjamin B. Thurston, afterwards for many years a member of Congress, were appointed by the Rhode Island House of Representatives, of which body they were members, to report a plan of treating and governing the Indians. He drew the report—a paper worthy to be classed among the best of his productions. It was through his influence and active exertions that a considerable annual appropriation was made by the State for the support of a school among these Indians. From Charlestown he removed to Woonsocket, where he pursued his profession for a period of about ten years. From Woonsocket he removed to the town of Taunton, in Massachusetts. After a residence in Taunton of about ten years, he returned to Rhode Island, purposing to retire from the practice of medicine, and soon after commenced writing his "Life and Times of Thomas Wilson Dorr." Upon its completion, finding his greatest enjoyment in the duties of his profession, he returned to it with new zeal. After residing for a short period in Providence, he removed to Smithfield, where he continued to reside until his death. Dr. King was a diligent student, keeping himself thoroughly informed in all that was new pertaining to his profession.

Besides the regular work of his avocation, and the discharge of the civil duties which were devolved upon him by his fellow-citizens, his hours of leisure were devoted to works of pro-

fessional and general utility. He invented a most valuable surgical instrument for the adjusting of fractured bones, which, if patented, would doubtless have been a source of considerable income to him, but which he freely gave for the use of the profession. For many years he was an esteemed and prominent member of the Massachusetts and Bristol County Medical Societies. Before the Bristol County Society, while resident in Taunton, he was repeatedly called to lecture on subjects of medical science and practice.

He also made many valuable contributions to the literature of his profession. Many interesting and important articles from his pen appeared from time to time in the "Medical Journal" and other periodicals. His "Quackery Unmasked," an able and well-written work, was favorably noticed in the "North American Review," and by the "Boston Medical and Surgical Journal," as well as by other medical publications of high authority. "The Life and Times of Thomas W. Dorr, with Outlines of the Political History of Rhode Island," is a work of ability, and gives a faithful outline of the political history of that State. Dr. King was also the author of other valuable books and pamphlets.

KING, HON. PRESTON, an American statesman, and at his death Collector of the port of New York, born at Ogdensburg, St. Lawrence County, in 1806, committed suicide while suffering under a sudden attack of insanity, November 12, 1865. He graduated with honors at Union College, and was in due course of time admitted to the bar of St. Lawrence County. He early developed tastes which led him into politics, and being a strong friend of Silas Wright, and an admirer of Gen. Jackson and his administration, bought and consolidated two newspapers of Ogdensburg, and in 1830 became editor and proprietor of the St. Lawrence "Republican." For a time he was postmaster at Ogdensburg. In 1834 he was elected to the Assembly, and was afterwards reelected three successive terms. In 1845 he was first chosen to a seat in Congress, which he continued to occupy until 1851. During the period of his life which we have reviewed, he acted earnestly and with continually growing influence with the Democratic party, in which he bid fair to become a leader. In 1854 Mr. King thought that he could follow it no longer; and as he had been a Barnburner in 1848, he determined to adhere to the logical consequences of his position, and entered into the organization of the Republican party. He received the Republican nomination for Secretary of State in 1855, supported Fremont in 1856, and was elected to the United States Senate in 1857, where he served a full term, and was Chairman of the Committee on Revolutionary Pensions.

He was a prominent member of the Baltimore Convention of last year, where he took a leading part in securing the nomination of Mr. Johnson, his warm personal friend, for Vice-President.

While the President was residing in Mr. Hopper's house at Washington, awaiting the refitting of the White House, Mr. King was his constant companion, residing in the same house with him. This friendship probably suggested the appointment of Mr. King to the Collectorship of New York.

As a public man, Mr. King had won a high place by his steadfast integrity, frankness, and purity of character. Singularly just, he had always also been singularly firm, and taking positions carefully, had held them against all influences. In Congress he was a calm and reliable legislator, feeling deeply the responsibilities of his office, and acting on the questions presented with great conscientiousness after patient examination. He had the high honor of speaking in the Senate of the United States the first plain word which told the Southern leaders that if they chose war, war they should have.

In mind, temperament, physical constitution, and experience, he was not well fitted for the vast, intricate, and perplexing duties of his last office. Burdened with immense direct responsibilities, overborne by politicians and office-seekers, straining every nerve to give to each relatively petty case the care and attention demanded by the greater, conceiving a false idea of the extent to which he was financially involved, Mr. King was rapidly and fearfully exhausted in the Collector's office. Upon a consultation with a few intimate friends, he had determined to call in Dr. Brown of the Insane Asylum to examine his case, but upon the day appointed for the investigation, in the early morning he procured a bag of shot of twenty-five pounds weight, which he attached to his person by a cord, and proceeding to the Hoboken ferry boat, sprang into the river while crossing. Diligent search was made for his body, but it was not found.

KING, THOMAS STARR, an American Unitarian clergyman, author, and orator, born in New York, December 16, 1824, died in San Francisco, California, March 4, 1864. His father, Rev. T. F. King, was a Universalist clergyman, of very decided ability, but died in the prime of life; and Thomas, at the age of twelve years, while fitting to enter Harvard College, found himself the principal support of his widowed mother and family. From the age of twelve to twenty he was constantly employed either as a clerk or schoolmaster, studying theology at every leisure moment, and in September, 1845, he preached his first sermon in Woburn, Mass. The next year he was settled over his father's former charge, in Charlestown, whence he was called in 1848 to the Hollis Street Unitarian Church, Boston, where he preached with great acceptance and a constantly increasing reputation till April, 1860, when he accepted the call of the Unitarian Church in San Francisco, to become their pastor. He had acquired, meantime, a very high reputation as an eloquent and effective lecturer, and had every year, from 1845 to 1860,

addressed large audiences in all the Northern States. On his arrival at San Francisco he entered at once upon his duties with a zeal and energy which won the hearts of the people. Every man found in him a brother and friend, and ere long he was as thoroughly identified with California interests as if his whole life had been spent there. His congregation increased in numbers and power with great rapidity; but he was a preacher for the whole city and State, and crowds hung upon his eloquent utterances and his bold, earnest words. When the war commenced, he found California in a hesitating position. Southern interests and Southern views were strong, and it would have required but little effort to have carried the State over to the South. Mr. King flung himself into the breach, and by his eloquence and earnestness saved the State; and when the Sanitary Commission was organized, he first set in motion, and through the next three years pushed forward the efforts in behalf of the sick and wounded soldier, till he had the happiness of knowing, before his death, that California had contributed more than six hundred thousand dollars for that noble object. His labors in this cause, added to his pastoral duties, were too severe for his strength, and in March, 1864, he was attacked with diphtheria, and died, after a very brief illness. Mr. King published, in 1859, "The White Hills, their Legends, Landscapes, and Poetry," and subsequently, several discourses and addresses.

KNIGHT, JONATHAN, M. D., an American surgeon and professor of surgery, born in Norwalk, Conn., September 4, 1789, died in New Haven, Conn., August 25, 1864. His father, Dr. Jonathan Knight, after serving as surgeon's mate in the army of the Revolution, settled in Norwalk, and practised there for nearly fifty years. His mother was the daughter of Dr. Asahel Fitch, of Reading, Conn. Young Knight prepared for college under the tuition of Rev. Matthias Burnett, of Norwalk, and entered the Sophomore class in Yale College in its last term, May, 1806, graduating September, 1808, giving the Latin salutatory at the commencement. For the next two years he taught in Norwich and New London, and in September, 1810, was recalled to New Haven as tutor. He occupied this position one year, but his predilections, alike from his own taste and from hereditary bias, for the medical profession were strong, and having already commenced the study of medicine, he attended two courses of lectures in the University of Pennsylvania, in 1811-'12, being at the same time a private pupil of Dr. Rush. He was licensed to practice by the Connecticut Medical Society, in August, 1811, and received the honorary degree of M. D. from Yale College in September, 1818. He commenced practice in New Haven in April, 1813, and the same year was appointed Professor of Anatomy and Physiology in the newly organized Medical Institution of Yale College. His first course of lectures was given during the win-

ter of 1813-'14, and he continued in that chair until 1838, when, on the death of Dr. Thomas Hubbard, he was elected to the Professorship of Surgery, which he adorned for more than twenty-five years, resigning in May, 1864, but was immediately appointed Professor Emeritus. His connection with the Yale Medical School was thus of more than fifty years' duration. For about twenty years of this period he also gave a course of lectures on anatomy, physiology, and hygiene, to the senior class of undergraduates. As a lecturer upon anatomy he was remarkably clear and concise, fluent, and elegant. As a lecturer upon surgery, it was generally acknowledged that he had no superior in this country. His definitions and diagnosis were so pellucid, his language expressed with such clearness his line of thought, and in every case he had chosen with such unerring accuracy the word which embodied exactly the idea he wished to convey, without redundancy and without obscurity, that his lectures might safely have been taken as models of elegant composition. Yet these lectures were delivered without notes, or at most with but a mere brief, indicating the topics to be discussed.

As a surgeon he was distinguished rather for the possession of a sound and discriminating judgment, than as a brilliant operator, though, when he deemed an operation necessary, it was always skilfully and carefully performed. He always preferred, however, to avoid an operation as long as it was possible to do so, setting a higher value upon conservative than upon maiming surgery. Dr. Knight was a man of high intellectual culture, of fine sensibilities and sympathies, but not demonstrative in his feelings or ardent in his attachments, except to the few congenial spirits to whom he unveiled the inner sanctuary of his heart. While always kind and courteous in his manner, he was taciturn and reserved in conversation, except among his most intimate friends. He was constitutionally conservative in his temperament, and modest and retiring in his manners, yet he had a just appreciation of his own powers; and such was his ease and self-possession, his tact and readiness for any emergency, that he was never thrown into a false or embarrassing position. His acknowledged standing at the head of the surgeons of his State, often brought him into the witness-box of courts of justice as an expert—a position among the most trying of all in which a medical man is liable to be placed, and in which even those justly eminent have frequently failed to do credit to themselves or to their profession. But by no artifice of cross-examination could Professor Knight be thrown from his mental equipoise, or inveigled into stating an opinion as a fact, or accepting crude hypothesis as the well-grounded result of experiment; nor could any perversity distort the truth of his clear and guarded statements, while the most audacious and unscrupulous of barristers respected his gentle dignity. The Convention which met in New York in May, 1846,

to form the American Medical Association, did itself honor in calling Dr. Knight to preside over its deliberations, a post for which he was admirably qualified both by his skill as a presiding officer and the extent and profundity of his medical attainments. The Association itself in its seventh year, 1853-'54, made him its president. He was for many years, and until his death, President of the Board of Directors of the General Hospital Society of Connecticut, and during the whole period was either an attending or a consulting surgeon of the hospital, freely giving his time and services to that excellent charity; and in 1862 was influential in establishing at New Haven the United States Military Hospital, which very appropriately bears his name. When the first instalment of sick and wounded soldiers reached the hospital, then in an unfinished state, he labored incessantly and far beyond his strength in dressing their wounds and promoting their comfort. He was a staunch, unflinching patriot, a friend of liberty, and firm supporter of the Government.

His great worth was fully appreciated by his fellow-citizens, and there was no office in their gift which he could not have received if he would have accepted it, but his modesty led him almost invariably to decline such honors. He had been for some years a sufferer from disease of the kidneys, but had kept his pain, which was at times intense, to himself, and it was not until the summer of 1864 that he yielded his active habits and lay down upon what was to be to him the bed of death. His last illness was protracted, and at times intensely painful, but he maintained the unflinching fortitude which had been his characteristic through life, and with more than resignation, with the triumphant mien of the Christian hero, he met the last enemy.

KOLLOCK, Rev. SHEPARD KOSCIUSCO, D. D., an American Presbyterian clergyman, born in Elizabeth, N. J., June 29, 1795, died at Philadelphia, April 7, 1865. Both in the paternal and maternal line he was descended from the Huguenots of France, and his ancestors were driven by persecution into Germany. In 1811, when but little over sixteen years of age, he graduated from Princeton College with high honors, and soon after, becoming deeply interested in the subject of religion, entered upon the study of theology under the direction of Rev. Dr. McDowell, and subsequently that of his brother, Dr. Henry Kollock, of Savannah. In June, 1814, when scarcely nineteen years of age, he was licensed to preach the Gospel, and from the first his labors were exceedingly blessed. After preaching awhile in Georgia, he visited North Carolina, and soon after was called to become the pastor of the Presbyterian Church in Oxford, where he was ordained in May, 1818. Having served this church and other parts of the country with zeal and acceptance, he was chosen Professor of Rhetoric and Logic in the University of North Carolina. In 1825 he was called to the Presbyterian

Church of Norfolk, Va., where he labored for ten years. He then returned to New Jersey, and was for three years the successful agent of the Board of Domestic Missions. After this he became pastor of the Presbyterian Church, Burlington, N. J., and subsequently took charge

of the church in Greenwich, West Jersey. In 1860 he removed to Philadelphia and accepted the position of preacher to the benevolent institutions of the city, faithfully discharging the duties of his office until failing health compelled him to retire to private life some two years since

L

LAMORICIERE, CHRISTOPHE LEON LOUIS JUHAULT DE, Commander-in-Chief of the Papal troops, and Governor-General of Algeria in 1845, born at Nantes, February 5, 1806, died at Prouzel, near Amiens, September 10, 1865. He was educated at the Polytechnic school and at Metz, and received his first commission shortly before the revolution of July, 1830. On that event, belonging to a Legitimist family, he at first determined to follow the king into exile, but he changed his mind and remained in Algeria, where he organized the now celebrated corps of Zouaves, to whom he seemed to communicate his own daring spirit and quick intelligence. In 1837 he was made colonel, a promotion following, as a natural result, the gallantry displayed at the taking of Constantina.

With his own hands he laid the powder bags to the gates, and was severely wounded by the explosion, narrowly escaping the fate of the "engineer hoist with his own petard." In 1839 he was recalled to Paris, but returned to Africa in the following year; and during his stay shared in no fewer than eighteen campaigns. It may be said of him, that every one of his honors and promotions sprang from some brilliant exploit successfully achieved. At the close of his Algerian career he crowned the triumphs of the expedition which he had organized, by hemming in Abd-el-Kader, and compelling that chieftain to surrender to the Duc d'Aumale. The political principles or preferences of Gen. Lamoriciere were not strongly marked, but he acted with the Liberal party. Toward the close of Louis Philippe's reign he took his seat in the Chamber of Deputies with the Dynastic opposition, and was designated as Minister of War in the Thiers, Molé, or Barrot combinations essayed by the king in his last struggle. On February 24, 1848, in the uniform of a colonel in the National Guard, he tried to stop the insurrection by proclaiming the king's abdication, and the regency of the Duchess of Orleans, but the rioters would not listen to him; his horse was killed, he himself was wounded, and he would have lost his life but for the interference of some workmen who rescued him from the fury of their companions. Under the Provisional Government he was offered the ministry of War, which he refused as well as any command in France. He was elected Representative of the People in the Department of the Sarthe. When the terrible and bloody insurrection of June broke out, he placed himself at the dis-

posal of his old comrade, Cavaignac, fought against the insurgents, and accepted, June 28th, the post of Minister of War, which he held till December 20, 1848. After the election of Prince Louis Napoleon to the Presidency, Gen. Lamoriciere offered no determined or systematic opposition to the new Government, though he strongly and openly disapproved the policy adopted on Italian affairs, and he continued the consistent supporter of the Republican Constitution. At the period of the Russian intervention in Hungary in 1849, he accepted a mission from the President to the court of St. Petersburg. In July, 1851, he recorded his vote against the revision of the Constitution; and in November following voted for the bill which was to place the military force under the control of the Assembly in the event of any attempt against the Constitution. In the *coup d'état* of December he was comprised among the eminent men, civilians as well as military, who were arrested by order of the new Minister of the Interior, M. de Morny. From that period till 1857 he chiefly resided in Belgium. In that year the Emperor spontaneously authorized him to return to France, on the sudden death of one of his children. Being in exile he was debarred from any share in the war against Russia, but he retained his fondness for military life, and offered his services to the Pope on the threatened invasion of the Pontifical territories by the Piedmontese troops under Cialdini in 1860. His offer was accepted, and he at once set about raising and organizing a Papal army; but all his exertions proved futile. He was defeated at Castelfidardo, when the greater part of his forces, mostly foreigners, surrendered. He himself escaped with a few horsemen to Ancona; but this city fell into the hands of Gen. Fanti, and Lamoriciere was taken prisoner. Since his liberation he has lived in retirement. His death resulted from a sudden attack of the gout.

LAUENBURG, a duchy in Germany. Area, 455 square miles. Population, in 1864, of the duchy, 49,704; of its principal towns, Ratzeburg, Molln, and Lauenburg, 8,298. The religion of the inhabitants is almost exclusively Lutheran, 49,652 belonging to that creed. Lauenburg, together with Schleswig and Holstein, belonged, until 1864, to the King of Denmark. In 1864 it was ceded, at the treaty of Vienna, to Austria and Prussia. In consequence of the convention of Gastein (*see* GASTEIN), Austria relinquished its claims to the

King of Prussia for the sum of 2,500,000 thalers. On September 18th the duchy was formally taken possession of by Prussia. A royal proclamation, dated Berlin, September 18th, announced the transfer to the people of the duchy. The relation of Lauenburg to the dominions of the king is thus defined in the royal proclamation: "In accordance with the wishes expressed by the representatives of Lauenburg, we take possession by virtue of this our royal patent of the said Duchy of Lauenburg, with all its sovereign rights and attributes, adding to our titles that of Duke of Lauenburg, and ordain by these presents that the succession in the dukedom shall be for the future hereditary, according to the law of succession hitherto in vigor in other parts of our monarchy. We send the inhabitants of the duchy our sovereign greeting, and command them to acknowledge us as their legitimate and rightful master, to take the oath of allegiance to us and our successors, and to respect and obey our laws and ordinances, whilst we, on the other hand, assure them of our sovereign protection, promising to govern them, the country, and its inhabitants, according to their own laws, to confirm their well-founded rights and privileges, and to do our best for the continued furtherance of their welfare and happiness.

"We have created a special minister for the affairs of the Duchy of Lauenburg, and appointed to that office our prime minister and minister for foreign affairs, Herr von Bismarck-Schönhausen, ordering him to carry on the government of the duchy according to the laws and ordinances hitherto in force. It is, moreover, our royal pleasure that all officials of high and low degree in the duchy remain in office, and be confirmed in their appointments upon taking the usual oath of fidelity and allegiance to us."

LIBERIA, a Negro Republic in Western Africa. The first settlement was made in 1822, and the proclamation of the Republic of Liberia took place on August 24, 1847. It has been recognized by Great Britain, France, Belgium, Prussia, Brazil, Denmark, Portugal, and (1861) the United States. The republic has about 600 miles of coast line, and extends back about 100 miles on an average, but with the facility of an almost indefinite extension into the interior. The number of inhabitants is estimated at about 500,000, of whom about 16,000 are Americo-Liberians, and the remaining aboriginal inhabitants. The country is divided into four counties: Montserrado, Grand Bassa, Sinoe, and Maryland. The executive authority is vested in a President and a Vice-President, and the legislative power is exercised by a parliament of two houses, called the Senate and the House of Representatives. The former consists of eight members (two for each county) elected for the term of four years; the latter of thirteen members, elected for the term of two years. On the increase of population each additional 10,000 persons will be entitled to an additional

representative. The first President of the republic was Joseph Jenkins Roberts. He was succeeded by Stephen Allen Benson. Each of these two Presidents served four terms of two years each. Actual President, Daniel Bashell Warner. At the general election held in May, 1865, the Hon. D. B. Warner and Hon. James N. Priest were re-elected President and Vice President of the republic for the ensuing two years from the 1st of January, 1866.

The last annual message of President Warner states with regard to the relations of Liberia with foreign powers that "they are pacific," that "the questions which have arisen between the Liberian and the British Government, out of the repudiation by certain chiefs, in the northwest portion of the republic, of the right of the Liberian Government to exercise authority in territory bought of them in that section of the country, are still in the course of discussion," and that "Great Britain still maintains an attitude immensely injurious" to Liberia. Ratifications of treaties of amity, commerce, and navigation with Portugal and with Denmark have been exchanged in London, by Gerard Ralston, Esq., Consul-General of Liberia. The treaty with Portugal contains the same important principle of international law first incorporated in the compact between Hayti and Liberia, assimilating the slave trade with piracy. The act of the Legislature of Liberia requiring foreign traders to do business at regularly declared ports of the republic, went into force on the 1st of January, 1865, and had the happiest results.

The Liberia "Herald" of November 1st reports a large increase in the exports of the country. "Within the last five months," it says, "five vessels have loaded with oil, chiefly at the Liberian ports of entry. They took, on an average, sixty thousand gallons of oil. This does not include the oil taken off by transient traders."

The trade of Liberia now flows almost wholly in European channels. The Company of African merchants, at their second meeting held in London, declared a dividend of ten per cent. It has purchased and was (in Jan., 1866) about to send out a steamer for the local coast trade of Sierra Leone with the northern rivers, Sherbro and Liberia. Steps have been taken to establish regular steam navigation on the Niger for the purposes of trade. At the semi-annual meeting of the African Steamship Company in London, December 6th, 1865, it was reported that "the revenue account was slightly better than what it was the previous half year," and "with regard to the two new ships, the Mandingo had been launched and would be ready for sea in a week. The Lagos was launched December 3d, and by the end of January would be ready for sea also. These ships would be built out of the income, without calling for a penny of capital from the resources of the company. They would, therefore, have one ship more than they ever had before. The vessels are of a

superior character and capable of earning larger profits." A dividend "of eight shillings per share for the half year, free of income tax, payable on and after December 8th," was declared. Another new enterprise in London is the Commercial Company of Africa, the capital of which is fixed at £300,000, with a present issue of £200,000, in £20,000 shares of £10 each. The prospectus states that this company is formed "for the purpose of conducting, upon an extensive scale, a trade in the Bights of Benin, Biafra, the River Niger, and other parts of Africa, chiefly by barter, of European manufactured goods for palm oil, palm-nut kernels, ground nuts, gold dust, ivory, cotton, and other produce; also for the purpose of manufacturing oil from the kernels of the palm-nut."

The number of emigrants sent by the American Colonization Society to Liberia during the year 1865, amounted to 527, a number exceeding the emigration of any year since 1856.

LICHTENSTEIN, a principality in Germany. Reigning prince, Johann II.; born October 5, 1840; succeeded his father, November 12, 1848. Area, 64 square miles. Population, in 1864, 7,150. A new constitution was given to the principality on October 15th, 1862, by the terms of which the whole legislative power is vested in one house of representatives, comprising fifteen members, three to be chosen by the reigning prince, and the other twelve by the people in public election. A vote is given to all inhabitants who can read and write; but to become a deputy, a small property qualification is required.

LINCOLN, ABRAHAM, sixteenth President of the United States, and Commander-in-Chief of the Army and Navy of the same, was born in Hardin County, Kentucky, February 12, 1809, and died in Washington, from a pistol-shot wound inflicted by an assassin, April 15, 1865. His father was very poor, and the region of Kentucky in which he lived afforded at that time but scant opportunities for education. At seven years of age he was sent to school for a short time, and his only text-book was an old copy of Dilworth's Spelling-Book. When he was in his eighth year, his father, tired of the hopeless struggle which even then crushed all the energies of the poorer white settlers in the slave States, sold his little homestead, and putting his family and his few household goods upon a raft, sought a new home in the then wilderness of Spencer County, Indiana, cutting his road with his axe through the dense forest during the last eighteen miles of his route. Rearing a log-cabin two or three miles distant from the nearest neighbor, the family entered upon a pioneer's life. The mother of the future President, herself a woman of intelligence and piety, taught her boy to read and write, and encouraged the taste for books which even their circumstances could not wholly repress. When he was ten years of age she died. His father married again a year or two later, and

the step-mother proved a kind and tender friend to the orphaned boy. When he was about twelve years old a Mr. Crawford, one of the settlers, opened a school in his own cabin, and young Lincoln attended and studied arithmetic and some of the other branches of a common school education. But few books had found their way into the wilderness of the "Pocket," as this portion of Indiana was called, but whenever one could be obtained his father always endeavored to procure the reading of it for him. In this way he became familiar with Bunyan's *Pilgrim's Progress*, *Æsop's Fables*, Weems's and Ramsay's *Life of Washington*, a *Life of Henry Clay*, and perhaps a few other volumes. At the age of nineteen he made a trip to New Orleans in company with the son of the owner of a flatboat, who intrusted to the care of the two youths a valuable cargo. Attacked on their way down by a gang of thievish negroes, the two young men defended the property and drove off the plunderers, and pushing out into the stream succeeded in saving it from depredation.

In 1830 Mr. Lincoln's father determined upon another removal to Decatur, Illinois, and his son assisted him in settling in his new home, breaking the ground for a crop of corn, and building a rail fence around his farm. The winter which followed was very severe, and it required the utmost exertion of Abraham Lincoln, now a stalwart youth of twenty-one years, and his father, to keep the family in food, which was mostly obtained by hunting. Two years more were passed in working on a farm, or as clerk in a store. In 1832 the Black Hawk war occurred. Volunteers were called for, and young Lincoln enlisted and was at once made captain. He experienced considerable marching during the campaign, but had no opportunity of exhibiting his prowess as a fighter. After his return from the war he ran for the Legislature, but was defeated, though receiving a heavy vote. He next purchased a store and stock of goods, and was appointed postmaster. The store proved unprofitable and he sold out, but through the whole pursued his studies at every opportunity. Having acquired a knowledge of surveying, he spent the greater part of the next two or three years as government surveyor, and won a high reputation for the accuracy of his surveys. In 1834 he was a member of the Illinois Legislature, and after the session closed, devoted all his leisure time to the study of law. In 1836 he was admitted to the bar, and in April, 1837, removed to Springfield, Illinois, and commenced practice in partnership with Hon. John T. Stuart. He soon won a good reputation as an able pleader, both in civil and criminal practice. He was reelected twice to the Legislature, where he formed the acquaintance of his subsequent political antagonist, Hon. Stephen A. Douglas. In 1840 he declined being a candidate for the Legislature, and though taking a deep interest in political matters, ranking as a Whig of the Henry Clay school, he

sought no political preferment, but devoted himself assiduously to his profession, in which his ability had already gained him a commanding position. In 1844 he canvassed the State for Mr. Clay. In 1846 he was elected to Congress, and took his seat in 1847, the only Whig Representative from Illinois, and probably the only one who could have been elected. During the single term in which he was a member of the House of Representatives there were several important questions before Congress, among others, the Mexican War, the Right of Petition, the Abolition of Slavery in the District of Columbia, the Wilmot Proviso, the Pacheco Case, the River and Harbor Bill, the Modification of the Tariff, and the abolishment of the Franking Privilege. In regard to all these questions Mr. Lincoln took a manly and decided action, voting generally with his party, but independently whenever he regarded their course as inconsistent with the highest rule of right.

In 1848 Mr. Lincoln was a member of the national convention which nominated Gen. Taylor for the Presidency, and subsequently canvassed Illinois in his favor. In 1849 he was the Whig candidate for United States Senator from Illinois, but was defeated, the Democratic party having a majority in both branches of the Legislature. He now devoted himself most assiduously to his professional pursuits, though still watching with great eagerness the political measures before the country. In May, 1854, the Nebraska bill was passed, and the Missouri Compromise act repealed. This roused the majority of the people of the Northern States to a vigorous opposition, and Illinois, which had long been regarded as one of the most reliable of the Western States for the Democratic party, was revolutionized. Mr. Lincoln took a prominent part in the political campaign of the autumn of 1854. A United States Senator was to be chosen in the place of Gen. Shields, who had supported the Nebraska bill, which Judge Douglas had originated. The State was carried by the Whigs, who had two candidates for the senatorship, Mr. Lincoln and Judge Trumbull, one of Whig and the other of Democratic antecedents. Regarding a division as disastrous at that time, and satisfied of Judge Trumbull's ability and integrity, Mr. Lincoln, with rare generosity, not only withdrew his name from the canvass, but persuaded his friends to support Trumbull, who was then elected.

In 1856 Mr. Lincoln's name was prominent before the first Republican national convention for the Vice-Presidency, receiving one hundred and ten votes on the informal ballot. His name headed the Republican electoral ticket in Illinois, and he took an active part in the canvass.

In 1858 the senatorial term of Judge Douglas being about to expire, the Republicans of Illinois, at their State convention on the 17th of June, 1858, at Springfield, nominated Abraham Lincoln as their candidate for United States Senator. Judge Douglas was the candidate of the Democratic party; and, in accordance with

Western custom, the two candidates canvassed the State in defence of their principles. The canvass was one of deep interest; great principles were at stake. Both the candidates were men of decided ability, and possessed the power of swaying their audiences—Judge Douglas by a rare talent for reaching the popular vein, and chiming in with the prejudices, the sympathies, and the passions of the people, and Mr. Lincoln by an irresistible logic, and a happy faculty of "putting things," which, by a few well-placed words, overturned and annihilated his adversary's positions. It would have been difficult to find two men better matched for a controversy. At first their meetings before the people were accidental; Judge Douglas spoke at Chicago on the 9th of July, and Mr. Lincoln on the 10th, and a week later both spoke on the same day at Springfield. On the 24th of July Mr. Lincoln challenged Judge Douglas to a series of debates on the principles involved in the campaign. The Judge accepted, and though the terms he proposed gave him four speeches to Mr. Lincoln's three, the latter made no objection. Seven of these debates were held in different parts of the State between the 21st of August and the 15th of October, and they were afterwards published in full from phonographic notes. The principles of the two parties were very thoroughly discussed, and the weak points of each fully exposed. The discussion was fair, open, and manly, and it was very generally conceded that Mr. Lincoln was unsurpassed in the mental tournament. The Republicans had a majority of about five thousand in the popular vote, but owing to the inequality with which the State was districted, and the pressure from other States, Mr. Douglas was reelected to the Senate by a small majority of legislative votes.

During the next year and a half Mr. Lincoln visited Ohio, Kansas, and New York, and made several speeches of great ability on political questions. That delivered in New York, and subsequently published, was one of the most effective and eloquent expositions of the policy of the Republican party made, and served as a text-book for the orators of that party in the succeeding canvass. A speech delivered in Cincinnati to an audience largely made up of Kentuckians in the spring of 1860, in which he enunciated, in his own telling way, his abhorrence of slavery, is still remembered in that city for its extraordinary power. The Republican national convention, which assembled at Chicago on the 16th of May, 1860, was at first nearly equally divided between Mr. Seward and Mr. Lincoln as its candidate for the Presidency, but the preponderance for Mr. Lincoln soon became evident, and on the third ballot he was nominated, receiving three hundred and fifty-four out of four hundred and sixty-five votes, and by motion of Mr. Evarts, of New York, the nomination was made unanimous. The nomination with the platform was formally accepted by him, in a graceful letter, on the 28d May,

and was enthusiastically received by the Republican party throughout the country.

His opponents were divided (purposely, there was reason to believe, it being the design of the leaders at the South to make his election certain, that it might be used to effect a disruption of the nation) to a greater extent than ever before, there being three other tickets in the field, viz., Messrs. Breckinridge and Lane, the candidates of the Pro-slavery Democrats; Messrs. Douglas and H. V. Johnson, the candidates of the Progressive Democrats; and Messrs. Bell and Everett, the representatives of a conservative party, mostly composed of those who had belonged to the old Whig party. On the 6th of November, 1860, the election took place, and Mr. Lincoln received 180 electoral votes out of 303, Breckinridge having 72, Bell 39, and Douglas 12. The popular vote was somewhat different in its proportions, Mr. Lincoln having a plurality of nearly 600,000, but not an absolute majority, while Douglas came next, Breckinridge next, and Bell last. The exact popular vote was: for Lincoln, 1,857,610; for Douglas, 1,291,574; for Breckinridge, 850,082; for Bell, 646,124.

No sooner was his election ascertained, than the conspiracy which had long been smouldering in the Southern States burst out in full flame. During the four months which intervened between his election and his inauguration, six States—South Carolina, Mississippi, Alabama, Florida, Louisiana, and Texas—passed ordinances of secession, and appointed delegates to meet in convention at Montgomery, Alabama, on the 4th of February, a month before the inauguration. This convention adopted a provisional constitution for what they denominated the Confederate States, and chose Jefferson Davis President and Alexander H. Stephens Vice-President of their new government. Thus, before he had even left his home in Illinois to come to the capital and assume office, and nearly a month before his taking his official oath, the insurrectionists had organized a separation involving six States, and with a certainty that others would join them. It was not in consequence of any thing he had done, for he could not as yet perform any official act; nor was it in consequence of any thing which the leaders saw he had power to do, for they knew his views of the sanctity of an oath, and he would swear to maintain the Constitution inviolate. Secession had been a foregone conclusion, to be carried out at this time, if it could be made practicable.

On the 11th of February, 1861, Mr. Lincoln left his home in Springfield, Illinois, to go to Washington, and enter upon his presidential duties. In the course of his journey he passed through Indianapolis, Cincinnati, Columbus, Pittsburg, Cleveland, Buffalo, Albany, New York, Trenton, Philadelphia, and Harrisburg. He met the Legislatures of Indiana, Ohio, New York, New Jersey, and Pennsylvania, which were then in session, at the capitals of those

States, and everywhere along his way made brief addresses, the main scope of which was, that if the people only stood firm in maintaining the Constitution and the Government, no power on earth could overthrow them. At Philadelphia, information was communicated to him that a plot existed to assassinate him at Baltimore. The only precaution he took was to leave Harrisburg one train earlier than had been expected, the telegraph wires being meantime disconnected. He arrived in Washington on the morning of Saturday, February 23d.

On the 4th of March, 1861, he took the oath of office, and delivered his inaugural address, a plain, straightforward talk with the nation. He began by showing, in the clearest way, that there was no ground for the apprehension which seemed to exist at the South that "their property, their peace, and their personal security were to be endangered." He declared that he took the oath to support the Constitution "with no mental reservations." He argued briefly and clearly the question of secession, averring that, in spite of all that had been done at the South, the Union was unbroken, and he should, to the extent of his ability, take care "that the laws of the Union be faithfully executed in all the States;" that in doing this there would be no bloodshed, "unless it be forced upon the national authority," but that the power of the Government would be used "to hold, occupy, and possess the property and places belonging to the Government, and to collect the duties and imposts;" and he closed his address with an earnest appeal to all who really loved the Union, to pause and consider "before entering upon so grave a matter as the destruction of our national fabric, with all its benefits, its memories, and its hopes." "In your hands, my dissatisfied fellow-countrymen," said he, "and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourselves the aggressors. You have no oath registered in heaven to destroy the Government, while I shall have the most solemn one to 'preserve, protect, and defend' it. I am loth to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battle-field and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature."

Mr. Lincoln found, upon entering upon the duties of his office, the credit of the Government greatly impaired by the uncertainty of the future, its navy scattered, and less than a dozen ships in serviceable condition to guard our coasts; the larger part of the small-arms and cannon belonging to the Government in the hands of the States which had already seceded; forts, arsenals, mints, and vessels, seized

by the insurrectionists; the troops of our regular army deprived of their arms and sent home, by slow and devious routes, as paroled prisoners; the garrison of Fort Sumter was drawing nigh the point of starvation, and no supplies could be sent them except by running the fire of batteries. The attempt was made by a merchant vessel, but she was fired upon, and without waiting the surrender, which could not have been long delayed, the rebel leaders chose to bombard the fort, and take possession of it after a thirty-three hours' siege, on the 14th of April.

Then came the necessity of at once calling the nation to arms, and on the 15th of April the call for 75,000 men roused the people to the struggle which for four years to come was to task their energies and try their patience. The response from every Northern State was cordial, prompt, and earnest. Men and means were pressed upon the Government in abundance. Kentucky, Missouri, Maryland, Delaware, and Virginia hung back, and some of them answered the call with insolent threats and defiance. Virginia soon after went over to the rebels; the Governor of Missouri, foiled in his efforts to take his State in the same direction, fled from it, and loyal officers took his place; Maryland, held in military possession, took up the national cause, and finally emancipated her slaves; Delaware, halting long between two opinions, at length raised troops for the Union; and Kentucky, attempting neutrality, found herself neutral only as the battlefield and plunder-ground of the contending armies. An extra session of Congress had been called for July 4th. On the 19th of April the ports of the seceded States were declared under blockade. Washington, at first in extreme peril, was, not without bloodshed, soon strongly garrisoned. The President long cherished the hope that the war would be but brief, and that soon peace and union as of old would be restored. The battle of Bull Run dispelled in part this illusion; the nation began to harness itself for the work before it, and during the autumn and winter of 1861-'62 the President was heavily burdened with the cares and responsibilities so suddenly thrown upon him; finance, the raising and maintaining great armies throughout the country, settling the difficult Trent case, and adjusting temporarily the serious and delicate questions connected with slavery which were constantly arising, under the movements of Butler, Fremont, and other of the army commanders.

The year 1862, though cheered by some victories like those of Thomas, at Mill Spring, the grand forward movements of Halleck, Grant, and Buell through Kentucky and Tennessee, the capture of Island No. Ten and Memphis, of New Orleans and its guarding forts, of Beaufort and Port Royal, of Roanoke Island and Newbern, was on the whole one of gloom and anxiety for the President. But the dawn of the new year brought altered prospects. He

had, after long and anxious deliberation, come to believe in the necessity of the proclamation of emancipation as a war measure, and the first day of the new year saw liberty proclaimed to all the slaves of the rebellious States. The victory of Stone River, the capture of Vicksburg and Port Hudson, and the opening of the Mississippi, the substantial exclusion of the rebels from Missouri and Arkansas, the redemption of Tennessee, were all so many positive gains; while the disaster of Chancellorsville was more than redeemed by the glorious though bloody victory of Gettysburg, and the misfortunes of Chickamauga alleviated by the triumphant successes of Chattanooga. "Peace," said the President, reviewing these achievements of our armies, "does not look so distant as it did." He had anxiously sought for two years to bring the border States into the adoption of a system of emancipation, more or less gradual; and he was rewarded by the adoption of an emancipation constitution in the new State of West Virginia, and the emancipation of their slaves by Missouri and Maryland, while Congress abolished slavery in the District of Columbia, forbade it in all the territories, and struck from the statute-books the fugitive slave laws.

The arrest of persons guilty of alleged treasonable acts or words, which, though not made in all cases by his order, he could not but sanction, occasioned some animadversions, and was explained by him in two lucid and able letters to the New York and Ohio committees who had addressed him on the subject. In 1864, the first few months of the year were rendered anxious by financial difficulties, the rapid depreciation of the national currency, the resignation of Secretary Chase, and the appointment of Mr. Fessenden. Then began in May those movements—unequalled in the history of modern times, by which, in less than a twelvemonth, the rebellion was crushed—Grant's great campaign, where each day's slaughter was almost that of an army, but in which, with a wonderful endurance and persistency, he held his adversary, till at last he yielded; that unparalleled march of a thousand miles, by which Sherman, making pauses only at Atlanta, at Savannah, and at Goldsboro, swept as with a besom of destruction through the hostile territory, and at last brought his foe to surrender; and that wisely-planned retreat of Thomas on Nashville, and his subsequent hurling of his troops upon the foe, pursuing them till they were scattered and broken.

Meantime Mr. Lincoln had been, by a respectable majority in the popular vote, and a great majority in the electoral college, called for a second term to the Presidential chair, inaugurated amid the acclamations of thousands; though still not without some threats of assassination, he seemed about entering upon more balcyon days. Richmond and Petersburg had been evacuated, and his own feet had trodden the pavements of the late Confederate capital; Lee had

surrendered, and Johnston was about to do so. Davis was a fugitive, and his abdication had been made, without leaving a successor. War had substantially ceased, and the national banner was to float from the walls of Fort Sumter on the 14th of April, 1865, the anniversary of the day, four years before, which witnessed its humiliation. Pacification was to be the future work of the President.

Amid these joyous anticipations of the future, when the sad and wearied look which had so long hovered over his face seemed about to give place to one of serene satisfaction, the assassin, creeping stealthily from behind, as he sat with his family and friends in his box at the theatre, on the night of the 14th of April, 1865, fired, with fatal precision, the pistol-shot, which, penetrating his brain, in a few hours terminated his life. The immediate assassin was an actor, by the name of John Wilkes Booth, but the assassination was a part of a conspiracy intended to cripple the Government by the simultaneous destruction of its principal executive officers, and it involved, either as principals or accessories, a number of persons. Nine of the more immediate actors suffered condign punishment, Booth being shot in the act of arresting him; Harold, Payne, Atzerot, and Mrs. Surratt hung; Arnold, Mudd, and McLaughlin imprisoned for life, and Spangler for six years. The excitement which the intelligence of his death caused throughout the nation has never been paralleled in human history. The whole people were in tears; cities and villages were draped in mourning; all ranks and conditions lamented him as a father, and everywhere were seen the insignia of sorrow.

The funeral honors paid to the deceased Chief Magistrate surpassed in magnificence as well as in their manifestation of the intensity of real sorrow those ever bestowed on any President who had deceased either in or out of office, and have hardly been equalled in the funereal pomp of the obsequies of any monarch of ancient or modern times.

The body, having been properly embalmed and prepared for the grave, was laid in state in the "Green Room" of the Presidential mansion—in a splendid coffin and within a grand catafalque. Here, surrounded by the sad emblems of woe, and covered with the costliest and rarest floral tributes of affection, it rested until noon of Wednesday the 19th of April. On that day, which by request of the Department of State was observed as a day of mourning by the whole American people, appropriate funeral services were performed at the White House, and the body removed, with an imposing military procession, and attended by an immense concourse of people to the rotunda of the National Capitol. Here, reposing beneath its splendid catafalque, it again lay in state, guarded by officers of the army with drawn swords. That day was observed throughout the length and breadth of the land, with a solemnity and genuine sadness of heart such as

no previous day of mourning had ever witnessed. The cities of Canada, by request of their municipal officers, all observed it by cessation from business and public meetings of condolence. In far-off San Francisco the citizens in mourning array formed in a procession in honor of the dead President, and in many of the cities of the South there were all the manifestations of grief.

All day, during the 20th of April, the body continued to lie in state in the rotunda, and more than twenty-five thousand persons visited it, many of them soldiers who left their beds in the hospitals to take one last look at their departed chief. At six o'clock in the morning of the 21st, the members of the Cabinet, Lieut.-Gen. Grant and his staff, several Senators, the Illinois delegation, and a number of army officers, arrived at the Capitol and took their farewell look at the face of the deceased. Then, after an impressive prayer by Rev. Dr. Gurley, the remains were borne without music, but accompanied by an escort, to the railroad station and placed in the hearse car, to which the remains of his son Willie had been previously removed. After a prayer and benediction, the train slowly moved from the depot, the engine bell tolling, and the immense assemblage reverently uncovering their heads. The funeral *cortège* was conveyed on a special through train, on the same route (with one or two exceptions) as that taken by Mr. Lincoln on his way to Washington in 1861. The car also, which bore the body and its attendants, was the same which had been especially constructed for the late President's especial use when travelling over the military roads—a superb piece of construction, and now appropriately draped, as were also the other six cars forming the train. To prevent accidents, the rate of speed was limited. No stoppage was made between Washington and Baltimore. In out-of-the-way places, little villages, or single farm-houses, people came out to the side of the track and watched, with heads reverently uncovered and faces full of genuine sadness, the passage of the car bearing the body of the late President. Along the whole line were seen these mourning groups, some on foot and some in carriages, wearing badges of sorrow, and many evidently having come a long distance to pay this little tribute of respect, the only one in their power, to the memory of the murdered Chief Magistrate.

Baltimore, through which city, four years before, the late President had hurried *incognito*, on his inaugural trip, now received his honored remains with every mark of reverence. Escorted by a splendid procession, the body was conveyed to the rotunda of the Exchange, where upon a gorgeous catafalque, and surrounded by flowers, it rested for several hours, receiving the silent homage of thousands who crowded to take their last look at the features of the illustrious patriot.

As the cars passed along their route, entire

neighborhoods, old and young, men, and women with infants in their arms, turned out by the roadside and anxiously watched the funeral train. Flags at half-mast, mourning inscriptions, funeral arches, testified the sorrow that was felt in every heart. Clusters of men at various points raised their hats as the funeral car glided past, and the deepest sorrow was expressed in every countenance.

At York, Pa., at the request of the ladies of that town, a beautiful wreath was placed with due solemnity upon the coffin, while a dirge was performed by the band, amid the tolling of bells and the uncovered heads of the multitude.

At Harrisburg, owing to the heavy rain, the intended military and civic display did not take place. Throngs of people, however, lined the streets, and followed the remains to the Capitol, where the body lay in state, in the House of Representatives, upon a fine catafalque, surrounded with a circle of white flowering almonds; and during a part of the night the citizens were allowed to obtain a view of the President's features.

From Baltimore to Philadelphia it may be said that the entire route was amid crowds of sorrowing people, for between villages and towns, all the way, farmers and their families assembled in fields and about houses, seriously and reverently gazing at the funeral *cortège*.

At Philadelphia, where they were received by a great procession, the remains of the President found a resting-place in Independence Hall, around which cluster so many historical memories, and over which four years before the then President-elect hoisted the American flag with a declaration of his willingness to sacrifice his life rather than abandon the cause which he at length fell in defending. The bier was close to the famous old liberty-bell which first sounded forth in 1776 the tidings of independence. The interior of the hall, as well as its exterior, was heavily draped and most artistically illuminated. Around the remains were appropriate decorations, leaves of exquisite evergreens, and flowers of a rich crimson bloom. At the head of the corpse were bouquets, while flaming tapers were at the feet, and from the elaborately hung walls the portraits of the great and good who have passed away, eloquent in their silence, looked down upon the sad scene. The next morning, before daylight, lines of people were formed to view the remains of the President, and these lines extended a distance of three miles, from the Delaware to the Schuylkill Rivers, and thousands spent three or four hours in the lines, before reaching the hall.

The funeral train left Philadelphia at 4 A. M. on the 24th of April, 1865. The incidents of the journey to New York were similar to those which had previously occurred. At times the track was lined for miles on both sides with a continuous array of people. The most impressive scene of the whole route thus far, was furnished by the city of Newark, where it

seemed as if the inhabitants had resolved to turn out *en masse* to pay their tribute of respect to the memory of the departed as his coffin passed by. For a distance of a mile the observer on the train could perceive only one sea of human beings.

Of a yet grander character was the reception given to the remains at Jersey City. The depot, one of the largest halls in the country, was draped in an imposing manner, bells tolled, cannon boomed in sad echoes, and as the remains were moved from the cars to the boat, a choir of singers chanted a solemn dirge. Again, as the ferry-boat neared the New York side of the Hudson, strains of funeral music pealed from their united voices, and mingled with the sound of cannon and tolling bells.

In New York city the scene was imposing beyond comparison. As far as the eye could see, a dense mass of people, all wearing the insignia of mourning, filled the streets and crowded every window. The fronts of the houses and warehouses were tastefully draped with mourning, and the national ensign was displayed at half-mast from the top of almost every building. The procession which accompanied and followed the remains to their resting-place in the City Hall was very large, and passed through such a concourse of mourning faces as New York never before witnessed. Along the entire route minute-guns were fired, the bells tolled from all the steeples of the city, and the Trinity chimes wailed forth the notes of "Old Hundred." Arrived at the City Hall, the coffin was borne into the rotunda amid the solemn chantings of eight hundred singers, and was placed upon the catafalque prepared for it. The hall was richly and tastefully draped, and the coffin almost buried in flowers, while a large military guard kept watch night and day of the precious dust. All day and all night long the living tide pressed into the hall to pay their last respects to the dead, and when the time came for the departure of the funeral procession, thousands who had waited for hours in the long lines to gain a glimpse of that well-known face, were obliged to turn away sadly disappointed. At the solemn hour of midnight on the 24th, the German musical societies performed a funeral chant in the rotunda of the City Hall, with the most thrilling effect. In the afternoon of the 25th of April the great metropolis took its final leave of the remains of Abraham Lincoln, and after a farewell more grand and imposing than any demonstration in the previous experience of the nation, they started on their way westward. The funeral pageant was of extraordinary grandeur and impressiveness. A military force of more than fifteen thousand men, with the staffs of the several brigades and divisions and their batteries, and the civic elements which joined in the procession, formed a double line of four and a half miles in length. Last in the procession were about two thousand colored citizens of New York, preceded by a banner bearing the in-

scription on one side, "ABRAHAM LINCOLN, OUR EMANCIPATOR," and on the other, "TO MILLIONS OF BONDMEN HE LIBERTY GAVE." Throughout the whole distance traversed by the procession the streets were lined by dense masses of sorrowing mourners, and every window amid its drapery of woe was filled with sad faces. At the same time a vast concourse assembled in Union Square, where an eloquent funeral oration was delivered by the Hon. George Bancroft, and an elegiac ode written by William Cullen Bryant was recited. As the sad procession moved westward, the same scenes of popular grief and of heartfelt sorrow and respect were everywhere manifested. Arches, columns, monuments, banners, etc., arranged with tasteful and loving care, lined the entire route of the funeral train as it passed along the Hudson River Railroad, heralded on its onward course by the tolling of bells and the echoing of minute-guns. At Albany the corpse was escorted across the river by a torchlight procession of the military and firemen, and placed in the Capitol of the State, where it rested until 2 P. M. of the next day—visited by thousands. Accompanied by a vast procession, it was then escorted to the depot of the New York Central Railroad Company and deposited in one of the richly draped cars of the funeral train, for its journey westward through the Empire State.

Notwithstanding the greater part of the trip between Albany and Buffalo was made at night, mournful crowds were collected all along the line to catch a view of the passing *cortège*. The buildings were appropriately draped, flags were everywhere at half-mast, and bonfires and torches illumined the sad pageant. All through the dark hours, as the train sped on, at each city, town, village, hamlet, and railway station, these testimonies of the people's affection and grief were repeated.

At Buffalo and Cleveland the body was appropriately received amid every possible demonstration of grief and respect. At the latter city an open temple had been constructed and under its canopy the coffin was placed, and thousands in sad procession passed and gazed on the changing features of their loved President. At Columbus, Ohio, the remains were placed in the rotunda of the State Capitol, which was appropriately draped. The coffin rested upon a mound of moss thickly dotted with the choicest flowers, and was surrounded by elegant vases of rare exotics. The walls were adorned with Powell's great painting of "Perry's Victory," and clusters of banners, smoke-stained, torn and riddled with bullets, borne by Ohio regiments during the war, and now festooned with crape, drooped sadly around the spacious rotunda; solemn dirges were played by the bands at intervals on the terraces of the Capitol, and guns were fired during the day. At Indianapolis, similar honors were paid to the departed Chief Magistrate.

At Chicago the reception of the dead Presi-

dent was imposing and sublime. A magnificent funeral arch had been erected at the railroad station, and under this the precious remains were received and conveyed thus to the rotunda of the Court House, where they were laid in state upon a catafalque of wonderful beauty, and visited by thousands who thus in sadness welcomed back their dead ruler to the State which had been for more than thirty years his home. From all the towns and villages for hundreds of miles around the Queen City of the Lakes, the people had come to express alike their grief and respect for Abraham Lincoln. At night when fair hands had strewn the coffin with fresh flowers, it was borne with chanted dirges by torchlight to the station house, and at last on the 3d of May, after a journey of seventeen hundred miles, reached Springfield, Illinois, the home where he had been so long personally known. The remains were received by a procession, and were carried to the State House, where they were deposited in the Hall of Representatives, under a canopy of exquisite design and finish, while prominent among the tasteful decorations of the place were the words of President Lincoln at Independence Hall, Philadelphia, February 22, 1861: "SOONER THAN SURRENDER THESE PRINCIPLES, I WOULD BE ASSASSINATED ON THE SPOT." Here, as elsewhere, the citizens of the place, as well as the thousands who came pouring in by every mode of conveyance, sought to gaze on the face of the dead. All night long the streets of the city resounded with the tramp of feet. It was estimated that more than seventy-five thousand passed into the hall.

During the morning, minute-guns were fired by Battery K, Missouri Light Artillery. About 10 o'clock, A. M., the coffin was finally closed. Meanwhile a choir of two hundred and fifty voices, accompanied by Lebrun's band from St. Louis, sang Pæsello's "Peace, troubled soul," and as the coffin was borne out, Pleyel's Hymn, "Children of the Heavenly King." The procession moved to Oak Ridge Cemetery, under the immediate command of Major-General Joseph Hooker, marshal-in-chief; and on its arrival at the cemetery, the remains were placed in the tomb, and after the simple but touching ceremonies of interment an eloquent funeral discourse was pronounced by Bishop Simpson, of the Methodist Episcopal Church, and the immense throng silently dispersed.

The grief which was occasioned by the President's death, was not confined to our own shores; England poured forth her encomiums upon the dead, her widowed Queen writing a most touching letter of sympathy to the bereaved consort of the President, while her poets vied with ours in chanting his requiem. France, too, expressed in words and tones of sympathy her grief at the nation's loss; and the wave of grief, sweeping over Europe, found answering billows in the far off Orient. China, Japan, and Siam sent their condolence.

Mr. Lincoln's character as a man and a Chief

Magistrate may be summed up in a few words. He was honest in the best sense of the term; patient, forbearing, and forgiving; slow in arriving at conclusions, but when once settled in them, firm to obstinacy; endowed with a wisdom and tact not acquired in the schools, but which guided him in administration, sustained him in despondency, and rendered him calm and self-possessed in the hour of success; of a genial and tender disposition, and possessing a rare and quaint humor which occasionally lit up with a momentary smile his sad face, and enabled him the better to bear his heavy burdens. In his administration of public affairs, he ever sought the good of the nation, and the interests of justice and truth, and much as some of his measures were questioned at the time, there are few who would now deny their wisdom or rectitude.

LINDLEY, JOHN, F. R. S., an eminent English botanist, and late Professor of Botany at University College, born at Calton, near Norwich, February 5, 1799, died at his residence, Acton-green, November 1, 1865. His father was proprietor of a large nursery garden, a circumstance which doubtless gave birth to the taste for the study of botany so early manifested in the son. After leaving the Grammar School of Norwich, young Lindley devoted his attention to botanical science. In 1819 he published a translation of *Richard's Analyse du Fruit*, and in 1820 a work entitled *Monographia Rosarum*, in which he described several new species of roses. About the same period he contributed to the "Transactions of the Linnæan Society" various papers on botanical subjects. Sometime afterwards he proceeded to London, where he became Assistant Secretary to the Horticultural Society, and was engaged by Mr. London to write the descriptive portion of his "Encyclopædia of Plants," the merit of which, as a botanical work, was entirely due to him, as was, stated in the preface. The "Encyclopædia" was completed in 1829, and in the same year he received the appointment of Professor of Botany at the London University. At this period the Linnæan system was almost universally followed by English botanists. It is one of the chief merits of Dr. Lindley that he early saw the necessity of superseding the artificial by the natural classification of plants. In an essay on this subject, published in his "Introduction to the Natural System of Botany" in 1830, he clearly showed the advantages of this system, and thus paved the way for its general adoption in England. Two years later he published the "Introduction to Systematic and Physiological Botany, and a Synopsis of the British Flora." In 1836 he published a "Natural System of Botany," wherein he took new views of botanical classification, and proposed a new nomenclature for families of plants. Ten years later, his great work, "The Vegetable Kingdom" was published, giving a description of all the families of plants, and more especially of those useful

to man; a work of great labor, and generally recognized as one of the most important contributions which had at that time appeared on systematic botany. In 1841 he became editor of the "Gardener's Chronicle," a weekly publication which he conducted with great ability. In 1860 he was appointed examiner in the University of London.

LITERATURE AND LITERARY PROGRESS IN 1865. The very high price of paper and the cost of labor, as well as the heavy burden of taxation which rested with exceptional effect on printed books, and upon all that went to make up their manufacture, engravings, paper, binders' cloth, and leather, etc., tended to depress the publishing trade during the year, and no doubt diminished slightly the number of new publications undertaken, which was somewhat less than the previous year; yet the demand for books was so great that the number of volumes sold was largely in advance of that of any former year, reaching in the case of school text-books in some instances to millions, and in histories of the war, biographies of Mr. Lincoln, etc., to numbers varying from 60,000 to 100,000 copies.

The number of distinct publications, aside from occasional pamphlets, reports, circulars, catalogues, sermons, and official Government, State, or municipal documents, was 1,802, being 226 less than the number in 1864. Of these 20 were works on military and naval science, 191 historical, of which 14 were histories of the war, 26 histories of particular battles or campaigns, 38 works relating to the war, but not strictly histories, 39 American local and other histories not connected with the war, 36 histories of other countries or times, 14 historical reprints, 7 historical periodicals and transactions of historical societies, and 18 works on ecclesiastical history. In biography there were 150 works, of which 130 were single biographies, a very considerable number of them biographies of President Lincoln, and 20 collective biographical works. In theology there were 48 works, of which 18 were doctrinal and 30 polemic. Of religious works, not theological, there were 81. In moral and intellectual science there were 12. In physical science there were 39, of which 3 were devoted to astronomy and meteorology, 10 to geology and mineralogy, 14 to zoölogy, 5 to natural philosophy, and 7 to chemistry. In political and social science the number of books was 25; in financial and statistical science, 112; in philology 10; in technology and mechanical science, 42; in agriculture, 23; in medical science, 55; in law, legal science, and legal compilations, 63. Of works on education and educational science there were 42; of geography and travels, 25; of essays and didactic works, 63; of poetry and the drama, 148. Musical works numbered 37; novels and works of fiction 254, of which 14 were religious, and the remainder (240) of a general character. The number of books for the young was 312, of which 25 were books of adventure, history, and

travels, 248 were religious, 24 were elementary, and 15 fairy and legendary. There were 15 works on art, 18 of a miscellaneous character, and 16 new periodicals, first issued during the year.

The number of reprints was small, amounting to only 276, about the same proportion as in 1864, but of these a very considerable proportion were books in French, German, and Spanish, reprinted without change; 92, one-third of the whole number, were novels, and 49 juveniles. The number in the other classes was inconsiderable.

Of the works on MILITARY AND NAVAL SCIENCE, but one was a reprint, viz., a "Review of Gen. Todleben's History of the Defence of Sebastopol," by W. H. Russell, D. D., late special correspondent of the "London Times." Several of the original works published during the year evinced great research, and possessed a high value. Among these were Capt. Nystrom's "Technological Education and Shipbuilding, for Marine and Naval Engineers;" "Experimental Researches in Steam Engineering," by B. F. Isherwood, Chief Engineer, U. S. N.; a new edition of Prof. D. H. Mahan's "Elementary Course of Military Engineering;" Commander Foxhall A. Parker's Treatise on the Use of the "Naval Howitzer Ashore;" a "History of the United States Cavalry, 1776-'63," by Major (now Colonel) Albert G. Brackett; a "Treatise on the Tactical Use of the Three Arms, Infantry, Artillery, and Cavalry," by Francis J. Lippitt; Lieut. Commander Roe's "Naval Duties and Discipline, with the Policy and Principles of Naval Organization;" Lieut. Buckner's "Calculated Tables of Ranges, for Navy and Army Guns;" a text-book, entitled "The Cadet Engineer; or, Steam for the Student," by Chief Engineer J. W. Long, and Assistant Engineer R. H. Buel, U. S. N.; Captain R. Brinkerhoff's Manual, "The Volunteer Quartermaster, a Collection of Laws, Regulations, Rules, and Practice governing the Quartermaster's Department of the U. S. A.;" an Essay, by Mr. D. Treadwell, "On the Construction of Hooped Cannon;" an Essay by anonymous author on "The Militia of the United States; what it has been; what it should be." There were also issued private editions of the Report of the Ordnance Bureau, and the Navy Register for 1865, and new editions of Morris's "Infantry Tactics," and Gillmore's "Fort Sumter."

In the Department of HISTORY, the literature of the year was remarkably full and interesting. In no former year has the number of works published been so great, or the editions of any thing like the same magnitude. Of the *Histories of the War*, which closed during the year, some were but the completion of works previously commenced, while others were entirely new. The "Pictorial History of the Rebellion," publishing in numbers by Messrs. Harper, as well as those of Messrs. Virtue, Yorston & Co., and Messrs. Johnson, Fry & Co., were continued, and the last completed during the year. The

"Rebellion Record" was also continued, the numbers composing the 8th volume being issued in the course of the year. Two additional volumes of Mr. W. M. Thayer's "Youth's History of the Rebellion," also appeared. A second volume of Rev. J. S. C. Abbott's "History of the Rebellion," and of the "Complete History of the Great American Rebellion," by E. G. Storke and L. P. Brockett, were also published, in each case completing the work. Mr. E. McPherson issued a second edition of his valuable "Political History of the United States of America during the Great Rebellion," in which he had made large additions, and had brought down the documents to the close of the war. Of new histories we may name "The Military and Naval History of the War," by Mr. William J. Tenney; "Lloyd's Battle History of the Great Rebellion," a compilation of the best narratives of the battles of the war; Jones Brothers' "Standard History of the Civil War;" "History of the Great Rebellion," in one stout volume, by Thomas P. Kettell; Mr. B. J. Lossing's "Pictorial History of the War," publishing in numbers; "Carey's Record of the Great Rebellion;" and "*La Victoire du Nord aux États Unis*," by Count Charles de Montalembert. The last was the only reprint among the books of this class.

Among the *histories of particular battles and campaigns* are: "Sherman and his Campaigns," by Col. S. M. Bowman, and Lieut.-Col. R. B. Irwin; "The Story of the Great March," by Brevet Major George Ward Nichols; "Sherman's March Through the South," by Capt. David P. Conyngham; "The Hero's Own Story; Sherman's Official Reports;" "The Star Corps; or, Notes of an Army Chaplain during Sherman's Famous March to the Sea," by Rev. G. S. Bradley, Chaplain 22d Wisconsin Vols.; "Grant and his Campaigns," by Professor Henry Coppee; "Gen. Grant's Own Report of the Campaign from May, 1864, to April, 1865," several editions; "Grant and Sherman; their Campaigns and Generals," by Hon. J. T. Headley; "Camp, March, and Battlefield; or, Three Years and a Half with the Army of the Potomac," by Rev. A. M. Stewart, Chaplain 102d Regt. Penn. Vols.; "A Narrative of the Campaign in the Valley of the Shenandoah in 1861," by Robert Patterson, late Major-General of Volunteers; "Maj.-Gen. McClellan and the Campaign on the Yorktown Peninsula," by Frederick Milnes Edge; "Battle of Williamsburg, with Reminiscences of the Campaign, Hospital Experiences, Debates, etc.," by James R. Burns; "Three Years in the Army of the Potomac," by Henry N. Blake, late Captain 11th Mass. Vols.; "History of the Pennsylvania Reserve Corps," by J. R. Sypher; "Three Years' Campaign of the 9th N. Y. V. M. during the Southern Rebellion," by John W. Jaques; "Our Campaigns; or, The Marches, Bivouacs, Battles, etc., of the 2d Regiment Pennsylvania Reserves," by Adj. E. M. Woodward; "Our Boys; The Personal Experiences of a Soldier in the Army," by A. F. Hill, of the

8th Pennsylvania Reserves; and "A Daily Journal of the 192d Regiment Pennsylvania Volunteers" (one hundred days men), by John C. Meyers. To this class belong also properly the records of the part borne by particular States in the war. Among these are: "The Patriotism of Illinois," by T. M. Eddy, D. D.; "The Martyrs and Heroes of Illinois in the Great Rebellion," by James Barnett; "Rhode Island in the Rebellion," by Edwin W. Stone; "Maine in the War for the Union," a History of the part borne by Maine Troops in the Suppression of the American Rebellion," by William E. S. Whitman and Charles H. True; and "The Reports of the Military Bureau of New York."

Of works relating to the war, not strictly historical, the year has been remarkably prolific. A large class among them are narratives of personal adventure and experience, or of observations of adventures of others, in camp, field, hospital, or prison. Among these are: "The Secret Service, the Field, the Dungeon, and the Escape," by A. D. Richardson, "Tribune" Correspondent; "Four Years in Secession," by Julius Henri Browne, Special War Correspondent of the "Tribune;" "Camp-Fire and Cotton-Field; Southern Adventures in Time of War," by Thomas W. Knox, "Herald" Correspondent; "A Nurse and Spy in the Union Army, comprising the Adventures and Experience of a Woman in Hospitals, Camps, and Battle-Fields," by S. Emma E. Edmonds; "Thrilling Stories of the Rebellion," by Lieut.-Col. Charles S. Greene; "The Life and Adventures of Miss Major Pauline Oushman, Union Spy and Scout," by F. L. Sarmiento; "The Scout and Ranger; or, The Adventures of Corporal James Pike in the Army of the Cumberland;" "Patriot Boys and Prison Pictures," by Edmund Kirke (J. R. Gilmore); "A Voice from Rebel Prisons, giving an Account of some of the Horrors of the Stockade at Andersonville, Millen, and other Prisons," by a Returned Prisoner of War; "Prison Life in the South during the years 1864-'65," by A. O. Abbott, late Lieutenant 1st N. Y. Dragoons; "Life and Death in Rebel Prisons," by Robert H. Kellogg, 16th Connecticut Volunteers; "Nineteen Months a Prisoner of War; Narrative of Lieut. G. E. Sabre, 2d Rhode Island Cavalry;" "Fourteen Months in Southern Prisons," by H. M. Davidson, member of Battery A., 1st Ohio V. L. A.; "Libby Life, Experiences of a Prisoner of War in Richmond, Va.," by Lieut.-Col. F. F. Cavada, U. S. V.; "Lights and Shadows of Army Life; or, Pen Pictures from the Battle-Field, the Camp, and the Hospital," by Rev. W. W. Lyle, Chaplain 11th Regiment O. V. I.; "Soldiers' Letters, from Camp, Battle-Field, and Prison," edited by Lydia Minturn Post; "The Soldier Bird," a History of "Old Abe, the Live War Eagle of the 8th Wisconsin Regiment," by Joseph O. Barrett; "The Yankee Scout; or, Haps and Mishaps on the Border," by James

L. Bowen. To these may be added two from Southern sources, viz., "Bell Boyd in Camp and Prison," written by herself (Mrs. Hardinge), with an Introduction, by G. A. Sala; and "Observations on the North; Eight Months in Prison and on Parole," by Edward A. Pollard.

Under this head may also be properly enumerated a very considerable class of essays and didactic works, political discussions, etc., bearing on the war. Among these are: "The American Republic; its Constitution, Tendencies, and Destiny," by Orestes A. Brownson, LL.D.; "The Criminal; the Crime; the Penalty," by George H. Hopworth; "Mr. Ambrose's Letters on the Rebellion," by John P. Kennedy; "Thoughts on the Future Civil Policy of America," by J. W. Draper, M. D., LL.D.; "Mr. Buchanan's Administration on the Eve of the Rebellion," by James Buchanan, late President U. S.; "Glimpses of History," by George M. Towle; "The Charter of American Liberty;" "Speeches of John Bright, M. P., on the American Question," with an Introduction by Frank Moore; "What I Heard in Europe during the American Excitement," by John H. Tobitt; "Hasty Recognition of Rebel Belligerency, and Our Right to Complain of It," by George Bemis; "The Work of New England in the Future of our Country; an Election Sermon," by Rev. A. L. Stone, D. D.; "Patriotism in Poetry and Prose; Selections and Original Poems," by Boker, T. B. Read, Janvier, and others; "The Patriotic Readings of James E. Murdoch;" "Trial of John M. Beall, as a Spy and Guerrilla, by a Military Commission;" "Rebel Brag and British Bluster," by Owlsglass.

There are also a few fictions based on historic incidents which, properly enough, may be ranged under this class; among these are "The Angel of the Battle-Field," by Wesley Bradhus; "The Devil in Dixie," a Tale of the Times, Semi-Comical, Semi-Historical and Quasi-Diabolical; "Tobias Wilson, a Tale of the Great Rebellion," by Hon. Jeremiah Clemens; "Tales of the Picket Guard, or the Blue Devils driven from Camp," Rev. H. N. Hudson, for some time Chaplain in the Army, has published a pamphlet entitled "A Chaplain's Campaign with General Butler;" and Mr. Charles J. Stillé, of Philadelphia, has prepared for the Sanitary Commission, a Memorial of the Great Central Fair for the U. S. Sanitary Commission held at Philadelphia, June, 1864. Histories of the Boston, the Metropolitan (N. Y.), the Brooklyn, the Cincinnati, the Pittsburg, and the St. Louis Sanitary Fairs were also published during the year.

In the class of *American local and other histories not connected with the war*, there have been a large number of publications, many of them reprints of works published in the seventeenth and eighteenth centuries, printed in limited editions, and on large paper,

in some instances fac-similes of the original works; forty-five works of this description are found in the list of the publications of 1865, and doubtless some have escaped a record. They are as follows: "Records of Salem Witchcraft, copied from the original Records," 2 vols., small quarto, pp. 279, 287; "Salem Witchcraft, comprising more Wonders of the Invisible World, collected by Robert Calef, and Wonders of the Invisible World, by Cotton Mather, together with Notes and Explanations," by Samuel P. Fowler, quarto, pp. 450; "Early History of New England, being a Relation of Hostile Passages between the Indians and European Voyagers and First Settlers, and a Full Narrative of Hostilities to the close of the War with the Pequots in the year 1637; also a Detailed Account of the Origin of the War with King Philip, by Increase Mather, with an Introduction and Notes by Samuel G. Drake, small quarto, pp. 309; "The Hutchinson Papers," vols. 1 and 2 published by the *Prince Society*; "Andréana, containing the Trial, Execution, and various matters connected with the History of Major John André, Adjutant-General of the British Army in America, A. D. 1780," quarto, pp. 67, plates, reprinted from the London edition; "Vindication of the Captors of Major André," by Egbert Benson, 8vo. pp. 84; "Vindication of the Captors of Major André," by Egbert Benson, LL. D., with Introduction and Appendix, 8vo. pp. ix., 134, *privately printed*; "A Relation of Maryland," reprinted from the London edition of 1635, with a prefatory Note and Appendix, by Francis L. Hawks, D.D., LL.D., small quarto, pp. vii., 73, map; "Anthology of New Netherland, a Translation from the Early Dutch Poets of New York (Steendam, Seylys, De Lille)," with Memoirs of their Lives, by Henry C. Murphy, royal 8vo., pp. 209, illustrated; "Letters from the Prisons and Prison Ships of the Revolution, with Notes by Henry R. Stiles, M. D.," 8vo., pp. 49; "Account of the Internment of the Remains of American Patriots who perished on board the British Prison Ships during the American Revolution, with Notes and an Appendix," by Henry R. Stiles, M.D., 8vo. pp. 246; "Recollections of the Jersey Prison Ships. From the Original Manuscripts of Captain Thomas Dring, one of the Prisoners," by Albert G. Green, edited by Henry B. Dawson, imp. 8vo, pp. xxii., 201, plates; "Notes, Geographical and Historical, relating to the Town of Brooklyn on Long Island," by Gabriel Furman. With Notes and a Memoir by the author, small quarto, pp. xxxiv., 119, xxxix.; "Minutes of a Conspiracy against the Liberties of America," octavo, pp. xiv., iv., iii., London, 1786, reprinted in Philadelphia; "Collections on the History of Albany, from its Discovery to the Present Time, with Notices of its Public Institutions, and Biographical Sketches of Citizens deceased," vol. I., royal 8vo, pp. viii., 529, plates; "A Sketch of the First Settlement of

the several Towns on Long Island, with their Political Condition to the End of the American Revolution," by Silas Wood, with a Biographical Memoir and Additions by Alden J. Spooner, 4to, pp. xix., 206, Portrait and Photographs; "Anecdotes of the American Revolution, illustrative of the Talents and Virtues of the Heroes of the Revolution who acted the most conspicuous Parts therein," by Alexander Garden, of Lee's Legion, second series, imp. 8vo, pp. ix., 223, vi., Charleston, 1828; Brooklyn, N. Y., 1865; "Supplement to the State of the Expedition from Canada, containing General Burgoyne's Orders respecting the Principal Movements and Operations of the Army, to the Raising of the Siege of Ticonderoga," 4to, pp. 26 (London, 1780); "Dialogue between the Ghost of General Montgomery, just arrived from the Elysian Fields, and an American Delegate, in a Wood near Philadelphia" (Phila. 1776), N. Y., *privately reprinted*; "Advertisements for the Unexperienced Planters of New England, or Anywhere; or, The Pathway to erect a Plantation, by Captain John Smith, sometime Governor of Virginia, and Admirall of New England, with a Fac-simile of Smith's Map of New England, with Additions and Corrections as published in 1635," 4to, pp. viii., 72; A Description of New England; or, Observations and Discoveries in the North of America in the Year of our Lord 1614; with the Success of Six Ships that went the next Year, 1615," by Captain John Smith (Admiral of that Country), with a Fac-simile of the Original Map, 4to, pp. vii., 89; Certain Inducements to Well-Minded People who are here Straitened in their Estates or otherwise, etc., small 4to, pp. 24; "Further Queries upon the Present State of New-English Affairs," by S. E., 4to, pp. 18; "Two Voyages to New England, made during the Years 1638, 1663, by John Josselyn, Gent., 4to, pp. vii.; "New England's Prospect. A True, Lively, and Experimental Description of that Part of America commonly called New England, etc.," by William Wood, small 4to, pp. xxxi., 131, map, (Lond., 1634), Boston, *The Prince Society*; "New England's Rarities discovered in Birds, Beasts, Fishes, Serpents, and Plants of that Country, by John Josselyn, Gent., with an Introduction and Notes by Edward Tuckerman, M. A., 4to, pp. viii., 169; "New England's First Fruit; with Divers other Special Matters concerning that Country, small 4to, pp. 47; "News from New England," 1676, 4to, pp. 22; "The History of the Indian Affairs in New England from the First Settlement to the Termination of the War with King Philip in 1677, from the Original Work by the Rev. William Hubbard. Carefully revised, and accompanied with a Historical Preface, Life and Pedigree of the Author, and Extensive Notes," by Samuel G. Drake, 2 vols., sm. 4to, pp. xxxii., 292, 303, map; "Strength out of Weakness; or, a Glorious Manifestation of the Further Progress of the Gospel among the Indians in

New England," by Henry Whitfield, sm. 4to, pp. xxii., 59; "A Farther Discovery of the Present State of the Indians in New England, concerning the Progress of the Gospel among them, manifested by Letters from such as preached to them," by Henry Whitfield, 4to, pp. x., 46 (Lond., 1651); "The Day Breaking if not the Sun Rising of the Gospel with the Indians in New England," small quarto, pp. 32; "The Clear Sunshine of the Gospel breaking forth upon the Indians in New England," by Thomas Shepard, small quarto, pp. xx., 56; "A Further Manifestation of the Progress of the Gospel among the Indians in New England," small quarto, pp. xi., 21; "A Call from Death to Life. Being an Account of the Sufferings of Marmaduke Stephenson, William Robinson, and Mary Dyer, in New England, in the Year 1659, small 4to, pp. ix., 47 (London, 1660), Providence, R. I.; "The Expeditions of Capt. Lovewell, and his Encounters with the Indians; including a Particular Account of the Pequaket Battle, with a History of that Tribe; and a Reprint of Rev. Thomas Symmes's Sermon," by Frederic Kidder, 4to, pp. 138, map, Boston; "A Brief State of the Province of Pennsylvania," by William Smith, D. D., 8vo, pp. 44; "The Journal of Major George Washington, sent by the Hon. Robert Dinwiddie to the Commandant of the French Forces in Ohio, with map," 8vo, pp. 46 (Williamsburg, 1754); "The Present State of Virginia," by Hugh Jones, A. M., 8vo, pp. viii., 151, cuts (London, 1724); "Names of Persons who took the Oath of Allegiance to the State of Pennsylvania between the Years 1777 and 1789, with a History of the 'Test Laws' of Pennsylvania," by Thompson Westcott, 8vo, pp. xlii., 145; "The Order Book of Capt. Leonard Bleeker, Major of Brigade in the Early Part of the Expedition under Gen. James Clinton, against the Indian Settlements of Western New York, in the Campaign of 1779. With Introduction and Notes," by B. F. Hough, M. D., 4to, pp. 137; "Orderly Book of the Siege of Yorktown, from September 26, 1781, to November 2, 1781." Now first printed from the original MSS., 4to, pp. 68; "Narrative of the Exertions and Sufferings of Lieut. James Moody, in the Cause of Government, since the Year 1776. Written by himself, with the Author's Last Corrections. With an Introduction and Notes," by Charles I. Bushnell, 8vo, pp. 98, illustrated; "A Journal of two Visits made to some Nations of Indians on the West Side of the River Ohio in the Years 1772 and 1773, by the Rev. David Jones. With a Biographical Notice of the Author," by Horatio Gates Jones, A. M., 8vo, pp. 127; "The Declaration of Independence. Fac-simile of the Original Document, in the Handwriting of Thomas Jefferson," quarto, pp. 7; "The Private Journal of a Journey from Boston to New York in the Year 1704, kept by Madam Knight," small quarto, pp. 92. Of local histories now first printed, the principal are: "An Authentic and Comprehensive History

of Buffalo, with some Account of its early Inhabitants, both Savage and Civilized, comprising Historic Notices of the Six Nations or Iroquois Indians, including a Sketch of the Life of Sir William Johnson, and of other prominent White Men, long resident among the Savages. Arranged in Chronological Order," in two volumes, by William Ketchum. Vols. 1 and 2, 8vo, pp. xvi., 432, vii., 443; "History of Thomaston, Rockland, and South Thomaston, Maine, from their First Exploration, A. D. 1605, with Family Genealogies, by Cyrus Eaton, 2 vols. 12mo, pp. xii., 468; iv., 472; "Queen's County in Olden Times: Being a Supplement to the several Histories thereof," by Henry Onderdonk, Jr., A. M., author of "Revolutionary Incidents of Long Island," etc., 4to, pp. 129; "Dartmouth (Mass.) Centennial Celebration. Proceedings in Connection with the Celebration at New Bedford, September 14, 1864, of the Two Hundredth Anniversary of the Incorporation of the Town of Dartmouth," 8vo, pp. 129; "A Record of the Inscriptions on the Tablets and Gravestones in the Burial-ground of Christ's Church, Philadelphia," by Edward L. Clark, Church Warden; "Commemoration of the Conquest of New Netherland on its Two Hundredth Anniversary," by the New York Historical Society; "History of New England," vol. 3, by John Gorham Palfrey; "The Register of New Netherland," 1626-1674, by E. B. O'Callaghan; "Pioneer History of the Champlain Valley, being an Account of the Settlement of the Town of Willsborough, by William Gilliland, together with his Journal and other Papers, and a Memoir and Historical and Illustrative Notes," by Winslow C. Watson; "The First Century of Dunmer Academy. A Historical Discourse delivered at Newbury, Byfield Parish, Aug. 12, 1863, with an Appendix," by Nehemiah Cleveland; "Memorial of the Centennial Anniversary of the Settlement of Machias; "The History of Portland from 1632 to 1864, with a Notice of Previous Settlements, Colonial Grants, and Changes of Government in Maine," by William Willis, 2d edition, revised and enlarged; "An Historical Address delivered at the Centennial Celebration of the Incorporation of the Town of Wilbraham, June 15, 1863, with an Appendix," by Rufus P. Stebbins, D. D.; "History of Lynn, Essex County, Mass., including Lynnfield, Saugus, Swampscot, and Nahant," by Alonzo Lewis and James R. Newhall; "History of New Boston, New Hampshire," Compiled and Written by Rev. Elliott C. Cogswell, map and illustrations; "Remarks on the Popham Celebration of the Maine Historical Society," read before the American Antiquarian Society, April 20, 1865, by S. T. Haven; "Historic Annals of the National Academy of Design, New York Drawing Association, etc.," by Thomas S. Cummings, N. A.; "A Chronological History of the Boston Watch and Police from 1631 to 1865, together with Recollections of a Boston Police Officer," by Edward H. Savage; "A History of the Bills

of Credit or Paper Currency of New York from 1709 to 1789, with Descriptions of the Bills, Catalogues of the Various Issues, and other Matters pertaining thereto," by J. Hickcox, author of "American Coinage;" "The Bryant Festival at 'The Century,' Nov. 5, 1864;" "The History of the Indian Races of North and South America, etc., etc., including the late Sioux Massacre at Minnesota," by Charles De Wolf Brownell.

Of *Histories of other Countries and Times*, we have—"France and England in North America. A Series of Historical Narratives," by Francis Parkman, author of "History of the Conspiracy of Pontiac," part I., 8vo., pp. xxiii., 420, portrait; "Historical View of the American Revolution," by George Washington Greene, author of "Historical Studies;" "The Age of Louis XIV.," by Henri Martin, being vols. xiii. and xiv. of the History of France, from the earliest period to 1789, translated from the fourth Paris edition, by Mary L. Booth; "The Cavalier Dismounted," an Essay on the Origin of the Founders of the Thirteen Colonies, by William H. Whitmore. To this class, perhaps, belongs also Mr. Henry B. Dawson's "Current Fiction," tested by Uncurrent Facts, a Correspondence between John Jay and Henry B. Dawson, and between James A. Hamilton and Henry B. Dawson, concerning "The Fœderalist."

Of *Historical Reprints*, the following are the principal: "The History of the Jews, from the Earliest Period down to Modern Times," by Henry Hart Milman, D. D., Dean of St. Paul's, reprinted from the newly revised and corrected London edition, 3 vols., post 8vo., pp. 512, 497, 479; "The History of the Romans under the Empire," by Charles Merivale, B. D., vol. vii., completing the work; "The Conversion of the Roman Empire; the Boyle Lectures for the year 1864," by Charles Merivale, B. D.; "A History of the World from the Earliest Records to the Present Time," by Philip Smith, B. A., vols. ii. and iii., Ancient History; "History of England from the fall of Wolsey to the Death of Elizabeth," by James Anthony Froude, M. A. 4 vols., 8vo., pp. 447, 501, 480, 508; "History of Friedrich the Second, called Frederick the Great," by Thomas Carlyle, fifth and sixth volumes, completing the work; "A Smaller History of Rome, from the Earliest Times to the Establishment of the Empire," by William Smith, LL. D. With a Continuation to A. D. 476, by Eugene Lawrence, A. M., 16mo., pp. xxv., 365, illustrated; "Historia de la Isla de Cuba, con Notas e Ilustraciones," por Pedro J. Guiteras. Tome I. 12mo., pp. xvi., 417; "The History and Antiquity of Ecton, in the County of Northampton (England)," by John Cole. 8vo., pp. 51, iii.

There were a few *Historical Periodicals and Transactions or Proceedings of Historical Societies* published during the year. Among them were: "The Firelands Pioneer." Pub-

lished by the Firelands Historical Society, Norwalk, Ohio, vol. vi., 8vo., pp. 124, portrait; "Proceedings of the Massachusetts Historical Society, for 1863-'4," 8vo., pp. xiii., 508, and "Collections of the Mass. Historical Society," vol. vii., fourth series, 8vo., pp. xvii. 647, plates; "Papers of the New Haven Colony Historical Society, vol. i., pp. iii., 170, iv., 192. Among the periodicals, "The Historical Magazine" was continued, as were the "United States Service Magazine," the "Army and Navy Journal," and "The Rebellion Record;" "Gazlay's "Pacific Monthly," a periodical published in the interest of the States and Territories of the Pacific slope, contained many valuable articles on the history of that region; "The Old Flag," a newspaper first published by Union Prisoners, at Camp Ford, Tyler, Texas, also appeared in lithographic fac-simile during the year.

In *Ecclesiastical History*, 1865 was more prolific than almost any previous year, and many of the works possessed great merit. The most important were: "A History of the Presbyterian Church of the United States of America," by Rev. E. H. Gillett, D. D.; "History of the Methodist Episcopal Church in the United States of America," by Abel Stevens, D. D., LL. D., vol. ii.; "The Planting and Training of American Methodism;" "The Centenary of American Methodism: a Sketch of its History, Theology, Practical System, and Success," prepared by order of the Centenary Committee of the General Conference of the Methodist Episcopal Church, by Abel Stevens, D. D., LL. D. With a Statement of the Plan of the Centenary Celebration of 1866, by John McClintock, D. D.; "History of Congregationalism from about A. D. 250 to the Present Time," in continuation of the account of the Origin and Earliest History of this System of Church Polity, contained in "A View of Congregationalism," by George Punchard. Second edition, rewritten and greatly enlarged, 2 vols.; "The Church of the First Three Centuries; or, Notices of the Lives and Opinions of the Early Fathers, with special Reference to the Doctrine of the Trinity, illustrating its late Origin and gradual Formation," by Alvan Lamson, D. D. Second edition, revised and enlarged; "History of the Planting and Training of the Christian Church by the Apostles," by Dr. Augustus Neander; translated from the German, by J. E. Ryland. Translation revised and corrected according to the Fourth German Edition, by E. G. Robinson, D. D.; "A General History of the Catholic Church, from the commencement of the Christian Era until the Present Time," by M. l'Abbé J. E. Darras. From the last French edition, with an Introduction and Notes by the Most Rev. M. J. Spalding, D. D., Archbishop of Baltimore, vol. i.; "History of the Society of Jesus, from its Foundation to the Present Time," translated from the French of J. M. S. Daurignac by James Clements, 2 vols.; "The Oriental Church and the Latin,"

by Jonas King, upwards of forty years Missionary in Palestine and Greece; Translation from the Original Greek of a Pamphlet entitled 'Letters of the Most Pious King, and of the Most Holy Patriarchs, concerning the establishment of the Most Holy Synod, with an Exposition of the Orthodox Faith of the Eastern Catholic Church,' by William O. King, of Athens, Greece; "The Russo-Greek Church," by a former Resident of Russia; "A Few Historic Records of the Church in the Diocese of Texas, during the Rebellion. Together with a Correspondence between Right Rev. Alexander Gregg, D. D., and the Rev. Charles Gillette;" "The History of Methodism within the Bounds of the Erie Annual Conference of the Methodist Episcopal Church," by Rev. Samuel Gregg, vol. i.; "Contributions to the Ecclesiastical History of Essex County, Mass." 1 vol., 8vo; "The Earliest Churches of New York and its Vicinity," by Gabriel P. Disoway, A. M.; "A Commemorative Discourse, delivered in the New South Church, Church Green, Boston, December 25, 1864, the Fiftieth Anniversary of its Dedication," by George E. Ellis, D. D.; "The Universalist Register," containing the Statistics of the Denomination for 1865.

In BIOGRAPHY, the greatest interest centred around the memory of the assassinated President, a biographical sketch of whom will be found elsewhere in this work. (*See LINCOLN, ABRAHAM.*) A list, known to be incomplete, gives forty volumes of memoirs, memorials, reminiscences, or funeral sermons, relative to President Lincoln. Of these, the most prominent and widely circulated biographies were those compiled by Frank Crosby, J. H. Barrett, Henry J. Raymond, L. P. Brickett, and J. G. Holland (we give them in the order of their publication). Cheaper and briefer memoirs were published, generally though not always without the name of the author, by T. B. Peterson and Brothers, Philadelphia, Carleton, Beadle & Co., Trent, Filmer & Co.; The American News Co., and T. R. Dawley, New York, and by Wm. V. Spencer, and B. B. Russell & Co., of Boston. Another class of biographical sketches of Mr. Lincoln were the memorial volumes, consisting of a brief memoir, and the public exercises connected with the funeral services conducted on the occasion of his death, either by municipal authorities or in churches or public halls. They included sermons, orations, eulogies, and odes or elegies, delivered at these memorial services. Of these were: "The Lincoln Memorial," published by Messrs. Bance and Huntington, N. Y.; "The Memorial Record of the Nation's Tribute to Abraham Lincoln," compiled by B. F. Morris; "A Memorial of Abraham Lincoln, late President of the U. S.," published by Ticknor and Fields, Boston; "The Promises of the Declaration of Independence, Eulogy on Abraham Lincoln, Boston, June 1, 1865," by Charles Sumner; "The Journeys of Abraham Lincoln; from Springfield to Washington in 1861, as

President Elect, and from Washington to Springfield, 1865, as President Martyred," by William T. Coggeshall; "The Martyr to Liberty;" three Sermons by Richard Eddy; "Our Martyr President, Abraham Lincoln, Voices from the Pulpit of New York and Brooklyn, with the Orations of Hon. Geo. Bahcroft and Bishop Simpson;" "Sermons preached in Boston on the Death of Abraham Lincoln; together with the Funeral Services in the East Room of the Executive Mansion at Washington;" "A Discourse occasioned by the Death of Abraham Lincoln, preached in Boston, April 16, 1865," by Andrew L. Stone, D. D.; "Commemorative Proceedings of the Athenæum Club on the Death of Abraham Lincoln, President of the United States, April, 1865." There were also orations, reminiscences, and an ode delivered and published by the New York Historical Society; a discourse before the Loyal League, by Rev. J. P. Thompson, D. D.; and proceedings and eulogies in most of the Clubs and Scientific Societies. Memorial volumes were also published by the cities of Troy, New York, and some others. A funeral oration was also pronounced by Miss Emma Hardinge on the 16th of April, and subsequently published. Another volume, combining the memorial with the biographical record, was "The Martyr's Monument; being the Patriotism and Political Wisdom of Abraham Lincoln, as exhibited in his Speeches, Messages, Orders, and Proclamations, from the Presidential Canvass of 1860 until his Assassination." Besides these, several collections were made of choice passages from his speeches, letters, and addresses; one of these bore the title of "Gems from Abraham Lincoln," and another, "The President's Words." Seven different volumes appeared, containing more or less full reports of the arrest and trial of the assassins and conspirators. Of these, one is in French, and one is mainly occupied with the details of the pursuit and capture of Booth and his accomplices. Of Mr. Andrew Johnson, President Lincoln's successor, three biographies were published, one anonymous, but issued by Messrs. Peterson and Brother, of Philadelphia; one by John Savage, of New York; and one introductory to a volume of his speeches, by Frank Moore. There were also four memoirs of Lieut.-Gen. Grant published during the year; an anonymous work, published by Peterson and Brother; a small biography, by C. J. Victor; another, of hardly greater extent, by F. W. H. Stanfield; and "Grant and his Campaigns," an elaborate work, derived from official sources, by Henry Coppée, A. M., now President of Lehigh College, Pa. Of other prominent officers of the army, Gen. Sherman received the honor of three biographical sketches, one by T. R. Dawley, another by Rev. P. O. Headley, and a third, with a full and careful account of his campaigns, under the title of "Sherman and his Campaigns," by Col. S. M. Bowman and Lieut.-Col. R. B. Irwin; a biographical sketch, under the title of "Kilpatrick and Our Cavalry," by James Moore, M. D.,

commemorates the services of that brilliant cavalry officer; the Century Association published a memorial of Gen. James S. Wadsworth and Col. Peter A. Porter, two brave officers slain in 1864, prepared by W. J. Hoppin, and F. S. Cozzens; Rev. P. C. Headley, in addition to his *Boy's Life of Sherman*, already mentioned, prepared a "Life of Gen. Sheridan," a "Life of the Admiral Farragut," and one of Captain Ericsson, inventor of the Monitor; Rev. Henry Clay Trumbull, under the title of "The Knightly Soldier," gave a very interesting memoir of Major Henry Ward Camp, of the 10th Connecticut Volunteers; Mrs. P. A. Hanaford, under the title of "The Young Captain," a memorial of Capt. Richard Derby, 15th Mass. Vols., and Judge Bacon, of Utica, one of his son, Adjutant William Kirkland Bacon.

Of other prominent deceased citizens there were five memorials and discourses of the late Edward Everett, one each by Rev. Dr. Hedge and Rev. Dr. Osgood, a Memorial published by the New England Historical and Genealogical Society, and "The Proceedings of the Thursday Evening Club," on the occasion of his death, and a Memorial from the City of Boston; Dr. Samuel W. Francis published a Memoir of the late Dr. Valentine Mott; the second and concluding volume of the Autobiography, Correspondence, etc., of Lyman Beecher, D. D., edited by Charles Beecher, D. D., made its appearance; other biographies of distinguished persons were: a Memoir of Alice B. Haven, under the title of "Cousin Alice," by her sister; Memoirs of Rev. Benjamin C. Cutler, D. D., late Rector of St. Ann's Church, Brooklyn, N. Y., by Rev. Horatio Gray, A. M.; "A Tribute to Rev. T. Starr King," by R. Frothingham; a Memorial of Albert Drake, with Funeral Discourse, etc., by Rev. E. K. Alden; a sketch of the Life of James William Wallack, senior, late stage actor and manager; "Life and Letters of Rev. James May, D. D.," by Rev. Alexander Shiras, A. M.; "Life and Services of Joseph Warren," by Richard Frothingham; "Life of John Jacob Astor," by James Parton; "The Life of Horace Mann," by his wife; "William Jackson Davis, in memoriam," by H. B. Dawson; "Eulogy on Thomas Crawford," by Thomas Hicks, N. A.; "Life of Pauline Cushman, the celebrated Union Spy and Scout," by F. L. Sarmiento; "A Colored Man's Reminiscences of James Madison," by Paul Jennings; "The Faithful Shepherd: a Man Mighty in the Scriptures," a memoir published in Northampton, Mass.; Jamie McClintock, a memoir by Rev. I. A. Cornelison; "Reminiscence of Sixty-four Years in the Ministry, by Rev. Henry Boehm, Bishop Asbury's Travelling Companion," edited by Rev. J. B. Wakeley; "Autobiography of Elder Osborn, an Itinerant Minister of the Methodist Episcopal Church, to which is added a brief Memoir of Rev. Ezekiah C. Wooster;" "The Unjust Judge: a Memorial of Roger Brooke Taney, late Chief Justice of the United States;" "The Life of John Brainerd,

brother of David Brainerd, and his Successor as Missionary to the Indians of New Jersey," by Rev. Thomas Brainerd, D. D.; "David Woodburn, the Mountain Missionary," by Curris Brandon; "Memoirs of Mrs. Mary H. Adams," by her husband; "A Memorial of Closing Scenes in the Life of Rev. George B. Little;" "Memoir and Sermons of Rev. Francis A. Baker, Priest of the Congregation of St. Paul," edited by Rev. A. F. Hewitt; Mr. W. O. Van Horn, a German author of considerable ability, has published in German a number of small volumes containing biographical sketches of Benjamin Franklin, George Stephenson, James Watt, John Jacob Astor, and Louis Napoleon. Mr. William L. Stone has completed a memoir commenced by his father, entitled "The Life and Times of Sir William Johnson." There have been also brief and somewhat sensational biographies published of "Semmes, the Pirate;" "John Y. Beall, the Pirate Spy;" "Robert Cobb Kennedy, the Incendiary Spy;" and "The Life and Adventures of Jeff. Davis," the last by McArone (the late George Arnold). Among the sensational books of the year was also one entitled "The Love-Life of Dr. Kane; containing the Correspondence and a History of the Acquaintance, Engagement, and Secret Marriage between Elisha Kent Kane and Margaret Fox, with fac-similes of Letters and her Portrait." Of biographies of men of other countries or times, we have "Life of Philip Doddridge, D. D., with Notices of some of his Contemporaries," by D. A. Harsha; also a "Life of Rev. James Hervey," by the same author; "Wilhelm Tell," the life by Schiller (in German); "The Life of John Mary Decalogue, Student in the University of Paris," translated from the French; "The Martyr of Lebanon," by Rev. Isaac Bird; "Life of Mary Anne Schimmelpenninck, author of 'Memoirs of the Port Royalists,'" edited by Christiana C. Hankin; "Memorials of Samuel Gurney, the Famous London Banker," by Mrs. Geldart; William Forsyth's "Life of Marcus Tullius Cicero;" "The Life of Felix Mendelssohn Bartholdy," from the German of Lampadius, with supplementary sketches by Julius Benedict, Henry F. Chorley, Ludwig Rillstab, Bayard Taylor, R. S. Willis, and G. S. Dwight. Edited and translated by W. L. Gage; "The Mother of the Wesleys: a Biography," by Rev. John Kirk; Silvio Pellico's biography of Francesca da Rimini (in Italian). The Life of Julius Caesar, by Napoleon III., was issued in six different editions, two of them in French. Other biographies of this class were—"Diary of David How, Private in Colonel Paul Dudley Sargent's Regiment of the Massachusetts Line in the Army of the American Revolution," from the Original Manuscript, with a Biographical Sketch of the Author, by George Wingate Chase, and Illustrative Notes by Henry B. Dawson; "A Political Epistle to His Excellency George Washington, Esq., Commander-in-Chief of the Armies of the United States of America, by an

Inhabitant of Maryland. To which is annexed a short Sketch of General Washington's Life and Character." Annapolis, 1791; New York, privately reprinted; "Washingtoniana; or, The Memorial of the Death of George Washington, giving an Account of the Funeral Honors paid to his Memory, with a list of Tracts and Volumes printed upon the Occasion, and a Catalogue of Medals commemorating the Event," by Franklin B. Hough; "The Adventures of Christopher Hawkins, containing Details of his Captivity, Escape from the Prison Ship, etc., written by Himself," with an Introduction and Notes, by Charles J. Bushnell; "Life and Letters of Frederick W. Robertson, M. A., Incumbent of Trinity Chapel, Brighton," edited by Stopford A. Brooks, M. A.; "Hesperus: or, Forty-five Dog-Post-Days: a Biography." From the German of Jean Paul Friedrich Richter, translated by Rev. Charles T. Brooks; "Richard Cobden, the Apostle of Free Trade, his Political Career and Public Services: a Biography," by John McGilchrist; "Hope for the Hopeless: an Autobiography of John Vine Hall, author of the Sinner's Friend," edited by Rev. Newman Hall, LL.D.; "Life and Character of J. H. Van der Palm, D. D., Professor of Oriental Language, etc., at the University of Leyden," sketched by Nicholas Beets, D. D., translated from the Dutch by J. P. Westervelt; "Memoirs of the Life of William Shakspeare, with an Essay toward the Expression of his Genius, and an Account of the Rise and Progress of the English Drama," by Richard Grant White; "Life of Michael Angelo," by Hermann Grimm. Translated, with the author's sanction, by Fanny Elizabeth Bunnett, 2 vols.; "Dante as Philosopher, Patriot, and Poet, with an Analysis of the Divina Commedia, its Plot and Episodes," by Vincenzo Botta; "Sir Charles Henry Frankland, Baronet; or, Boston in the Colonial Times," by Elias Nason, M. A. Among the biographies may properly be included a number of Lives of the Saints of the Roman Catholic Church, first published in the United States during the year 1865. Among these were—"The Life and Miracles of Saint Philomena, Virgin and Martyr, whose sacred body was lately discovered in the Catacombs of Rome, and thence transferred to Magnano, in the Kingdom of Naples," from the French; "Life of Saint Antony, of Padua, of the Order of Friars Minor," by Father Servais Dicks; "The Life of Blessed Paul of the Cross, Founder of the Congregation of Discalced Clerks of the Most Holy Cross and Passion of Jesus Christ," written by Father Pius of the Name of Mary, translated by Father Ignatius of S. Paul.

Among the *collective biographies* the most important were—"Annals of the American Pulpit," etc., by William B. Sprague, D. D. Vol. viii., Unitarian Congregational; "Southern Generals, Who they are and What they have done," by William Parker Snow; "Our Great Captains, Grant, Sherman, Thomas, Sheridan, and Farragut," by L. P. Brockett, A. M.;

"Lives made Sublime: or, Sketches of Christian Men who adorned their Lives with Good Works;" "National Jewels: Washington, Lincoln, and the Fathers of the Revolution," by Rev. Andrew Manship; "The Perfect Light: or, Seven Hues of Christian Character," by Julia M. Olin; "Lessons from Biography for Young Men;" *Contes Biographiques*, by Madame, E. Foa; "The New Jersey Conference Memorial, containing Biographical Sketches of all Deceased Members, including those who have died in the Newark Conference;" "Women of the South distinguished in Literature, illustrated with Portraits on Steel," by Mary Forrest, a new edition; "A Biographical History of the Fine Arts: or, Memoirs of the Lives and Works of Eminent Painters, Engravers, Sculptors, and Architects, from the Earliest Ages to the Present Time," by Shearjashub Spooner, new edition, 2 vols.; "The Cyclopædia of Biography: a Record of the Lives of Eminent Persons," by Parke Godwin, new edition, with a Supplement brought down to 1865, by George Sheppard; "Supplement to the Cyclopædia of American Literature, including Obituaries of Authors, Continuations of former Articles, with Notices of Earlier and Later Writers omitted in previous Editions," by E. A. Duyckinck.

Genealogical works properly come under this head. Of these there were—"A Brief Genealogy of the Descendants of William Hutchinson and Thomas Oliver, reprinted, with additions, from the 'N. E. Historical and Genealogical Register,'" "A Memorial of John, Henry, and Richard Townsend, and their Descendants;" "The Pratt Family; or, The Descendants of Lieut. William Pratt, one of the First Settlers of Hartford and Saybrook, with Genealogical Notes of John Pratt of Hartford, Peter Pratt of Lyme, John Pratt (Taylor) of Saybrook," by Rev. F. W. Chapman, A. M.; "The Burke and Alvord Memorial;" "A Genealogical Account of the Descendants of Richard Burke, of Sudbury, Mass.," compiled by John Alonzo Boutelle, of Woburn, Mass., for William A. Burke, of Lowell, Mass.; "Anthony Stoddard, of Boston, Mass., and his Descendants," a Genealogy, originally compiled by Charles and Elijah W. Stoddard, and published in 1849: revised and enlarged by Elijah W. Stoddard, and republished in 1865.

The number of *THEOLOGICAL WORKS* was larger than in 1864. Among those of a *doctrinal* character were—"The Lives and Doctrines of the Apostles," by Rev. S. J. Fletcher; "A Treatise on Despondency in the Pursuit of Piety, followed by one on Temptations," by Rev. P. J. Michel, translated from the French; "South Church Lectures, Discourses upon Christian Doctrine, delivered in the South Baptist Church, New York, on Sabbath Evenings, from January to April, 1863," by Clergymen of New York, representing Six Evangelical Denominations; "Almighty God and His Perfections," by the Rev. J. Furniss, O. S. S. R.; "The Laws of God as Contained in the Ten

Commandments, Explained and Enforced," by William S. Plumer, D. D., LL. D.; "Meditations on the Essence of Christianity and on the Religious Questions of the Day," by M. Guizot, translated from the French; "The Words of the Lord Jesus," by Rudolf Stier, D. D., translated by the Rev. W. B. Pope, and revised by James Strong, S. T. D., and Henry B. Smith, D. D.; "The Love of Religious Perfection; or How to Awaken, Increase, and Preserve it in the Religious Soul," by Father Joseph Bayma, translated from the Latin; "Sermons preached in the Second Church, Dorchester," by James H. Means; "Our Faith; the Victory: or, a Comprehensive View of the Principal Doctrines of the Christian Religion," by Rev. John McGill, D. D., Bishop of Richmond; "Remember Me; or, the Holy Communion," by Ray Palmer, D. D.; "Our Vows: a Work to be read in Preparation for Baptism, Confirmation, and the Eucharist," by the Rev. Richard Lowndes, M. A., revised and adapted to Use in the Church in the United States; "An Exposition of the Thirty-nine Articles, Historical and Doctrinal, by Edward Harold Browne, D. D., Lord Bishop of Ely, 1st American from the 5th English edition: edited, with Notes, by J. Williams, D. D., Bishop of Connecticut; "Catholic Anecdotes; or the Catechism in Examples: the Apostles' Creed," etc., translated from the French by Mrs. J. Sadlier; "A Critical and Grammatical Commentary on St. Paul's Epistles to the Philippians, Colossians, and to Philemon, with a Revised Translation," by Right Rev. Charles J. Ellicott, D. D.; "The Prophecies of Isaiah Translated and Explained," by Joseph Addison Alexander, D. D., revised edition, 2 vols.; "A Commentary on the Gospels, Matthew," by Rev. J. H. Lange, D. D. Translated, with Additional Notes, by Philip Schaff, D. D. and others; "Notes on the Book of Genesis," by C. H. Mackintosh; "Expository Thoughts on the Gospels, for Family and Private Use, with the Text Complete," by the Rev. J. C. Ryle—St. John; "A Critical and Grammatical Commentary on the Pastoral Epistles," by the Right Rev. C. J. Ellicott, D. D.; "A Concise Dictionary of the Bible, comprising its Antiquities, Biography, Geography, and Natural History, being a Condensation of the Larger Dictionary," edited by William Smith, LL. D.; "A Cyclopaedia of Biblical Literature," originally edited by John Kitto, D. D., F. S. A.: third edition, greatly enlarged and improved, edited by William Lindsay Alexander, D. D., three volumes; "The New Testament of our Lord and Saviour Jesus Christ, with Explanatory Notes and Practical Observations," by Rev. Lyman Cobb, D. D.

Of works in *Polemic Theology*, the following were the most important: "What is Confirmation, or the Laying On of Hands? The Question answered to Strangers in the Church, with an Appendix, showing by Testimony that a similar Custom anciently existed, and is still observed among the Jews," by the Rev. David

G. Haskins; "Christ's Second Coming: Is it Pre-millennial or Post-millennial? Scripturally, Historically, and Philosophically considered, with a Reply to Prof. Shedd on Eschatology, etc., and Remarks on an Article on the same Subject, by Rev. E. F. Hatfield, D. D.," by Rev. R. C. Shimeall; "Mater Admirabilis; or First Fifteen Years of Mary Immaculate," by Rev. Alfred Monnin, translated from the French by the Sisters of Charity, Mount St. Vincent, N. Y.; "Morning Lectures: Twenty Discourses delivered before the Friends of Progress in the City of New York," by Andrew Jackson Davis; "Universalism: its Doctrines and their Foundations," by Rev. L. J. Fletcher; "Childhood and Manhood of the Spirit in Jesus; and 'New Year's Gifts of the Spirit';" Two Discourses, by Rev. O. B. Frothingham; "Reply to the 'Christian Examiner' on Catholicity and Naturalism;" "Sermons on our Lord Jesus Christ and on His Blessed Mother," by his Eminence Cardinal Wiseman; "Evidences of Divine Revelation, in a Letter to a Judge," by Ichabod S. Spencer, D. D.; "The Unions of the Liberal Faith:" a Discourse by Rev. O. B. Frothingham; "Tract Number Ninety: Remarks on Certain Passages in the Thirty-nine Articles," by John Henry Newman, D. D.; "The Month of Mary," for the Use of Ecclesiastics; "Lectures on M. Rénan's 'Vie de Jésus,'" by John Tulloch, D. D., Principal of the College of St. Mary's in the University of St. Andrew's, with an Introduction by Rev. J. W. Wiley, D. D.; "Congregationalism: What It Is: Whence It Is: How It Works: Why it is Better than any Other Form of Church Government; and its Consequent Demands," by Henry M. Dexter, D. D.; "Lessons from the World of Matter and the World of Man," by Theodore Parker: selected from Notes of Unpublished Sermons, by Rufus Leighton; "The Person of Christ, the Miracle of History, with a Reply to Strauss and Rénan, and a Collection of Testimonies of Unbelievers," by Philip Schaff, D. D.; "The Verdict of Reason upon the Question of the Future Punishment of Those who Die Impenitent," by H. M. Dexter, D. D.; "Reason in Religion," by Frederick Henry Hedge, D. D.; "The Radical Creed:" a Discourse by Rev. David A. Wasson; "The Unity of the Spirit, not Unbroken Episcopal Succession, the Revealed Bond of Peace to the Church," by Rev. Mason Gallagher, Rector of the Church of the Evangelists, Oswego; "Scripture Baptism Defended," by Rev. John Livingston; "Pastoral Letter of the Rt. Rev. H. Potter, D. D., D. C. L., with Replies of the Rev. S. H. Tyng, D. D., E. H. Canfield, D. D., John Cotton Smith, D. D., W. A. Muhlenberg, D. D.; "Review of a Pastoral Letter to the Clergy of the Diocese of New York, from the Bishop," by a Presbyterian; "Essays on the Supernatural Origin of Christianity, with a Special Reference to the Theories of Rénan, Strauss, and the Tübingen School," by Rev. George P. Fisher, A. M., Professor of Church History in Yale College; "The

Vicarious Sacrifice, Grounded on Principles of Universal Obligation," by Horace Bushnell, D. D.; "History or Romance? an Answer to Rénan" (in German), by Rev. Dr. Osterzu; "Eternal Penalty: Nine Essays from 'The Northwestern Church,'" by Hugh Miller Thompson, Professor of Church History in Nashotah Theological Seminary; "Slavery and Southern Methodism: Two Sermons preached in the Methodist Church in Newnan, Georgia," by the Pastor, Rev. John H. Caldwell; "The End, as Foretold in Daniel, with an Exposition of Some Numbers, and the Chronology of the Hebrew Scriptures," by Redford A. Watkinson; "History of Rationalism: embracing a Survey of the Present State of Protestant Theology, by the Rev. John F. Hurst, A. M., with an Appendix of Literature; "The Reformed Church of Christendom; or the Duties of Liberal Christians to the Natural Faith at this Crisis of Opinion:" a Sermon, by Rev. H. W. Bellows, D. D.

The number of RELIGIOUS WORKS NOT THEOLOGICAL (aside from religious books for children which form a distinct class) was considerably smaller than the previous year, but included a considerable number of very valuable original publications, as well as some important reprints. Of the former, the most important were—"The Mystical Rose; or, Mary of Nazareth, the Lily of the House of David," by Maria Josephine; "Home Scenes: or, Lights and Shadows of the Christian Home;" "Jesus in Bethany," by the author of "Allan Cameron;" "Christ and the Sea: or, Sketches of His Works and Wonders in the Deep," by Rev. John Spaulding, late Corresponding Secretary of the American Seaman's Friend Society; "The Predictions of the Prophets which have been most wonderfully fulfilled since the Commencement of the Christian Era, and especially those Predictions concerning the United States of America," by Rev. E. P. Royse; "The High Mountain Apart: or, the Desert Place a Delight;" "St. John Land; a Retrospective: in Two Letters supposed to be written some Years hence;" "Sermons preached at the Church of St. Paul, the Apostle, during year 1864;" "Reflected Light; Illustrations of the Redeemer's Faithfulness in the Happy Deathbed Experience of Christians;" "Counsels to Converts," by Rev. A. C. George; "A Sermon of Childhood," by Rev. Morgan Dix, S. T. D.; "St. Paul in Rome; Lectures delivered in the Legation of the United States of America, in Rome," by Rev. C. M. Butler, D. D.; "A Pastor's Review, a Discourse preached in Medway, Mass., Nov. 2, 1864, on the Fiftieth Anniversary of the Author's Ordination and Settlement," by Jacob Ide, D. D.; "The Light of Life: or, the True Idea of the Soul," by N. S. Saxton, M. D., Greenpoint, L. I.; "Hours with the Tilling, a Book for Women;" "Spiritual Progress," by J. W. Cummings, D. D., LL. D., of St. Stephen's Church, N. Y.; "The Christian Armor, with Illustrative Selections in Prose and Poetry;"

"The Believer's Refuge; or, Meditations on Christ and Heaven," by Joseph P. Thompson, D. D.; "A Discourse delivered in Harvard Church, Charlestown, March 12, 1865, on the 25th Anniversary of his Ordination," by George E. Ellis, D. D., with an Historical Note; "The Missionary Jubilee; an Account of the Fiftieth Anniversary of the American Baptist Missionary Union at Philadelphia, May 24-26, 1864, with Commemorative Papers and Discourses;" "Our Country: its Trials and its Triumphs; a series of Discourses suggested by the varying events of the War for the Union," by George Peck, D. D.; "Parochial Sermons," by Rev. Charles Mason, D. D., late Rector of Grace Church, Boston, with a brief Memoir of the Author; "Machpelah: a Book for the Cemetery;" "Behold the Lamb of God!" by E. N. Kirk, D. D.; "The Waiting Saviour," by E. N. Kirk, D. D.; "Thoughts on the Death of Little Children," by S. I. Prime, D. D., with an Appendix, selected from various authors, a new and enlarged edition; "Hours among the Gospels: or, Wayside Truths from the Life of Our Lord," by N. C. Burt, D. D.; "Notes from Plymouth Pulpit; a Collection of Memorable Passages from the Discourses of Henry Ward Beecher, with a Sketch of Mr. Beecher and the Lecture Room," by Augusta Moore, a new edition, revised and greatly enlarged. "Questions for the First Half of the Christian Year," by Rev. William R. Huntington, Worcester; "Four Years in the Old World: comprising the Travels, Incidents, and Evangelical Labors of Dr. and Mrs. Palmer, in England, Ireland, Scotland, and Wales," by the Author of "The Way of Holiness;" "Vital Godliness," by Rev. W. S. Plumer, D. D.; "Daily Meditations," by the Rev. George Bowen, American Missionary to Bombay, India; "Some Words of Promise;" "The Soul Gathered," by the Author of "The Way Home;" "Book of Worship, for Private, Family, and Public Use," by W. W. Everts, D. D.; "Golden Sands from the Ocean of Divine Wisdom," by the Author of "Emma Allen;" "Gleanings from Pious Authors;" "How to be Saved: or, the Sinner directed to the Saviour," by J. H. B.; "Jesus and the Coming Glory: or, Notes on Scripture," by Joel Jones, LL. D., a new edition; "An Essay on Temptation," by E. C. Wines, D. D.; "Family Prayers, with Forms for Occasional and Private Use," by the Rt. Rev. Henry W. Lee, D. D., Bishop of Iowa; "New Fruits from an Old Field," by Rev. Ephraim Whittaker.

Among the reprints the following are most noteworthy: A new and very elegant edition of Jeremy Taylor's "Rule and Exercise of Holy Living," and "Rule and Exercise of Holy Dying;" "Ore from Precious Mines;" a new edition of Paley's "Horæ Paulinæ;" "The Rhythm of Bernard de Morlaix, Monk of Cluny, on the Celestial Country," translated by Rev. J. M. Neale, B. D., Warden of Sackville College; "Sermons of Rev. C. H. Spurgeon," preached at the Metropolitan Tabernacle, London, Eighth

Series; "Sermons on Moral Subjects," by his Eminence Cardinal Wiseman; "Of the Imitation of the Sacred Heart of Jesus," translated from the Latin of Rev. P. J. Arnouldt," by Rev. J. A. M. Fastre; "Life in Heaven: there Faith is changed to Sight, and Hope has passed into Blissful Fruition," by the Author of "Heaven our Home;" "Arbor Vitæ: or, the Natural History of the Tree of Life (London, 1741), privately reprinted; "Religious Duty," by Frances Power Cobbe; "Mary the Handmaid of the Lord," by the Author of the Schönberg-Cotta Family (Mrs. Charles); "The Throne of Grace," by the Author of "The Pathway of Promise;" Words to the Winners of Souls," by Rev. Horatus Bonar, D. D.; "The Office of the Dead, according to the Roman Ritual and Missal, with Gregorian Chants in Modern Notation;" "Meditations and Considerations for a Ritual of one day in each month," compiled from the writings of Fathers of the Society of Jesus; "The Year of Mary: or, the True Servant of the Blessed Virgin," translated from the French of Rev. M. d'Arville, edited by Mrs. J. Sadlier; "The Cross of Jesus: or, Heaven on Earth to Me," by Rev. David Thompson; "Plain Words on Christian Living," by Charles John Vaughn, D. D.; "Voices of the Soul answered in God," by Rev. John Reid; "The Parables read in the Light of the Present Day," by Thomas Guthrie, D. D. A new and cheap edition of Bunyan's Pilgrim's Progress. "Manna Crumbs for Hungry Souls," consisting of Excerpts from the Letters of the Rev. Samuel Rutherford, gathered by Rev. W. P. Breed, D. D.; "Bible Blessings," by Rev. Richard Newton, D. D.; "Wanderings over Bible Lands and Seas," by the Author of the Schönberg-Cotta Family (Mrs. Charles); "Work: or, Plenty to do, and how to do it," by Margaret Maria Brewster, a new edition.

WORKS ON MORAL AND INTELLECTUAL SCIENCE are not very numerous in any year, but 1865 had more than its predecessor, and of these, six works of considerable ability were original. They were as follows: "Practical Ethics," by Rev. J. W. French, D. D., Professor of Ethics U. S. Military Academy, to which are added Lectures on Ethics and Jurisprudence; "Know the Truth, a Critique on the Hamiltonian Theory of Limitation, including some Strictures upon the Theories of Rev. Henry L. Mansel and Mr. Herbert Spencer," by Jesse H. Jones; "A View at the Foundations: or, First Causes of Character, as operative before Birth, from Hereditary and Spiritual Sources," etc., etc., by Woodbury M. Fernald; "Brief Outline of an Analysis of the Human Intellect; intended to rectify the Scholastic and Vulgar Perversions of the Natural Purposes and Methods of Thinking, by rejecting altogether the Theoretic Confusion, the Unmeaning Arrangement, and Indefinite Nomenclature of the Metaphysician," by James Rush, M. D., 2 vols., 8vo; "New System of Physiognomy, or the Art of Knowing Men by their Eyes," by M. Aguirre de Venero; "Physiognomy, or Signs of Character, based on

Ethnology, Physiology, and Phrenology." The reprints, though few in number, were works of great ability. They were—"The Intuitions of the Mind Inductively Investigated," by Rev. James McCosh, LL. D., a new and revised edition; "An Examination of Sir William Hamilton's Philosophy, and of the Principal Philosophical Questions discussed in his Writings," by John Stuart Mill, 2 vols., and "History of the Rise and Influence of the Spirit of Rationalism in Europe," by W. E. H. Lecky, M. A., 2 vols., 8vo.

The works on PHYSICAL SCIENCE did not materially vary in number from those of the previous year, though their distribution in the various sub-classes was decidedly different. In *Astronomy and Meteorology*, but a single work appeared, "The Report of the Meteorologist of the New York Skating-Club." There were indeed Meteorological Reports, in the Report of the Agricultural Department, in the Journal of the Franklin Institute, and some other publications, but no distinct work except the one named, devoted to this science, and none to astronomy, appeared during the year. In *Geology and Mineralogy*, thanks to our mining interests, the record is more extensive. Some of them, too, were works of great value. Among these were—"The Geological Survey of California," by J. D. Whitney, State Geologist, vol. i.; "Carboniferous and Jurassic Fossils," by F. B. Meek; "Triassic and Cretaceous Fossils," by W. M. Gabb; "The Mineral Resources of the Pacific States and Territories," a Lecture by the Hon. William M. Stewart, U. S. Senator from Nevada; "Contributions to the Geology and Physical Geography of Mexico, including a Geological and Topographical Map, with Profiles of some of the Principal Mining Districts: together with a graphic Description of an Ascent of the Volcano Popocatepetl," edited by Baron F. W. Von Egloffstein. The Geologists who were conducting the Geological Survey of Canada, added a volume to their report, published jointly in Montreal and New York. It was entitled, "Figures and Descriptions of Canadian Organic Remains, Decade II., Graptolites of the Quebec Group," by James Hall, 8vo., 21 plates. Another contribution to geological science was, "The Cooling Globe: or, the Mechanics of Geology," by C. F. Winslow, M. D., author of "Cosmography," etc. Dr. Worthington Hooker, Professor in the Yale Medical College, in pursuance of his design of popularizing science, published during the year as part third of his Science for the School and Family, a Treatise on Mineralogy and Geology. The only reprint in this sub-class was, "A Treatise on the Assaying of Lead, Copper, Silver, Gold and Mercury," from the German of Th. Bodemann and Bruno Keil, translated by W. A. Goodyear, Ph. B. In *Zoology* the number of works of a high character was very considerable. Mr. Daniel Giraud Elliot issued part third of his admirable monograph on the "Tetraonine or Grouse Family," Mr. Augustus Radcliffe Grote, the Curator

of Entomology in the Buffalo Society of Natural Sciences, published "Notes on the Sphingidæ of Cuba;" Mr. George W. Tryon, Jr., issued a third volume of his "Contributions to Conchology, containing the Synonymy of the Species of Strepomatidæ (Melanians) of the United States; with Critical Observations on their Affinities and Descriptions; of Land, Fresh Water, and Marine Mollusca," with two Plates. The Essex Institute (Salem, Mass.), one of the most efficient Natural History Societies in the country, issued a "Naturalist's Directory of North America and the West Indies," and published two monographs of some of its zealous members, entitled, "Notes on the Habits of some Species of Humble-Bees, and on the Leaf-Cutting Bee," by F. W. Putnam, and "The Humble-Bees of New England and their Parasites, with Notices of a New Species of Anthophorabæ and a New Genus of Proctotrupidæ," by A. S. Packard, Jr.

The Museum of Comparative Zoology, at Cambridge, have commenced the publication of an Illustrated Catalogue of the Museum, and in their first number give lists, with illustrations and descriptions, of the Ophiuridæ and Astrophytidæ, prepared by Theodore Lyman. They also issue a periodical Bulletin. A son and daughter of Professor Agassiz have made their contribution to the science in which their father stands preëminent, in a little volume entitled, "Seaside Studies in Natural History," in which they describe the Radiates found on the coast of Massachusetts. A Spanish naturalist, Senor Marco a Rójas, has published in his own language, in New York, a brief manual of Natural History entitled, "*El Reino Animal segun la clasificacion de Cuvier ó Historia Incinta de los Seres ameados, a Compañada de Reflexiones muy utiles.*" In popular, as distinguished from exact science, we have "Superior Fishing: or, the Striped Bass, Trout, and Black Bass of the Northern States, Embracing full Directions for Dressing artificial flies, with the Feathers of American Birds, an Account of a Sporting Visit to Lake Superior," etc., by Robert B. Roosevelt, author of "The Game Fish of North America;" and a work which, while making little pretension to science of any sort, is yet very interesting. "Curious Facts in the History of Insects, including Spiders and Scorpions. A complete collection of the Legends and Superstitious Belief and Ominous Signs connected with Insects; together with their Uses in Medicine, Art, and as Food, and a Summary of their Remarkable Injuries and Appearances," by Frank Cowan.

The works on *Natural Philosophy and Chemistry*, published during the year, were of no great importance. "The Annual of Scientific Discovery, for 1865," gave a *résumé* of the most important discoveries in these and kindred sciences; and the "American Journal of Science and the Arts," the ablest scientific journal maintained by private enterprise in the world, had its usual number of able papers on both subjects. Aside from these, the only original publications bearing even remotely on

Natural Philosophy were—"Rays of Sunlight from South America," seventy photographs, by Alexander Gardner, and a treatise on the "Preparation and Mounting of Microscopic Objects," by Thomas Davies. Two reprints were issued, one, an admirable lecture on Radiation, by Prof. John Tyndall; the other, a sort of encyclopædia of popular science, with the title of "That's It, or Plain Teaching." The only original work on chemistry was "Schultz and Warker's Mineral Spring Waters, their Chemical Composition, Physiological Action, and Therapeutical Use, with a Short Review of the History of Mineral Waters," by Carl Schultz.

In POLITICAL AND SOCIAL SCIENCE, the number of works was considerable, and some of them were valuable contributions to the discussion of the subjects of which they treated. Mr. Henry C. Carey, one of the highest authorities on Political Economy now living, published a series of letters under the title of "The Way to Outdo England without Fighting Her;" "Letters to the Hon. Schuyler Colfax, Speaker of the House of Representatives, on the Paper, the Iron, the Farmers, the Railroads, and the Currency Questions;" a condensation of Mr. Carey's great work, "The Principles of Social Science," by Kate McKean, well known as the author of several popular text-books, was also published during the year, under the title of "Manual of Social Science." Other works of importance on political and social science, were—"Words for the People, in three Parts, I. Civil Government, II. Government of the United States, III. Social Duties," by Origen; "The Fiscal Convention, Hints for the People, etc., in pro-forma Debates of a Convention of Delegates from Different Classes and Interests, with a Platform of Principles unanimously recommended to the National Government." "The Curse, or the Position in the World's History occupied by the Race of Ham," by Rev. Increase N. Tarbox. Prof. Arthur L. Perry, of Williams College, published, near the close of the year, "Elements of Political Economy," which, though intended as a text-book, is yet deserving of notice for its clear and somewhat original statement of the principles of this science. "The Reconstruction of States," a Letter of Major-General Banks to Senator Lane; "The Old Farm and the New Farm, a Political Allegory," by Francis Hopkinson, member of the Continental Congress, with an Introduction and Historical Notes, by Benson J. Lossing; "The Laws of the Commonwealth, shall they be Enforced?" speech of Wendell Phillips, Esq., before the Legislative Committee, February 28, 1865; "England and America," a Lecture by Goldwin Smith; "The New Man for the New Times," a Sermon by Rev. H. W. Bellows, D. D.; "Woman's Dress, its Moral and Physical Relations," by Mrs. M. M. Jones; "The American Union shown to be the New Heaven and the New Earth, and its Predicted Restoration to Life within Four Years from its

Death;" "Southern Planters and the Freedmen," by Rev. J. B. Waterbury, D. D. There were also a very considerable number of publications of an occasional character, relative to the Freedmen and to the reconstruction of the States. Of these, the most remarkable were the report of a tour, made at the request of the President, through the South, by Carl Schurz, late Major-General U. S. V., to ascertain the state of feeling in the South, and the report of Major-General Howard, Commissioner of the Freedmen's Bureau. Other works belonging to this class were—"The Fenian's Progress, a Vision; also the Constitution of the Fenian Brotherhood;" "Washington Vision," by Wesley Bradshaw; "The growth of New York;" two editions of "The Constitution of the United States, and the Declaration of Independence;" "Idols of the Polls, an Odd Essay on What is Even So," by Arácharr. A periodical, bearing the title of "The Social Science Review, a Quarterly Journal of Political Economy and Statistics," edited by Alexander Delmar and Simon Stern, and intended to sustain the Political and Social dogmas of the Free Traders and the Democracy, was commenced in January, 1865. Of republications, the most noteworthy were—"Social Statics, or the Conditions Essential to Human Happiness Specified, and the first of them Developed," by Herbert Spencer. This, like Mr. Spencer's other works, was ably edited by Prof. E. L. Youmans. Two editions, one in French the other in English, of M. A. Rozeard's "Political Satire on Napoleon III., *Les Propos de Labienus*," were issued.

Under the head of FINANCIAL AND STATISTICAL SCIENCE, were two or three treatises and essays on Finance, among which were—"A Critical Examination of our Financial Policy during the Southern Rebellion," by Simon Newcomb; "A National Currency," by Sidney George Fisher; a "Reply to the Last;" "A National Debt a National Blessing." Other works belonging to this class were—"The New York Stock Exchange Manual, containing its Principles, Rules, and its different Modes of Speculation, also, a Review of the Stocks dealt in on 'Change, Government and State Securities, Railway, Mining, and Petroleum Stock, etc.," by Henry Hamon; "The Annual Report or Volume of the New York Chamber of Commerce;" "The Merchant's and Banker's Almanac;" The Reports of the Philadelphia, Baltimore, Boston, Cincinnati, and Chicago Chambers of Commerce. "The American Annual Cyclopædia and Register of Important Events of the Year 1864, embracing Political, Civil, Military, and Social Affairs, Public Documents, Biography, Statistics, Commerce, Finance, Literature, Science, Agriculture, and Mechanical Industry;" "Chambers's Encyclopædia, a Dictionary of Universal Knowledge for the People, vol. vii.;" "The Report of the National Academy of Sciences," for 1863; and the "Annual of the National Academy of Sciences," for 1863-'64; "The In-

come Record, a List giving the Taxable Income of every Resident of New York for the Year 1863;" "The Stranger's Guide and Complete Hand-Book to the City of New York;" "Notices of the Triennial and Annual Catalogues of Harvard University, with a reprint of the Catalogues of 1674-1682 and 1700," by John Langdon Sibley, A. M.; "The Manual of the Corporation of the City of New York for 1865," with maps, etc.; "The Connecticut Register for 1865;" The Massachusetts Register for 1865;" "The New Hampshire Annual Register and United States Calendar for 1865;" "The Vermont Register (Walton's) and Farmer's Almanac for 1865;" "Sadlier's Catholic Almanac and Ordo for 1865, with a full Report of the Various Dioceses in the United States, British North America, and Ireland;" "The Tribune Almanac for 1865;" "The Evening Journal Almanac for 1865;" "The Franklin Almanac for 1866;" "The Railroad and Insurance Almanac for 1865;" "The American Photographic Almanac for 1865, being an Annual Appendix to Humphrey's Journal of Photography and the Allied Arts and Sciences," edited by John Fowler, M. D.; "The Illustrated Annual of Phrenology and Physiology for 1865," by S. R. Wells; "The Presbyterian Historical Almanac and Annual Remembrancer of the Church for 1864," by Joseph M. Willson; "The Physician's Visiting List, Diary, and Book of Engagements for 1866;" "Carroll's New Practical Catalogue of Current Miscellaneous Books published in the United States." Besides these, there were thirty-two Almanacs having some specialty of statistics or information; and about seventy-five directories of cities and towns, giving special statistical information concerning them. There were also ten extensive library catalogues published during the year.

PHILOLOGY is not a science which is ordinarily prosecuted with much advantage amid the din of war; yet several very valuable works, the result of investigations carried on during the past five years, were published in 1865. Noteworthy among these are—"Method of Philological Study of the English Language," by Francis A. March, Professor of the English Language and Lecturer on Comparative Philology in Lafayette College, Easton, Pa.; "Affixes in their Origin and Application, exhibiting the Etymological Structure of English Words," by S. S. Haldeman, A. M.; "An Explanatory and Pronouncing Dictionary of the Noted Names of Fiction, including also familiar Pseudonyms, Surnames bestowed on Eminent Men, and Analogous Popular Appellations often referred to in Literature and Conversation," by William A. Wheeler; "The Emphatic Diaglott, containing the Original Greek Text of what is commonly styled the New Testament, according to the Recension of Dr. J. J. Griesbach, with an Interlineary Word for Word English Translation, a new Emphatic Version, based on the Interlineary Translation, on the Renderings of Eminent Critics, and on the

Various Readings of the Vatican Manuscript (No. 1,209), in the Vatican Library, together with Illustrative and Explanatory Foot Notes, and a Copious Selection of References, to the whole of which is added a valuable Alphabetical Appendix," by B. Wilson, editor of the "Gospel Banner," "Sacred Melodist," etc. Messrs. De Vries, Ibarra & Co., a foreign publishing house of Boston, have issued four little Pocket Manuals, entitled respectively: "Do You Speak French?" "Do You Speak German?" "Do You Speak Spanish?" and "Do You Speak Italian?" intended to facilitate the efforts of beginners in acquiring rapidly a colloquial knowledge of those languages. The only important reprint in Philology during the year, was that of the second series of Max Müller's invaluable "Lectures on the Science of Language, delivered at the Royal Institution of Great Britain in February, March, April, and May, 1863."

IN MINING, TECHNOLOGY, and MECHANICAL SCIENCE, the principal interest in the early part of the year centred in the discoveries and search for petroleum. Fourteen volumes of considerable size, besides some hundreds of reports of investigations by chemists, mining and civil engineers, were published on the subject. Over six hundred companies were formed, and nearly all issued pamphlets, setting forth their claims upon the public patronage. Twelve, and perhaps more, periodicals, weekly and monthly, were established, giving the history, progress, and success of the new enterprises, and the price and fluctuations of petroleum and petroleum stock. Of the books on the subject, the following are the most important: "A Practical Treatise on Coal, Petroleum, and other Distilled Oils," by Abraham Gesner, M.D., F.G.S., second edition, revised and enlarged by George Welden Gesner; "Coal Oil and Petroleum: their Origin, History, Geology, and Chemistry, with a View of their Importance in their Bearing upon National Industry," by Henri Erni, A. M., M. D.; "The Oil Regions of Pennsylvania, showing where Petroleum is found, how it is obtained, and at what Cost, with Hints for whom it may concern," by William Wright; "Petrolia, or the Oil Regions of the United States," by Frank B. Wilkie; "Petroleum and Petroleum Wells, with a Complete Guide-Book and Description of the Oil Regions of Pennsylvania, West Virginia, Kentucky, and Ohio," by J. H. A. Bone; "The Oil Districts of Canada;" "Guide-Book for Investment in Petroleum Stocks;" "Marietta and the Oil and Mineral Regions of Southeastern Ohio and West Virginia;" "Whence comes the Oil? a Popular Essay on the Palaeophytic Production of Petroleum," by William Morris, M. D.; "Petroleum and Petroleum Wells: what Petroleum is, where found, and what used for, where and how to sink Petroleum Wells, with a Complete Guide-Book and Description of the Oil Regions of Pennsylvania, West Virginia, and Ohio," by J. H. A. Bone; "Derrick and Drill,

or an Insight into the Discovery, Development, and Present Condition and Future Prospects of Petroleum, in New York, Pennsylvania, Ohio, West Virginia, etc., arranged and edited, from numerous Sources, by the Author of 'Ten Acres Enough'" (Mr. E. Morris); "The Oil-Dorado of West Virginia: a full Description of the Great Mineral Resources of West Virginia, the Kanawha Valley, and the Country between the Ohio, the Hughes, and the Kanawha Rivers;" "Coal and Coal Oil, or the Geology of the Earth, being a Popular Description of Minerals and Mineral Combustibles," by Eli Bowen, Professor of Geology. The ablest of the periodicals devoted to this topic commenced during this year, was "The Mining Chronicle and Petroleum Gazette," a large and well-conducted monthly, published in New York.

Next in importance to the petroleum excitement, and perhaps surpassing it in the vast amounts invested, was the mania for gold and silver mining in Colorado, Nevada, Idaho, and Montana. Hundreds of companies were formed, with large capital, for the prosecution of mining and the extraction of the precious metals from the ores, and great numbers of reports of analyses and mineral investigations by eminent chemists and civil engineers were published. Aside from the geological surveys of certain portions of these territories, there were published several hand-books, or practical treatises, on the art of extracting the precious metals, and kindred topics. Of these, the following were the principal: "The Quartz Operator's Hand-Book" (published in San Francisco); "Silver Mining Regions of Colorado, with some Account of the different Processes now being introduced for working the Gold Ores of that Territory," by J. P. Whitney, of Boston; "A Manual of Metallurgy, more particularly of the Precious Metals, including the Method of Assaying them," by George Hogarth Makins, M. R. C. S., F. C. S., etc. (a reprint). To these may be added, "Facts about Peat as an Article of Fuel, with Remarks upon its Origin and Composition, the Localities in which it is found, the Methods of Preparation and Manufacture, and the various Uses to which it is applicable, etc.," compiled by T. H. Leavitt. The construction of steam-engines and boilers has attracted largely the attention of practical men during the year, and several valuable works on that subject have been published. Among these are—"Hand-book of the Steam-Engine, containing all the Rules required for the right Construction and Management of Engines of every Class, with the easy Arithmetical Solution of those Rules, constituting a Key to the 'Catechism of the Steam-Engine,'" by John Bourne, C. E. (a reprint); "Practical Rules for the Proportions of Modern Engines and Boilers for Land and Marine Purposes," by N. P. Burgh, Engineer; "The Differential Tubular Boiler," by Alban C. Stimers, Chief Engineer, U. S. Navy. Two works of great merit on architecture were published during the year:

"Woodward's Country Houses," by George E. and F. W. Woodward, Architects; and "Architectural Designs for Model Country Residences, illustrated by colored Drawings of Elevations and Ground Plans, accompanied by General Descriptions and Estimates," by John Riddell, Architect. Mr. S. F. Van Choate, an electrician and telegraph operator, published an interesting monograph on ocean telegraphing, the adaptation of new principles for the successful working of submarine cables, etc., and Mr. J. C. Buckmaster, an able treatise on the "Elements of Mechanical Physics."

Among the treatises on special branches of manufactures, the following were the most important: "A Treatise on the Art of Boiling Sugar, Crystallizing, Lozenge-making, Comfits, Gum Goods, etc., etc.," by Henry Weatherley; "Reminiscences of Glass-making," by Deming Jarves; "What to do with the Cold Mutton: a book of Rechauffés: together with many other approved Receipts for the Kitchen of a Gentleman of Moderate Income;" "Treatise on the Imposition of Forms, embracing a System of Rules and Principles for Laying the Pages, applicable to all Forms, with Instructions for making Margin and Register, turning and folding the Sheets, etc., and Diagrams of all the Standard Forms, Tables of Signatures, etc., useful to Compositors, Pressmen, and Publishers," by George H. Bidwell; "A Chronology of Paper and Paper-making," by J. Munsell; "A New and Complete Treatise on the Art of Tanning, Currying, and Leather-Dressing, comprising all the Discoveries and Improvements made in France, Great Britain, and the United States," by Professor H. Dussauce, Chemist; "The Art of Confectionery, with various Methods of Preserving Fruits and Fruit Juices, the Preparation of Jams and Jellies, Fruit and other Syrups, Summer Beverages, and Directions for making Cakes, and different methods of making Ice Cream, Sherbet, etc.," "On the Strength of Cast-Iron Pillars," by James B. Francis. Mr. S. H. Sylvester, taxidermist, of Middleboro', Mass., published a valuable little work, called "The Taxidermist's Manual, giving Instructions for Mounting and Preserving all kinds of Animals and Insects, as well as Skeletons, Eggs, etc." A valuable manual for the dyers is—"The Color-Mixer, containing nearly Four Hundred Receipts for Colors, Paints, Acids, Pulps, etc., etc.," by John Sellers. A most charming English volume, imported in quantities by a Philadelphia house, which, from its *quasi* relations to Technology, properly comes under this head, is, "Frost and Fire, Natural Engines, Tool Marks and Chips, with Sketches taken at Home and Abroad, by a Traveller."

The number of works on AGRICULTURE was a trifle larger than last year, and the greater part of them were of an eminently practical character. The titles of the most important were—"The Field and Garden Vegetables of America: containing full Descriptions of nearly eleven hundred Species and Varieties, with Di-

rections for Propagation, Culture, and Uses," illustrated by Fearing Burr, jr.; "The Origination and Test Culture of Seedling Potatoes;" "The Potato, its Diseases, with Incidental Remarks on its Soil and Culture," by C. E. Goodrich; "On the Production and Consumption of Cotton," by Hon. Frederick A. Conkling; "Hop Culture: Practical Details for the Selection and Preparation of the Soil, etc. etc. Plain Directions as given by Ten Experienced Cultivators;" "Manual of Flax Culture. Seven Prize Essays on the Culture of this Crop, and on Dressing the Fibre," etc.; "Cordon Training of Fruit Trees, adapted to the Orchard House and Open Air Culture," by Rev. T. Collings Bréhaut, with a Supplement by C. M. Hovey, President of the Massachusetts Horticultural Society; "A Treatise on the Insect Enemies of Fruit and Fruit Trees. With numerous Illustrations drawn from Nature, by Hochstein, under the immediate Supervision of the Author," by Isaac P. Trimble, M. D., Entomologist of the State Agricultural Society of New Jersey, etc., etc.; "The Curculio and the Apple Moth;" "Silver's New Poultry Book. A Brief and Practical Treatise on the History, Breeding, and Successful Management of Various Kinds of Fowls," by L. B. Silver; "Domestic Poultry: being a Practical Treatise on the Preferable Birds of Farmyard Poultry, their History and leading Characteristics," etc., by Simon M. Saunders; "Theory and Practice of Landscape Gardening," by A. J. Downing, new edition; "Woodward's Graperies and Horticultural Buildings," by George E. and F. W. Woodward, Architects and Horticulturists; "Wet Days at Edgewood with Old Farmers, Old Gardeners, and Old Pastors," by the Author of "My Farm at Edgewood" (Donald G. Mitchell); "Illustrated Annual Register of Rural Affairs and Cultivator's Almanac for 1866," by J. J. Thomas; "Proceedings of the Fourth Session of the American Pomological Society, held in Rochester, September, 1864;" "Transactions of the Massachusetts Horticultural Society, for the year 1864;" "Proceedings of the New York State Agricultural Society for 1864;" "Proceedings of the Ohio State Agricultural Society, for the Year 1864;" "Report of the Department of Agriculture, for 1864." The only reprint of the year was Miss Harriet Martineau's "Our Farm of Two Acres." The periodicals devoted to agriculture are numerous, and many of them are conducted with remarkable ability. "The Agriculturist," which, during the year, has absorbed "The Genesee Farmer," and has now a subscription list of about 120,000 patrons, leads the van; while the "Rural New Yorker," "The Country Gentleman," "The Working Farmer," and, in another department, "The Horticulturist," together with numerous papers of more local circulation, follow in their order, and are doing their best to enlighten the farming community. The Department of Agriculture issues a monthly circular, in which, besides giving crop statistics and meteorology.

there is afforded a large amount of valuable agricultural information.

In MEDICAL SCIENCE AND HYGIENE, the number of books published was about the same as the previous year, but a large proportion were works of original research and experience, and of a high character. In *surgery* the following were the most important works: "A Treatise on Military Surgery and Hygiene," by Frank Hastings Hamilton, M.D.; "Contributions to Practical Surgery," by W. H. Van Buren, M.D.; "Lectures on Inflammation, being the First Course delivered before the College of Physicians of Philadelphia, under the bequest of Dr. Müller," by John H. Packard, M.D.; "The Principles of Surgery," by James Syme, F.R.S.E., Surgeon in Ordinary to the Queen in Scotland," etc. To which are appended his Treatises on "Diseases of the Rectum," "Stricture of the Urethra and Fistula in Perineo," "The Excision of Diseased Joints," and numerous additional contributions to the "Pathology and Practice of Surgery," edited by his former pupil, Donald McLean, M.D.; "Lectures on Surgical Pathology, delivered at the Royal College of Surgeons of England," by James Paget, F.R.S., etc., revised and edited by William Turner, M.D., London. Third American edition. On the *Theory and Practice of Medicine*, the following were the principal works: "Lectures on Fever, delivered in the Memphis Medical College, 1853-'56," by A. P. Merrill, M.D., Professor, etc.; "The Practice of Medicine," by Thomas Hawkes Tanner, M.D., F.L.S. From the fifth London edition, enlarged and improved; Obscure "Diseases of the Brain and Mind," by Forbes Winslow, M.D. Second American, from the third and revised English edition; "Lectures on the Diseases of the Stomach, with an Introduction on its Anatomy and Physiology," by William Brinton, M.D., F.R.S.; "Health and Disease," by Dr. W. W. Hall. Fifth edition, revised, with additions; "Hand-book of Hygienic Practice, intended as a Practical Guide for the Sick-Room," by R. T. Trall, M.D.; "The Homeopathic Theory and Practice of Medicine," by E. E. Marcy, M.D., and F. W. Hunt, M.D. 2 vols.

In the special department of *Diseases of the Throat and Lungs*, there were several valuable treatises published. Among them were—"Rhinoscopy and Laryngoscopy: their Value in Practical Medicine," by Dr. Frederick Semeleder. Translated from the German by Edward T. Caswell, M.D. Cuts and colored plates; "The use of the Laryngoscope in Diseases of the Throat, with an Appendix on Rhinoscopy," by Morell Mackenzie, M.D.; "Nephrotherapathy: the New System for the Treatment of Diseases of the Throat, and all Diseases of the Respiratory Organs," by Dr. Edward Bunford Lighthill; "A Practical Treatise on Diseases of the Throat and Lungs, their Pathology, Symptoms, and most successful mode of Treatment;" "The Laryngoscope," by H. J. Phillips, M.D.; "Consumption: its Early and Remedial Stages," by

Edward Smith, M.D.; "A Treatise on Diphtheria: its Nature, Pathology, and Homoeopathic Treatment," by William Todd Helmuth, M.D. Second edition, revised and corrected. In *Obstetrics* but a single work was issued: "The Practice of Medicine and Surgery applied to the Diseases and Accidents incident to Women," by William H. Byford, A.M., M.D. In *Materia Medica* the principal books issued were—"The Dispensatory of the United States of America," by George B. Wood, M.D., and Franklin Bache, M.D. Twelfth edition, carefully revised; "The Essentials of Materia Medica and Therapeutics," by Alfred Baring Garrod, M.D.; "Materia Medica for the Use of Students," by John B. Biddle, M.D., Professor of Materia Medica; "Stimulants and Narcotics, their Mutual Relations: with Special Researches on the Action of Alcohol, Ether, and Chloroform, on the Vital Organism," by Francis E. Anstie, M.D.; "Researches into the Medical Properties and Application of Nitrous Oxide, Protoxide of Nitrogen or Laughing Gas," by George J. Zeigler, M.D.; "A Monograph on Glycerin and its Uses," by Henry Hartshorne, A.M., M.D.; "The Pharmacist's and Druggist's Practical Receipt-Book, with a Glossary of Medical Terms, and a copious Index," by Thomas F. Brandin.

Of monographs on special diseases, infirmities, or modes of treatment, the following were the most important: "Defective and Impaired Vision, with the Clinical Use of the Ophthalmoscope in their Diagnosis and Treatment," by Lawrence Trumbull, M.D.; "Defective Sight and Hearing; also, the Use and Abuse of Spectacles, the Nature of Catarrh," etc., by William W. Gardner, M.D. "Hand-book of Skin Diseases, for Students and Practitioners," by Thomas Hillier, M.D., London; "The Human Hair and the Cutaneous Diseases which affect it, together with Essays on Acne, Lycosis, and Chloasma," by B. C. Perry, Dermatologist; "Hypodermic Injections in the Treatment of Neuralgia, Rheumatism, Gout, and other Diseases," by Antoine Rupaner, M.D.; "The Renewal of Life; Lectures chiefly Clinical," by Thomas King Chambers, M.D.

In *Anatomy and Physiology*, two works of a popular rather than a scientific character, were published; "Systematic Human Physiology, Anatomy, and Hygiene, being an Analysis and Synthesis of the Human System, with Practical Conclusions," by T. S. Lambert, M.D., and "Laws of Health, for the Use of Schools, Academies and Colleges," by Edward Jarvis, M.D. On Hygienic and Sanitary topics, the most important works were—"Report of the Council of Hygiene and Public Health of the Citizens' Association of New York, upon the Sanitary Condition of the City; published, with an Introductory Statement, by Order of the Council of the Citizens' Association." Plates. "Our Social Health: a Discourse," by Garth Wilkinson, M.D.; "On Wakefulness, with an introductory Chapter on the Physiology of Sleep," by William A. Ham-

mond, M. D.; "The Hygienic Cook-book, with an Appendix," etc., etc., by Mrs. Mattie M. Jones; "The Hand-book of Dining; or, Corpulency and Leanness Scientifically Considered; comprising the Art of Dining on Correct Principles, consistent with Easy Digestion, the Avoidance of Corpulency, and the Cure of Leanness: together with Special Remarks on these Subjects," by Brillat Savarin, Author of "*Physiologie de Goût*," translated by L. F. Simpson. Banting's "Essay on Corpulency" reached its fortieth edition. In the way of Medical Lexicography, a new, thoroughly revised and greatly modified and augmented edition of Dr. Robley Dunglison's Medical Lexicon was issued, and also, "A Vest-Pocket Medical Lexicon, being a Dictionary of the Words, Terms, and Symbols of Medical Science; collated from the best Authorities, with an Appendix," by D. B. St. John Roosa, M. D., Aural Surgeon to the N. Y. Eye and Ear Infirmary. The two semi-annual "Parts" of Braithwaite's Retrospect were issued during the year, and also an Alphabetical Index, comprising all the articles in the first twenty-five years of publication. Dr. Guido Furman published his Medical Register of the city of New York, for the year commencing June 1st, 1865, and Dr. E. P. Mosman, of Norwich, Conn., his Homeopathician's Medical Diary. Medical Diaries and Physicians' Visiting Lists were also published by W. A. Townsend, in N. Y., and Lindsay and Blakiston in Philadelphia. Mr. S. R. Haynes published a contribution to Veterinary Surgery and Medicine, under the title of "The American Farrier and Horseman's Companion." Medical Periodical Literature is abundant. The members of the regular profession have numerous semi-monthly, monthly, and quarterly journals, and usually one or more in all the larger cities. The American Journal of the Medical Sciences, a quarterly of high character, takes the lead, and other monthly and semi-monthly periodicals in New York, Boston, Philadelphia, Cincinnati, Chicago, St. Louis, and New Orleans, have attained to a moderate circulation. There are also several monthly journals, like "Hall's Journal of Health," Dixon's "Scalpel," etc., which, though edited by regularly educated physicians, appeal rather to the non-professional public than the professional. The practitioners of the Homeopathic, Eclectic, and Botanic Schools, the advocates of Hydropathy and the Movement Cure, have also each their periodicals.

In works on LAW AND LEGAL SCIENCE, the year was prolific. More than twenty of the volumes issued, however, were Reports of Cases in the Supreme Courts or Courts of Appeals in the States of New Hampshire, Vermont, Massachusetts, Connecticut, New York, Pennsylvania, New Jersey, Ohio, Michigan, Illinois, Wisconsin, Minnesota, and Iowa, published by the official reporters of those Courts, and two volumes were issued of the Reports of the Supreme Court of the United States. Besides these, a volume of Brightly's Digest of the Laws

of the United States and one of his Digest of the Laws of Pennsylvania were published, while Mr. William E. Sheffield made a digest of the first fourteen volumes of the Wisconsin Reports. There were also three or four volumes of Reports of Superior Courts, especially of New York. Volumes xi. and xii. of the English Common Law Reports (the Common Bench Reports) were republished here during the year. Messrs. Tillinghast and Shearman issued a second volume of their "Practice, Pleadings, and Forms in Civil Actions in Courts of Record in the State of New York, adapted to the Code of Procedure of the State of New York; adapted also to the Practice in California, Missouri, Indiana, Wisconsin, Kentucky, Ohio, Alabama, Minnesota, and Oregon," and Messrs. Tiffany and Smith published "The New York Practice: a Treatise upon Practice and Pleadings in Actions and Special Proceedings in the Courts of Record of the State of New York," in three volumes. The father of the late venerable Josiah Quincy was, in his day, a law reporter, and preserved the manuscripts of his "Reports of Cases Argued and adjudged in the Superior Court of Adjudicature of the Province of Massachusetts Bay, between 1761 and 1772," which have been edited and published by his great-grandson, Samuel M. Quincy.

The Tax, or Internal Revenue Law, the Banking Law, and the Tariff Acts, each as last amended, were published, some of them simultaneously by several publishing houses. The petroleum excitement in Pennsylvania led to the collation and publication of the "Mining and Manufacturing Laws of Pennsylvania," which had a bearing upon the organization of petroleum companies. A number of important trials were reported, some of them by several publishers. Among these were the trial of the assassins and conspirators who murdered Mr. Lincoln; that of Wirz for his inhumanity at Andersonville, the Opydyke Libel Case (reported both in prose and rhyme), and the trial of Miss Harris for the killing of A. J. Burroughs, and that of Livingston against Roebuck. The "Parrish Will Case" was at last completed, and published in two volumes.

The trial of Aaron Burr for Treason was republished, with notes by the compiler (J. J. Coombs) on the Law of Treason as applicable to the existing Rebellion. Several of the recent Laws or Statutes of Congress or of the States required explanation and instruction, as well as forms for the use of those who would administer them. Notably was this the case with the Internal Revenue Laws, for which Hon. G. S. Boutwell prepared a manual embodying the instructions and decisions of the Commissioners; and the Pension Laws, for which Mr. Daniel Forbes, late Chief Examiner in the Pension Office, and Mr. Robert Sewell, a counsellor at law, each prepared a manual. Mr. Maskell E. Curwen, of the Cincinnati bar, prepared a very convenient "Manual upon the Searching of Records and the Preparation of

Abstracts of Title to Real Property, illustrated by References to the Statutes of Pennsylvania, Ohio, Kentucky, Indiana, Illinois, Iowa, and Kansas;" and Judge Matthews, of the Superior Court of Cincinnati, prepared a Summary of the Law of Partnership, for the use of business men. Other manuals or books of instruction and explanation on existing laws, were—"A Treatise on the Organization, Jurisdiction, and Practice of the Courts of the United States, with an Appendix of Principal Forms," by Alfred Conkling, etc., fourth revised and enlarged edition; "The Law and Practice in Civil Actions, and Proceedings in Justices' Courts and on Appeals to the County Courts in the State of New York," etc., by William Wait, counsellor at law, two volumes. The Amendments to the New York Code of Procedure were published during the year. Having thus disposed of the great bulk of the legal publications of the year, there still remain a few commentaries or treatises on great legal principles and measures. The Hon. Isaac F. Redfield, late Chief Justice of Vermont, has carefully revised, and considerably enlarged, the masterly Commentaries of the late Justice Story on the "Conflict of Laws, Foreign and Domestic," and those on "Equity Pleadings and the Incidents thereof," and has thus rendered a great service to the legal profession. Judge Bishop (Joel Prentiss Bishop) has published a third and revised edition of his "Commentaries on the Criminal Law." Judge Francis Hilliard, author of "The Law of Tests," published "The Law of Injunction." Mr. Horace Binney, an eminent lawyer of Philadelphia, issued during the year the third part of his Essay on the Privilege of the Writ of Habeas Corpus under the Constitution. Mr. B. F. Clark, of North Chelmsford, Mass., published an Essay on the Prohibitory Liquor Law of Massachusetts, in which he undertakes to demonstrate that "prohibition of the sale of intoxicating liquors is impracticable; that the Maine Law is a failure, and a stringent license law the true policy." The legal periodicals are numerous, and many of them conducted with great ability.

The number of works appertaining to *Education and Educational Science* was very considerable, but, with three exceptions, they were all text-books, though many of them in the higher departments of science. These three were—"Methods of Instruction; that part of the Philosophy of Education which treats of the Nature of the several Branches of Knowledge, and the Methods of Teaching them according to that Nature," by James Pyle Wickersham, A. M.; "The Culture of the Observing Faculties in the family and School: or Things about Home and how to make them Instructive to the Young," by Warren Burton, author of

The District School as it Was;" "Classical and Scientific Studies and the Great Schools of England: a Lecture read before the Society of Arts of the Massachusetts Institute of

Technology, April 6, 1865," by W. P. Atkinson, with additions and an appendix. Of the text-books, six were mathematical, devoted to Algebra, Astronomy, Mental and Analytical Geometry, Differential Calculus, and Drawing, and were prepared by Professors Loomis, Docharty, Holloway, Emerson, Spare, and Warren. Eight were text-books in ancient and modern languages, whereof five were French and German and three Latin or Greek, the latter by Professors Brooks, Frieze, and Goodwin. Three were treatises on Geography, all of high character, those of Messrs. Shaw and Allen and Mr. Colton being occupied with Mathematical, Physical, and Political Geography, and Mr. W. L. Gage's translation of Carl Ritter's work pertaining to Comparative Geography only. Of Readers and Speakers there were half a dozen, each distinguished by some peculiarity. The "Shakspeare, adapted for Reading Classes and the Family Circle," by the Messrs. Bulfinch, the "Lessons for Schools, taken from the Holy Scriptures, in the Words of the Text," and Mr. Bremen's translation of Willson's Readers into German, are the most remarkable of the former, and Mr. Philbrick's and Prof. Culver's Speakers are the most noteworthy of the latter. Of Spellers there were two, both containing dictation exercises—Mr. G. W. Fetter's and Mr. Edward Mulvaney's, and with these should be ranked Miss Sewell's Dictation Exercises. Of more miscellaneous text-books there were—a Spanish version of Mrs. Willard's History, an "Infant-class Manual," by Miss Pamela Belding; "A Manual of Light Gymnastics," by W. L. Ruthe; "A Manual of Zoology for Schools," by Sanborn Tenney; "The Elements of Political Economy," by Prof. A. L. Perry, and a "Compendium of Tachygraphy, or Lindsley's Phonetic Shorthand," by D. P. Lindsley. The proceedings at the inauguration of Frederick A. P. Barnard, S. T. D., LL. D., as President of Columbia College, October 3, 1864, also belong to this department.

In the department of GEOGRAPHY and TRAVELS, several important original works were published during the year. Prominent among these was Dr. H. Willis Baxley's "What I saw on the West Coast of South and North America, and at the Hawaiian Islands;" Miss Mary A. Anderson, a daughter of the venerable Secretary of the American Board of Commissioners of Foreign Missions, also gave her impressions of a part of the same Territory in "Scenes in the Hawaiian Islands and California." The late Edward Robinson, D. D., LL. D., one of the ablest Oriental scholars and explorers of the century, left a supplementary volume to his "Biblical Researches," which was published last year under the title of "Physical Geography of the Holy Land," a work of value; and as illustrating another phase of this subject of Oriental study, Mrs. M. E. Rogers published "Domestic Life in Palestine." An American missionary in South Africa, Rev. Lewis Groat,

has published the experience and observation of fifteen years, under the title of "Zulu-Land; or Life among the Zulu Kafirs of Natal and Zulu-Land, South Africa;" and Rev. Charles B. Bush has edited a work prepared by a missionary to China (Rev. William Aitchinson), entitled "Five Years in China." Mr. William H. Thomas, twice for a considerable period a resident of Australia, has published a volume entitled "The Bush Rangers," a Yankee's adventures during his second visit to Australia. Rev. C. M. Butler, D. D., has given the public an insight into the interior of the Eternal City, under the title of "Inner Rome: Political, Religious, and Social." Of works of travel and exploration, or illustrative of the newer regions of our own Republic, the number is considerable. Capt. John Mullan, late Superintendent of the Northern Overland Wagon Road, published a Miner's and Traveller's Guide to Oregon, Washington, Idaho, Montana, Wyoming, and Colorado, *via* the Missouri and Columbia Rivers; and Mr. Edward H. Hall, a traveller and explorer at the West, followed with a manual called "The Great West: Traveller's, Miner's, and Emigrant's Guide and Hand-book to the Western, Northwestern, and Pacific States and Territories." Both works are illustrated by maps. Mr. J. R. Dodge, of the U. S. Department of Agriculture, has published a valuable little work on West Virginia, giving its statistics, population, and progress; Hon. Richard C. McCormick issued a little treatise on "Arizona; its Resources and Prospects." Mr. S. D. Wyeth has given a graphic picture of "The Federal City; or Ins and Abouts of Washington." Two anonymous writers have discoursed, the one on "The Silver Mines of Nevada," the other on "The Opening of the Adirondacks." Of reprints, the most important were "Arminius Vámbéry's Travels in Central Asia," a remarkable and deeply interesting work; and W. Howard Russell's "Canada: its Defences, Condition, and Resources."

The department of ESSAYS, BELLES-LETTRES, and CRITICISM was unusually well represented during the year, in part, perhaps, owing to the growing tendency to periodical and magazine writing, in which a large portion of the literary ability of the present day is absorbed. The interest aroused by the tercentennial commemoration of Shakspeare in 1864, overflowed into 1865, and produced several works in this country, as well as many in Europe, on subjects connected with Shakspeare. Among these were an Essay on "William Shakspeare," by the late Cardinal Wiseman (a reprint); "The Legal Acquirements of William Shakspeare," by Franklin Fiske Heard; "Shakspeare's Medical Knowledge," by Charles W. Stearns, M. D.; "Remarks on the Sonnets of Shakspeare; with the Sonnets, showing that they belong to the Hermetic Class of Writings, and explaining their General Meaning and Purpose," by the author of "Swedenborg a Hermetic Philosopher" (Gen. E. A. Hitchcock). When we add

to these Mr. Richard Grant White's Elaborate "Memoir of Shakspeare," also published during the year, the Shakspeare literature of 1865 makes a fair showing.

Of *Essays* proper by American writers the following were the principal: "Real and Ideal," by John W. Montclair; "Autumn Leaves," by Samuel Jackson Gardiner; "House and Home Papers" and "Little Foxes," by Christopher Crowfield (Mrs. H. B. Stowe); "Prize Papers," written for the "New York Observer;" "Essay, Poems, and Tale;" "Skirmishers and Sketches," by Gail Hamilton (Miss Abigail Dodge); "Cape Cod," by Henry D. Thoreau; "A Woman's First Impressions of Europe, being Wayside Sketches made during a short Tour in the Year 1863," by Mrs. E. A. Forbes; "Dante as Philosopher, Patriot, and Poet: with an Analysis of the Divina Commedia, its Plot and Episodes," by Vincenzo Botta; "Matrimonial Infelicity, with an occasional Felicity by way of Contrast, by an Irritable Man, to which are added as being pertinent to the Subject, My Neighbors, and Down in the Valley," by Barry Gray (R. B. Coffin); "The Humbugs of the World: an Account of Humbugs, Delusions, Impositions, Quackeries, Deceits, and Deceivers generally in all Ages," by P. T. Barnum; "The Freedman's Book," by L. Maria Child; "Attic Wit;" "Recollections of Seventy Years," by Mrs. John Farrar; "Good Company for Every Day in the Year;" "American Criticism;" "The North American Review," and the "Life and Times of John Huss;" "The Orpheus C. Kerr Papers," Third Series.

Of *Letters, Lectures, and Speeches*, which properly belong under this head, the following were the most important: "Speeches and Letters of Gerrit Smith, from January, 1863, to January, 1865, on the Rebellion;" "The Stewardship of Wealth, as illustrated in the Lives of Amos and Abbott Lawrence: a Lecture," by Frank W. Ballard; "Speeches of Carl Shurz," Collected and Revised by the Author: "Eight Years in Congress, from 1857 to 1865: Memoir and Speeches," by Samuel S. Cox; "On the Cam:" Lectures on the University of Cambridge in England, by William Everett, A. M.; "The Progress of the Age, and the Danger of the Age: two Lectures," by the Rev. Louis Heylen; "The Graver Thoughts of a Country Parson," by the Author of Recreations of a Country Parson (Rev. A. K. H. Boyd), Second Series (Reprint); "Sesame and Lilies: two Lectures delivered at Manchester, in 1864, by John Ruskin, M. A. 1. Of Kings' Treasures: 2. Of Queens' Gardens" (a Reprint); "Speeches of Andrew Johnson, President of the United States," with a Biographical Introduction, by Frank Moore; "An Inquiry into some of the Conditions at present affecting the Study of Architecture in our Schools," by John Ruskin; "Letters to Various Persons," by Henry D. Thoreau; "Letters, Æsthetic, Social, and Moral, written from Europe, Egypt, and Palestine," by Thomas C. Upham; "Letters and Writings of

James Madison, Fourth President of the United States, published by order of Congress," 4 vols.; "Artemus Ward: his Travels—Part I. Miscellaneous—Part II. Among the Mormons" (written by Charles F. Brown, and first delivered in substance as Lectures); "Plain Tales on Familiar Subjects, a series of Popular Lectures," by J. G. Holland, M.D.; "Complete Works of the Most Rev. John Hughes, D.D., Archbishop of New York, comprising his Sermons, Letters, Lectures, and Speeches, etc.," carefully compiled from the best Sources, and edited by Lawrence Kehoe: 2 vols.; "Speech of George Francis Train on Irish Independence and English Neutrality before the Fenian Congress, Philadelphia, Oct. 18, 1865;" "The Gulistan, or Rose Garden of Saadi," translated from the original by Francis Gladwin, with an Essay on Saadi's Life and Genius, by James Ross, and a Preface by R. W. Emerson. Of new editions of standard Belles-Lettres works, we have Riverside editions of Irving's "Tales of a Traveller," "Crayon Miscellany," "Tales of the Alhambra," and "Wolfert's Roost;" new editions of "Emerson's Essays;" "The Squibob Papers," by John Phoenix (the late Capt. George H. Derby); "The Works of the Right Hon. Edmund Burke;" "The Fables of Æsop," with 111 illustrations from Original Designs by Herrick; O. W. Holmes' "Autocrat of the Breakfast Table;" John Ruskin's complete Works—"The Tour of Dr. Syntax in Search of the Picturesque;" and a translation of the Works of Epictetus, by Rev. T. W. Higginson, based on that of Elizabeth Carter. Mrs. L. C. Tuthill has gathered from the works of John Ruskin, a volume of "Precious Thoughts, Moral and Religious." Among the reprints of works of this class are—"Essays, Historical and Biographical, Political, Social, Literary, and Scientific," by Hugh Miller, edited with a Preface by Peter Bayne; "Parson and People; or, Incidents in the Every-day life of a Clergyman," by Rev. Edward Spinner, M. A., Vicar of Heston, Middlesex, with an Introduction by Rev. L. W. Bacon; "Essays in Criticism," by Matthew Arnold, Professor of Poetry in the University of Oxford; and "A Summer in Skye," by Alexander Smith. To these may be added, as coming perhaps more appropriately under this class than any other—"Bibliographical Tracts, number one;" "Spurious Reprints of Early Books;" "Rogues and Rogueries of New York, a full and Complete Exposure of all the Swindles and Rascalities carried on or Originated in the Metropolis;" "Tardy George;" "Joe Miller's Jests, with Copious Additions," edited by Frank Bellew.

In POETRY AND THE DRAMA the number of publications was larger than in any previous year. Fifty new poets, claimed a hearing, most of them for the first time. Among their productions were the following: "Utterances," by A. J. H. Duganne; "Poems," by Caroline May; "Little Songs for the Little Singers," by Karl Reden; "Love and Friendship's Rosary,"

by E. L. E. Von Meyer; "Poems," by Astarte; "Cabirol, a Poem," by George H. Calvert; "My Angel and other Poems," by Miss M. H. Bulfinch; "The Poets of Portsmouth," compiled by Annie M. Payson and Albert Leighton; "The Snoblace Ball; or, Pil Garlic and his Friends," by "The Spectator;" "Virginia and other Poems," by J. H. Vosburg; "Lyrical Recreations," by Samuel Ward; "A Group of Children and other Poems," by D. C. Collesworthy; "The Changed Cross and other Religious Poems;" "Abraham Lincoln, an Horatian Ode," by R. H. Stoddard (not a new poet, who also published during the year "The Children in the Wood: told in Verse by R. H. Stoddard;" and "The King's Bell," with illustrations, and edited "Melodies and Madrigals," "The Later English Poets," "Under Green Leaves," and "Favorite English Poems;" "Hymns and Sacred Pieces," with Miscellaneous Poems, by Rev. Ray Palmer, D.D. "Poems," by R. W. Emerson; "Songs for the Seasons, from Advent to Trinity," by Rev. William Pinkney, D.D.; "A Summer Story, Sheridan's Ride, and other Poems," by Thomas Buchanan Read; "Ode on the Death of Abraham Lincoln," by S. G. W. Benjamin; "Voices of the Morning," by Belle Bush; "Christian Poems," by Rev. F. R. Holeman; "Vagaries of Vandyke Brown, an Autobiography in Verse," by William P. Brennan; "Seventeen Cantos of the Inferno of Dante Alighieri, translated by Thomas William Parsons; "Poems," by Edna Dean Proctor; "Puritania, a Satire," by a Metropolitan; "Eva, a Goblin Romance, in Five Parts," by John Savage; "Walt, Whitman's Drum-Taps;" "Songs of the Rivers," by Emily T. B. Bennett; "Poems," by T. Buchanan Read, new and enlarged edition, 2 vols; "Anselmo, a Poem," by George R. Parburt; "The Soldier's Sacrifice, a Poem for the Times," by M. S. H.; "Poetical Tributes to the Memory of Abraham Lincoln;" "Country Love or City Flirtation: or, Ten Chapters from the Story of a Life, reduced to Rhymes for Convenience' Sake," by H. T. Sperry; "Outcroppings, being Selections of California Verse;" "Poems by Gay H. Naramore;" "War Lyrics and other Poems," by Henry Howard Brownell; "The Poems of Elizabeth G. Barber Barrett;" "Summer Songs," by H. H. M.; "The Poems of Thomas Bailey Aldrich;" "Versions and Verses," by Charles Dexter; "Palm Leaves," by Rev. W. H. Cooke; "The Dutch Pilgrim Fathers and other Poems, Humorous and not Humorous," by Rev. Edward Hopper; "Poems of Faith and Affection," by Mrs. W. H. Milburn; "Victoria, with other Poems," by Sa-repta Irish Henry; "Our Heroic Themes," a Poem," by George H. Boker. A volume of poems was also published by Rev. Absalom Peters, D.D., his first effort, though written when nearly seventy years of age. Portions of the lyrical and shorter poems of several of the more eminent of our poets, and particularly of Longfellow, Whittier, and Holmes, were

published in a cheap form, but illustrated, an enterprise of great merit, as having for its object the placing the best poetry of the language within the reach of all classes. The poems of Bayard Taylor, complete, were published during the year in one volume. Above thirty volumes of compilations of poetry were published, many of them possessing very little merit, but others of a high character and permanent value. The following were the best: "Wayside Hymns, Selected from Various Authors;" "Elim; or, Hymns of Holy Refreshment," edited by Rev. F. D. Huntington, D. D.; "Hymns for the Church on Earth," selected and arranged by Rev. J. C. Ryle; "Home Ballads, by our Home Poets;" "The Late English Poets," edited by R. H. Stoddard; and "Golden Leaves from the British and American Dramatic Poets," collected and arranged by John W. S. Hows; "Hymns for Mothers and Children," second series, compiled by the author of "Hymns of the Ages" (Miss Wentworth); "Festival of Song, a Series of Evenings with the Poets," prepared by the author of "Salad for the Solitary" (Frederick Saunders); "Companion Poets," illustrated (Longfellow's Household Poems, Tennyson's Songs for all Seasons, Browning's Lyrics of Life); "Songs of Praise and Poems of Devotion in the Christian Centuries," with an Introduction by Henry Coppée, Professor, etc.; "The Seven Great Hymns of the Mediæval Church;" "O Mother Dear Jerusalem; the Old Hymn, its Origin and Genealogy," by William C. Prime; "The Sabbath Psalter," a Selection of Psalms for Public and Family Worship, compiled by Rev. Henry J. Fox; "The Sunday Book of Poetry," selected and arranged by C. F. Alexander, author of "Hymns for Little Children;" "The Ballad Book, a Selection of the Choicest British Ballads," edited by William Allingham (reprint); "Street Ballads, Popular Poetry, and Household Songs of Ireland" (reprint); "Melodies and Madrigals, mostly from the Old English Poets," edited by Richard Henry Stoddard; "The Poetry of the Orient," by William Rounseville Alger; "Gems from Tennyson;" "Hymns and Prayers for the Church and Home;" "*Deutsches Balladen-Buch*," compiled by Prof. L. Simonson, Trinity College, Hartford; "Favorite English Poems;" "Under Green Leaves: a Book of Rural Poems," edited by R. H. Stoddard; "My Sabbath School Scrap-book, containing Anniversary Dialogues, Addresses, in prose and verse, etc., etc.," by John J. Reid. Among reprints of foreign poetical works, those of Tennyson took the lead; nine editions of either a part or the whole of his poems being published during the year. The other reprints were—Sir Walter Scott's Poems, those of Winthrop Mackworth Praed (in two editions), "Pearls from Heine," Shakspeare's Sonnets, Gray's Poetical Works, Milton's Poetical Works, Amelia B. Edwards' "Ballads," "English Bards and Scotch Reviewers," "Hood's Lay of the Shirt, and other

Poems," Earl Derby's translation of the *Iliad*, Browning's "Lyrics of Life," Mrs. Sewell's "Lost Child and the Romance of the Mallee Scrub," "Gerald Massey's Poems," a new edition; Jean Ingelow's "Songs of Seven," Robert Buchanan's Poems, Algernon Charles Swinburne's "Chastelard" and "Atalanta in Calydon," Sir E. Bulwer Lytton's translation of Schiller's "Lay of the Bell," illustrated. Mr. Richard Grant White's critical edition of Shakspeare was completed by the publication of the first volume, which had been delayed for the sake of the Memoir; and a Boston publishing house imported a large edition of the Globe edition of Shakspeare published in England.

Dramatic Poetry was not much affected either by American or English authors. Mr. Swinburne's two tragedies above named were the only new English works of the class republished, though a new edition of Talfourd's Tragedies was issued. In this country, Mr. John Savage published "Sybil, a Tragedy in five acts;" Mrs. Sadlier, "The Secret, a Drama;" Mr. Charles E. Moelling, "Faust's Death, a Tragedy in five acts;" and an anonymous drama, "Cecilia," was issued by Messrs. J. and D. Sadlier; and a children's play, dramatized from Cinderella, was prepared for a Children's Concert at the Academy of Music. Besides these, there were twenty-two German and French plays published by the French and German publishers of Boston and New York, part of them for text-books.

The works on Music were considerably numerous. Of these, ten were collections of Hymns and Tunes for worship on the Sabbath, or for Sunday Schools, or the religious exercises at the opening of other Schools. Of this number, the most important were—"Hallowed Songs," compiled by Theodore E. Perkins, Philip Phillips, and Sylvester Main; "Songs for the Sanctuary," compiled by Rev. Charles S. Robinson; "Happy Voices, for the Home Circle and Sabbath Schools," "The Sacred Harp of Judah" (for Jewish worship), by G. M. Cohen; "Praises of Jesus," by Rev. E. P. Hammond; "Social Hymn and Tune Book, for the Lecture Room, Prayer Meeting, Family Circle, and Mission Church;" the Plymouth S. S. Collection of Hymns and Tunes, by William B. Bradbury; the Sunday School Banner, by T. E. Perkins; the School Service Book, by Rev. Asa Fitz; Musical Leaves for Sabbath Schools, by Philip Phillips. There were also eight or ten collections of vocal and instrumental music, songs, glees, duets, trios, etc., for schools and seminaries, by such experienced musical writers and compilers as Messrs. Emerson, Fitzhugh, Root, Wilder, Davenport, Sharland, and others, and books of musical instruction by Messrs. Root, Meignen, Keys, etc. There were also twelve or thirteen collections of instrumental music for organ, piano, violin, flute, concertina, banjo, etc. There are a number of musical periodicals, monthly, semi-monthly, and quarterly, conducted with great ability. The "Musical Sunbeam

and Sabbath School Manual," a quarterly, was the only new periodical, we believe, issued during the year.

The class of NOVELS is, as usual, very large, a little beyond the numbers of the last year, those of a *general* character averaging a publication of about five per week through the year. Of these, however, one hundred and eleven belonged to the class of cheap novels, ranging in price from ten to fifty cents each, and the greater part of them from ten to twenty-five cents. Of these, ninety-seven were original works and fourteen reprints. The literary merit of the original works was not usually remarkable, but they were popular with a considerable class of readers. Of the remainder of the works of fiction, published during the year, thirty-eight were original and seventy-five reprints. Of the original works, the most important were—"My Own Story," by Marion Leigh; "Moods," by Louisa M. Alcott; "The Morrisons, a Story of Domestic Life," by Mrs. Margaret Hosmer; "The Three Scouts," by J. T. Trowbridge; "Nothing but Money: a Novel," by T. S. Arthur; "Inside Out, a Curious Book," by Dr. S. W. Francis; "Leaves from the Note-Book of a New York Detective," "Private Record of J. B.," "The Thinking Bayonet," by James K. Hosmer; "Husbands and Homes," by Marion Harland (Mrs. Virginia Terhune); "The Ideal Attained, being the Story of Two Steadfast Souls, and How they Won their Happiness and Lost It Not," by Eliza W. Farnham; "Mary Brandegee: an Autobiography," by Cuyler Pine; "The Fixed Stars, or the Goddess of Truth and Justice," "St. Philip's," by the author of "Rutledge" (Miss Miriam Coles); "Silent Struggles," by Mrs. Ann S. Stephens; "At Anchor: a Story of our Civil War," by an American; "Fairy Fingers: a Novel," by Anna Cora Ritchie; "Janet Strong" by Virginia F. Townsend; "Linwood, with Other Stories;" "Looking Around: a Novel," by A. S. Roe; "Hugh Worthington: a Novel," by Mrs. Mary J. Holmes; "The Metropolitans, or Know Thy Neighbor," by Robert St. Clair; "Luke Darrell, the Chicago Newsboy," "Allworth Abbey," by Mrs. E. D. E. N. Southworth; "Atlantic Tales: a Collection of Stories from the Atlantic Monthly;" "Cotton Stealing: a Novel;" "Two Men: a Novel," by Mrs. Elizabeth Stoddard; "Robert Dalby and His World of Troubles: being the Early Days of a Connoisseur;" "Millicent Halford: a Tale of the Dark Days of Kentucky in the year 1861," by Martha Remick; "Home Heroes, Saints, and Martyrs," by T. S. Arthur; "What Came Afterwards: a Novel," by T. S. Arthur; "Standish: a Story of Our Day," "A Spinster's Story," by M. A. F.; "De Vane: a Story of Plebeians and Patricians," by Hon. Henry W. Hilliard; "The Lovers' Trials; or, the Days before the Revolution," by Mrs. Mary A. Dennison; "Château Frissac; or, Home Scenes in France," by Olive Logan, author of *Photographs of Paris Life*.

The reprints comprise Dickens' "Our Mutual Friend," and "Dr. Marigold's Prescriptions," two books by Jean Ingelow; new editions of several of Mrs. Grey's and Mrs. Gore's novels; a new edition of one of Mrs. Percy Bysshe Shelley's works; "Too Strange not to be True," by Lady Fullerton; "Quite Alone," by G. A. Sala; the first instalment of a superb edition of Thackeray's works; novels by Charles and Henry Kingsley, J. S. Le Fanu, Mrs. Henry Wood, Miss Braddon, Michael and John Banim, Annie Thomas, Anthony Trollope, Miss D. M. Muloch, William Carleton, Charles Lever, Sir C. F. Lascelles Wraxall, Alexander Smith, Miss Amelia B. Edwards, the author of "Faith Gartney's Girlhood," the author of "Philip Thaxter," the author of "Wondrous Strange," "Ouida," etc., etc. There were also about twenty reprints of French and German novels in the original languages, from the pens of Madame George Sand, O. Feuillet, Constant Gueroult, Ernest Capendu, Erekman-Chatrain, Ernst Willkomm, Moritz Hartmann, Theodor Storm, etc., etc. There were very few *religious novels* published, aside from those of a juvenile character, and of these all but three were reprints. Mrs. O. J. Barlow published "Helen Macgregor; or, Conquest and Sacrifice;" Mr. Davis B. Casseday, "The Hortons; or, American Life at Home;" and Mrs. A. M. Stewart, "Justice and Mercy: a Tale of All Hallow E'en." Of the reprints, four or five were from the pen of Mrs. Edmund Charles, the author of "The Schönberg-Cotta Family;" two only, "The Diary of Mrs. Kitty Trevelyman," and "Winifred Bertram and the World She Lived In," being new works of that popular author. These both had a large sale. Miss Yonge's "The Clever Woman of the Family," Miss Julia Kavanagh's "Beatrice," and Mrs. Oliphant's "The Perpetual Curate," were the only other reprints of this class worthy of note.

The number of JUVENILE BOOKS was about one-fourth less than the previous year, but a somewhat larger proportion were works of decided merit. The juvenile literature of the country makes steady and somewhat rapid progress each year, both in the style and quality of the books issued, and in the beauty of their typography and illustrations. In the latter particulars, the new books of 1865 exhibited an extraordinary advance upon those of previous years.

In the sub-class of *Juvenile works of Adventure, History, and Travel*, one-third were reprints chiefly of books of Captain Mayne Reid, R. M. Ballantyne, Captain Marryat, W. H. G. Kingston, Sir C. F. Lascelles Wraxall, Madame Eugénie Foa, etc., etc. Of the original works, a large proportion had for their subject the adventures or history of some real or imaginary actor in the recent war. "Oliver Optio" (Mr. W. T. Adams) published three books of this description, "The Young Lieutenant; or, Adventures of an Army Officer;" "The Yankee

Middy; or, The Adventures of a Naval Officer;" and "Fighting Joe; or, the Adventures of a Staff Officer." Mr. H. C. Castlemon, himself an officer on one of the Western gunboats, published "Frank on a Gunboat," and "Frank, the Young Naturalist;" "Carleton" (Mr. Charles Carleton Coffin), of the *Boston Journal*, published a second volume of his Boys' History of the War, under the title of "Following the Flag." Of the books of this sub-class not relating to the war, the most important were: "Treasury of Travel and Adventure;" "Lives of Familiar Insects," by the author of "Violet;" "The Yankee Boy from Home;" "The Young Wrecker of the Florida Reef," by Richard Meade Bache, and two volumes of Miss Sarah W. Lander's Spectacle Series, "Rome" and "Berlin."

In the very large sub-class of *Religious Juveniles*, numbering about two hundred and eighty distinct volumes, less than one-tenth were reprints, and of these the greater part from the prolific pen of A. L. O. E., Madame Wildermuth, Caroline Hadley, Miss Yonge, Mrs. Ruth Buck, etc., etc. The original works of this sub-class were the productions of a great number of writers, some of whom have had large experience in writing for children, while others made their first ventures in that field during the year. As in former years, Nellie Grahame was one of the largest contributors to this description of literature, eight works from her pen appearing among the year's catalogue of juveniles. The author of "Allan Cameron" had seven volumes published during the year; Aunt Fanny (Mrs. Fanny Barrow), six; the author of the "Variety Library," five; Miss Caroline E. Kelly, five; Jacob Abbott, five; the author of "The Dove Series," six; "Champney," five; "Sophie May," six; "Josephine Franklin," six; the author of "Real Children," four; the author of "Aunt May's Children," four; Alice Gray, three; Miss Sarah J. Pritchard, three; J. H. Langille, three; "A. J. G.," three; Susie M. Waring, three; Rev. W. P. Breed, two; the author of "Katie Lee," two; Miss M. E. Dodge, three; "K. M.," two; the author of "Kate Elmore," two; the author of "Kitty's Victory," three; "A. L. W.," two; the author of "Try," three; Miss Alice A. Dodge, two; the author of "The Fisher Boy," three; "Maxwell," three; Theodore Tilton, three; Rev. D. C. Eddy, D. D., two; "Fanfan," two; Mrs. H. McNair, two; Miss Harriet B. McKeever, two; the author of "Rosa Lane," two; the author of "The Best Friend," two; the author of "Win and Wear," two; "E. H.," two; the author of "Autumn Days," two; the author of "Ferris Hollow," three; "Aunt Hattie," two; the author of "Harry's Battles," two; and "Rose Elmwood," "Aunt Annie," Rev. J. Belcher, "H. L. C.," Miss Mary S. Chapman, Rev. F. H. Wines, Julia Leonard, Maria H. Bulfinch, the author of "Douglas Farm," Mary Granger Chase, "M. M.," the author of "High Church," William Rogers,

Rev. R. M. Abercrombie, "A. L. W.," the author of the "Story of a Pocket Bible," Rev. P. W. Clark, the author of "I'd Choose to be a Daisy," Mr. G. P. Disosway, Rev. J. B. Waterbury, "A Clergyman's Daughter," Rev. T. H. Hawks, the author of "Ellen Murray," Henry L. Williams, Jr., "Mrs. Madeline Leslie," the author of "Ellen's Idol," Grace Webster Hinsdale, M. A. Edwards, Maria Louisa Hayward, Mrs. Prosser, Miss C. M. Trowbridge, Edward Howard, Helen Hazlett, Jonathan Cross, Mrs. H. O. Gardner, "Cousin Carrie," the author of "Money," Miss Emily Warner, Alice Warren, George B. Taylor, Mrs. R. J. Greene, "Zell," "Una Locke," the author of "Uncle Paul's Stories," "Harriet Myrtle," Anna Putnam, the author of "Blind Annie Lorimer," "M. H. S.," Robert A. West, Nellie Eyster, Frank Stanley, Marie Louise Hayward, "Lawrence Lancewood," Horatio Alger, Jr., Rev. Edward Payson Hammond, "M. E. F.," Mrs. C. H. Gildersleeve, W. O. Van Horn, and seventy-five other anonymous writers, each one.

Of *Elementary Books for Children* (Picture-Books, etc., not of a Fairy or Legendary Character), the number was large, but it was composed to a great extent of reprints or of imported toys not reprinted. A few original works, like Mr. Theodore Tilton's "The Fly," some pictorial Alphabets, and other compiled books of Pictures, were issued; but the foreign colored toys, by their greater brilliancy and perfection in color-printing, mainly occupied the market. In *Fairy and Legendary Books for Children*, there were some remarkable editions of "Old Mother Hubbard;" "The Fox and the Geese," "The House that Jack Built," etc., with original and very spirited illustrations in tint, by H. L. Stephens, of a much higher character than were ever previously attempted, and also editions of "Puss in Boots," "Beauty and the Beast," "Cinderella," "Little Red Riding Hood," etc., with excellent illustrations by the same artist, printed in colors. Nothing of this kind has been attempted in this country until 1864 and 1865. Several editions of Hans C. Andersen's and Grimm's Fairy Stories were also published during the year. A new, original American Version of "The House that Jack Built," finely illustrated, by L. Whitehead, Sen., also appeared. Mrs. Charles (author of "Chronicles of the Schönberg-Cotter Family") published, we believe, first in this country, a little legend entitled "The Song without Words;" and some of the French and German publishing houses issued editions in the original of several of the Fairy Stories of France and Germany.

We ought to notice also, briefly, the appearance of several periodicals for children, of high character, during the year. Two of them, "Our Young Folks," published by Messrs Ticknor and Fields, of Boston, and the "Little Corporal," published by Mr. Alfred L. Sewell, of Chicago, have at once attained a large circulation, which they merited from their ability.

In the Department of ART, which includes Illuminated Books and those whose illustrations constitute their first claim to notice, there were a few books published of great merit.

The illuminated books were—"The Twenty-Third Psalm," with emblematical illuminations of each verse; "The Three Kings of Orient: a Christmas Carol," the words, music, and designs, by Rev. John Henry Hopkins, Jr.; "The Book of Rubies," a collection of the most notable Love Poems in the language, (edited by Thomas Dunn English), with illuminated borders, and "The Christian Armor," with illuminated designs, legends, and scrolls, and illustrations of the text in poetry, etc., by Eliza Crawford Ball. Mr. G. W. Carleton, a New York publisher, issued a little volume of his experiences as a traveller in Cuba, with fifty drawings on wood, designed by himself, under the title of "Our Artist in Cuba." Three little treatises on the popular game of "Croquet," liberally illustrated, were published during the year—one by John Jaques, another by R. Fellow, and a third by one of the members of the Newport Croquet Club, and a new and enlarged edition of the late Mrs. Jameson's "Legends of the Monastic Orders, as represented in the Fine Arts," was issued. Editions of several of the most exquisitely illustrated English works, such as Watts' "Divine and Moral Songs for Children," illustrated by Cooper, Mrs. Barbauld's "Hymns in Prose," by the same artist, "Pictures of Society," Churton and Jones' "New Testament," the superb quarto Testament of Longman, and the Illustrated Bible of Gustave Doré, were imported and met with a rapid sale. The finest American illustrated volume of the year was "The Festival of Song," compiled by Mr. Frederick Saunders, and illustrated from original paintings of the members of the National Academy of Design.

Under the head of MISCELLANEOUS WORKS are included ten manuals and treatises on Masonic subjects, published by the well-known Masonic publishing houses, A. W. Pollard & Co., of Boston, Macoy, Sickles, and Pierson, New York, John Shierer, Cincinnati, and Joseph Covell, of Portland, Me.; a little treatise entitled "Practical Thoughts on Sisterhood, in reply to a Letter of Inquiry, with Extracts from the Principles of Association and Rules of the Sisterhood of the Holy Communion, now at St. Luke's Hospital, by One of their Number;" "Banting's Letter on Corpulence," Mark Lemon's "Jest-Book" (both reprints), and "Umbrellas and their History," by Clyde and Black, with illustrations by Bennett, are the other noticeable books of this department. The year was prolific in NEW PERIODICALS, literary, scientific, critical, technological, humanitarian, artistic, political, and antiquarian. Some of these we have noticed in connection with the topics to which they were devoted, but others deserve mention here. Of monthly periodicals there were twelve commenced in the course of

the year: two, "Hours at Home," and "The Catholic World," devoted to literature with a religious leaning; one, "Beadle's Monthly," commenced just at the close of the year, occupied exclusively with the lighter, though instructive literature; one, "Our Young Folks," having for its aim the instruction and amusement of the young; one, "The New Path," devoted mainly to art criticism; three, "The Progressive Review," "The Radical," and "The Monthly Review," advocating what are called liberal and progressive views in religion, politics, and social reform; the "Social Science Review" professed to deal with social, political, and economical questions; the "Heraldic Journal" had for its object to record the armorial bearings and genealogies of American families; the "Mining Chronicle" was occupied with the statistics, discoveries, and difficult questions pertaining to the mining and petroleum interests; and "The Temple of Public Opinion" presented the opinions of the leading papers on the current questions of the day, with some original comments of its own. There were two or three new Quarterlies, devoted to scientific or professional topics; the most noticeable was the "American Journal of Conchology," edited by George W. Tryon, Jr., and published at Philadelphia. In weekly periodicals a new field was entered, at least new in this country, for England has had for some years weekly periodicals, which, while maintaining a high literary character, and devoting much space to criticism in literature and art, discussed, from a somewhat independent standpoint, political and social questions. "The Round Table," which had been published for a short time in 1864, but then discontinued, was revived under more favorable auspices, and soon made itself felt as a critic in literature, art, manners, and morals. "The Nation" having a somewhat wider scope, brought within its purview not only literature, art, and science, but the political questions of the day, and handled them with great ability. "Progress," a weekly, originally devoted to the interests of the Israelites, took a wider sweep, and embraced general criticism, politics, and religion also. Of the weekly periodicals of a lighter class, "The Chimney Corner," occupied with fiction, biography, and incident, and "Every Saturday," a reprint of the lighter articles from the foreign periodicals, were the best examples. A kind of historical record, entitled "The Weekly Register," containing a record of important documents and events of the times, with essays on subjects connected with art, science, and literature, conducted by A. M. Trimble and C. A. Schaffter, was issued at Lynchburg, Va. Mr. Alexander Strahan, an enterprising publisher of London and Edinburgh, established a publishing house in New York, and issued from thence, though manufacturing them in Great Britain, his three popular monthly magazines, "The Sunday Magazine," "Good Words," and "The Contemporary Review."

II. **ENGLISH LITERATURE FOR THE YEAR 1865.** Our review of English literature must, for want of space, be brief, and confined to the leading books under each class. In **GENERAL HISTORY**, the most noteworthy books were: "A History of the Commonwealth of Florence from the Earliest Independence of the Commune to the Fall of the Republic in 1531," by T. Adolphus Trollope, in four volumes, a work of profound research and great merit; "History of the Rise and Influence of the Spirit of Rationalism in Europe," by W. E. H. Lecky, M. A., of Trinity College, Dublin, which, as already noticed, was reprinted here by Messrs. Appleton; a new volume of Mrs. Everett Green's "Calendar of State Papers," illustrating the domestic affairs of the reign of Charles II.; "Higden's Chronicles and Memorials of Great Britain and Ireland," edited by Mr. Churchill Babington; Mr. Prendergast's "The Cromwellian Settlement of Ireland;" Mr. Edward Burnet Tyler's "Researches into the Early History of Mankind and the Development of Civilization;" Dr. Rennie's "British Arms in North China and Japan." Historical works on India and Indian affairs were, as usual, abundant; Mr. G. O. Trevelyan sketched the history of the Cawnpore Massacre; Dr. Knighton published "Elihu Jan's Story; or, the Private Life of an Eastern Queen," a narrative of the last days of the independence of Oude; Sir Charles Jackson set forth "A Vindication of Lord Dalhousie's Indian Administration;" and the Duke of Argyll published a little volume on "India under Dalhousie and Canning;" Major Evans Bell has given a politico-historical account of "The Mysore Reversion;" Captain Hastings Frazer, a sketch of "Our Faithful Ally, the Nizam;" and an anonymous writer a "History of the Sect of Mahárájas or Vallabhacháryas in Western India," a body of religious fanatics and shameless sensualists.

The Rev. Julian E. T. Woods compiled, in one large volume, "A History of the Discovery and Exploration of Australia;" Mr. William Howitt described the progress of discovery in Australia, Tasmania, and New Zealand; Mr. Matthew Macfie issued a volume on the history, prospects, and resources of Vancouver's Island and British Columbia; Viscount Bury gave a history of the progress of colonization in his "Exodus of the Western Nations;" Mr. J. B. Hurlburt published a work on colonial history, with the title of "Britain and Her Colonies;" and Mr. Lyons McLeod, an historical sketch of "Madagascar." The history of the Bourbonist reaction in Italy is told by Count Maffei, with reference to official documents, in two volumes, entitled "Brigand Life in Italy;" a Greek writer, Mr. Stefanos Xenos, compiled a "Diplomatic History of the Annexation of the Ionian Islands to the Kingdom of Greece;" Mr. Americo Palfrey Marras prepared an able essay on "The Secret Fraternities of the Middle Ages;" and Mr. T. W. Allie, Lecturer on the Philosophy of History to the Catholic Univer-

sity of Ireland, put forth a collection of his lectures, under the title of "The Formation of Christendom."

Among the works devoted to the illustration of particular periods of British history, were—a volume edited by Mr. William Brenchley Rye, Assistant Keeper of the Department of Printed Books in the British Museum, entitled "England as Seen by a Foreigner in the Days of Elizabeth and James I., comprising Translations of the Journals of the Two Dukes of Württemberg in 1592 and 1610; with Extracts from the Travels of Foreign Princes and Others;" "Documents from Simancas relating to the Reign of Elizabeth (1558–1568)," translated from the Spanish of Don Tomás Gonzales, and edited by Mr. Spencer Hall, F. S. A., Librarian to the Athenæum; "Our British Ancestors," by Mr. Lyons; a "History of the Viceroy's of Ireland, with Notices of the Castle of Dublin, and its Chief Occupants in Former Times." Other historical works of interest were—the "Historical Essays" of the late Nassau W. Senior, and those of Mr. Herman Merivale; "Sketches of General History," by the late James Douglas of Cavers; "Persecution of the Knight Templars," by Anthony O'Neal Haye; "Private History of the Insurrection in Poland in 1863," by H. Sutherland Edwards; the second and third volumes of Mr. Philip Smith's "History of the World from the Earliest Records to the Present Time;" the third volume of Mr. George Rawlinson's "Five Great Monarchies of the Ancient Eastern World;" Dr. T. H. Dyer's "History of the City of Rome from its Foundation to the End of the Middle Ages"—a municipal history, having reference to the structures and monuments of the Imperial Capital, not to its political vicissitudes; Mr. Lionel James Trotter's "Sequel to Thornton's History of India;" "Notes on the Battle of Waterloo," etc., with a brief memoir of his life and services, by the late General Sir James Shaw Kennedy, K. C. B., and a "History of the Gipsies," by Walter and James Simson.

The English works on the war in America were fewer than the previous year; the principal were—Lieut.-Col. Fletcher's "History of the American War;" Captain Chesney's second volume of "Campaigns in Virginia, Maryland," etc.; Mr. G. A. Sala's disgraceful "Diary in America in the Midst of War;" and "Belle Boyd in Camp and Prison," a stupid book, which has nevertheless been republished here.

In *Historical and Collective Biography*, the works of most importance were—the fifth and sixth volumes of Carlyle's "History of Friedrich II. of Prussia, called Frederick the Great;" a translation of Napoleon III.'s "Life of Julius Cæsar," by Thomas Wright; "Masaniello of Naples," by Mrs. Horace St. John; the third and fourth volumes of Dr. Hook's "Lives of the Archbishops of Canterbury;" "Studies in Biography," by Mr. Lionel James Trotter; "Biographies of Richard Cobden and Lord Palmerston," by Mr. John McGilchrist, "Lives

of the Warriors of the Thirty Years' War," by Lieut.-Gen. the Hon. Sir Edward Cust; "Biographies of eminent Soldiers of the Last Four Centuries," by the late Maj.-Gen. Smith, edited by Dr. Leonard Schmitz; the "Life and Character of King John," by Mr. William Chadwick; and "Lives of the Tuscan Sculptors," by Mr. Charles Perkins.

Of *Biographies of Single Individuals*, the following are of the greatest interest: "The Life and Times of Sir Joshua Reynolds, with Notices of some of his Contemporaries," commenced by the late painter Leslie, and completed by Professor Tom Taylor; "Life of Thorwaldsen" from the Danish of J. M. Thiele, translated and edited by Rev. Mr. Barnard; "Life of Michael Angelo," by Hermann Grimm, translated by Fanny Elizabeth Bunnett (reprinted here); "Louis Spohr's Autobiography," "Furioso; or, Passages from the Life of Ludwig Von Beethoven," and the "Life of Von Weber," by his son, Baron Max Maria Von Weber, all three translated from the German; two biographies of Josiah Wedgwood; one by Miss Meley, and finely illustrated, the other by Mr. Llewellyn Jewitt, F. S. A., smaller, and without illustrations; "The Life and Career of Dr. Dodd," the Clerical Forger, by Mr. Percy Fitzgerald; "The Life and Anthropological Treatises of Blumenbach," translated and edited by Mr. Thomas Bendyshe; "The Life of John Clare," the peasant poet, by Mr. Frederick Martin; "Memoirs of Sir Richard Steele and his Contemporaries," by Mr. H. R. Montgomery, two volumes; the "Autobiography of Sir Benjamin Brodie," edited by Mr. Charles Hawkins, F. R. C. S.; a third volume of Mr. Charles Knight's Autobiographical "Passages of a Working Life during Half a Century;" "Biographical Memoir of Samuel Hartlib, Milton's Familiar Friend," by Mr. Dircks, and a "Life of the Second Marquis of Worcester," by the same author; "Lives of Boulton and Watt, principally from the Soho MSS., comprising also a History of the Invention and Introduction of the Steam Engine," by Samuel Smiles; "The Journal and Correspondence of Miss Berry from 1783 to 1852" (Miss Berry was the friend of Horace Walpole, Hannah More, and most of the notabilities of the latter part of the eighteenth century, and the early part of the nineteenth), by the late Lady Theresa Lewis; Life and Letters of the late Frederick W. Robertson, of Brighton," edited by Mr. Stopford A. Brooks (reprinted here).

In *Theological and Religious Literature*, the principal works were—"The New Testament for English Readers," by the Dean of Canterbury (Henry Alford, D. D.); "The Holy Bible with Notes and an Introduction," by Canon Wordsworth; "Progress of Doctrine in the New Testament," Bampton Lectures for 1865, by Rev. Mr. Barnard; "Discussions on the Gospels," by Rev. Dr. Roberts: The Fifth part of Bishop Colenso's work on the Pentateuch,

"The Hidden Wisdom of Christ," by Mr. Ernst Bunsen; "The Non-Eternity of Future Punishment," by Rev. James Barlow; a History of German Rationalism, by Professor Hagenbach; "The Critical History of Christian Literature," by Mr. Donaldson; "Christendom's Divisions," by Mr. E. Ffaukes; "History of the Early Scottish Church," by Rev. T. McLauchlan; "The Reform of the Church of Scotland," by Dr. Lee, of Old Greyfriars. On controversial topics there were—"Judgments of the Judicial Committee of the Privy Council" on Theological Questions; "An Eirenicon," by Dr. E. B. Pusey; "Temporal Mission of the Holy Ghost," by Archbishop Manning; "Essays on Religion and Literature," edited by Archbishop Manning (the last three reprinted here); "Catholic Missions," by Messrs. Strickland and Marshall.

In *Intellectual and Moral Science*, there were several works of remarkable ability. Among them were—"The Secret of Hegel, being the Hegelian System in Origin, Principle, Form, and Matter," by Mr. James Hutcheson Sterling; "An Examination of Sir W. Hamilton's Philosophy, and of the Principal Philosophical Questions discussed in his Writings," and "Auguste Comte and Positivism," both by Mr. John Stuart Mill (reprinted here); "Vindication of the Hamiltonian Philosophy," by Mr. James Hutcheson Sterling; "The Conformation of the Material by the Spiritual, and the Holiness of Beauty," by Mr. W. Cave Thomas; "A Treatise on Logic, Pure and applied," by Mr. S. H. Emmens; "The Argument, *a priori*, for the Moral Attributes of God," by Mr. W. H. Gillespie; "Plato and the other Companions of Socrates," by Mr. George Grote, three volumes; "Time and Space," by Mr. S. H. Hodgson; "Studies of Ethical and Social Subjects," by Miss Frances Power Cobbe; "Recent British Philosophy," by Professor David Masson; "History of the Mathematical Theory of Probability, from the Time of Pascal to that of Laplace," by Mr. Todhunter; "Spiritual Philosophy founded on the Teaching of Samuel Taylor Coleridge," by Mr. Joseph Henry Green; "The Emotions and the Will," a new and enlarged edition, by Mr. Alexander Bain.

IN ANTIQUARIANISM, TOPOGRAPHY, AND FOLK LORE, departments of literature not cultivated to any considerable extent in the United States, numerous works were published; some of the most interesting were—"The Romance of London," three volumes by John Timbs; "Haunted London," by Walter Thornbury; "Highways and Byeways of the City," by the author of "London Scenes and London People;" "The Great Schools of England," by Howard Staunton, giving the past history, present condition, and prospects of Eton, Winchester, Westminster, St. Paul's, and other endowed schools of England; "Memorials of the King's School, Canterbury," by Rev. J. S. Sidebotham; "Popular Genealogists," giving the history of Sham Family Trees; "History and Antiquities of Masham and Mashamshire," by Mr. John Fisher; "Introductory

Lecture on Archaeology," by Mr. Churchill Babington; "Etoniana;" "Memorials, Archæological and Historical, of Chester, Manchester, St. Asaph, and Bangor," by Mr. Mackenzie Walcott; "Ancient British Sculptured Rocks of Northumberland and the Eastern Borders," by Mr. George Tate; "The Ancient Pillar Stones of Scotland: an Inquiry," by Mr. George More; "The Killarney Lakes," by Mr. and Mrs. S. O. Hall; "History of Caricature and Grotesque in Literature and Art," by Mr. Thomas Wright; "A Century of Potting in the City of Worcester," by Mr. R. W. Binns; "Three Notelets on Shakespeare," by Mr. William J. Thoms, referring to the Folk Lore embodied in some of Shakespeare's Plays; "Notices Illustrative of the Drama and other Popular Amusements, chiefly in the Sixteenth and Seventeenth Centuries," by Mr. William Kelly; "The Book of Were Wolves," by Mr. Sabine Baring Gould; several works on matters connected with the times and death of King Arthur; "Primitive Marriage," by John F. McLennan, Advocate, a remarkable work; "Popular Romances of the West of England: or, the Drolls, Traditions, and Superstitions of Old Cornwall," collected by Mr. Robert Hunt, two volumes; "Cornwall and its Coasts," by M. Alphonso Esquiros; "Walk from London to Land's End and back," with Notes by the Way," by Mr. Elihu Burritt; "Eastern England from the Thames to the Humber" two volumes, by Mr. Walter White; "A Summer in Skye," by Alexander Smith (reprinted here).

IN GEOGRAPHY AND TRAVEL the number of books was very great, and most of them possess much interest. We name the principal ones: "The Alps of Dauphiné, and his Adventures among them," have been described by Mr. T. G. Bonney, F. G. S., a member of the Alpine Club; "The Cruise of R. Y. S. *Eva*," by Mr. Arthur Kavanagh, gives a lively account of Albania; "Village Life in Switzerland," by Mrs. Delmard, describes the social life of the Helvetic Republic; "A Short American Tramp, in the Fall of 1864," is an Account of a Geological Tour, by the Editor of "Life in Normandy;" Mrs. Beke, who accompanied her husband, Dr. Beke, in an antiquarian expedition to the East, gives an account of the journey, under the title of "Jacob's Flight; or, a Pilgrimage to Haran, and thence in the Patriarch's Footsteps into the Promised Land." Other valuable books on these topics are—"Scenes of Wonder and Curiosity in California," by Mr. James M. Hutchings; "Last Winter in Rome," by Mr. Wild; "Stray Leaves from the Diary of an Indian Officer;" "Camp and Cantonment: a Narrative of the Indian Mutiny," by Mrs. Leopold Paget; "Domestic Life, Character, and Customs of the Natives of India," by Mr. James Kerr; "The Giant Cities of Bashan, and Syria's Holy Places," by Rev. J. L. Porter; "A Winter in Algeria, 1863-'64," by Mrs. G. A. Rogers; "A Work on Algeria," by Mr. G. A. Sala; "The Principal Ruins of Asia Minor," by Charles Texier, Mem. of Inst. of France, and R. Popplewell Pullan,

F. R. I. B. A.; a magnificent work; "Travels and Discoveries in the Levant," by Mr. C. T. Newton; "Excursion in the Peloponnesus, in the Year 1858," by the late Sir Thomas Wyse; "Holy Land," by Mr. Hepworth Dixon; "Travels in Palestine," by Mr. H. B. Tristram; "Adventures among the Dyacks of Borneo," by Mr. Frederick Boyle, F. R. G. S.; "The Northwest Passage by Land," by Viscount Milton, and Mr. W. B. Cheadle; "Ten Years in Sweden: being a Description of the Landscape, Climate, Domestic Life, Forests, Mines, Agriculture, Field Sports, and Fauna of Scandinavia," by an old Bushman; "The *Marathon* and the Mediterranean;" "The Harz Forest," by "A Scotch Family;" "The Regular Swiss Round," by Rev. Harry Jones; "The Isthmus of Panama," by Mr. O. T. Bidwell; "Ice Caves in France and Switzerland," by Rev. G. F. Browne; "Guide to Spain," by Mr. O'Shea; "Over the Pyrenees into Spain," by Miss Mary Eyre; "Reminiscences of a Personal Mission to the Friendly Islands and their Dependencies," by Rev. Thomas West, a Missionary; "Queen's Messenger; or, Travels on the Highways and Byeways of Europe," by Captain Hall; "Egypt and Syria," by Mr. S. S. Hill, F. R. G. S.; "Transylvania," by Mr. Charles Bonar; "Journey from London to Persopolis, including Wanderings in Daghestan, Georgia, Armenia, Kurdistan, and Mesopotamia," by Mr. Ussher; "Journey North and South," vol. iii., treating of Canada, by W. H. Russell, LL. D.; "Travels and Researches of Greece," mostly treating of the Natural History of the country, by Captain Spratt; "Central and Eastern Arabia," by W. Gifford Palgrave, a work of deep interest; "Letters from Egypt in 1863-'65," by Lady Duff Gordon; "Buenos Ayres and Argentine Gleanings," by Mr. Thomas J. Hutchinson; "Adventures and Observations on the West Coast of Africa and its Islands," by Rev. Charles W. Thomas; "Peking and the Pekingese," full of valuable information, by Dr. Rennie, of the British Embassy; "Pen and Pencil Sketches in Italy," by an anonymous author; "Narrative of an expedition to the Zambesi and its Tributaries, and of the Discovery of the Lakes Shirwa and Nyassa, 1858-1864," by David and Charles Livingstone (reprinted here).

ESSAYS AND WORKS OF CRITICISM were abundant. Among them were—"The Critical Essays of a Country Parson" (A. K. H. Boyd); "Lacon in Council," by Mr. J. F. Boyes; "Essays on Criticism," by Mr. Matthew Arnold; "The Campaign at Home," and a "Vindication of Dryden," by Shirley (Mr. John Skelton); "Essays of a Recluse; or, Traces of Thought, Literature, and Fancy," by Mr. William Benton Clulow; "Henry Holbeach, Student in Life and Character: a Narrative and a Discussion;" "The Rook's Garden," by Mr. Cuthbert Bede; "Critical and Literary Essays," forming vol. ii. of the Life and Writings of Joseph Mazzini; "Hunting Sketches," and a Don's "Sketches from Cambridge," both by Anthony Trollope; "Chinese Miscellanies," by Sir John Davis;

"Essay on Shakespeare," by the late Cardinal Wiseman; "An Editor off the Line," by Mr. E. B. Miall; "Pages in Waiting," and "The Business of Pleasure," both by Mr. Edmund Yates; "People, Places, and Things," by the author of *Lost Sir Massingberd*; "Characters and Criticisms," by Mr. Hanway; "Soldiering in Sunshine and Storm," by William Douglas, private in the 10th Hussars; "The Three Great Teachers of our Time—Carlyle, Tennyson, and Ruskin," by Mr. Alexander H. Japp; "Sesame and Lilies," and "Ethics of the Dust," both by John Ruskin.

IN POLITICAL AND SOCIAL SCIENCE there were a few works of great value and importance. Such were the following: "Our Convicts," by Miss Mary Carpenter; "Journal of a Third Visit to the Convict Jails, Refuges, and Reformatories in Dublin, and its Neighborhood," by the Recorder of Birmingham (Hon. M. D. Hill) and his daughter; "The Pauper, the Thief, and the Convict, their Haunts and Habits," by Mr. Thomas Archer; "Principles of Reform, Political and Legal," by Mr. John Boyd Kinnear; "The Ideas of the Day on Policy," by Charles Buxton, M. P.; "Constitutionalism of the Future; or, Parliament the Mirror of the Nation," by Prof. James Lorimer; "Six Months among the Charities of Europe," by Mr. John de Liefde; "Three Years among the Working Classes in the United States, during the War," by the author of "The Autobiography of a Beggar Boy"; "Remarkable Convictions," by "A Writer to the Signet."

IN FINANCIAL SCIENCE, the most important books were—"The Economy of Capital; or, Gold and Trade," by Mr. Patterson; "The Bank of England and the Organization of Credit," by an anonymous author; "The Bubbles of Finance," by a writer in "All the Year Round."

IN TECHNOLOGY AND MECHANICAL SCIENCE, the principal works were—"Wine and other Fermented Liquors from the Earliest Ages to the Present Time," by Mr. James Richmond Sheen; "The English Gentleman's House; or, How to Plan English Residences, from the Parsonage to the Palace, with Tables of Accommodation and Cost, and a Series of Selected Plans," by Robert Kerr, Architect; "History of Architecture," vol. i., magnificently illustrated, and "Lectures on the Holy Sepulchre and the Temple," both by Mr. Ferguson; "Astra Castra; or, the Science of Ballooning," by Mr. Hatton Turner; "The Book of Perfumes," by M. Eugene Rimmel; "Diamonds and Precious Stones: their History, Value, and Distinguishing Characteristics," by Mr. Harry Emanuel; "Precious Stones," by Mr. C. W. King.

IN NATURAL HISTORY, "Homes without Hands," by Rev. M. Wood, and "Strange Stories of the Animal World," by Mr. Timbs, are the best specimens of the popular treatment of topics of physical science.

IN POETRY, amid the almost numberless aspirants for fame, a few have achieved works

which will live. Among them are—Mr. Algernon Charles Swinburne, whose "*Atalanta in Calydon*," and "*Chastelard*" (both reprinted here), have created a decided sensation in literary circles in England. Mr. Robert Buchanan, a young Scotchman, whose "*Idyls and Legends of Inverburn*," attracted great attention in 1864, has made a still deeper impression by his "*Undertones*," in 1865. These are both reprinted in the United States. Mr. Allingham, in his "*Fifty Modern Poems*," has given evidence of great poetic ability. Miss Isa Craig has published a drama called "*Duchess Agnes*," which, though defective as a drama, contains some extremely tender and beautiful writing. Mr. Richard Hartwell Horne, who for many years has resided in Australia, has published a drama, called "*Prometheus the Firebringer*," characterized by great vigor and power of expression. Mr. Arthur Munby has printed a volume of verses, "*New and Old*," distinguished by profound thought and emotion; and Mrs. Frederick Prideaux, a name hitherto unknown to fame, has published a poem entitled "*Claudia*," of decided merit. There were also new editions, many of them with considerable revision and addition, of the poems of Mrs. Fanny Kemble, Sir Bulwer Lytton, Mr. John Edmund Reade, Dean Alford, the late Miss Adelaide Anne Procter, Tennyson, Browning, and Wordsworth. Following Earl Derby's example, translations of the "*Iliad*" into English hexameters have been made by Edwin W. Simecox and Mr. J. H. Dart; into the Spenserian stanza, by Mr. Philip Stanhope Worsley, and into English blank verse by Mr. Ichabod Charles Wright; of the "*Odyssey*" into English blank verse, by Mr. George Musgrave; the "*Agamemnon*," "*Choephoroi*," and "*Eumenides*" of *Æschylus*, have been rendered into English verse by Miss Anna Swanwick; and the "*Tragedies of Sophocles*," by Mr. E. H. Plumptre. Dante's "*Inferno*" has been translated in the metre of the original, by the Rev. Prebendary Ford; the "*Divina Commedia*" into English in its own metre, by Mr. John Dayman; Tasso's "*Jerusalem Delivered*," by Sir John Kingston James, and Goethe's "*Faust*," by Mr. Theodore Martin.

IN FICTION, the event of the year was the completion of Mr. Dickens's "*Our Mutual Friend*." Mr. Anthony Trollope's serial story, "*Can You Forgive Her?*" was also completed during the year, and Mr. Wilkie Collins's "*Armadale*" nearly so; Mr. Trollope also published during the year "*Miss Mackenzie*," which, in the opinion of the critics, ranked below most of his novels; Miss Muloch (since married) published a novel entitled "*Christian's Mistake*," which was exceedingly popular; Miss Annie Thomas added to her reputation by her "*Theo. Leigh*" and "*On Guard*;" Miss M. E. Braddon contributed "*Only a Clod*," "*Sir Jasper's Tenant*," and the first part of "*The Lady's Mile*" to her already long list of novels; Mrs. Henry Wood, with remarkable reserve, furnished but a single work, "*Mildred Arkell*;" all these

have been reprinted here. Other new novels of considerable merit were—"Sir Felix Foy, Bart," by Mr. Dutton Cook; "Never Forgotten," by Mr. Percy Fitzgerald; "Selvaggio," a novel, intended to show the progress of Protestantism in Italy, by the author of "Mary Powell;" "Constance Sherwood, an Autobiography of the Sixteenth Century," intended to exhibit the sufferings of Roman Catholics in England in the days of Queen Elizabeth, by Lady Georgiana Fullerton; "Sophy Laurie," by Mr. W. C. Hazlitt, son of the eminent essayist; "Who is the Heir?" by Mr. Mortimer Collins; "The Spanish Match, or Charles Stuart at Madrid," by W. Harrison Ainsworth; "One Against the World, or Reuben's War," by Mr. John Saunders; "The Clyffards of Clyffe," by the author of "Lost Sir Massingberd;" "Agnes," by Mrs. Oliphant (reprinted here); "Half a Million of Money," by Miss Amelia B. Edwards (reprinted here); "Faith Unwin's Ordeal," by Miss Georgiana Craik.

OF FAIRY FICTIONS FOR CHILDREN, the most important were—"Little Wanderlin and Other Fairy Tales;" a translation of "What the Moon Saw," and other Fairy Stories, by Hans O. Andersen; "Mehemet the Kurd," a Series of Oriental Stories after the manner of the Arabian Nights, by Mr. Charles Wells; and translations of two Icelandic Sagas; "Gisli the Outlaw," by Mr. Dasent, and "Viga Glum," by Sir Edmund Head.

SOME VERY REMARKABLE ILLUSTRATED BOOKS FOR CHILDREN were produced during the year. "The Divine and Moral Songs of Dr. Watts," every page of which was illustrated in the highest style of art, under the direction of Mr. Cooper, was an advance even upon the beautiful edition of Mrs. Barbauld's "Hymns in Prose," illustrated by the same eminent artist the previous year. A series of toy books for children printed in colors, on Natural History topics, were remarkable for their extraordinary fidelity to nature, the drawing and coloring, vying in this respect with the best executed engravings of the illustrated monographs on Natural History.

IN MISCELLANEOUS LITERATURE, we can only notice a very few books not otherwise classified. "Familiar Words," a collection of well-known quotations and popular phrases, with parallel passages in illustration, by Mr. Hain Friswell; "Handbook of Familiar Quotations," compiled by a Lady; "Evenings in Arcadia," a volume of criticisms on the old poets, by Mr. John Dennis; "Molière Characters, Criticisms, and Translations," by Charles Cowden Clarke; "Common Words with Curious Derivations," by Archdeacon Smith; "The Origin of Language," by Rev. Frederick W. Farrar; "Wit and Wisdom from West Africa (African Proverbs," etc.), by Major Burton; "Prehistoric Times, as Illustrated by Ancient Remains, and the Manners and Customs of Modern Savages," by Mr. John Lubbock; "Superstitions of Witchcraft," by Mr. Howard Williams; "The Letters

of Mozart," translated by Lady Wallace (reprinted here).

LOUISIANA. At the commencement of the year, Louisiana was under the State Government previously organized by the coöperation of Gen. Banks, which extended its control to the verge of the military lines. At the same time the military occupation continued unchanged. New Orleans, with adjacent important positions, were held by this occupation. Nevertheless, the State within these limits was treated practically as a restored portion of the United States. Under the call for troops issued by President Lincoln in December, 1864, a draft was ordered to take place in the Department of the Gulf, by Maj.-Gen. E. K. S. Canby, on February 15th. This was the day fixed for the draft in all Northern States. The quotas assigned were as follows: Parish of Orleans and Jefferson, 4,148; St. Charles, 53; Ascension, 45; East Baton Rouge, 118; Lafourche, 176; Terrebonne, 163; St. Mary, 54; Assumption, 65; St. Bernard, 42; Plaquemine, 76; Plaquemine, left bank, 48; St. James (not announced), —; St. John Baptiste (not announced), —; Dis. of Southern Ala., 31; Dis. of West Florida, 90; Dauphin Island, 29.

In order to facilitate the draft, these parishes and districts were formed into Districts as follows: 1st. Parish of Orleans, Jefferson, St. Charles, and Ascension; 2d. Parish of Lafourche, Terrebonne, St. Mary, and Assumption; 3d. Parish of East Baton Rouge, St. John Baptiste, and St. James; 4th. Parish of St. Bernard and Plaquemine; 5th. District Southern Alabama, West Florida, and Dauphin Island.

Enlistments made between the date of the order and that of the draft were credited on the quota, and the bounties provided by law were paid. "Drafted men became soldiers in the service of the United States, by the fact of their names having been drawn in the draft. The notification served upon them by the Provost Marshal's Department is an announcement of the fact, and an order for them to report for duty at a designated time and place. And any person failing to report, after notice is left at his last place of residence, or served on him, unless relieved by proper authority from the requirements of the draft, is pronounced by law a deserter; he may be arrested, held for trial by court-martial, and sentenced to death."

Such were the words of Maj.-Gen. Hurlbut, in his order issued January 17th, to carry out the provisions of the order No. 4, of Gen. Canby, issued January 8th, above mentioned. All the conditions and stipulations established in the Northern loyal States, were in full force in Louisiana. Deserters from the enemy were not to be drafted; and if enlisted, they were to be assigned to regiments serving on the Indian frontier. On the day appointed the draft took place in New Orleans for the number of men deficient. The speedy close of the war, however, removed any occasion for their services in the field. The number of men from the

State in the Federal armies was about forty thousand.

On September 5, 1864, an election of five members of Congress was held, as stated in a previous volume, and the persons so chosen proceeded to Washington, in order to take their seats at the commencement of the session. The first election of members of Congress subsequent to the outbreak of the war was held in December, 1862, in consequence of instructions from President Lincoln to Gen. Butler. Messrs. Hahn and Flanders were elected, and took their seats by the action of the House on February 9, 1863, and their term of office expired on March 4th ensuing. Subsequently, in October, an address appeared in the New Orleans newspapers to the "citizens loyal to the Government of the United States." Under the direction of the parties from whom this address proceeded, it was claimed that an election of members of Congress took place in some parishes, and persons appeared in Washington as duly elected members. Two were present at the election of Speaker of the House, and one of them nominated Gen. F. Blair as a candidate. They voted for Clerk, and one then resigned or retired. The other remained, and compensation was voted to him by the House. But they were not recognized as members after the organization. The next election was held on September 4, 1864, as above stated. The members elect presented themselves for admission to seats, and in February, 1865, a majority of the committee to whom the credentials of the applicant from the First District was referred reported in favor of admission. The committee state the facts which preceded the election, and say: "This election depends for its validity upon the effect which the House is disposed to give to the efforts to reorganize a State Government in Louisiana, which have here been briefly recited. The districting of the State for representatives, and the fixing of the time for holding the election, were the act of the convention. Indeed, the election of Governor and other State officers, as well as the existence of the convention itself, as well as its acts, are all parts of the same movements."

It was urged as an objection to the validity of these measures, that they neither originated in, nor followed any preëxisting law of the State or nation. To which the committee reply, that in the nature of the case, neither a law of the State nor nation to meet the case was a possibility. And in the absence of any such legal form prepared beforehand in the State, and like absence of power on the part of the General Government, under the delegated powers of the Constitution, it followed that the power to restore a lost State Government in Louisiana existed nowhere, or in "the people," the original source of all political power in this country. The people, in the exercise of that power, cannot be required to conform to any particular mode, for that presupposes a power to prescribe outside of themselves, which it has

been seen does not exist. It follows, therefore, that if this work of reorganizing and reestablishing a State Government was the work of the people, it was the legitimate exercise of an inalienable and inherent right, and if republican in form is entitled not only to recognition, but to the "guaranty" of the Constitution. The committee then inquire how far this effort to restore constitutional government in Louisiana has been the work of the people. They say: "The evidence before the committee, and all the information they could obtain, satisfied them that the movement which resulted in the election of State officers, the calling of a convention to revise and amend the Constitution, the ratification of such a revival and amendment by a popular vote, and the subsequent election of representatives in Congress, was not only participated in by a large majority, almost approaching to unanimity, of the loyal people of the State, but that the loyal people constituted a majority of all the people of the State." They also add, that from all the facts, they find that the election was held under the auspices of a new State organization which had arisen from the ruins of the old, in as much conformity to law as the nature of the case would permit. This report was not acted upon by the House. But Congress by an act appropriated money to defray the expenses of those representatives elect. A question really existed in Louisiana as to the validity of the election of September 5, 1864, when the Constitution was adopted and members of the State Legislature and representatives to Congress chosen. It was asserted that persons had opportunities to vote who had no legal right to vote, and that such persons did vote; that there were men in the Legislature not elected by the people, whose votes were necessary to make up a quorum. The Legislature which assembled soon after the election, held a long session devoted exclusively to local affairs. That the statements of illegality were justified, would seem to be evident from the following proclamation of the acting Governor on May 3d:

Whereas, according to an official statement of J. Randall Terry, late Register of Voters in and for the city of New Orleans, made to me under date of March 6, 1865, nearly five thousand persons are registered as voters on the books of said office who did not possess the qualifications required by law to become voters in this State; and whereas, it is made my duty to see that the laws are enforced; and whereas, the only way in which the elective franchise can be purified and the rights of the citizen be protected against these illegal votes is by a new registration of the names and residences of all the qualified electors of the city of New Orleans—an inconvenience which every good and law-abiding citizen will cheerfully submit to, for the sake of the end to be accomplished;

Now, therefore, I do issue this my Proclamation, declaring the old books of the Register of Voters for the city of New Orleans to be closed from this date, and the registration of all persons contained therein, as well as all certificates issued by virtue of said records to persons, conferring on them the right to vote, to be null, void, and of no effect from and after the present date.

I do further proclaim, and hereby authorize the Register of Voters in and for the city of New Orleans, to open a new set of books, to commence on the first day of June, 1865, for the registering of all voters in and for the said city, in accordance with the qualifications prescribed by the Constitution and Laws of the State, and of which this proclamation will be considered as giving due notice.

Given under my hand and seal of the State, at the city of New Orleans, this 3d day of May, A. D. 1865, and of the year of the independence of the United States the eighty-ninth.

J. MADISON WELLS.

This order led at once to a difficulty between Gen. Banks and the acting Governor. The registry set aside was made under an order of the former, and many persons registered were reported to be negroes.

On March 4th, Gov. Hahn resigned his office, and was succeeded by the Lieut.-Gov. Wells. Gov. Hahn had been elected by the Legislature as a Senator to Congress, at Washington. The new Governor delivered a brief address, and was followed by Maj.-Gen. Hurlbut in a speech, which thus described the condition of the portion of the State in military possession:

Now a few words about your State. Let me call your attention to this fact: the resources of this State are infinitely reduced by the casualties of war. The commerce, whose innumerable wheels used to vex the turbid current of the Mississippi, has passed away—the result of war. Plantations which used to bloom through your entire land, until the coast of Louisiana was a sort of a repetition of the garden of Eden, are now dismantled and broken down. Trade, commerce, every thing, crippled. Crippled, remember, in every instance where this has occurred, as the natural result of that deadly poison of secession which this people unwisely received and unwisely acted on. With all these things, this newly organized State of Louisiana has to confront difficulties such as never beset any community of men before. You have to create almost out of nothing. You have to make revenues where the taxable property of the State is reduced almost two-thirds. You have to hold the appliances and surroundings of government, and maintain them. All this you have to do out of a circumscribed territory and a broken-down country. Hence there is eminent practical wisdom in the suggestion contained in the address you have just heard, that the most rigid and self-denying economy should be exercised in all these relations which you hold to your fellow-citizens. Gentlemen, let me give you a few facts. The United States supports to-day 14,000 poor people here in the city of New Orleans. The same United States—this same military authority—is maintaining and keeping up to a great extent nearly every charity which belongs to the city or State. The *levées*, on which the life of your country depends, which from local causes cannot be repaired by the civil authorities, must be attended to by the United States, and the sum of \$160,000 is being laid out now by the United States for the purpose of preventing this delta of the Mississippi from being subject to overflow. Now, in view of this state of things, if you desire to take these matters off the hands of the General Government, look to it well that you have the means to carry out the necessities of the times, and the power to compel observance.

The close of the war soon followed. Paroled prisoners in large numbers returned to their homes. All under certain grades were restored to citizenship who took the oath of amnesty prescribed by the President. The Confederate

Governor, Allen, who had located the seat of his government at Shreveport, in the western part of the State, issued, on June 2d, an address to the people of the State, in which he declared that his administration as Governor of Louisiana closed on that day. He said: "The war is over, the contest is ended, the soldiers are disbanded and gone home, and now there is in Louisiana no opposition whatever to the Constitution and laws of the United States." All the Confederate State officers in its various departments rendered their final accounts, and made full settlements with Gov. Allen, who transferred all important records to the care of the Federal military authorities.

On June 10th, Gov. Wells issued the following address:

STATE OF LOUISIANA, EXECUTIVE DEPARTMENT, }
NEW ORLEANS, June 10, 1865. }

To the People of the Parishes of Saint Tammany, Washington, Saint Helena, Livingston, West Baton Rouge, Platte Coupee, Saint Martin, Concordia, Madison, Carroll, Franklin, Saint Mary, East Feliciana, West Feliciana, Tensas, Vermilion, Saint Landry, Lafayette, Calcasieu, Acadiane, Natchitoches, Sabine, Caddo, Ouachita, De Soto, Rapides, Morehouse, Union, Jackson, Caldwell, Catahoula, Claiborne, Bossier, Bienville, and Winn:

I extend to you my heartfelt congratulations on your being restored to the protection of the flag of our country, the symbol of law, order, and freedom, and which now waves in majestic power over an undivided nation. Our once wealthy and fertile State, now bankrupt and desolate from the ravages of intestine war, resumes her natural relations (which have been temporarily disrupted) within the glorious Union of the States, united by the bonds of universal freedom and ties that can never be dis severed. It is not my purpose to rake up the ashes of the past, by inquiring who has erred and who has not erred in the fearful struggle the nation has just passed through. Whatever may have been the causes of the outbreak, and however bitter may have been the feelings engendered in the hearts of some, it is better that all such matters be buried out of sight forever. It is not the past, but the present and future, we have to deal with. Great and responsible duties rest upon every citizen at this crisis, to manfully go to work and assist in the reestablishment of civil government. In that connection it is a most cheering sign to see the spirit of submission to the laws, and willingness to acquiesce in the result, manifested by those so recently engaged in hostility to the Government. Even the soldiers return to their homes wiser and better men, frankly owning to the failure of their experiment, and all expressing a desire to atone for the errors of the past by cheerful obedience to the Government, and glad again to enjoy its beneficent rule. You, my friends and fellow-citizens—for I esteem it a privilege to call you so—must follow in the footsteps of so good an example. You must go to work to organize civil government in your respective parishes. Sheriffs, recorders, clerks of courts, and police jurors, will have to be appointed provisionally, until elections can be held to fill these offices as provided by law. You must confer among yourselves, and select men of integrity and capacity to fill these positions. I will act on your recommendations by appointing the persons named by you, if they are men of proper character, and have taken the oath prescribed in the President's proclamation of the 8th of December, 1863, or that of the 29th of May, 1864. This will be prerequisite in all cases, the original or certified copy of which oath must be transmitted with the application for appointment. It is also my intention to organize the Judiciary throughout the State by appointing, provisionally,

Judges of the District Courts and District Attorneys, as soon as practicable. The former class of officers are made appointive by the Executive under the new Constitution for a term of six years, and I invite recommendations from you as to who shall fill those offices, as also District Attorneys.

I cannot urge upon you too strongly the importance of your acting promptly and with unanimity in the matters herein brought to your notice. If you neglect to avail yourselves of the opportunity offered you, I shall be compelled to make appointments to office for your section, from the best information in my possession, and you cannot blame me if they are not acceptable to you. Important elections will be held this fall. Members of Congress and a Legislature will have to be elected; and if each parish is provided with proper officers to open the polls, an election for Governor and other State officers, according to the new Constitution, will take place at the same time.

While the population of that portion of the State which has been so fortunate as to enjoy the protection of the strong arm of the General Government sooner than other sections (and for which they are not entitled to any merit of their own), in order to hasten the restoration of civil government in the State, have adopted a new Constitution and elected a Legislature which has passed laws; yet I feel authorized to say, that it was with no intention of forestalling or denying your rights to participate in the making of the fundamental, as well as all other laws.

In conclusion, I assure you that no one is more anxious to have the whole State represented in all general elections, and particularly for the office of Governor, than myself.

J. MADISON WELLS,
Governor of Louisiana.

This proclamation was followed by a local reorganization in nearly all of the parishes. Considerable discussion subsequently took place on the validity of the existing Government of the State. It was created by the Constitution prepared in convention, in 1864. On the one hand, it was urged against the validity of the Constitution, that the first article in the creed of American republicanism was that a State Constitution is the written embodiment of the people's will, expressed in the most authentic form. To make it valid, the voters throughout the State must have an opportunity to be represented in the convention which frames it. A form of government imposed upon a State, no matter how, unless it springs from the will of a majority of its voters lawfully expressed, is not "a republican form of government," such as the United States is bound by its Constitution to guarantee to each State. But the people of the State, as a people, had nothing to do with framing or adopting the Constitution of 1864. It was therefore without a legal sanction, and the government under it a provisional *de facto* government, resting on force as a necessary consequence of the revolutionary state of things in which it had its birth, but to be obeyed and respected as a *de facto* government until it could be replaced by a government of constitutional law. On the other hand, it was urged that the civil business of the State had been transacted under the Constitution of 1864 for a year or more; two sessions of a recognized Legislature had been held; laws had been enacted and put in force in ac-

cordance with that Constitution; a Governor had been elected and was in authority under its provisions. Its first article provided for the abolition of slavery in a formula that had subsequently been inserted in many State Constitutions. It also contained a provision, by a short method, for amendment. Furthermore, every thing was then in a train for a speedy resumption of civil rule in all portions of the State. As soon as the anomalous position under the military authority ceased, every portion of the State Government could be effectually organized, and the first fruits of civil administration would be at once apparent. To this it was replied, that the formation of another Constitution by a convention was the path to restoration pointed out by President Johnson. The Constitution of 1864 had been tried in Congress, and found wanting. The fact that more of the people may have voted under it, than did for it, could give it no higher validity than it had before, for no other choice had been offered to them.

On September 21st Gov. Wells issued a proclamation, declaring that an election would be held in every parish in the State on November 6th, for the choice of a Governor, Lieutenant-Governor, Secretary of State, Treasurer, Attorney-General, and Superintendent of Public Education; also Representatives in Congress; also State Senators in place of those whose term of office had expired, and also Representatives to the Legislature. For the guidance of public officers, and for the information of the voters, the Governor annexed the following qualification of voters as established by law:

Every white male who has attained the age of twenty-one years, and who has been a resident of the State twelve months next preceding the election and the last three months thereof in the parish in which he offers to vote, and who shall be a citizen of the United States, shall have the right of voting.

In addition to the foregoing qualification, every elector is required to produce the amnesty oath prescribed in the President's proclamation, either of the 8th of December, 1863, or that of the 29th of May, 1865, sworn to and subscribed by him before competent authority:

"I do solemnly swear or affirm, in the presence of Almighty God, that I will hereafter faithfully defend the Constitution of the United States and the Union of the States thereunder, and that I will, in like manner, abide by and faithfully support all laws and proclamations which have been made during the existing rebellion with reference to the emancipation of slaves. So help me God."

This oath is imperative on and after the 29th day of May, 1865, and will be rigidly enforced. It will be understood, at the same time, that those who are excluded from the benefits of this amnesty oath, by any of the list of exceptions contained in the proclamation, will not be allowed to vote unless specially pardoned by the President.

In all other respects the election will be conducted in accordance with law, which is the same as under the Constitution of 1852, and returns will be promptly made to the Secretary of State.

On October 2d a Democratic Convention was held at New Orleans to nominate candidates for State officers; ex-Governor Robert C. Wickliffe was elected temporary chairman. On taking

his seat, the chairman proceeded to say that he would be false to himself and his country if he were not to say that this was the proudest moment of his life. He saw upon the walls the device of "Welcome all"—forget all differences, all past animosities, and assemble once more under the Constitution of the United States. The temporary chairman was duly appointed permanent chairman. Twenty-one parishes were not represented. Governor J. M. Wells was unanimously nominated by the convention, and the following series of resolutions adopted:

Whereas, The National Democratic party of the State of Louisiana, in general convention assembled, fully recognizing the fact that the issue, which for the last four years has tried the strength of the United States Government, was made openly, manfully, and honorably, and that the decision having gone against them, and,

Whereas, We have now come forward in the same spirit of frankness and honor to support the Federal Government under the Constitution. Therefore,

Resolved, That we give our unqualified adhesion to the National Democracy of the United States, and that we recognize that party as the only agent by which radicalism can be successfully met, and this Government restored to its pristine purity and vigor.

Resolved, That we emphatically approve of the views of President Johnson with regard to the reorganization of the State Governments of the South, whereby the rights of the respective States are kept unimpaired, and in consequence of which these States are to regulate their institutions as freely and with the same guarantees and privileges as are enjoyed by any other State in the Union.

Resolved, That we hold it to be a cardinal rule of action, both under the General and State Constitutions, to exclude from the field of politics all religious questions and controversies, recognizing in each and every one the right to a full and free exercise of his religious opinions and tenets.

Resolved, That we hold this to be a Government of white people, made and to be perpetuated for the exclusive benefit of the white race; and in accordance with the constant adjudication of the United States Supreme Court, that people of African descent cannot be considered as citizens of the United States, and that there can, in no event, nor under any circumstances, be any equality between the white and other races.

Resolved, That while we announce emphatically our opinion that the Constitution of 1864 is the creation of fraud, violence, and corruption, and is not in any sense the expression of the sovereign will of the people of Louisiana, and while we believe that it should be repudiated and abolished as speedily as it can be done legally, yet, as the Government organized under it is a *de facto* Government, and the only *de facto* Government in the State of Louisiana; as the election about to be held is called under that Constitution, by an officer holding his position under that Constitution; as the recognition of Governor J. Madison Wells by the President, Andrew Johnson, is to that extent a recognition of that Constitution and of the Government organized under it, and as this convention has no right to make or alter constitutions or forms of government, we, therefore, recognize it as the existing Government, but recommend the calling of a convention of the people of the State at the earliest practicable period, for the purpose of adopting a Constitution expressing the will of the entire people of the State.

Resolved, That the institution of slavery having been effectually abolished in the Southern States, we consider it our right to petition Congress for com-

pensation for all losses sustained by the emancipation policy.

Resolved, That we will use all the means in our power to favor a return to the economical administration of the finances of the Government and the full and entire payment of its just liabilities.

Resolved, That we advocate the repeal of all ordinances and laws found to have been passed in Louisiana, and which are not in harmony with the Constitution and laws of the General Government, and which are not the deed of bodies constituted by the people at large.

Resolved, That we advocate a levée and labor system, and recommend the immediate adoption of such laws and means as will most effectually relieve the planters and people at large.

Resolved, That considering it consonant with the chivalrous magnanimity of the Chief Executive at Washington, and due to a large number among the people in general, we most earnestly and strongly appeal for an early general amnesty and prompt restitution of property; assured that thereby impending total ruin will be averted and the domestic tranquillity of the Southern States successfully insured.

Resolved, That we invite all law-abiding citizens who agree with us upon the measures and principles above enumerated, without distinction of nationalities, to join us in our opposition to the Radical Republican party, whose tendency and aim are to centralize and consolidate a Government on the ruins of our State institutions.

Previously, on September 9th, the committee of those designated as National Conservative Union, issued an address, in which they say:

There have been recently organized in this city: First, a party calling itself the "National Democratic," which advocates the ignoring of our present Constitution, and the organization of the State under that of 1852; and secondly, another, assuming the title of "Conservative Democratic," opposed also to our present Constitution, but favoring a new Convention. Both of these appeal to old and deeply-rooted prejudices, a yielding to which, at this time, would be certain to imperil the welfare of the State, and delay beyond any possibility the admission of our Representatives into the next Congress of the United States. In addition to these, there is the Radical Republican faction, which advocates negro suffrage and a new Convention. Between these extremes stands the National Conservative Union party, opposing the extension of the elective franchise to the negro, the calling of a new Convention as unnecessary, and recognizing the existence and validity of the Constitution of 1864, as the organic law of this State. This instrument, though framed by a Convention, in which "the people of the State were not wholly represented," is yet framed in the interests of the whole State.

The same committee called a Convention, to assemble on October 9th. The Convention thus called was organized by the appointment of H. Fuselier as chairman, and adopted the following platform:

Whereas, The National Conservative Union party of Louisiana (now assembled in Convention in accordance with Gov. Wells's proclamation of election), believes that the opportune period has arrived when it behooves the good people of this State to come together in a spirit of conciliation, brotherhood, and compromise for the purpose of resuming the relations severed by the secession ordinance of 1861;

And *whereas*, the National Conservative Union party of Louisiana desires that our State should resume, as soon as possible, her relations with the National Government, and accept in good faith the result of the war as overthrowing all the political theories which led to it; therefore, be it

Resolved, That the National Conservative Union party of Louisiana pledges itself to support by all means in its power the Union of these States under the Constitution of the United States.

Resolved, That this Convention recognizes the result of the issues lately dividing the North and South as final and beyond appeal, and that it proudly hails the restoration of Federal authority over the national domain as a triumphant vindication of our republican form of government.

Resolved, That the gratitude and admiration of the country are eminently due to President Andrew Johnson, for the firmness, patriotism, and lofty conservatism which he has displayed in his administration of national affairs; that we regard his reconstruction policy as wise, clement, and conciliatory, affording the people of the South an opportunity to show themselves prepared to fill the part of good and loyal citizens; and that it now becomes the duty of all so to avail themselves of it as to give him no cause to regret his magnanimity.

Resolved, That the allegiance of every American citizen is primarily due, under the Constitution, to the Government of the United States, and that we repudiate the doctrine that any State can dissolve her constitutional relations to the Union except by successful revolution.

Resolved, That we hereby declare our inflexible opposition to the payment of any debt or liability contracted or incurred by any civil or military authority in this State, in furtherance of the war waged against the authority and Government of the United States.

Resolved, That we deem it just and proper that all liabilities incurred by the Government, in the restoration of peace and national unity, should be promptly and honorably liquidated by a system of taxation, uniform in its provisions and bearing equally upon all parts of the country.

Resolved, That we cordially endorse the action of our Conservative friends in the Northern States in their manly opposition to the spread of radical principles, and to the elevation of the African upon a footing of political equality with the white man.

Resolved, That we will maintain the right of suffrage as now established by the Constitution of this State, restricting the elective franchise to the white race alone.

Resolved, That we will favor the establishment of just and equitable laws for the regulation of labor and the fostering of the agricultural interests of this State, a thorough and efficient levee system, and an economical administration of the State government.

Resolved, That we urgently advocate the speedy issuing of a general amnesty, and the repeal of the confiscation law.

Resolved, That regarding, as we do, the Constitution of the United States as the palladium of our liberties, we shall steadily oppose any and every attempt to ostracise any citizen, either on account of his nativity or of his religious opinions.

Resolved, That we most cordially recommend to the next Legislature the passage of a general law for the relief of those who have resided outside of the lines of Federal occupation in this State, and who have been compelled to pay taxes to the officers claiming authority therein.

Resolved, That we earnestly appeal to all conservative loyal citizens of this State, who desire a speedy restoration of our full rights in the Union of States, to unite with us in the support of the candidates of the National Conservative Union party.

The Convention also nominated Gov. Wells for reelection.

At the same time the friends of the late Confederate Governor, Allen, issued the following:

For Governor—The friends of ex-Gov. Henry Watkins Allen, anticipating his immediate return home,

hereby announce him as a candidate for Governor of the State of Louisiana, at the ensuing November election.

Governor Wells, who had been nominated by both conventions, had been formerly a Red River planter, and manifested his devotion to the Union cause by coming within the Federal lines after they were established, and bringing his slaves with him, and thereby emancipating them. He addressed a letter of acceptance to the President of the National Conservative Convention, in which he thus explained his position:

I have also received the platform adopted by the Convention. After carefully reading the same, I am pleased to acknowledge the conservative character and conciliatory spirit that pervades the platform. According to my understanding, there is no material difference in its principles and those adopted by another convention, whose nomination I have already accepted. Both platforms are in unison with the principles, liberal measures, and harmonizing policy of the National Executive, whose lofty patriotism and efforts to uphold the Constitution are fully endorsed. In accepting the nomination, which I do, of the National Conservative Union party, I therefore consider that I can consistently do so on the platform of principles adopted by both conventions and without compromising either.

I am not a party candidate, according to the strict meaning of that term. Heretofore I have acted irrespective of all party trammels. I am warranted in believing that I am indebted to my official record and acts for the high and unusual honor conferred on me in being chosen as their candidate by two conventions from the people, acting under different party names, but both, I am happy to believe, having the same patriotic purpose in view, to wit: the true welfare of the State, and to support the Constitution of the United States and the Union of the States thereunder.

All the other candidates on the separate tickets were different individuals. At the election which was held in November, the number of votes cast was 27,808, of which Governor Wells received 22,312, and ex-Governor Allen 5,497. The total vote of the State in 1860 was 50,510. The Democratic ticket for members of the Legislature was successful in every county except one.

On November 13th the Radical Republicans held a mass meeting in New Orleans, at which resolutions were passed claiming the election of H. C. Warmouth as their delegate to Congress from the Territory of Louisiana, in part by the votes of colored persons, amounting to 19,000; also declaring the State organization repugnant to the Federal Constitution; and also that the State Government has been made repugnant to the Federal Constitution, both in law and in effect; therefore it was apparent to all parties that the President of the United States could not restore it by proclamation. That the State could only be restored in the constitutional way by petitioning Congress for admission whenever a majority of the whole people deem it expedient so to petition. That the temper of a majority of the white voters, nine-tenths of whom were disloyal, rendered it inexpedient at this time to apply to Congress for admission. That even in the face of this condition of things

in Louisiana, they rejoice that the Republican party everywhere, in the recent Northern elections, triumphed, and that this pointed to ultimate success. That their hope was in Congress; that the premature admission of Senators and Representatives from Louisiana would be disastrous, and place them under rebel rule. That, as loyal citizens, they will resort to all peaceable means for redress and for securing the right to life, liberty, and the pursuit of happiness.

On November 23d the Legislature assembled at New Orleans, in an extra session called by the Governor. His message was confined chiefly to local topics which required the attention of that body. He said that it was necessary the State should be fully represented in Washington. For this purpose it was requisite that two Senators should be elected in time to reach Washington at the opening of Congress. The Governor thus repudiated an election of Senators which was made at the session of the Legislature at the beginning of the year. At a joint session of both Houses, presided over by Lieutenant-Governor Wells, Governor Hahn and R. King Cutler had been elected United States Senators—the former to fill the vacancy caused by the withdrawal of Judah P. Benjamin, and the latter by that of John Slidell. Twenty-five Senators and seventy-nine members of the House were present. The Governor further called attention to the finances of the State, to the system of labor, to immigration, and to the educational and charitable institutions of the State—the condition of which was generally very unfavorable. The interest on the public debt had not been discharged for some years. One of the first movements in the Assembly of the Legislature was the appointment of a committee, to whom was referred a resolution providing for the call of a convention to draft a State Constitution. With this resolution were also referred a number of others, following in the lead of the original one. A majority and minority report were made by the committee, which are important as showing the embarrassing division of sentiments in the State.

The majority report assumed in the preamble that the Constitution of 1864 was the creation of fraud and violence, declared the necessity of inquiring into the expediency of a new election of delegates to a convention; stated that great doubts existed as to the mode of revising the Constitution; advocated the submission of the subject to the people, so that they might have an opportunity to act on republican principles. Whether the Legislature would ratify or reject the Constitution of 1864, they should do all in their power to relieve the people of their necessities, and alleviate the pressure of evils under which the State labored. The report specified the means by which the question Convention or no Convention should be submitted to the people; required the Governor to issue his proclamation based on the same grounds as the

late election to the General Assembly; advocated the placing of two ballot-boxes at each poll, in which the electors should vote for or against the Convention, and make choice of delegates to that Convention at the same time: in one ballot-box should be voted the ticket Convention or no Convention; in the other delegate tickets were to be voted. The returns were to be made in conformity with the above programme.

The minority report recognized the Constitution of 1864 as binding. Since the condition precedent to a restoration in the rights, immunities, and privileges of the Union, is the abolition of slavery, the ratification of the constitutional amendment, the repeal of the ordinance of secession, it was incumbent on the Legislature to enact laws to that result. But the Constitution of 1864 had already accomplished this end. The Constitution in question provides in Art. 146 for the manner in which amendments may be made, and the report advocated the amendment to the existing Constitution in place of its eradication; it was held that this mode was by far the cheapest of the two, for a new Convention necessarily involved another large outlay of funds. The gist of the minority report was that there was no necessity for calling a Convention.

The consideration of the reports was postponed to a future day. Meanwhile, on the next day, December 6th, the Assembly passed a resolution to proceed on the same day to the election of United States Senators, in which the Senate concurred. It was objected that this action would be an indirect approval of the Constitution of 1864. In reply it was said, that Messrs. Hahn and Cutler had applied in vain to Congress for admission, and new Senators should therefore be elected. The result was, the choice of Messrs. Randall Hunt and Henry Boyce as Senators. The question of calling a Constitutional Convention was finally postponed to the regular session in January, 1866. At this session bills were passed "to provide for and regulate labor contracts for agricultural pursuits;" "relative to apprentices and indentured servants;" and "to punish in certain cases the employers of laborers or servants." The status of freedmen was declared to be the same as the free negroes in Louisiana have always enjoyed under the laws, thereby admitting their right to sue and be sued, to plead and be impleaded, to own, possess, establish ownership, and have their property defended by the courts, but prohibiting them from voting or participating at elections. A bill was also passed appropriating \$20,000 as a fund for the relief of disabled soldiers.

The proposed amendment to the Federal Constitution was brought up, for the purpose of setting at rest the doubt as to its passage by the Constitution of 1864, and as due to President Johnson and in unison with his policy. It was adopted by a vote of two to one in the Assembly, in the following form:

Resolved, therefore, by the Senate and House of Representatives of the State of Louisiana in General Assembly convened, That the aforesaid proposed amendment of the Constitution of the United States be, and the same is hereby ratified and adopted, with the express understanding that in the sense of the General Assembly, the power granted to Congress by the second section of the foregoing amendment, is strictly limited to legislation appropriate and necessary for the prevention and prohibition of slavery or involuntary servitude within the United States, or any place subject to their jurisdiction, and that any attempt on the part of Congress to legislate otherwise upon the political status or civil relations of former slaves within any State, would be a violation of the Constitution of the United States as it now is, or as it will be, altered by the proposed amendment.

The extra session closed on December 22d, by adjournment to the first day of the regular session.

A Bureau of Free Labor, the predecessor of the Freedmen's Bureau, was in operation at New Orleans at the commencement of the year. It had exercised supervision over the freedmen in the military lines during the previous year. The labor year terminated on February 1st, when laborers were allowed to select their places of employment for the ensuing year—one-half the wages earned was also payable at that time. The lessee system of Government plantations, owing to a want of military protection, had generally been a failure. A system of military occupation for the protection of planters was introduced by Gen. Canby with more success, and a system of regulations of free labor adopted by the Federal Treasury Agent under whose general charge the freedmen were placed. It was a kind of Freedmen's Code, since set aside by the instructions of the National Bureau. During the year 1864, fifteen hundred plantations were worked by fifty thousand freedmen under the supervision of a Federal agent, who reported that on not more than one per cent. of the plantations would the laborers fail to receive their full wages. At the close of hostilities, stringent orders were issued by Gen. Herron in northern Louisiana, requiring the freedmen to remain on the plantations until the crops were secured, otherwise they would be arrested as vagrants. The freedmen, generally, believed that at the close of the year there would be a division of property, and they would be able to live in comfort and idleness. In vain the Federal officers endeavored to convince them of the falsity of this opinion, or to induce them to renew their contracts. In their view, the master had been stripped of every thing except his lands for their benefit, and there was no reason why these should not be taken also. A degree of demoralization ensued which presented an unfavorable aspect for crops in the ensuing year. In the State, there were one hundred and forty-one schools for freedmen, attended by nineteen thousand scholars. The amount of school tax paid by the blacks of New Orleans was reported at \$40,000.

The results of confiscation in New Orleans were thus reported:

Government has in fact made very little by its confiscations of 1863-'64. The defaulting quartermaster here turned over \$75 as the total net proceeds of the sales of all the splendid Paris-made furniture, gold and silver plate, and an infinitude of valuable things which were taken from the houses of rich absentees and registered enemies of New Orleans; and Judge Durrell of the United States District Court says that the net proceeds of the confiscation sales of the property adjudged to the United States in his court will not exceed \$100,000. This includes such properties as the eight hundred valuable city lots of John Slidell, with many a splendid store and family residence upon them. Harpies, who have done nothing but make money out of both parties during the war, profit by confiscation, the Government does not.

About eighty plantations, comprising some of the finest sugar estates in the country, were held by the Freedmen's Bureau as liable to confiscation.

In June, the Chief Justice of the United States being in New Orleans, was invited to address an assembly of blacks, to whom he made the following reply:

NEW ORLEANS, June 6, 1865.

GENTLEMEN: I should hardly feel at liberty to decline the invitation you have tendered me, in behalf of the loyal colored Americans of New Orleans, to speak to them on the subject of their rights and duties as citizens, if I had not quite recently expressed my views at Charleston in an address, reported with substantial accuracy, and already published in one of the most widely circulated journals of this city. But it seems superfluous to repeat them before another audience.

It is proper to say, however, that these views, having been formed years since, on much reflection, and confirmed in new and broader application by the events of the civil war now happily ended, are not likely to undergo, hereafter, any material change.

That native freemen, of whatever complexion, are citizens of the United States; that all men held as slaves in the States which joined in rebellion against the United States, have become freemen through executive and legislative acts during the war; and that these freemen are now citizens and consequently entitled to the rights of citizens, are propositions which, in my judgment, cannot be successfully controverted.

And it is both natural and right that colored Americans, entitled to the rights of citizens, should claim their exercise. They should persist in this claim respectfully but firmly, taking care to bring no discredit upon it by their own action. Its justice is already acknowledged by great numbers of their fellow-citizens, and these numbers constantly increase.

The peculiar conditions, however, under which these rights arise, seem to impose on those who assert them peculiar duties, or rather special obligations to the discharge of common duties. They should strive for distinction by economy, by industry, by sobriety, by patient perseverance in well-doing, by constant improvement of religious instruction, and by the constant practice of Christian virtues. In this way they will surely overcome unjust hostility, and convince even the most prejudiced that the denial to them of any right, which citizens may properly exercise, is equally unwise and wrong.

Our national experience has demonstrated that public order reposes most securely on the broad base of universal suffrage. It has proved also that universal suffrage is the sure guaranty and most powerful stimulus of individual, social, and political progress. May it not prove, moreover, in that work of reorganization which now engages the thoughts of all patriotic men, the best reconciler of the most

comprehensive lenity with the most speedy and certain revival of general prosperity?

Very respectfully yours, S. P. CHASE.
Messrs. J. D. RUDANEZ, L. GOLLS, and L. BANKS,
Committee.

The loss of the State on the Confederate side of the conflict was severe. Of fifteen thousand men in the army of Gen. Lee, in Virginia, only six hundred were reported as remaining.

LÜBECK, a free city in Germany. According to the present constitution, which was adopted on December 29, 1851, the executive power is vested in a Senate, composed of fourteen members, and the legislative authority in the "Bürgerschaft" (House of Burgesses), consisting of one hundred and twenty members, chosen by all citizens who are members of any of the twelve guilds of the city. Lübeck is the seat of the Supreme Court of Appeal for the four free cities of Germany, which is composed of a president and six councillors. The "Budget" of 1863 estimates the public revenue at 1,334,450, and the expenditure at 1,300,214 marks current. Area, 109 square miles; population, in 1862, 50,614. They are all Lutherans, with the exception of about 400 Calvinists, 200 Roman Catholics, and 500 Jews. The contingent of Lübeck to the Federal army of Germany is 679 men. The value of imports in 1863 was as follows:

	Marks current.
By Sea.....	20,363,798
By Rail.....	40,010,811
Other Conveyances by Land.....	4,836,035
River.....	1,252,701
Total.....	65,958,345

Lübeck possessed, at the commencement of 1862, fifty-seven sea-going vessels, among them thirteen steamers.

LUTHERAN CHURCH. There were, in 1865, twenty-three Lutheran Church, school, and missionary periodicals published in the United States, namely, seven English, thirteen German, two Swedish, one Norwegian. Not included in the above list are two new English papers, which in the latter months of the year were announced as soon to appear in Virginia and North Carolina.

The number of theological seminaries or theological departments in connection with colleges was fourteen. They are situated at Philadelphia and Gettysburg, Pa.; Columbus and Springfield, O.; St. Louis, Mo.; Hartwick and Buffalo, N. Y.; Springfield and Paxton, Ill.; Strawberry Point and Decorah, Ind.; Newberry, S. C.; Watertown, Wis.; Selinsgrove, Pa.

The number of colleges and collegiate departments is sixteen; of female seminaries, six. Lutheran Orphans' Homes and Christian Hospitals for the Sick have been established in various parts of the country. In 1865 such institutions were in operation at Pittsburg, Zellenople, Rochester, Germantown, Middletown, Pa.; Buffalo, N. Y.; Toledo, O.; Milwaukee, Wis., and other places.

The "Lutheran Church Almanac" for 1866

(published in Allentown, Pa., by the Rev. S. R. Brobst), gives the following statistical view of the Lutheran Church in the United States:

	Minis- ters.	Congrega- tions.	Communi- cants.
1. Synod of Pennsylvania and ad- jacent States.....	113	268	40,322
2. Ministerium of New York.....	62	60	12,926
3. Synod of Maryland.....	40	41	7,000
4. Synod of North Carolina*.....	23	23	4,200
5. Joint Synod of Ohio †.....	134	280	25,000
6. Synod of Tennessee †.....	32	33	5,300
7. Synod of South Carolina*.....	42	54	9,250
8. Synod of West Pennsylvania.....	46	97	11,615
9. Synod of Virginia*.....	30	63	8,740
10. Hartwick Synod (New York).....	27	21	4,400
11. East Ohio Synod.....	37	30	4,000
12. English Synod of Ohio.....	12	32	2,480
13. Franckean Synod (New York).....	26	33	2,748
14. Alleghany Synod (Pa.).....	39	94	6,396
15. East Pennsylvania Synod.....	60	113	12,647
16. Synod of West Virginia*.....	20	37	2,039

The Synod of Kentucky, at its session in May, 1865, passed a resolution to dissolve, and it commended the ministers and churches within its bounds to join the Olive Branch Synod of Indiana.

A contributor to the "Lutheran" of Philadelphia gives the following survey of the expressions of the Lutheran synods on the loyalty question during the war: "I happen to have in hand the minutes for the year 1864 of twenty-three synods, out of the twenty-four thus associated, the Synod of Kentucky alone excepted. In running my eye over these pamphlets, I have found that the larger number of these bodies did, in the last year, give strong evidence of an unmistakable position on the side of loyalty and nationality. In regard to the remainder of these synods, I have examined other numbers of their minutes from 1861 to 1863, and am gratified to find that only two synods appear without giving a decided expression in the right

* The synods marked * are not connected with the General Synod, which meets biennially. Those marked † formerly belonged to the General Synod, but were not represented at the last meeting of the General Synod.

direction. Among the twenty-two synods *not* 'silent' was that of Kentucky (lately disbanded), which adopted the strong resolutions on the state of the country passed by the General Synod in 1862. One of the remaining two bodies is the little Synod of Minnesota, which came into the General Synod at the last meeting of the latter. Of this body, I have before me only the minutes of 1864; but I find therein presumptive evidence that all is right. A committee was appointed to prepare a report on the war; but, as the minutes were presented in the briefest space possible, the report is not printed. The Melancthon Synod in Maryland is the only one left to be noticed. In glancing the eye over the minutes, I have met with nothing of a patriotic character."

In 1865 many of the synods passed resolutions for appointing missionaries for the freedmen, and for calling the attention of the next General Synod (which meets in 1866) to this work. The Pittsburg Synod also passed the following resolution on the state of the country: "We pledge ourselves to use our influence in every proper way, that full justice be done to our colored brethren, who have so long been the victims of this most unchristian oppression." The Philadelphia Synod unanimously expressed the hope that "all classes and conditions of men may, in accordance with the spirit of the blessed Gospel, and the fundamental principles of our land, as expressed by the fathers and founders of the same, come fully to the enjoyment of certain inalienable rights, among which are life, liberty, and the pursuit of happiness." Similar resolutions were passed by other synods.

LYNCH, WILLIAM F., formerly a captain in the U. S. Navy, and afterwards a commander in the Confederate navy; an author and explorer, born in Virginia in 1801, and died at Baltimore, Md., October 17, 1865. He entered the United States Navy in 1819, his warrant as midshipman dating January 26th of that year. He was promoted a lieutenant in May, 1828, and as such made his famous expedition to the Dead Sea and near Jordan in 1848. The plan of this expedition originated with Lynch, and, on receiving the sanction of the Government, was carried out by him with much success and

credit. He sailed from this country for Smyrna in the naval storeship *Supply* in November, 1847. He visited Constantinople to obtain the requisite authority and protection from the Turkish Government to pass through Palestine. He made this necessary overland journey on camels, and by the aid of Arabs and others. His party was landed in the Bay of Acre in March, 1848, and in the following April began the work of navigating the Jordan to the Dead Sea. A thorough exploration and sounding of the sea were made. Among other curious features of the labor was the establishment by a series of levels of the depression of the Dead Sea below the level of the Mediterranean, a former survey by Lieut. Symonds, of the British navy, being fully corroborated as correct, and the depression established as one thousand three hundred and twelve feet. On his return Lieut. Lynch published a narrative of his expedition, which has passed through several editions and attained a position among standard works. On his return he was promoted a commander. He prepared to engage in an expedition into Africa, but the exploration was abandoned. In 1851 he published a volume entitled "*Naval Life; or, Observations Afloat and on Shore.*" In 1856 he was promoted captain, and this position he retained until his resignation in 1861 to join the South. His commission as flag officer, as the Confederate Navy Department designated the rank of commodore, was dated June 10, 1861. He was immediately assigned to duty as commander of the defences of North Carolina. He commanded the naval squadron which resisted Gen. Burnside's attack on Roanoke Island on the 7th and 8th of February, 1862, and subsequently commanded the remainder of the fleet, which was surprised two days after by a portion of Commodore Rowan's fleet, which pursued to Elizabeth City. Lynch was on shore at the time and escaped. He remained in the interior of North Carolina for a long time, and did not make his appearance again until Porter's attack on Fort Fisher developed him as the commander at Smithville. When Fort Fisher fell Lynch dismantled the Smithville defences and retired with his marines to Wilmington, and thence into the interior.

M

MAGIE, DAVID, D.D., a Presbyterian clergyman, born near Elizabeth, N. J., March 13, 1795, died at Elizabeth, May 10, 1865. His ancestors were of Scotch origin, men of deep piety, and strongly attached to the principles of the Presbyterian order. When in his eighteenth year, during a revival of religion, he was converted, and in June, 1813, made a public profession of his faith. From this time his whole desire was toward the ministry; but being the eldest of five children, and his mother a widow in somewhat straitened circumstances, he had at first

some struggles concerning the path of duty. Having decided to enter the ministry, he commenced a course of study under the direction of Dr. John McDowell, entered the junior class in the college of New Jersey in 1815, and, after graduating with honor, entered the theological seminary of that place in the fall of 1817. After spending one year in the seminary he was solicited by the Faculty of the college to accept the office of tutor, which he held for two years. Subsequently he was licensed to preach by the Presbytery of New Jersey, and

in 1820 entered upon the pastorate of the Second Presbyterian church in Elizabeth. His health failing, he was obliged to spend the winter of 1822 in Georgia, from which change of climate he received much benefit. In 1826, however, he was again obliged to visit Savannah, and with the same happy result. He received calls to two churches in that city, but declined both, and subsequently several others in his own neighborhood and the West; but his heart could not be drawn from his own people, and he continued to hold the place of his first choice through life. Dr. Magie held several positions of honor and trust; as trustee of the College of New Jersey, director in the American Board of Commissioners for Foreign Missions, director in the American Tract Society, and director in the Theological Seminary at Princeton. In 1842 he received the title of Doctor of Divinity from Amherst College.

MAGNAN, BERNARD PIERRE, Marshal of France, born in Paris, October 7, 1791, died at Paris, May 29, 1865. He was educated for the law, but in his eighteenth year he enlisted as a private soldier in the 66th regiment of the line, and in the course of four years' service in the campaigns of Portugal and Spain, gained, by his good conduct and valor, the rank of captain and the cross of the Legion of Honor. He was then transferred to the Imperial Guard, with which he took an active part in the last campaign of France, and served at the battle of Waterloo. He was next, through the influence of Marshal Gourion de St. Cyr, admitted to the Bourbon Royal Guard, serving with distinction in Spain in 1823, where he gained the rank of colonel, and in the expedition against Algiers in 1830, for which he was made commander of the Legion of Honor. In 1831 he was in garrison at Moultrison, when he received orders to march on Lyons, where a dispute about wages had caused an insurrection among the workmen. Having reached the gates of the city, in order to avoid effusion of blood he commenced treating with the insurgents; but this course not meeting with the approbation of the Government of Louis Philippe, the humane officer was placed on half pay. He then offered his services to the king of the Belgians, who at once appointed him general of brigade, charged him with the investment of Maestricht, and afterwards confided to him the military division of Ghent. In 1839, when there was danger of war with Holland, Gen. Magnan commanded, at the camp of Beverloo, the advanced guard of twenty-five thousand men, being half of the Belgian army. Peace having been signed the same year he quitted Belgium and returned to France with the rank of major-general, to which he had been promoted in 1835. After being stationed for a short time in the Pyrénées, he obtained command of a division in the department of Nord, which he held for seven years, during which time he was repeatedly called on to suppress insurrections among the workmen of Lille and of Roubaix. In 1840, having been

accused of complicity in the attack by Louis Napoleon on Boulogne, he defended himself before the Chamber of Peers. At the time of the revolution in 1848 Gen. Magnan was unemployed, and Louis Philippe declined the offer of his services; he, however, accompanied the Duchess of Orleans and her children to the Chamber of Deputies, when the abdication of the king in favor of his grandson, the Count de Paris, was proposed; but the project was not listened to, the republic being proclaimed instead. Under the new rulers Gen. Magnan commanded the division of the Alps. During the insurrection of June he advanced to the relief of Paris, marching one hundred and twenty leagues in seven days. Subsequently he suppressed a movement in Lyons, for which service he received the cordon of a grand officer of the Legion of Honor, and was promoted to command the division of Strasbourg. While there he was chosen by the electors of the department of the Seine as one of their representatives to the Legislative Assembly, but his military duties on the frontiers prevented his taking any active part in the sittings. As commander-in-chief of the army of Paris, a post he had held since 1851, he took a prominent part in the *coup d'état* of the 2d of December, for which he was rewarded with the *bâton* of field-marshal, the dignity of senator, and the office of grand huntsman to Napoleon III.

MAGNESIUM. Brief notices of this metal, its properties and uses, appear under its name in the volume of this CYCLOPEDIA for 1863, and under the title LIGHT in that for 1864. The continued developments in connection with the subject, and particularly as to the qualities and possible applications of the magnesium light, are such as to warrant a more extended account in this place.

Preparation of Magnesium: Sonstadt's Method.—During some years, in which the peculiar properties of this metal and of the light afforded on combustion of it were becoming generally known, the processes of obtaining it remained beset with difficulties and suited only to the laboratory; and the consequent limited supply and high price prevented the introduction of the metal into general use. M. E. Sonstadt, however, set out to devise a process for preparing magnesium on a manufacturing scale; and it now appears that in this he has entirely succeeded. The first requisite was to obtain economically the anhydrous chloride of magnesium, free at the same time from ammonium or other prejudicial intermixture. By heating to redness the hydrated chloride of the metal in a dry current of gaseous chlorhydric acid, a perfectly anhydrous and pure chloride is obtained. This process, however, is tedious. The mother-liquor left after extraction of common salt from seawater constitutes a convenient source of chloride of magnesium, the only purification required being a precipitation of sulphates present by the chlorides of barium and calcium, and of the

excess of barium exactly by carbonate of soda or of potassa. Where this mother-liquor cannot be obtained, and the chloride must be artificially produced, the sulphate of magnesia (Epsom salts) serves as a better crude material than the so-called magnesia of commerce. The sulphate, it appears, is decomposed by carbonate of soda, and the carbonate of magnesia obtained is submitted to repeated washings with hot water, alternated with drying by means of great pressure or by aid of a centrifugal machine. This artificially prepared carbonate of magnesia gives the best results; but the native carbonate, found in many parts of the world, which never contains sulphates and frequently so little of a certain undetermined prejudicial ingredient (*X*) often arising during the operation with the commercial carbonate, or of other impurities, that it serves even without preliminary purification as a good primary material. By saturating chlorhydric acid with this native carbonate, the chloride of magnesium is readily prepared.

To extract, in the next place, the metallic magnesium, equivalent quantities, in solutions, of the chloride or magnesium obtained in any of the ways now indicated and of the chloride of potassium or sodium (M. Sonstadt, in the outset, at least, recommending the former, though the latter appears now to be employed in practice), are mixed, and the mixture evaporated to dryness, and fused at a red heat to expel the last remains of water; the fused mass is turned into shallow sheet-iron pans to cool, and after solidification is broken up into small pieces, and till wanted kept excluded from the air; finally, there is added to the fused chlorides [47.5 parts by weight of $MgCl$, with 74.5 of KCl , or 58.5 of $NaCl$] also an equivalent [23 parts] of metallic sodium, this being simply placed in one mass in the bottom of the iron crucible employed, and over it the other material; and an iron cover being carefully luted on, the crucible is heated for a length of time depending on its size, in a convenient furnace. The reaction begins at a dull red heat or below, and is speedily completed by the heat developed by the change within the material, when, to avoid loss of magnesium in vapor, the crucible must be quickly removed: the sodium has withdrawn the chlorine from its union with magnesium, leaving the metal free within the mass. Crucibles into which silica enters, owing to the fact that at the temperatures required in the process magnesium combines with the silicium, cannot be employed; nor can those of platinum, with which the metal forms an alloy. The contents of the crucibles, having been allowed to cool, are then removed in a block: on breaking this up, the crude magnesium is found in masses of various shape and size down to small grains. These are separated by simply mechanical means from the saline matrix, then washed with water, and dried gently at below $100^{\circ} C$.—*Technologiste*, Nov., 1864; vol. xxvi.

The fact that, melting at a bright-red heat, magnesium then speedily volatilizes, is availed

of for refining the crude metal, obtained in the manner now described. The magnesium is distilled in a crucible, a tube within which extends from near the lid down through the bottom into an iron box beneath the bars of the furnace, and which is kept cool. The crucible being filled to the mouth of the tube with the crude metal, and the lid carefully luted down, atmospheric air is expelled by injection of hydrogen. As the crucible becomes heated, magnesium rises in vapor and free from impurities, and descends through the upright tube into the box below, where, at the end of the operation, it is found as a conical pile of drippings. It can then be melted, and cast into ingots or other desired form. A second distillation, however, may be required.—*Artisan*, July 12, 1865; *Technologiste*, vol. xxv., p. 181.

The preparation of magnesium, by Sonstadt's process, is already being carried on by Messrs. Mellon & Co., at Salford, in the suburbs of Manchester, England. It is stated that the metal is being produced in considerable quantities, and that the price of the ordinary magnesium wire, some months previously as high as six cents the foot, is already reduced to at most but two cents. The preparation of the metal, and by the process named, has also been commenced recently by the "American Magnesium Company," of Boston. Statements met with are to the effect that at the former of the two manufactories named, the crude material used is the native carbonate of magnesia; while that adopted at the latter is the dolomite, or magnesian limestone, in which magnesium is present to the amount of thirteen or fourteen per cent. Faraday has stated that every ton of sea-water contains over two pounds of magnesium, in the form of chloride, so that the entire ocean must contain 160,000 cubic miles of magnesium, a quantity which would form a cubic block fifty-four miles on a side. As, in the process of manufacture above described, when through care no waste of sodium is allowed, every twenty-three pounds of that metal converted into chloride can release only twelve pounds of magnesium, it follows that the cheapening to be desired in the cost of this metal, as well as in that of aluminium and cadmium obtained through a like reaction, must, in an important degree, wait for and depend on a prior reduction in the cost of sodium.

Properties of Magnesium.—These are already so well understood that they need not here be stated in full. The metal, when yet untarnished, is of a bluish-white color, resembling silver, than which, however, it is said to be even more beautiful. While the specific gravity of aluminium is 2.56, that of magnesium is only 1.75; so that whilst the former has *one-fourth*, the latter has but *one-sixth* the density of silver (10.50); and an ounce of magnesium has accordingly six times the bulk of an ounce of silver. Exposed for some time to the atmosphere, the metal becomes covered with a thin coating of oxide, taking on

the appearance of tarnished zinc. Faraday states that the film of oxide, once formed over a mass of the metal, protects it from further action of the air. Unlike silver, magnesium is not at all attacked by sulphuretted hydrogen (sulphydric acid gas). The affinity of the metal at elevated temperatures for oxygen is, however, strong. When brought in contact even with water-vapor, in a tube heated over an alcohol lamp, it ignites, burning brilliantly, with disengagement of hydrogen. This observation was made recently by MM. Deville and Caron, who also find that the metal, cold, decomposes water in presence of the feeblest acids, even carbonic acid.

Thermic Equivalent of Magnesium.—This subject has been investigated by Dr. Thomas Woods, who states that his interest in the question arose not alone from the fact of the great amount of light yielded on combustion of magnesium, but also in view of researches made some years since by him on the amounts of heat produced by the combination with oxygen of several of the metals, and of the occurrence of those amounts in multiple proportions (*Philos. Magaz.*, Nov., 1852, and July, 1856). The general method adopted by him, is that described in the former of the two papers referred to—dissolving in dilute sulphuric acid, marking the rise of temperature of the fluid, and correcting the result by making the proper allowances for the heat absorbed in the decomposition of water, and that evolved by combination of the magnesia with the acid.

Combination of 4 grs. of zinc, or one equivalent, oxygen=1 (gr.), evolves heat sufficient to raise the temperature of 1,000 grains of water by $9^{\circ}.6$ F.; while combination of $1\frac{1}{2}$ grs. of magnesium, or one equivalent, O=1, suffices to raise the temperature of 1,000 grs. of water $19^{\circ}.2$ F. The latter, the greatest quantity of heat afforded by oxidation of an equivalent of any known substance, is thus also just *twice* that developed by oxidation of an equivalent quantity of zinc. Of potassium and sodium, hitherto the greatest heat-evolvers known, neither produces by oxidation of one equivalent a rise greater than $17^{\circ}.5$ F. in 1,000 grs. of water. The quantity of heat evolved by combination of magnesium with chlorine is, however, greater than is afforded even with oxygen. Dissolving a metal in chlorhydric acid, the acid is decomposed, chlorine uniting with the metal. Adding to the attendant rise of temperature the amount of heat proper to the decomposition, we get the heat actually generated by combination of the chlorine with the metal. And it results that one equivalent of magnesium, combining with one of chlorine, evolves heat enough to raise the temperature of 1,000 grains of water $25^{\circ}.2$ F.; while one equivalent of zinc in like circumstances heats so much water $11^{\circ}.25$; and one equivalent of potassium, $22^{\circ}.9$.

Qualities of the Magnesium Light.—Of the remarkable intensity of the light of burning magnesium—a wire only $\frac{1}{32}$ d (.012) of an inch

in thickness affording for the time as much light as seventy-four stearine candles—it has been offered in explanation that the great heat due to oxidation of the metal is also developed within a brief period and in a small mass of matter, so that it is in consequence greatly concentrated, and gives rise to light-undulations of corresponding rapidity (frequency) and force (amplitude); the effect of such conditions should be just such a light as the metal affords, namely, one which is much more highly than other artificial lights charged with the more refrangible rays—blue, violet, and chemical, or actinic,—and which is also very intense. Compared with other artificial lights, the lime-light is highly bluish; but it is stated that when on a white screen the lime and magnesium lights are thrown side by side, the former acquires by contrast a reddish hue. Dr. Woods' investigations (see above) attest the preëminent heat-yielding capacity of magnesium combinations. But the explanation of this great heat is next to be sought; and this too appears now to be supplied in M. Schröder van der Kolk's recent theory of a *conversion of energy* accompanying chemical actions (See CHEMISTRY, this volume); magnesia, chloride of magnesium, etc., must by this theory be regarded as compounds the energy proper to which is very greatly less than that representing the sum of the energies of the elements entering into them; the lost energy of the act of combination appearing as heat, which, under the usual conditions of the case, suffers almost immediately a further conversion in large degree into light and actinism. And in fact, it would appear to be through effect of the very conditions now considered, that all the valuable qualities of the magnesium light arise.

Thus, containing so large a proportion of the more refrangible rays, it is an *achromatic* or *white* light, being in this respect closely similar to sunlight. Hence, like the latter, and unlike gaslight, which changes most colors to the eye, and almost destroys some, it shows all colors and hues perfectly, that is, without darkening or other modification of them. Owing to the intensity of the light, also, it possesses great penetrating power, being visible to great distances; while its richness in chemical rays renders it admirably adapted to the purposes of photography, in the night and in caverns, etc., wherever in fact sunlight is not present, or its chemical power is insufficient. M. Schrötter has stated, indeed, that the spectrum of ultra-violet rays obtained from the light of burning magnesium is at least six times as long as its luminous portion; and M. Lallemand, agreeing with M. Schrötter, finds that under the influence of the magnesium light, as by sunlight, hydrogen and chlorine gases in mixture combine with explosion, an effect which does not take place in darkness, nor under the influence of the red or yellow rays. M. Chantard states also (January, 1865), that the magnesium light is well fitted to render phosphorescent

bodies luminous, a fact already availed of for an interesting lecture-room experiment. Thus, a series of wide tubes containing different phosphorescent substances, and all appearing white, are placed within a box [lined with black?]: upon throwing upon the tubes the magnesium light, each suddenly glows with its specific phosphorescent color.

The magnesium light has the advantage of being a portable one. The wire can even be carried in a coil in the pocket and lighted with a match, and the trouble involved in such case of portioning out the wire, at the rate of its consumption, may yet be obviated by the devising of very compact forms of the magnesium lamp. One among the greatest advantages of the new light for use in apartments, halls, etc., consists in the circumstance that the material burned disengages no gas or vapor of any sort. The only product of the combustion of a pure wire is, of course, the inert and harmless oxide, *magnesia*; but even this, escaping, it appears, in flocculent form, is said to form a dense white smoke, or rather cloud of ash, which has its inconveniences for certain situations. It has been proposed to force this smoke, or ash, by mechanical means, into dilute sulphuric acid; but the plan appears not as yet to have been carried out. With the exception of the possible diffusion of a dust of *magnesia* in the air of a room lighted by the metal, no agent deleterious to the health could be given off by the latter, and, in any case, nothing is emitted calculated to tarnish or injure articles of furniture or ornament.

Magnesium Lamps: Improved Forms of Material.—Since the discovery that the combustion is improved by flattening the magnesium wire into ribbon, the latter form is coming into general use. In the production of a magnesium lamp, a first essential is, some apparatus that will pay out the wire or ribbon at the precise rate of the combustion. Mr. Wm. Mather, of Salford, and Mr. F. W. Hart, of Kingsland, each produced a lamp in which the wire was delivered by hand from a reel, being then guided between rollers and through a tube, and, in order to avoid risk of extinction, into the flame of a spirit-lamp. To this arrangement, Mr. Alonzo Grant, of Nottingham, affixed clock-work to secure automatic delivery of the wire; and the apparatus, in this form, has proved tolerably successful.

A chief difficulty, in the early use of the light, arose from the risk of sudden extinction, due probably to some foreign material or flaw in the wire. With improvements in the preparation of both metal and wire, this difficulty has already been greatly reduced, a single wire sometimes burning without going out for half an hour. But the risks of extinction are very greatly lessened by using together two or three strands of ribbon or wire, one of these being likely, if occasion require, to relight the other. In this way the spirit-lamp may be dispensed with; and one of Mr. Grant's lamps, paying

out a double strand, has burned two hours without cessation.

Prof. Carlevaris, of Italy, has been investigating the production of the magnesium light, and experimenting with a view to secure the best form of the material. He declares that when magnesium wire is ignited in air or oxygen, the greatest luminous effect is not manifested until after a certain quantity of oxide has been formed and raised by the heat to an excessively high temperature. The most intense heat of the flame leaves the magnesian oxide still solid and unaffected, but the solid particles of oxide serve in the flame the same purpose—of evolving light—as do the carbon particles in the flames of ordinary lights, and platinum or lime in the oxy-hydrogen flame. To raise this oxide to the temperature necessary to give the greatest light, it should be presented to the flame in as small a quantity and as large a volume as possible. To this end, Carlevaris at first introduced into the oxy-hydrogen flame (or, better still, it appears, into that given by a jet of illuminating gas and atmospheric air with one-tenth oxygen), *magnesia*, and, in subsequent experiments, its carbonate; while, finally, he found the best effects from exposing to such flame a piece of the chloride of magnesium (and, as one account states,) in contact with a piece of carbon; the chloride is rapidly decomposed, furnishing the spongy oxide. In this way a light of still greater actinic power than that of metallic magnesium was obtained.

Applications of the Magnesium Light.—Some of these have already been incidentally alluded to. It is stated that the magnesium lamp is likely soon to become, in Paris and London, a regular article of furniture in every silk-merchant's show-room. In winter and foggy days, when the ordinary light fails to show delicate distinctions of color, and in the night, the magnesium light at once exhibits all hues as truly as a clear daylight. The same quality fits the light for the exhibition of colored photographs, and we may add, of course, for night exhibition in picture-galleries, and wherever it is desirable to present truthfully, by an artificial light, delicate and various hues of color.

Good photographic pictures have, in some instances, already been secured by the unaided magnesium light, and the latter has also been used to assist an imperfect chemical action of daylight. Prof. Piazzi Smyth early tested both the illuminating and the photographic powers of the light in the interior of the Egyptian pyramids, and in case of the former, at least, with astonishing success. More recently, the light has been applied to photographing sections of the interior of lead mines, in order to show the quantity of ore exposed and the different veins the miners are following. Capt. Bamber, R. N., of the island of Jersey, has been engaged in adapting the magnesium light to use in mines and tunnels, and for railways. By means of a spring, a train of wheels, and a governor, he supplies the ribbon to a burner within a small

box, the light being exhibited through a powerful lens, or "bull's eye." Burning the thinnest ribbon lately manufactured, the light sufficed for reading a watch at two hundred and fifty yards distance.

Capt. F. J. Bolton, inventor of the "flash-ing" system of signalling, with the lime light, and which the English Board of Trade is about to incorporate with the commercial code of signals, has very recently experimented with the magnesium light on board the Great Eastern, lying at the time about six miles from shore, off Shoeburyness. A lively conversation was held with the town, the signals from the latter being with the lime light. It is stated that the experiments made proved the magnesium light quite as effective for signalling on Capt. Bolton's plan as the lime light, whilst it is also much cheaper and more convenient. Thus the new light bids fair to come into use for shore and ships' signals, and perhaps to some extent for light-houses; and not only in these, but in other ways, it is likely to render important services in behalf of commerce and in time of war.

Other Applications of Magnesium.—In wire and in other forms, this metal has been suggested as a suitable material for certain purposes of decoration and of ornament, including to some extent ornamental articles of dress; though how well it will serve such purposes, under the ordinary conditions of use and exposure, can scarcely be decided except by actual trial. The considerable degree of strength possessed by good magnesium wire, in connection with its extreme lightness—scarcely heavier, in fact, than like-sized rods of heart of oak—has led to the suggestion of its use in telegraphing; and whether these anticipations be or be not justified by experience, there can be no doubt that many and important uses for a metal possessing qualities so peculiar will in time be ascertained.

M. Bultinck, of Ostend, has proposed the use of magnesium instead of zinc as the positive element of voltaic batteries; and he has determined the electromotive force of a couple composed of magnesium and silver to be three times that of one of copper and zinc. It is stated (*Mechanics' Magazine*) that, being confined to use of the wire, he constructed a galvanic chain; and that he found that this, moistened simply with water, produced all the effects of a "Pulvermacher's" chain moistened with a saline or acid solution.

In *Le Technologiste* for December, 1864, appears an article on the utilization of the chloride of magnesium in the chemical arts; as, for liberating chlorine in the preparation of bleaching salts, the resulting magnesia being subsequently useful for the revivification of peroxide of manganese after its decomposition in liberating the chlorine of chlorhydric acid, also for use in bleaching.

MAINE. The Legislature of Maine convened at Augusta on January 4, 1865, and was organized by the choice of Republican officers

in both branches. On the succeeding day Governor Cony was inaugurated, and delivered his message to the Legislature. Among the measures recommended by him, were the necessity of an organized State militia, the assumption by the United States of all the State debts incurred for the national defence, and the abrogation of the Reciprocity Treaty with Great Britain, which he alleged had proved detrimental to the lumber and agricultural interests of the State.

The funded debt of Maine on January 1, 1866, was \$5,164,500, as against \$699,500 on January 1, 1861, the increase, amounting to \$4,465,000, being due altogether to extraordinary expenses growing out of the war. The expenditures for war purposes since 1861 amount to \$7,357,572, of which the sum of \$4,578,636 was paid for bounties. The amount advanced by cities and towns for aid to families of soldiers to January 1, 1865, was \$1,599,536, which has been for the most part refunded by the State. To this is to be added the estimated sum of \$400,000 advanced in 1865, which was provided for by the tax bill of that year. Deducting \$320,000 refunded by the United States, the amount expended by the State for the support of the war, reaches \$7,037,572. Large claims for money expended in behalf of the National Government are still outstanding, and will be pressed for settlement at an early day. Beyond the above amounts, the cities and towns of the State are in debt not less than \$6,556,183 for bounties. The aggregate of expenditures by the people of Maine for the support of the national cause amounts to \$14,093,572, for which they owe about \$12,000,000. During 1865, bonds of the State to the amount of \$100,500 were purchased for the sinking fund, at from four to five per cent. discount. The total outlay of the State in 1865 was \$2,872,080, of which the sum of \$325,113 represented the entire cost of the civil department. The Legislature adopted the policy in that year of resorting to heavy taxation instead of loans for meeting the annual expenditures. The result was, that the credit of the State remained unimpaired, and \$1,000,000 borrowed in anticipation of the taxes was obtained on terms as favorable, within one or two per cent., as the United States 7.30 loan with its higher rate of interest and exemption from taxation. In accordance with a resolution of the Legislature of 1865, adopted before the conclusion of the war, the \$355,000 of scrip for soldiers' bounties, payable February 1, 1867, was issued in the course of the year. The State tax for 1866, it was estimated, would be reduced \$1,200,000, or about 50 per cent. as compared with 1865.

The troops furnished by Maine to the national forces during the late war comprised three regiments of cavalry, one regiment of heavy artillery, seven batteries of light artillery, thirty-one regiments of infantry, seven companies of sharpshooters, thirty companies of infantry mustered into regimental organizations, and seven com-

panies of coast guards. These, with the recruits constantly sent to reinforce the ranks in the field, and the naval enlistments, formed an aggregate of 71,558 men, being more than one-tenth the population of the State. At the commencement of 1866, there still remained in the service five regiments and one battalion of infantry. Of the numbers above given 8,446, nearly one-eighth of the whole force, perished either on the battle field or from wounds or disease; and 6,642 were mustered out for disabilities resulting from casualties occurring in service or from sickness. No measures have yet been taken by the Legislature to afford permanent State aid to soldiers disabled in the war, although the subject has been recommended to its attention by the Governor.

The political campaign for 1865 opened on August 10th with the meeting of the Republican Convention at Portland. Samuel Cony was renominated for Governor by an almost unanimous vote, and a series of resolutions were adopted, of which the most important were the following:

Resolved, That the citizens of Maine renew their emphatic endorsement of the principles and measures of the administration of Abraham Lincoln, who was stricken down by assassination, for his signal devotion to human freedom and the American Union, and that this Convention expresses its entire confidence in the honesty, integrity, and patriotism of President Andrew Johnson, believing him to be sincerely desirous of restoring the just rights of all parties, and in behalf of the Union citizens of Maine we pledge to him our cordial support in the great work of securing national restoration and equality of human rights and an enduring peace.

Resolved, That if, in attempting to reorganize any State and restore it to the Union, it should be found that the character of the people is such as to render them unsafe depositors of a free republican Government, it is the duty of the United States to hold such State under a provisional government until all its inhabitants shall furnish satisfactory evidence of loyalty and attachment to free State institutions, and a sincere disposition to secure all loyal persons in their States equal political rights.

Resolved, That in reorganizing the States lately in rebellion, it is the right as well as the duty of the national authorities to demand as a condition precedent to their resuming the exercise of their political power, that they shall ratify the Constitutional Amendment abolishing slavery, that they shall remove all the disabilities which, under that system, attach to another class on account of color, and secure to all loyal persons perfect equality before the law.

Resolved, That we earnestly endorse the sentiment of President Johnson that the American people must be taught, if they do not already understand, that treason is a crime and must be punished, and we believe that now is the time, if ever, when the law against treason should be enforced; that those who have controlled that treasonable organization lately known as the "Confederate civil and military government," have committed that crime under circumstances of the most aggravated atrocity, and that they should be made an example of, which shall in all coming time deter others from committing the like crime.

Resolved, That in administering the law of treason, principals in crime should be made the first and most prominent objects of punishment; and until Jefferson Davis and other rebel chiefs are tried and punished, little good will be accomplished by trying and punishing the men who have been only their instruments.

Resolved, That the Constitution of the United States should be so amended as to secure equality and uniformity of the right of suffrage and representation of the several States in the National Congress.

Resolved, That the Emancipation Proclamation of President Lincoln, the enlistment and efficient service of more than 100,000 colored troops in the army of the United States, the good faith maintained by the whole race amidst treason and the most threatening dangers, the acts of Congress giving them pay and rank with white officers and soldiers, and the post of danger and honor assigned those troops in some of the most desperate battles fought against the rebels during the war, have pledged the national honor that these people shall be free in fact, as they are in name, and that there shall be conferred on them all the political rights of freemen, and that this great pledge, so officially and solemnly made by the Government, the people of these United States will redeem.

The following additional resolution was proposed, but rejected:

Resolved, That all tests, disabilities, and discriminations based on color or race are unjust, anti-republican, and pernicious, and ought to be prohibited by a constitutional amendment.

The Democratic Convention met at the same place on August 15th, and renominated for Governor Hon. James Howard, of Portland, who had been their candidate in the previous year. The following are the most important of the resolutions adopted:

Resolved, As within the scope of sound constitutional principles and to reestablish at the earliest practicable period, it is the duty of the Federal Government acting with as little executive and legislative interference as possible, to observe the true constitutional relations between itself and the revolted States, and to execute all legitimate power and influence to promote and perpetuate that universal harmony, fraternity, and unity, which are essential to the peace, happiness, and glory of the republic, now destined to be "one and indivisible" forever.

Resolved, That the Democracy of Maine do here reassert and declare their fundamental principles of action to be equal and exact justice to all men of whatever State or persuasion, religious or political; peace, commerce, and honest friendship with all nations; entangling alliances with none; the support of the State Governments in all their rights as the most competent administration of our domestic concerns and the honest bulwark against anti-republican tendencies; the preservation of the General Government in its whole constitutional vigor as the sheet anchor of our peace at home and our safety abroad; a jealous care of the right of election by the people; a mild and safe correction of abuses which are left by the sword of revolution; where peaceable remedies are unprovided, absolute acquiescence in the precisions of the majority—the vital principle of republics, from which there is no appeal but to force—the vital principle and immediate parent of despotism; a well-disciplined militia our best reliance in peace and in the first moment of war; the supremacy of the civil over the military authority.

Resolved, That the ballot is the right of every American citizen, to be restricted only by limitations as the public safety may require, and that the Constitution recognizes the right of the people of each State to prescribe the qualifications of electors, "a power the people of the separate States comprising the Federal Union have rightfully exercised from the origin of the Government to the present time."

Resolved, That the sums advanced by States, and by county and by municipal organizations, to aid in suppressing the rebellion, are a legitimate and equitable charge upon the Federal treasury, to be borne

by the whole country, and the Democracy of Maine are in favor of their payment by the General Government.

Resolved, That banishing all minor party considerations, and acting in the spirit of an enlarged and generous patriotism, we will cordially support President Johnson in the policy which he has avowed, and in all such constitutional measures as he may inaugurate to harmonize the country and restore and cement the Union of the States to enable the States late in revolt to put their Governments in practical operation.

Resolved, That we congratulate the whole country that among the first acts of President Johnson's administration we return to the better days of the Republic in his declaration to accept volunteered gratuities while holding office, and we regard it as a proof of integrity in marked contrast to the bribery and corruptions which have recently characterized and disgraced official station.

The election occurred on September 11th, with the following result:

Governor.	No. of Votes.
Samuel Cony, Republican.....	53,449
James Howard, Democrat.....	31,117
Majority for Cony	22,332

This did not include the soldiers' vote, which, it was estimated, would increase Cony's majority to 23,000.

The Legislature chosen at this election stood:

	Senate.	House.	Joint Ballot.
Republicans.....	31	136	167
Democrats.....	—	15	15
Republican majority.....	31	121	152

The Legislature of 1865 reflected Hon. W. P. Fessenden United States Senator for the term ending March 4, 1871.

MARS. This planet has of late been the object of much telescopic research, in which Airy, Dawes, and Lockyer have taken an important part, and of considerable discussion by these explorers, by Phillips, and others. It will be seen that much still remains uncertain in respect to the planet's geography (if we may so speak) and its meteorology; while to some extent the views held on these points by eminent observers are as yet contradictory.

Prof. Hennessey, before the British Association, 1864, treated upon the question of the amount of polar compression—i. e., the ellipticity—of Mars. He remarked that the physical characters of this planet have attracted much notice on account of its supposed resemblance to our own. If, however, the ellipticity were as great as claimed by some astronomers, the planet would in this particular present a marked contrast with the earth. Now, two eminent observers, Bessel and Johnson, had concluded that the polar flattening of Mars does not vary greatly from that of our globe. And a mathematical discussion by Hennessey himself of the conditions of equilibrium of a fluid like water—supposing such to exist on the planet—had shown that (for the rate of diurnal rotation possessed by Mars), if its ellipticity were as great as by many assumed, there should be an equatorial belt of dry land, while the poles should be enveloped in water. Without stating as yet a positive conclusion, he would say,

especially from an examination of Mr. Lockyer's drawings, that a predominance of equatorial land does not characterize the planet. If, then, there be oceans on its surface, it must be concluded that its ellipticity has been generally exaggerated. It may be added, that the general tendency of the most recent astronomical opinion is to the conclusion that the polar compression of Mars does not greatly exceed that of the earth.

At a meeting of the Royal Astronomical Society, March 10, 1865, Mr. J. Joynson read a paper on the "Opposition of Mars," accompanying it with drawings selected from a large number taken during the opposition in 1862 and that in 1864, and which were so arranged as to show the varying appearances of the planet's disc through one entire revolution, supposing the observer could watch them during the whole of such period. He stated that when Mars was observed in 1862 it was much ruddier to the naked eye than last year; and Mr. Huggins had in the course of the discussion previously remarked, that in August, 1864, the brilliancy of the spectrum of Mars was found to diminish in a remarkable manner at about the line F, a series of strong dark lines making their appearance from this point through to the violet end of the spectrum. This result may have been due to absorption by the dense atmosphere of Mars exerted upon light passing to and reflected from its surface, when that atmosphere was free from clouds. It was to such absorption that Mr. Joynson had long attributed the red color of the planet—poëticæ, "the red planet, Mars"—as seen by the naked eye, and Mr. Huggins also admitted that, when the atmosphere of Mars is freest from cloud and fog its light is most ruddy, while at the same time the permanent markings on its surface are most distinctly seen.

Mr. Dawes presented before the same society, at its June meeting, 1865, a paper on Mars. He argued, on the contrary, that the redness of the planet's light does not arise from any peculiarity in its atmosphere, instancing in proof the circumstance that the color is always deepest in the centre, where the depth of atmosphere traversed by the light is least. The exterior of the disc being whiter (from what cause not stated), the greenish tinge it shows may be an effect of contrast. He thought that usually Mars has not a very cloudy atmosphere.

Prof. John Phillips has, in the *Quarterly Journal of Science* for July, 1865, a very full and interesting discussion of the appearances of this planet. Its compression he thinks not greater than that of the earth, about $\frac{1}{100}$ part. The apparent (angular) diameter being 22', the compression would be but $\frac{1}{14}$ of a second, a quantity too small to be observed with certainty by any but the finest instruments. At the opposition in 1862, the south pole of Mars was visible, being tilted toward the ob-

server about $25\frac{1}{2}^{\circ}$. Around this pole was a coronet of apparently glittering snow. Lord Rosse had estimated the diameter of this snowed surface in July, three months before, at 1,000 miles; at the beginning of the opposition, in October, it did not exceed 560 miles; and it diminished continually during the two months of observation: thus, from *Martial* latitude 74° S., in July, the snow had receded to 8° S. in October, this pole having been all the time in sunshine. No appearance of snow was then seen about the north pole. In 1864 the opposition was later in our year by about seven weeks—at the end of November; the south pole was tilted toward the observer only about 6° , and the snow had been longer in sunshine. Only a small ellipse of snow could then, and that not invariably, be detected. But now there were sure indications of snows in two situations on the northern aspect of the planet. The appearance reached the latitude of about 50° , constituting an uninterrupted arctic zone in the latter part of the southern *Martial* summer, and toward the close of the northern winter. Fifty degrees of north latitude then free from great tracts of snow, would be a result fairly matching the average climate of our northern zones toward the end of February. Mr. de la Rue's drawings, April, 1856, showed northern and southern snow masses, the northern not then reaching the pole, which was toward the sun; and the equatorial interval between the two was 105° —a fact leading to the conclusion that the temperature is not much lower than that of the earth, upon which the interval may be taken at about 120° .

The surface of the planet, generally free from the appearance of snow, offers a great variety of distinct outline, which separates bright from dusky or shaded parts. In general, an undulated outline is traced along the inter-tropical regions, mostly south of the equator; from this a large tract of bright surface spreads toward the north, while south of it the surface is mostly greenish gray, or appears in half-lighted spaces. Calling the gray parts sea, and the bright land, it would follow that upon Mars water prevails in the southern and land in the northern hemisphere. The tint of the supposed land is that of a soft red, like the diffused air-tints of a hazy sunset, or that given by Indian red, faint. As seen in the observations of 1864, the larger masses of supposed land had the same color as when previously observed, though then more faint, in part at least, through increased distance; but the seas were at that time gray and shadowy, without the very distinct greenish hue noticed in 1862. In his opening address before the British Association, at the meeting of 1865, Professor Phillips, whose remarks in his previous papers would bear the interpretation that he considered the red color of the continental parts of Mars as due to some quality of the land itself, distinctly avowed the opinion already given as

that of Huggins and Joynson, declaring that "enough is ascertained to discountenance the notion of his redness being due to a peculiarity of the soil." In any case, the redness is, as a rule, hardly traceable over any part of the smaller and less distinctly bordered lands of the south. One broad dark surface appeared about the equator in longitude 20, communicating by an apparent channel (a long narrow strait, running N. E. and S. W.—DAWES), with the north polar region, which also presents for the most part apparently a water surface.

Are there, then, in fact, snows?—land?—water?—any thing, indeed, beyond effects of a vast and diversified stratum of cloud? The answer is: the facts go to show a distinct and steady melting away of snows. Then there must be water, and an atmosphere having aqueous vapor. Besides, the characteristic outlines noted upon the planet's surface are too permanent for cloud. Of land and water surfaces on the body of the planet, as one may see by looking from a high mountain on land and ocean, the water surfaces must appear the more obscure. Unlike the earth, Mars appears to have more land than water surface, the land being mostly collected in a broad band, including the intertropical spaces and the northern temperate region, while seas surround the poles, and cover a large proportion of the south temperate zone.

But how account for a climate on this more distant planet not greatly differing from that of our earth, when the mean quantity of sunshine reaching the former should by theory be only the $(\frac{1}{1.38})^2$ of that affecting the latter? Two suppositions present themselves: the flow of internal heat may be greater; or the waste of heat from the surface may be much less. In fact these two conditions may coexist: directly considered, the second is probably the more important in the case; and yet it appears requisite to suppose a greater communication of heat from the interior of the planet, in order to maintain in the atmosphere, and with the limited ocean-surface of Mars, the greater quantity of vapor, to the presence of which the retaining of the sun's heat should be due. For Prof. Tyndall has shown that an atmosphere charged with vapor is to its planet as the "clothing" or "jacket" to a steam cylinder; it keeps in the heat; and in case of an atmosphere holding vapor, the deeper and denser the stratum of the latter, the greater the effect. The vapor, while it admits freely the sun's radiant heat, possesses in proportion to its extent in height and the percentage of it present, a greater power of arresting the outflow into space both of the planet's central heat and that it receives from the sun. Possibly the atmosphere of Mars may be peculiar in quality; if so, spectrum analysis may yet indicate that fact. Many independent observations go to show that this planet's atmosphere is extensive, but also that it is not always loaded with clouds.

Finally, a determination of the true constitution of Mars will be likely to lead, though more slowly, to a knowledge of the physical peculiarities of the other planets; and, it may be added that, in his paper on Mars before the Royal Society, January, 1865, Prof. Phillips concluded that, upon the whole, we may perhaps be allowed to believe that Mars is habitable—the conclusion, as here put, of course implying, by beings constituted not very differently from ourselves.

MARYLAND. The General Assembly met on the 4th of January, and continued in session till the 24th of March. The most important bill passed was one in accordance with the first article of the new Constitution, which directed that the General Assembly should provide by law for a uniform registration of the names of voters in the State, which registration should be evidence of their qualification to vote at any election thereafter held, after which no person should vote unless his name appeared on the register. According to this law, the following classes were excluded from the right of suffrage:

- 1st. Persons who are not white male citizens of the United States.
- 2d. Persons who are not twenty-one years of age.
- 3d. Persons who have not resided one year in the State and six months in the county.
- 4th. Persons who have been in armed hostility to the United States, or in any manner in the service of the so-called Confederate States.
- 5th. Persons who have left the State of Maryland and gone within the military lines of the so-called Confederate States, with the intention to adhere thereto.
- 6th. Those persons who have given aid, comfort, countenance, or support to those engaged in armed hostility to the United States, or in any manner adhered to the enemies of the United States.

The persons included in the sixth class were defined by the fourth section of the Constitution to be:

- 1st. Those contributing to the enemies of the United States, or unlawfully sending within the lines of such enemies money, or goods, or letters, or information.
- 2d. Those who have disloyally held communication with the enemies of the United States.
- 3d. Those who have advised any person to enter the service of the said enemies, or aided any person so to enter.
- 4th. Those who may have by any open deed or word declared their adhesion to the cause of the enemies of the United States.
- 5th. Those persons who have declared a desire for the triumph of said enemies over the arms of the United States.

At a State convocation of registers of voters held at Baltimore for the purpose of securing concert of action throughout the State, the following list of questions to persons applying for registration, was agreed upon:

- 1st. What is your full and true name?
- 2d. Do you consider the oath just taken as legally and morally binding as if administered by a judge of the court or a justice of the peace?
- 3d. Are you perfectly aware that any false statements made in said oath, or false answers given to any question which may be propounded to you, renders you liable to indictment for perjury, and, if found guilty, to confinement in the penitentiary not less

than one nor more than eight years, and forever disqualifies you from voting or holding office, in addition to the moral turpitude and future punishment due for false swearing?

- 4th. What is your age?
 - 5th. Where were you born?
 - 6th. How long have you resided in this State, and in this county, city, ward, or district?
 - 7th. If naturalized, where are your papers?
 - 8th. Have you ever, since twenty-one years of age, been convicted of larceny or any infamous crime, and confined in the penitentiary and not pardoned out by the Governor?
 - 9th. Have you at any time been in armed hostility to the United States or the lawful authorities thereof?
 - 10th. Have you ever been in any manner in the service of the so-called "Confederate States of America"?
 - 11th. Have you ever left this State and gone within the military lines of the so-called "Confederate States or armies" for the purpose of adhering to said States or armies?
 - 12th. Have you ever given any aid, countenance, or support to those engaged in armed hostility to the United States or the so-called "Confederate States of America"?
 - 13th. Have you ever, in any manner, adhered to the enemies of the United States or the so-called "Confederate States or armies"?
 - 14th. Have you ever contributed money, goods, provisions, labor, or any such thing, to procure food, clothing, implements of war, or any such thing for the enemies of the United States or the so-called "Confederate States or armies"?
 - 15th. Have you ever unlawfully sent within the lines of such enemies money, goods, letters, or information?
 - 16th. Have you ever, in any manner, disloyally held communication with the enemies of the United States or the so-called "Confederate States or armies"?
 - 17th. Have you ever advised any person to enter the service of the enemies of the United States, or the so-called "Confederate States or armies," or advised any one so to enter?
 - 18th. Have you ever, by any open word or deed, declared your adhesion to the cause of the enemies of the United States or the so-called "Confederate States or armies"?
 - 19th. Have you ever declared your desire for the triumph of said enemies over the armies of the United States?
 - 20th. Have you ever been convicted of giving or receiving bribes in elections, or of voting illegally, or of using force, fraud, or violence to procure yourself or any one else nominated for an office?
 - 21st. Have you ever deserted the military service of the United States and not returned to the same, or reported yourself to the proper authorities within the time prescribed by the proclamations of the President of the United States and the Governor of this State?
 - 22d. Have you, on any occasion, expressed sympathy with the Government of the United States?
 - 23d. Have you voted at every election held in the State of Maryland since 1861, and if not, state your reasons for not doing so?
 - 25th. During the rebellion, when the armies were engaged in battle, did you wish the success of the armies of the United States, or those of the rebels?
 - 26th. Have you, in taking this oath, or in answering any question propounded to you, held any mental reservation or used any evasion whatever?
- The effect of the law was the disfranchisement of a very large number of citizens. It was claimed to be unconstitutional; much opposition was manifested toward it, and in some parts of the State resistance was threatened. It was asserted that by its operation the domi-

nant party in the State represented a minority of the aggregate population. At a meeting of the citizens of Howard County on the 26th of August, in favor of supporting the policy of President Johnson, Montgomery Blair, alluding to the registration law, said:

By the terms of that law three members of the dominant party constitute a tribunal in each election district, clothed with absolute power to disfranchise whom they please. Thus, a penalty which has heretofore been inflicted only upon persons convicted of infamous crimes, after a fair and open trial by a court and jury, may be imposed by a secret inquisition. That multitudes of good citizens, against whom no one would dare publicly to make any dishonorable charge, will thus be branded as felons, is most probable. Men who are earnest in a cause, even when disinterested, are apt to doubt the patriotism of zealous opponents. But when they have a selfish motive to heat their passions, toleration is almost impossible. But many of our registers are expectant candidates for the suffrages they are deciding upon. They are generally, too, the nominees of the county committees, who are made up for the most part of standing candidates of the party. Nothing but a strong public sentiment can prevent a partisan enforcement of such a law. I have been against it from the beginning for this reason. Exasperation against the rebellion affected most of those who voted for it, but it was instigated, I fear, by partisanship. It bears the stamp of a disfranchising spirit which existed before the rebellion, the leaders in which taught the rebels how to organize in secret to carry elections against the public will. In my opinion, there never was any justification for such a law, and certainly there is none now. The ostensible reason has passed with the rebellion, and the maxim that the law ought to cease with the reason for it applies in such a case undoubtedly.

To test the constitutionality of the law, the case of "Thomas Anderson *vs.* the Board of Registration of the fourth district of Montgomery County" was made up. Mr. Anderson appeared before the registers of the district and demanded that his name be registered as a legal voter, at the same time refusing to take the oath required by the State Constitution, and upon the registers declining to do so, applied to the Circuit Court of the county for a writ of mandamus to compel them. Judge Berry deciding that there were not sufficient grounds for the interposition of the court, dismissed the petition for a mandamus, and Mr. Anderson appealed. The case was fully argued by Attorney-General Randall, Mr. Williams, and Reverdy Johnson, before the Court of Appeals, which sustained the action of the registers; Chief Justice Bowie, and Judges Cochran, Weisel, and Goldsborough affirming the constitutionality of the law, and Judge Bartol dissenting from their opinion. Governor Swann, in his message of January 11, 1866, said:

The act passed for the registration of voters, in furtherance of the requirements of the Constitution, has been threatened, I regret to say, with resistance in some parts of the State, chiefly among those who, in the face of the decision of our highest judicial tribunal, persist in denying its constitutionality, and object to the oath of allegiance which it imposes. I trust and believe that such threats are confined to a very small class of our citizens. The intention of both the Constitution and the registry law, was

simply to protect the State against treason, and to show distrust of those who had been connected with it. Complaints have been made that abuses have arisen in the execution of this law, and that qualified voters as well as others have been arbitrarily disfranchised, upon frivolous and irrelevant issues, growing out of mistaken views of the purpose and meaning of that act. I am sure that the Legislature designed no more than that the provisions of the Constitution should be strictly complied with, without the remotest intention of interfering with any loyal citizen entitled to the right of suffrage. The law would have been less liable to abuse had it embodied the feature of appeal to some competent tribunal. The registration act was passed, as is well known, at a time when the ravages of civil war were desolating our State. Large numbers of our citizens, variously estimated at from ten to fifteen thousand, had left their homes, taken up arms against their State, and subscribed to the most stringent oath of allegiance to the so-called "Confederate States." I do not propose at this time to discuss events that have passed, further than to refer to the acts of the Union men of that day in their praiseworthy efforts to save their State from the threatened ruin which hovered over it. I would rather forget the past than reopen afresh these fruitful sources of irritation, which should now be permitted to sleep. If these acts were radical and ultra, much more so was the attempt to revolutionize the State and break up the Union. Maryland, surely, could not have disregarded the first duty of self-preservation. It has been alleged that the dominant party who now control the State represents a *minority* of her aggregate population. If it be so, it is the more to be regretted that so large a number of our citizens should so have identified themselves with the rebellion as to suffer the power which this minority controlled to pass into other hands. Small, however, as the minority may be, it cannot be denied that it is the fair and legitimate representative of whatever there is of loyalty among our people. They are the men to whom you are indebted for the safety of your State and the property which you now enjoy, and without whose uncompromising devotion to the Union Maryland would have been handed over to indiscriminate destruction.

The elective franchise is a function of the State. To confer or withhold it is the province of those who are entrusted with the formation of your organic law. Our citizens engaged in this rebellion have been received with kindness and toleration; they come back, however, to be dealt with as the people in their wisdom may deem most expedient. Threats of resistance to the Constitution and laws could hardly be expected to facilitate them in resuming the privileges of citizenship which they have deliberately abandoned. In the mean time, they have no just right, in any fair view of their existing relations, to complain of the hardships of a law which they have themselves deliberately provoked, and which intended no more than to place the government of the State, at a time of imminent danger, in the hands of its loyal defenders. Are they not the legitimate guardians and depositaries of its power?

The repeal of the registration act, in my judgment, will not materially benefit any class of voters who have been heretofore disfranchised under its provisions. The oath of allegiance prescribed by the Constitution makes it incumbent upon the judges of election to do substantially what the registers are required to do under a fair and proper interpretation of their powers. As the Executive of the State, I do not feel authorized to recommend a repudiation by the Legislature of the organic law of your State by any radical modification of the terms of the registration act. To alter or amend the Constitution, upon which this act rests, would require the sanction of the qualified voters of the State. The regular stated meeting of the General Assembly, under the Constitution, takes place in January next. The delegates

who will compose that body may be expected to represent the wishes of the people upon this subject, as the agitation now going forward will show its results in the ensuing fall elections. No other practical mode of dealing with this question occurs to my mind than by its reference to the representatives of the people who shall compose that body, who, coming fresh from their constituencies, will be prepared to reflect the public sentiment in any action which may be deemed prudent and advisable.

Among the other important bills passed by the Legislature were those allowing citizens in the army to vote; repealing nearly the whole of the "black code;" allowing the bankers of Maryland to accept the provisions of the national banking law, and providing for a uniform system of schools throughout the State. Many of the measures required by the new Constitution were not acted upon for want of time. A bill to provide for the general reassessment and valuation of property throughout the State was rejected in the Senate, after having passed the House by a large majority. A bill for the organization of the State militia was rejected, on the ground that its requirements would be too onerous upon the citizens. John A. J. Creswell was chosen Senator to fill the vacancy caused by the decease of Thomas H. Hicks.

There was received into the State treasury during the fiscal year ending September 30th, the sum of \$2,681,592. Of this amount, \$830,746 proceeded from a loan negotiated by the treasurer, and \$248,742 from the public school tax, leaving \$1,602,104 received from the ordinary sources of revenue, or \$110,013 less than the receipts from similar sources during the previous year. The disbursements during the fiscal year were \$3,125,566, principally for bounties to volunteers, interest on the public debt, and the expenses of the constitutional convention and the General Assembly. Certificates of indebtedness to the amount of \$56,525, issued on account of the Annapolis and Elkridge Railroad, were redeemed during the year. The balance in the treasury at the close of the fiscal year appears from the following statement:

Receipts from all sources.....	\$2,681,592 20
Balance in Treasury 30th Sept., 1864.....	876,899 83
	\$3,558,491 53
Disbursements.....	8,125,565 58
	\$492,926 00
Add amount to the credit of Free Schools	
Fund.....	48,773 84
Add amount to the credit of Sinking Fund ...	177,178 72
Total balance in Treasury 30th Sept., 1865....	\$668,878 06

Deducting the balance to the credit of the "funds" and the public school tax from this amount, the balance in the treasury proper was only \$184,184. The sum paid during the fiscal year, on account of bounties to volunteers and others, was \$1,762,421, exceeding the amount realized from loans by \$931,675, and the amount from both loans and county tax, by \$666,378. The total amount paid for bounties by the State up to the end of the fiscal year was \$3,044,090; the amount raised from loans was \$1,356,930, and from the bounty tax \$460,496, leaving

\$1,226,663 to be paid from the revenue derived from other and ordinary sources. The assessed value of the real and personal property in the State liable to direct taxation was \$278,507,519, being a decrease from the assessment of 1864, of \$7,234,836, owing to the fact that all assessments on account of slaves were deducted from the tax-books. The following statement shows the assessed value of real and personal property, with the amount of the levy thereon, in Baltimore city and each county in the State:

	Assessed Value.	Levy
Allegany County.....	\$4,945,415 00	\$14,896 25
Anne Arundel County.....	6,890,105 00	19,170 81
Baltimore City.....	129,199,817 00	387,599 45
Baltimore County.....	21,105,468 00	63,316 40
Calvert County.....	1,920,156 00	5,760 47
Carroll County.....	10,256,074 00	30,763 22
Caroline County.....	2,098,549 00	6,239 65
Charles County.....	3,221,920 00	9,635 76
Cecil County.....	7,764,626 00	23,295 94
Dorchester County.....	4,664,462 00	13,993 89
Frederick County.....	21,819,529 00	63,953 59
Harford County.....	6,860,281 00	20,590 69
Howard County.....	3,563,740 00	11,591 23
Kent County.....	5,219,760 00	15,650 23
Montgomery County.....	4,972,061 00	14,916 18
Prince George's County.....	7,626,412 00	17,439 92
Queen Anne's County.....	5,843,441 00	16,080 82
Somerset County.....	5,211,957 00	15,635 57
St. Mary's County.....	2,692,182 00	7,506 46
Talbot County.....	4,965,996 00	14,597 51

Worcester County.....	4,514,040 00	13,542 12
	\$278,507,519 00	\$824,082 94
Amount of Levy for State Tax, at 5 cents on \$100.....	\$189,258 76	
Amount of Levy for Bounty Tax, at 10 cents on \$100.....	273,507 52	
Amount of Levy for Public School, at 15 cents on \$100...	406,821 66	\$824,082 94

Comptroller Jump, urging the necessity of a reassessment, says:

According to the general assessment made in 1852, the value of real and personal property was \$261,243,660, exhibiting an increase of \$49,667,825 when compared with the year immediately preceding, and of \$64,492,515, or nearly thirty-three per cent., when compared with the general assessment of 1841, only eleven years before.

When it is considered that more than thirteen years have elapsed since the assessment in 1852, and that the State has rapidly increased in population, wealth, and general prosperity, and that the assessment of the present year exceeds the general assessment of 1852 but in the sum of \$17,263,859, or less than seven per cent., it is not unreasonable to suppose that a new assessment would insure a taxable basis of at least \$350,000,000, notwithstanding the large investments by the people of the State in non-taxable Government securities.

If the result should prove the correctness of this estimate, a large increase of revenue will be secured to the general treasury and to the schools.

A reassessment is necessary, also, that the burdens of taxation may be equally distributed. In some portions of the State property has greatly enhanced in value, in others only to an inconsiderable extent. Many persons, too, regardless of the moral and political obligation to bear their just proportion of the taxes necessary for the support and good credit of the State, secrete their securities, and perhaps other property, when others, more honest, and the farmer, mechanic, and tradesman generally, are assessed to the full value of their estate. This in-

equality is a heavy grievance, and is aggravated by the lapse of time.

The available assets of the Maryland Penitentiary, according to its annual report, were \$6,269, and the entire debt \$5,019, leaving a surplus of \$1,250. The expenses for the year were \$68,091, the average number of prisoners having been 406, and the cost per head \$167.71. The highest number in confinement at any one time was 432, and the lowest 380. Of 50 prisoners pardoned during the year, 12 were undergoing imprisonment for assisting in the escape of slaves. There were received among the prisoners during the year an extraordinary number of colored women, boys, and men, for short terms.

From the first annual report of the "Baltimore Association for the Moral and Educational Improvement of the Colored People," it appears that on the 9th of January, 1865, the first free school was opened in Baltimore, and that since that time fifteen schools have been opened in different parts of the city, employing sixteen teachers, of whom thirteen were white and three colored. The average number of pupils in attendance was 1,206, and the total cost up to the time of the report \$8,878. Eighteen schools had also been started in the county and were in successful operation. The number of pupils in attendance was 1,110, at a cost to the association of only \$788, the balance of the expense being defrayed by the neighborhoods. The total receipts of the association were \$14,960, and the total expenditures \$13,492, leaving a balance in the hands of the treasurer on November 6th, of \$1,468. To aid in the maintenance of these schools and the establishment of others, it is recommended that a committee be appointed to memorialize the Legislature for an appropriation of \$20,000, or that the colored schools may be included in the general school system of the State.

The State colored convention held at Baltimore, on the 29th of December, passed resolutions to solicit aid to rebuild the seven colored churches burned in the State "by rebels and malicious persons," and if successful, to request the Baltimore Association to establish day and night schools therein. Resolutions in relation to the death of President Lincoln were also passed, including the following:

Be it resolved, That the exalted public and private character of the late President, his freedom from selfish ambition, his fear of God, his devotion to the eternal principles of liberty and justice, and the unsurpassed wisdom and magnanimity which he evinced in carrying out the principles of republican government, will cause his memory to be cherished with love and reverence by us as a people until the end of time.

An address to the "colored citizens of Maryland" was also agreed upon, containing the following advice:

Brethren and Fellow-Citizens: We, the delegates of the State of Maryland, in convention assembled, feel it to be our duty to address you on matters pertaining to our best interests. A very important pe-

riod in our history has arrived. We have, by the votes of the loyal citizens of Maryland, been lifted from bondage to liberty, and thrown upon our own resources as men.

There are many things claiming our attention which heretofore we were unacquainted with, such as providing for ourselves and families, the education of our children, and other duties of life.

We would therefore advise you, 1st. To feel that you are free, and dependent upon yourselves for support.

2d. We advise you to become men of virtuous habits, disdaining to do any thing beneath the dignity of men.

3d. We advise you to be industrious in all the pursuits of life, purchase property and become men of wealth, owning the soil, for there is no class of men so independent as farmers.

4th. We advise you to educate your children, give them trades, and thereby qualify them for any position in life. For if ever we are raised to that elevated summit in life for which we are striving, it must be done by our individual exertion; no one can do it for us. It is no longer a question whether our race possess competency as soldiers; all we asked for was to give us a trial, and we have proven by many a hard-fought battle, and brilliant victory, that we were men of bravery. Now, we should show by frugality, that all we want is a chance, and we will become as good citizens as any are.

5th. We advise you to use every exertion to contradict the predictions of your enemies, which were uttered previous to the emancipation of the State—that if the slaves were freed they would become a pest to society, and paupers, dependent on public charities.

After instituting a "State league for the proper and perfect enforcement of the rights of the colored people of Maryland," the convention adjourned *sine die*.

Gov. Swann, in his message of January 11, 1866, on the subject of the laws relating to negroes, said:

The system of negro slavery having been abolished throughout the country, it becomes a duty that the status of the freedmen in Maryland should now be distinctly and clearly defined under our laws. From the origin of our State government slavery has been more or less interwoven with our whole domestic economy. The result has been that our statute books are burdened with laws—some long since obsolete, but unrepealed—and mostly all calculated to confuse and lead to embarrassment, in the action of our courts. The relations existing in the past between master and slave being dissolved, the entire system of laws relating to the colored population should be carefully revised by some competent authority, and such changes and modifications recommended as may lead to the adoption of a defined and uniform system for their protection and guidance in the future. In proclaiming freedom to the colored race, the State of Maryland designed to confer upon the negro something more than a mere nominal benefit—she intended freedom in all that relates to person and property. This would not be accomplished, if, after being made free by the provisions of your organic law, the freedmen are left without proper direction under a system of just and equitable laws, or denied the fullest protection in their new relation. There should be entire conformity between these laws and the principles recognized and proclaimed in your free Constitution. In connection with this recommendation, I should hope that steps may be taken, at an early day, to confer upon the freedman the privilege of testifying in our courts—a right which has already been conceded in some of our sister States of the South, and which is urged by the strongest considerations of justice and fair dealing.

I would recommend that authority be given to appoint a commissioner, whose duty it shall be to revise all laws relating to the former status of the negro, and report at the regular session of your Honorable Body in January next, such modifications or additions in the present code as may be suggested by the provisions of the new Constitution abolishing slavery, and the changed relation in which we stand toward the colored race.

With regard to the question of negro suffrage he added:

Maryland has no interest in negro suffrage, beyond the effect which it is calculated to produce upon the general interest and welfare of the country and the negro himself. Her policy is already settled by her new Constitution. To withhold from other States the same power which she has exercised, to deal with this and other subjects of a like character, appertaining to their domestic governments, would be to let go the most popular feature which has heretofore contributed to our bond of union.

The election in the Second Congressional district to fill the vacancy caused by the resignation of Edwin H. Webster, took place on the 7th of November, and resulted in the success of the Union candidate, John L. Thomas, by 4,677 votes, the Democratic candidate, William H. Kimmell, receiving only 950.

MASSACHUSETTS. The Legislature of this State convened at Boston on January 4th, and was organized by the choice of Republican officers in both branches; and on the 6th Gov. Andrew delivered his annual message. Among the measures recommended to the attention of the Legislature were the abolishment of the death penalty, modifications of the law of marriage and divorce, and of the usury laws, and an amendment to the Federal Constitution repealing the inhibition duties on exports. The Legislature was also requested to ask the President to convene an extra session of Congress, in case the Thirty-eighth Congress should fail to adopt an amendment abolishing slavery. In conclusion, he intimated that this was the last time he should assume the duties of Chief Magistrate of the Commonwealth. The Legislature adjourned on the 17th of May, having passed two hundred and eighty-five bills and seventy-six resolves. The session was the longest since 1856.

The finances of the Commonwealth received a large share of attention from the Legislature, in view of the necessity of meeting the extraordinary liabilities incurred under the war. A "bounty fund" of ten millions, with interest at five per cent., payable in gold, had been created in 1864; but owing to the high premium on gold, which the State was obliged to purchase to meet the accruing interest, only a small part of the loan was put into the market, and the Treasurer of the State negotiated call loans to the amount needed at six per cent., which was one per cent. higher than the law allowed. To remedy these difficulties the Legislature of 1865 authorized a new loan of ten millions, at six per cent. interest, payable in currency, and raised the rate of interest on call loans to six per cent. Before the new currency loan could

be negotiated the overthrow of the rebellion so enhanced the value of United States securities that those of the State stood no chance in competition with them. An act was therefore passed late in the session of 1865 giving the Treasurer authority to borrow money, at such rate of interest as the Governor or Council might determine, until July, 1866, and authorizing a portion of the currency loan of ten millions to be issued, with interest in gold at five per cent. An act was also passed allowing a part of the loan of 1864 to be expressed in the sterling currency of Great Britain for more convenient sale abroad. To defray the current expenses of the State a tax of \$4,700,000 was assessed upon the cities and towns, and a single commissioner was appointed in place of the former Board of Commissioners, consisting of the Treasurer and Auditor.

The coast defences of the Commonwealth received some share of attention, and a resolution was adopted referring to Congress the importance of fortifying Provincetown and of constructing a military road from Orleans to the extremity of Cape Cod. The act passed in 1864 making militia duty compulsory was suspended, and a new act was passed authorizing the militia force to be composed entirely of volunteers, the infantry to consist of seventy companies, with artillery and cavalry in proportion. Provision was also made for a State census in 1865, and for a compilation of the industrial statistics of the Commonwealth, the same to be repeated once in ten years hereafter. An act was passed prohibiting a discrimination in the admission of colored people to theatres and other places of amusement, and a resolution that it is not "expedient or right in principle" to license the sale of intoxicating liquors. Committees were appointed to sit in the recess of the Legislature to consider the "financial condition of the Commonwealth," "what direction shall be given to the liberality of the State in behalf of invalid soldiers," and other matters. Early in the session the Hon. Henry Wilson was reelected a United States Senator for six years from March 4, 1865.

The funded and unfunded debt of Massachusetts on January 1, 1866, amounted in the aggregate to \$23,122,872, of which amount the portion which should be charged to the war account is \$15,108,437. The funded debt was \$19,131,435, of which \$6,574,435 should be set aside, as having accrued from loans to railroad corporations, secured by mortgages and collateral securities in addition to the sinking funds established for the redemption of the scrip. Of the residue, namely, \$12,557,000, all but \$450,000 is provided for by sinking funds, which are supposed to be ample for the payment of the debts for which they are pledged at maturity. Of the total funded debt the amount of \$7,170,000 will not mature until 1894, and this sum will be further increased by the issue of additional scrip for the bounty fund loan, authorized by the Legislature of 1864. This additional issue will

absorb or fund a large portion of the now outstanding temporary loan which has accrued in the payment of bounties. The remainder of the funded debt, amounting to \$11,961,435, will mature in smaller instalments, commencing with \$175,000 in 1866, and so on until 1894. The unfunded debt consists of temporary loans amounting to \$3,991,437, of which the sum of \$1,863,389 is payable on thirty days' notice, with interest at six per cent., and the residue of \$2,128,048 is payable on six or twelve months' notice, with interest at seven and three-tenths per cent. To meet this unfunded debt, there was in the State treasury on January 1, 1866, a balance of \$959,373.77, besides the sum of \$2,000,000 negotiated in the latter part of 1865 on account of the bounty fund loan, and a further sum of \$621,435.53 allowed on account of war claims and awaiting draft at Washington, making an aggregate of \$3,580,798.30. These funds would fall short of extinguishing the unfunded debt by \$410,638.70; but against this unliquidated balance there stands an unliquidated balance of war claims against the United States of \$989,107.89, the greater part of which, it is supposed, will be allowed.

The gross amount of receipts into the State treasury in 1865 was \$24,876,163.77, and the payments therefrom during the same period amounted to \$23,916,790, leaving a balance of \$959,373.77 on hand January 1, 1866. Of the total receipts the sum of \$7,268,669.96 accrued on account of ordinary revenue; and \$16,072,516.59 on account of trust and other funds, including deposit and temporary loans. Of the total payments there was disbursed, on account of expenses payable from the ordinary revenue, the sum of \$6,604,127.91, and on account of various funds \$17,312,662.09. Under the head of general expenses the principal items were:

Legislature	\$219,302
Public printing	64,313
Attorney-General's Department	174,468
Interest and premium on gold	195,410
Public charities	370,357
Reformatory and correctional purposes	216,092

The extraordinary or exceptional expenses included the greater part of the military expenses incurred, and the chief items were:

Quartermaster's and Ordnance Department	\$23,914
Surgeon-General's Department	12,612
Paymaster's Department	18,494
Agencies for sick and disabled soldiers	20,250
Coast defences	50,358
Arms and equipments	63,647
State militia	232,966
Bounties to volunteers	630,400
Monthly pay of volunteers	2,022,810
Home for discharged soldiers	16,000
Aid to families of volunteers	2,196,250
Interest, with premium on gold	1,172,211

The total military expenditures of the State in 1865 for other than purposes of an ordinary character, amounted to \$6,244,933, of which sum \$5,863,188.69 was in payment of bounties and other expenses growing out of the prosecution of the late war, and \$381,744.99 accrued in the maintenance of the military departments of the State, including the purchase

of uniforms, equipments, and other munitions for the use of the State militia. The aggregate amount of claims presented against the United States is \$3,501,766.50, of which \$1,934,314 has been reimbursed, \$621,435.53 is awaiting draft, and \$989,107.89 remains unadjusted. A final account, amounting to \$43,256.98, is yet to be presented, making the total outstanding claim of the State for advances to the General Government on account of the war amount to \$1,032,864.87.

The following table indicates the total receipts and expenditures of Massachusetts for the period embraced between January 1, 1861, and January 1, 1866:

Cash on hand January 1, 1861	\$154,841 53
Receipts in revenue during five years, 1861 to 1866	24,432,634 43
Receipts on account of sinking and other funds, loans, and other accounts	53,843,209 08
	<hr/>
	\$77,935,685 09
Total payments on account of ordinary expenses	22,041,517 22
Total payments on account of sinking and other funds, and other accounts	54,934,494 16
Cash on hand January 1, 1866	959,373 77
	<hr/>
	\$77,935,685 09

During these five years \$18,125,204.34 more were received into the State treasury than since the beginning of the present century to the year 1861, and the average payments of each year, amounting to \$15,395,262.26, were two millions more than the annual expenditure for ordinary purposes for the whole United States during the administration of John Quincy Adams.

The receipts of ordinary income for 1866 are estimated at \$1,400,000, and the ordinary expenses during the same period at \$1,375,000. To meet the extraordinary expenses of the year, including the reimbursement to the towns for aid furnished to families of volunteers in 1865, the further sum of \$2,700,000 will be required, making the aggregate expenses for the year amount to \$4,075,000, and leaving the sum of \$2,675,000 to be provided for.

The number of men furnished by Massachusetts to the army and navy during the late war (reckoning the nine months' men at one-fourth of their actual number, and reducing the naval recruits to the same term of three years) was 131,116. The actual number of men furnished by her for all arms and all terms, including seamen and marines, was 159,165, which is 10,610 more than are now to be found in the State between the ages of eighteen and forty-five. The whole number of colored troops was 6,039, and of foreign recruits 907; and the number of men furnished for different periods of service in the navy was 26,329. From a report of the Paymaster-General of the Commonwealth, brought down to December 31, 1865, it appears that the whole amount of State bounties paid from the beginning of the war to that date, was \$12,803,600. The total expenditure incurred by Massachusetts on ac-

count of the war, including only such expenses as have accrued under the direction and supervision of the several State departments, as authorized by legislative enactments, amounted to \$27,705,109; and, as far as can be ascertained at present, the expenses incurred by cities and towns for bounties and other military purposes, have been not less than this sum. The militia of the State at the close of the year comprised eighty-eight companies of infantry, six companies of cavalry, four batteries of light artillery, and two companies of cadets. In view of what he considered defects in the militia law of 1865, Gov. Andrew delayed the complete organization of the militia and the delivery of the uniforms prescribed by the act, until the Legislature could frame a better law.

At the close of 1865 only one bank of discount, organized on the old system, remained in Massachusetts; all the others had been converted into national banks. As one of the results of this change, the State Board of Bank Commissioners passed out of existence. The savings banks numbered on January 1, 1866, one hundred and two, having deposits amounting to nearly \$60,000,000, a sum exceeding by \$6,000,000 the combined capital of both classes of banks in 1851. The number of depositors in these banks amounted to nearly 300,000.

During 1865 the sum of \$1,940,000 was expended on public schools, exclusive of buildings and books, which exhibits a considerable gain over any previous year. All the municipalities of the State except twenty-two raised by taxation double the sum required by law as a condition of receiving a share of the income of the general school fund. The latter has now reached the maximum of \$2,000,000 fixed by the Legislature in 1864. It is estimated that the amount raised by taxation in 1866 will exceed the entire fund. Harvard University, which, since the adoption of the State Constitution, has been to a certain extent controlled by the Legislature, was, by an act passed in 1865, made an entirely independent institution. Her Board of Overseers, previously elected by the Legislature, are hereafter to be elected by the College Alumni.

The public charitable and correctional institutions of Massachusetts are under the control of a Board of State Charities, created by the Legislature in 1863. They report that for the year ending September 30, 1865, the average population of the State almshouses was 1,919, whose support cost in money drawn from the treasury \$152,500. During the same period, 1,702 paupers and lunatics, belonging to other communities, were removed from the Commonwealth by this Board. Since September 30, 1857, 1,400 paupers, including more than 1,000 lunatics, have in like manner been removed. These removals have cost about \$50,000, or \$3.50 for each person sent. To support those who remain has cost, for the eight years, in round numbers, \$1,100,000 for a constant average of 2,042 paupers, and \$630,000 for an

average of 550 lunatics. As the direct result of this action, no new pauper institution has been designed since 1857, and none appears likely to be required; the average number in the almshouses is less than ten years ago; and notwithstanding the increase of population, especially in that class whence State paupers are derived, the official returns indicate that their number has considerably decreased since 1855. The total expenditure for State paupers in three lunatic asylums, three State almshouses, and one general hospital, was \$270,000. The schools at Westboro' and Lancaster, and the Nautical School Ship, constituting the three juvenile reformatories of the State, maintained during the year 625 inmates, at a cost of \$100,900. The aggregate cost of all charities and reforms was half a million of dollars.

The following table exhibits the condition of the steam railroads of Massachusetts and their operations in 1865:

Capital stock.....	\$78,075,405
Capital paid in.....	65,565,482
Debt.....	25,068,218
Cost of roads and equipment.....	72,175,091
Total income in 1865.....	18,974,914
Working expenses.....	12,801,757
Net earnings.....	6,173,157
Interest paid.....	1,164,179
Amount of dividends paid.....	3,872,817
Surplus, November 30, 1865.....	5,562,486
Total length of rail (as single track) in miles....	1,975
Tons of freight carried.....	5,277,568
Number of passengers carried.....	20,278,055
Number of passengers killed.....	21
Number of men employed, exclusive of those engaged in construction.....	7,977
Number of employes killed.....	26
Number of persons killed while walking or lying upon the track.....	45
Number of engines owned.....	471
Number of passenger cars.....	573
Number of merchandise cars.....	8,612

The number of passengers carried over all the roads in 1865 was 20,278,455, which was 2,072,032 more than in 1864. Of the fatal accidents to passengers, twenty-one in number, not one was caused through any negligence on the part of employes of the railroad companies. From the report of the Commissioners of the Troy and Greenfield Railroad and Hoosac Tunnel, work on both enterprises appear to be making satisfactory progress. The payments for the year were \$531,416, and the commissioners held a balance at the close of the year of \$12,491. Of the amount expended, \$241,600 was for the Deerfield dam and for buildings and machinery; \$235,542 for work on the tunnel; \$6,000 for commissioners' salaries; \$2,435 for surveys and estimates. The progress of tunnelling the Hoosac Mountain for the last six months has averaged forty-one feet, and for the last three months forty-seven feet per month, which is more by several feet than the estimate of the commissioners. A difficulty has been experienced in excavating the west end of the tunnel, in consequence of a great flow of water from a spring about ten feet below the grade, which for some time interrupted the work. This has been in a measure surmounted, and there is no reason to apprehend that the work will henceforth be materially delayed from any

similar cause. The amount appropriated by the Legislature for the enterprise, including \$800,000 granted in 1865, is \$3,000,000, and the total expenditures down to the commencement of 1866 were \$2,484,943. The commissioners feel confident that an outlay of about half a million of dollars per annum is all that is now required, and expect ere long greater results from such an expenditure than can at the present time be obtained. Much of the labor and expense has thus far been in the nature of preparation, looking to a period, now very near at hand, when the work will progress in a manner entirely satisfactory to the people of the Commonwealth. The commissioners give statistics of transportation between the East and West, to show the necessity for the completion of the tunnel and its road. The practicability of the tunnel having been doubted by many persons, a survey for a railroad around and over the Hoosac Mountain has been completed, and estimates made, by which it is computed that, instead of tunnelling the mountain, the State may relinquish the tunnel to the Troy and Greenfield Company, and proceed to build the new road for a much less amount of money than has already been sunk in the bore. It is said that the road over the mountain could be completed within a year. The plan contemplates going nearly to the top of the mountain, and then by switches making a detour of five miles.

The manufacture of paper is carried on to a greater extent in Massachusetts than in any other State. The following table shows the operations of her paper-mills for the year ending May 1, 1865:

Number of mills.....	77
Tons of stock consumed.....	34,165
Value of do.....	\$5,381,671
Tons of printing paper made.....	5,077
Value of do.....	\$1,922,526
Tons of wrapping paper made.....	4,202
Value of do.....	\$1,157,190
Reams of writing paper made.....	608,989
Value of do.....	\$2,531,004
Tons of other paper made.....	8,221
Value of do.....	\$8,397,501
Capital invested.....	\$3,875,300
Males employed.....	1,881
Females employed.....	1,923

The total value of the paper manufactured during the year was \$9,008,521.

With a view of re-peopling the waters of the Connecticut and Merrimac Rivers with salmon, the taking of which was formerly a lucrative branch of industry, a commission was appointed in 1865 to investigate the matter of obstructions to the passage of fish up those rivers by the construction of dams and other artificial obstacles. The commissioners, in their report rendered at the close of the year, arrive at the conclusion that in order to restock the Connecticut and Merrimac with fish, fishways must be built, the pollution of the water prevented, salmon must be bred at the head of the rivers in New Hampshire, and the use of weirs and nets be forbidden in Connecticut. They think that the fishways would always more or less

seriously injure manufacturers. Under these conditions a moderate supply might reasonably be anticipated, but nothing like the primitive abundance.

Gov. Andrew having, in his inaugural address of 1865, called the attention of the Legislature to the excess of females over males in Massachusetts, amounting, according to the census of 1860, to 37,517, a special committee was appointed to consider that part of the address relating to the emigration of young women to the West. The report of the committee shows that there is abundance of occupation in the State for all females willing and having the capacity to work, and that during 1864 and the early part of 1865, the demand for female labor in the large manufacturing towns was always in advance of the supply, notwithstanding the introduction of large numbers of young women into the country from Europe. The committee accordingly discouraged any project for sending the surplus female population to such Western States as have an excess of males.

The registration report, showing the vital statistics of Massachusetts for the year 1863, was laid before the Legislature of 1865. The general statistics for 1863 were—30,314 children born alive, of whom 15,692 were males and 14,579 females; 10,873 couples married, and 27,751 persons died. Compared with the year 1862, the number of births was less by 1,961, and less than in 1861 by 5,131; the number of couples married was less by 141, and the number of deaths greater by 4,777, or 3,666 greater than in 1861. Compared with the annual average for the five preceding years, there was a decrease of 4,423 births, or 5,737 less than in 1860; a diminution of 405 marriages, or 1,529 less than in 1860, and an increase of 5,552 deaths. The natural increase to the population of the State, that is, the excess of births over deaths, was, therefore, 2,563, which is 6,738 less than in 1862, and 10,420 less than in the year 1861. Compared with the returns in 1860, before the breaking out of the war, there were 5,737 fewer births, 1,531 marriages, and 4,683 more deaths. Then the natural increase of population, the excess of births over deaths, was 12,983, and in 1863 it was only 2,563, with a probable increase of at least 25,000 inhabitants. It will be thus seen that the ordinary relation of births, marriages, and deaths, had become altogether deranged during those three years, in consequence, doubtless, of war influences. The number of deaths in the State in 1863 largely exceeded that of any previous year, as is shown in the following table:

	1863.	1862.	1861.	1860.	1859.
Deaths.....	27,751	22,093	24,085	23,063	20,976
Stillborn.....	908	974	1,017	1,062	789

This increase was of course owing to the war. The number of male largely exceeds the number of female deaths. In 1863 it was 109 males to 100 females, which is a very unusual excess for any country. Previous to 1860 the proportion had been about 100 males to 101 fe-

males. The average of the twelve years ending in 1863, was one death to 52 persons living. In 1863 it was one to 45 persons. The deaths in 1863 were distributed rather uniformly through the catalogue of diseases. There was, however, considerable increase of deaths from dysentery, diarrhoea, and diphtheria. The most fatal disease was consumption, which carried off 4,667 persons, being 398 more than in 1862. A general view of the geographical distribution of the more important classes of diseases shows that miasmatic diseases have a marked predominance in the interior counties. Diseases of the digestive organs and bowels are distributed over the State apparently with no geographical distinctions. For diseases of the respiratory organs the most fatal vicinity is Barnstable County, and next Nantucket and Dukes, Hampden, Plymouth, Essex, Berkshire, Bristol, Hampshire, Middlesex, Franklin, Worcester, Norfolk, Suffolk. While Suffolk County is more exposed to acute diseases of the lungs, in tubercular diseases it holds a more favorable position, the series being: Hampden, Franklin, Worcester, Norfolk, Hampshire, Barnstable, Middlesex, Suffolk, Nantucket and Dukes, Essex, Bristol, Plymouth. In developmental diseases, the county of Franklin stands at the head of exemptions, while Hampden, its neighbor, is least exempt. Compared with the number of inhabitants, there was one death in 1,636 in Barnstable, and one in 452 in Hampden, the average for the State being one in 794. In general, the sthenic diseases, characterized by inflammation or fever, prevail more in the interior and elevated lands than on the seaboard; while those of the asthenic type are found in largest proportion in the lowland counties.

The report of the Liquor Commissioner for 1865, shows that in most of the towns of the State supplied with liquors from the State agency, there has been more care manifested in the appointment of the agent and the regulation of the agencies than in former years. The amount of sales from September 30, 1864, to October 1, 1865, including analyzation and charges for trucking and package, was \$239,714.25; commissions \$14,504.44; total \$254,218.69. The office and travelling expenses amounted to \$8,345.23, and the profits of the commissioner to \$6,159.21. A conflict has recently arisen between the liquor dealers and the State, on the question whether the former are not protected against prohibitory State legislation, by having taken out a license to sell under the internal revenue act of the United States. The Supreme Court of Massachusetts decided that they were not, and the question has been carried before the Supreme Court of the United States.

The annual political canvass commenced with the meeting of the Republican convention at Worcester, on September, 14th. Gov. Andrew having declined, after five years' service in the executive chair, to be again a candidate, the Hon. Alexander H. Bullock, late Speaker

of the House of Representatives, was nominated in his place. A special series of resolutions were unanimously adopted, declaring "that in the death of Richard Cobden, late a member of the British House of Commons, we feel that our country has lost one of its most earnest and devoted friends, and we mourn his loss as that of a great benefactor of the human race," expressing joy that he, having done so much in our great cause, had lived long enough to be assured of its certain and glorious triumph; and recognizing how much we owe to his coadjutor, John Bright, who stood as a fearless friend of our country and its cause. Among the regular resolutions adopted were those expressing confidence in President Johnson, agreeing with him that treason is the greatest of crimes, and deserves condign punishment; and the following:

Resolved, That the entire pacification of the country and the restoration of order is an object of the first importance, and one which requires the exercise of the most deliberate and cautious wisdom, in order that there may be no necessity of retracing our steps; and we agree with the Republicans of Pennsylvania, who, in their recent State convention, declared that "the people lately in rebellion cannot be safely intrusted with the political rights which they forfeited by their treason, until they have proved their acceptance of the results of the war by incorporating them in constitutional provisions, and securing to all within their borders 'the inalienable right of life, liberty, and the pursuit of happiness.'" And we call upon Congress, before whom must speedily come the whole question of reorganizing the Southern communities, to see to it that the loyal people, white or black, shall have the most perfect guarantees for safety before any final steps are taken toward the readmission of the revolted people of the South to their forfeited rights.

Resolved, That we stand by the pledge given by the convention which nominated Lincoln and Johnson in 1864, and will not only "maintain the acts and proclamations by which the Government in self-defence has aimed a death-blow at the gigantic evil" of slavery, but will continue to ask for such amendments of the Constitution as will prohibit the existence of that institution in every part of the country; that we claim that no slaveholding constitution, law, or custom broken up or placed at the mercy of the Government by the act of rebellion, shall be repaired or reinstated for the purpose or with the tendency of practically reenslaving the enfranchised blacks, and leaving loyal men under the control of rebel power. And we warn the people that the purpose and intent of the party which plunged the country into war in 1860 and declared it a failure in 1864, is to sacrifice all which has been secured to liberty by a four years' contest, by repudiating its former demands for universal suffrage, and all for the sake of place and power.

Resolved, That so long as any important political questions growing out of the war remain unadjusted, no part of the powers of the Government can be safely committed to any political party composed of Southern men who were lately rebels in arms and Northern men who in national convention, only a year ago, declared that "after four years of failure to restore the Union by the experiment of war, during which, under the pretence of military necessity, a war power higher than the Constitution, the Constitution itself has been disregarded in every part, and public and private right alike trodden down, and the material prosperity of the country essentially impaired, justice, humanity, liberty, and the public welfare demand that immediate efforts be

made for a cessation of hostilities." And further, resolved, that no confidence ought to be placed in the professions of an organization that declared the necessary protection of the polls from the assaults of ruffians and traitors to be "a shameful violation of the Constitution," which ought to be "held as revolutionary and resisted," and that now seeks to reinstate itself in power by nominating soldiers and provost marshals, and passing resolutions of confidence in a Republican administration.

Resolved, That we have no theories to promulgate in relation to the right of suffrage. But as a practical question we declare that so long as the grand issues of the day are the maintenance of the Government, the completed integrity of the Union, the preservation of the national credit and the national faith, and the extirpation of slavery, no test can be made or encouraged which will admit to the elective franchise rebel soldiers and traitorous politicians, and at the same time will exclude loyal men of equal intelligence, thousands of whom have borne arms and shed their blood in the nation's defence, and whose votes may be indispensable hereafter, as President Lincoln said, in his letter to Gov. Hahn, of Louisiana, "to keep the jewel of liberty in the family of freedom." Such tests cannot stand the scrutiny of the loyal American people. If incorporated into the new constitutions of the Southern States, Congress should rectify the abuse and maintain the public faith toward the freedmen, while it provides for the peace, solvency, and security of the country.

The Democratic committee met at Worcester, on September 28th, and nominated for Governor, Gen. Darius N. Couch. Among the resolutions adopted, were the following:

Resolved, That the people regard the subordination of military to civil rule, the restoration of the authority of the courts, with trial by jury, and of the writ of *habeas corpus*, an economical administration of the Government, and the recognition of the equality of the States, as essential to the peace and well-being of the nation; and all efforts to force any rule of suffrage upon any State against the will of the people thereof are subversive of the principles of our Government.

Resolved, That we recognize the obligations by which the whole resources of the country are pledged to the payment of the public debt; and that we believe the burden of the debt should be borne equally by all classes of the people, and the whole property of the country, real and personal, should be subject to all needful regulations; but we do not believe in a system of taxation which places the burden of the debt upon the shoulders of the producing classes.

Resolved, That in order that the public debt may more justly and easily be met, we earnestly desire the speedy restoration of all the States to their proper position in the Union, so that a standing army and its expense may be avoided, and the industry of the whole country have every advantage, and its wealth thereby be rapidly increased.

Resolved, That in the plan of President Johnson to restore the States lately in rebellion to their proper position in the Union, leaving each State to regulate the question of suffrage for itself, "a power the people of the several States comprising the Federal Union have rightly exercised from the origin of the Government to the present time," we recognize a just appreciation of the Constitutional relations of the several States to the Federal Government, and that enlarged statesmanship which looks to the permanent peace and happiness of a great people; and in the prosecution of that plan we pledge to him our vigorous and hearty support.

The election took place on November 6th, with the following result for Governor:

A. H. Bullock, Republican.....	69,913
D. N. Couch, Democrat.....	21,245
Majority for Bullock.....	48,667

The following was the result of the election for members of the Legislature:

	Senate.	House.	Joint ballot.
Republicans	89	221	260
Democrats	1	19	20
Republican majority,.....	88	202	240

An election was also held in the Sixth Congressional district to fill a vacancy occasioned by the resignation of D. W. Gooch, member elect of the Thirty-ninth Congress. Gen. N. P. Banks, Republican, was returned by 8,128 votes to 1,988 for Thomas J. Greenwood, Democrat.

McALLISTER, HON. MATTHEW HALL, an American jurist and statesman, born in Savannah, Geo., November 26, 1800, died at San Francisco, Cal., December 19, 1865. He was educated at Princeton College, New Jersey, and bred to the law, in which profession for three generations members of his family have achieved distinction. In 1827 he received from President John Quincy Adams the appointment of United States District Attorney for the State of Georgia, at a time when energy and legal ability were requisite to adjust the threatened difficulties, on account of her Indian lands, between Georgia and the General Government. This post had been previously held by his father, under the appointment of General Washington. For many years Judge McAllister was a resident of Savannah, where he was distinguished as an able lawyer and an influential political leader; in the first capacity he evinced the generosity of his heart by invariably refusing to plead against the life of a fellow-creature, always preferring at a sacrifice to support the cause of the defence; and in the latter capacity as a politician, he was an unflinching advocate for the Union. When, in 1832, the attempt was made to engraft the doctrines of nullification upon the policy of the South, he boldly ranged himself with the defenders of the Union and the Constitution, and in the heated discussions of that period exhibited a breadth of knowledge, a logical power, and a fervid eloquence which soon marked him for a popular leader. He was for some years Mayor of Savannah, and in that capacity won for himself an honorable renown for his maintenance of the rights of the humble and lowly. Andrew Marshall, a slave, but a man of extraordinary talent, piety, and eloquence, was the pastor of a colored Baptist Church in the city, and as such was permitted by Mayor McAllister to exercise his calling, though prohibited by a local law from doing so, and his right to preach was defended by the Mayor before a civil tribunal with such effect that he was never subsequently molested. For these deeds of kindness the people of color in Savannah were accustomed for years to pray publicly for Mr. McAllister in their churches. At the age

of thirty-five he was one of the most prominent and influential members of the Legislature of Georgia, and subsequently, for five successive years, represented Savannah in the State Senate, during which time, in the face of a vigorous and persistent opposition, he effected a radical and most beneficial change in the judicial system of that State, by the establishment of the Court for the Correction of Errors. In 1845 he became the Democratic candidate for the governorship of Georgia, and, though his party were in a hopeless minority, such was his personal popularity that he was defeated only by a small vote, and, three years afterwards, represented his native State, as one of the delegates at large, in the National Democratic Convention which nominated General Cass for the Presidency. On the discovery of the mineral resources of the Pacific, Mr. McAllister, at the age of fifty, with a family consisting of a wife and six children, some of whom were still dependent upon his personal exertions, courageously abandoned professional and political preferment, to venture his fortunes amid the hardships and unparalleled energies of that distant coast.

In 1855 he received from President Franklin Pierce the appointment of United States Circuit Judge for the State of California. Titles and claims were in a chaotic state throughout that wealthy country. Mexican and English law conflicted at many points; the deeds and boundaries of estates were exposed to every variety of trespass and chicanery; mines of untold wealth, the stoppage of which for a single day involved thousands of dollars, were subject to his injunction and adjudication; and the industry and fortunes of innumerable families were dependent upon his firmness and legal ability. His record speaks for itself; his decisions were reaffirmed and sustained at Washington; and thus, much of the prosperity and happiness of California is due to the labors and honesty of Judge McAllister, the first United States Circuit Judge of the Pacific Coast. His opinions have been published by one of his sons. During his Judgeship there arose the noted struggle between the citizens of San Francisco and the State Courts; but when an appeal was made to his authority, and the Vigilance Committee had become exaggerated beyond the intention of its originators, and continued to exist alone through fear of the consequences from such a usurpation of authority, it was disbanded by the judicious firmness of Judge McAllister, who was courageously supported in his enforcement of respect for the United States authority, by Admiral Farragut, then Commander Farragut of the Navy Yard at Mare Island, California. Law and order were reestablished, and those who were violent against the action of Judge McAllister became his firm admirers.

Judge McAllister received from Columbia College, New York, the honorary degree of Doctor of Laws at the same time in which it

was conferred upon his brother-in-law, the late Dr. John W. Francis, of New York. During his residence in California he contributed largely toward the erection of a church edifice in San Francisco, as he had previously cooperated in the establishment of several churches in his native State. Failing health compelled him to resign his position as Circuit Judge in 1862, and from that time till his death he remained in private life. Of Judge McAllister's intellectual and moral qualities, it may be generally observed that he possessed in happy combination the shrewd practical sense, the keen analytical power, and the strong moral feeling which characterized his Scottish ancestry, and the fervid imagination and the chivalrous honor which grow out of aristocratic systems and ripen under tropical skies. His learning was both extensive and varied; his style, whether in speaking or in writing, clear and rich; and his language apt and precise. His manners were of the old school, so courtly and so gentle that they won for him affection and commanded for him respect. He was kind and generous to all with whom he came in contact; and young practitioners especially, who in their early struggles are often checked and wounded by the frosty patronage, the trampling jealousy, or the stern severity of their seniors, ever found in him a discriminating adviser and a sympathizing friend. His published works were few—fewer than they should have been, with his high intellectual power and his graceful and elegant style. A "Eulogy on President Jackson," and a volume of his legal opinions published by one of his sons, are the principal monuments which remain of his intellectual labors and his untiring mental industry.

McCARTEE, Rev. ROBERT, D. D., an American Presbyterian clergyman, born in the city of New York, September 30, 1791, died at Yonkers, N. Y., March 12, 1865. His family were of Scotch origin, and his father was a ruling elder in the Scots Presbyterian Church of which Dr. John M. Mason was the distinguished pastor. Young McCartee, after a very thorough course of preparation, entered Columbia College, and graduated in the class of 1808, and leaving college commenced the study of law, and was in due time admitted to the New York bar, where his intellectual and social qualities, his close application to legal studies, and his graceful eloquence, soon won him reputation, and would in a few years have given him a leading position among the profession. After two or three years of practice, however, having become a professor of religion, he felt called to give his talents and his life to the work of the ministry, and accordingly entered the Theological Seminary of the Associate Reformed Church in the city of New York, at the head of which was his pastor, the Rev. John M. Mason, D. D., then in the zenith of his great reputation. He was licensed to preach in April, 1816, and received calls from numerous

vacant churches to settle as their pastor. He finally accepted that of the Old Scots Church, in Spruce Street, Philadelphia. He entered upon his labors there in the autumn of 1816, but was not ordained and installed as pastor till May, 1817. Soon after his settlement he was married to Miss Jessie, eldest daughter of the celebrated Divie Bethune. His labors in connection with the Spruce Street Church were abundant and very successful. The church, which at his coming was weak in numbers was greatly increased and strengthened, and the congregation filled the house to overflowing. The prejudices of the older members were, however, very strong, and their adherence to old habits and forms so strenuous, that the young pastor found his position one of great discomfort, and he resigned his charge on the 21st of April, 1821. He had expected to remove to Baltimore on leaving Philadelphia, but receiving an urgent call from the Irish Presbyterian Church, then worshipping in Orange Street, New York, he accepted it, and was installed as its pastor in 1822. The church was at that time composed of only about thirty members, mostly emigrants from Ireland, and its house of worship was badly located, and in every respect unattractive. By his strenuous efforts and influence a valuable and pleasant site was obtained in Canal Street, on favorable terms, and a new edifice of ample dimensions erected upon it. Here Mr. McCartee soon gathered one of the largest congregations in the city, and in a few years had a communing membership numbering more than one thousand names. From being the feeblest society in New York, his church became one of the strongest and most influential in the Presbyterian denomination. To this church Dr. McCartee (he received the degree of D. D. from Columbia College in 1831) sustained quite other relations than those of the pastors of the city generally. While laboring constantly and indefatigably as preacher and pastor, he was also the adviser, the legal counsellor, and informally the magistrate of his congregation. The troubles, difficulties, and anxieties of even the humblest and most timid were freely unbosomed to him, and his counsel, sympathy, and wise decision, most heartily bestowed. The burden and responsibility of such a position in a congregation so large, forbade his indulgence in the pursuits of scholarship, or his devotion of any considerable time to belles-lettres studies for which he had a strong inclination, and eventually made such inroads upon his remarkably vigorous constitution as to compel him to seek, in 1836, a less laborious and exciting sphere of labor. In that year he became pastor of a small Presbyterian church at Port Carbon, Schuylkill County, Penn., where, in addition to other and more directly pastoral labors, he gave great attention to the intellectual improvement of the miners of that region, and organized a Lyceum of Natural History among them, to incite them to the study of

the sciences bearing on their own pursuits. In the spring of 1840, with renovated health, he accepted a call from the Presbyterian Church of Goshen, Orange County, N. Y., and again assumed his appropriate position as a leader and religious teacher. Here he had a long and vigorous contest, at first almost single-handed, against those whom he deemed as violating the law of the Sabbath. At first many of his old friends were alienated, but in the end he carried his point, and they acknowledged the justice and manliness of his course. In 1849 he removed to Newburgh, to become the pastor of the Union Presbyterian Church, and while residing there (in 1855) lost his excellent and devoted wife. In 1856 he was recalled to New York, to take charge of the Associate Reformed Church in Twenty-fifth Street, which was to be united with the Westminster Church in Twenty-second Street. This union was happily effected, the heavy debt which oppressed the church removed by his earnest efforts, and then, though with a mind still vigorous and active, but with his physical powers impaired by disease, he retired from pastoral duties in 1862, and removed to Yonkers, where the brief remainder of his days was passed.

McCLURE, ALEXANDER WILSON, D. D., a clergyman of the Reformed Dutch Church, and author, born in Boston, Mass., in 1808, died at Canonsburg, Pa., September 20, 1865. He studied in the Latin School of Boston, and at the age of fifteen years entered Yale College. After spending two years at New Haven, his relations were transferred to Amherst College, where he was graduated in 1827. During the last term of his senior year, there was a powerful revival of religion in college, of which he was a very marked subject. From this time forward he looked to the ministry with singleness of purpose, never taking into consideration any other pursuit in life. He immediately entered upon his theological studies at the Andover Theological Seminary, then conducted by Drs. Porter, Woods, and Stuart, whom he ever held in great honor. He graduated at Andover in 1830. After preaching at Malden, Mass., two years, he was ordained there in 1832. A powerful revival of religion during these two years saved that church from extinction. He continued pastor there eleven years, during which time there were many conversions, adding greatly to the strength of the church. After the dissolution of his pastoral relation to the Malden church, he became acting pastor of the Presbyterian church in St. Augustine, Florida. At that time there was a military post established there, embracing two hundred or three hundred soldiers, together with the general and his staff. He labored with great assiduity among the soldiers, as well as in a general way in the cause of temperance, until the officer in charge told him that the guard-house, which had been generally crowded with occupants, of late had little occasion to be used. He persevered in these labors with great benefit to

the community, under obstacles and discouragements that would almost have appalled any other man. From thence he returned to Boston, and soon after commenced the publication of the "Christian Observatory," which he edited more than three years. He assisted also three years in conducting the "Puritan Recorder," then edited by Dr. Parsons Cooke. About this time he was recalled to his own church in Malden, where he remained a few years, and was then installed over the Dutch Reformed church in Grand Street, Jersey City. He remained pastor of that church three years, and on his dismissal, at once entered upon the duties of Secretary of the American and Foreign Christian Union, in place of Rev. Dr. Baird, resigned. In the first year of his secretaryship he was appointed chaplain at Rome. At the anniversaries of the great benevolent societies in London and Paris, he represented his own society in public addresses. He spent much time in Paris in making arrangements and collecting subscriptions for erecting a chapel there. After his return to the United States he occupied himself very earnestly in measures to secure the erection of the Paris chapel. This object was happily effected after having been talked of in vain by good men for more than thirty years. The following spring, March, 1859, he was suddenly attacked by the asthma with great violence, at Rutland, Vermont, on a journey, which soon disabled him from active labors, and from which he never fully recovered. Dr. McClure published a large number of works during his ministry, among which are the following: A little tract called the "Life Boat," which had a wide circulation—it was called "An Allegory;" "Four Lectures on Ultra Universalism," three editions, two volumes of the "Lives of the Chief Fathers of New-England," in the series published by the Mass. S. S. Society, and "Translators Reviewed," giving a biographical sketch of each translator concerned in King James' version. This has been adopted by the Board of Publication of the Reformed Dutch Church. Dr. McClure was a man of extensive learning, a sound divine, and warm and faithful in his friendships.

MEDILL, Hon. WILLIAM, ex-Governor of Ohio, born in Newcastle County, Delaware, in 1805, died at Lancaster, Ohio, September 2, 1865. He received a thorough academical education, studied law, and having removed to Ohio, was admitted to the bar of that State in 1832. He was soon after elected to the State Legislature, and gained some distinction as one of the Democratic leaders; was twice elected Speaker, and was a Representative in Congress from that State from 1839 to 1843. Under the administration of President Polk he was appointed first Assistant Postmaster-General, and subsequently held the office of Commissioner of Indian Affairs, the duties of which position he discharged with great acceptability. When delegates were elected to the Constitutional

Convention, by which the present constitution of Ohio was framed, Mr. Medill was elected as one of the delegates from Fairfield County. Of the Constitutional Convention he was chosen the presiding officer, and he received the award of the members thereof as a presiding officer of rare excellence. At the first election under the present constitution he was elected Lieutenant-Governor by the Democratic party, and succeeded to the Governorship by reason of Gov. Wood having resigned the Governorship and accepted the consulship to Valparaiso. In October, 1853, Mr. Medill was elected Governor, and served out the term of his office. Under President Buchanan he held the position of Comptroller of the Treasury. The duties of every trust reposed in Mr. Medill were discharged with ability and strict fidelity. In his public and private relations he was a man of great purity of character. In his politics he was a Democrat, true and unflinching.

MEEK, Hon. ALEXANDER BEAUFORT, an eminent lawyer and author, born in South Carolina in 1814, died at Columbus, Miss., November 30, 1865. His father, a physician and clergyman of the Methodist Church, removed with his family to Alabama in 1819 and settled at Tuscaloosa. The son was graduated at the University of Alabama, and was admitted to the bar in 1835, where his logic, legal research, wit, and eloquence gave him at once a place in the front rank of his legal compeers. He served in 1836 in the Seminole war, and was soon after appointed Attorney-General of his State, which office he abandoned for an editorial position, as more in consonance with the literary bent of his mind. In 1842 he became Judge of the County Court of Tuscaloosa, and during his term of office published a useful "Digest" of the laws of the State. In 1845 he held the post of law clerk, in the office of the Solicitor of the Treasury at Washington, and in 1846 was appointed United States District Attorney for Southern Alabama, which post he held for four years, the next five being devoted to editorial duties, during which time he was elected, in 1855, to the State Legislature, where he originated and carried out the Free School system of the State. In 1854 he was appointed Judge of Probate for Mobile County, from which office he was ousted at the next election by the Know-Nothing party, who then held the reins of power in Mobile. In 1856 he was a Democratic Presidential Elector, and also in 1860, when he supported Mr. Breckinridge. In 1859 he was reelected to the Legislature, and chosen Speaker of that body, an office which he filled with a grace and dignity and thorough knowledge of parliamentary usages which can never be forgotten by his associates. For years prior to his death, however, his attention was mainly devoted to literary pursuits, and in 1855 he published "Red Eagle," an historic poem of the Creek war, which was soon followed by "Songs of the South," and "Romantic Passages in South-

western History," a prose volume for which his profound interest in the subject and the researches of early years furnished him abundant materials, which were clothed with all the beauties of his diction and the graces of his poetic pen. These works attained a widespread reputation at home and abroad, being highly lauded by the English press. His next undertaking was a "History of Alabama," for which he was arranging and compiling the abundant materials at his disposal, but unfortunately the hand of death prevented the completion of his greatest work, and the historic annals of his State have suffered an irreparable loss. The personal appearance of Judge Meek was very striking, and would arrest attention in any concourse. Rising to the commanding height of six feet four inches, he towered above the heads of common men, and it was a favorite jest among his friends that although "Meek, he was by no means lowly." His eyes were blue, his complexion florid, his forehead high and massive, features good, and when lit up by his genial smile, remarkably attractive. His conversational powers were brilliant, his fund of anecdote exhaustless, his wit free and flashing, and his knowledge of men and manners and literature thorough. Judge Meek was an accomplished and skillful chess-player, and achieved much distinction in competition with some of the most eminent chess-players both in this country and in Europe.

METALS, SOME POINTS IN THE WORKING OF.
Iron of Remarkable Purity.—Dr. Stahlschmidt has obtained with better success than other chemists the nitride of iron, by means of passing ammoniacal gas through a tube heated to dull redness, and containing the sublimed protochloride of that metal. Among the products of the reaction is the new nitride, NFe , which remains in the tube.

By decomposing with hydrogen the compound named, the author succeeded in separating iron in a state of very remarkable purity. He describes the metal in this condition as "of a silver-white color, extraordinarily ductile, and so soft that it may with ease be cut with a knife. It oxidizes in the air as readily as ordinary iron, and in moist air more readily. It possesses the property of condensing water on its surface when in contact with atmospheric air." Its specific gravity is as low as 6.03. It dissolves in acids without leaving the slightest residue; and it appears to be purer than any iron obtained by any other method.

Exceedingly Hard Iron.—Some years ago, M. Gaudin found that by heating iron, tolerably free from carbon, with a small quantity of boron and to a very high temperature, he obtained a product which could not be forged, but which possessed extraordinary hardness. He has now found that an equally hard iron may be produced by adding to ordinary cast-iron in fusion some phosphate of iron and peroxide of manganese. The product cannot be forged,

but it casts easily; and it is therefore applicable to the construction of such machines or parts of them as require extreme hardness, rather than tenacity. The metal so produced is, moreover, singularly sonorous; and M. Gaudin has proposed it as a material for bells.

Cast-Iron and Steel hardened with Tungsten.—M. Gaudin finds that a metal still harder than that just referred to, is produced by addition of tungsten to the materials for cast-iron. He states that, as a material for cutting rocks, this tungsten iron surpasses every thing previously known; and that crystals of it will cut glass as readily as the diamond.

A statement appears in the *Mechanics' Magazine*, September 8, 1865, to the effect that the tungsten steel so much talked of a few years since, and in the processes for which Mr. Mushet especially was largely interested (*see IRON and STEEL, CYCLOPEDIA*, 1863), proves to have no sufficient superiority in value to warrant its production. M. Le Guen, however, in a note to the French Academy, so late as November 7, 1864, reasserts as the result of his experiments that the addition of tungsten to steel, up to 2½ per cent., greatly increases its tenacity; though the effect is less when the iron is cemented with wood charcoal than when with coke.

In regard to the beneficial effects of the addition of tungsten to cast-iron, greater unanimity of opinion exists; and on this point M. Le Guen still maintains his former views. He states that results of experiments lately made at the Marine Foundry at Nevers go to show that cast-iron has its tenacity improved to the extent of about *one-sixth* by the addition of 2 per cent. of tungsten. As the metal itself has not been hitherto available in sufficient quantities, the addition is made in form of the mineral *wolfram*.

Economical Production of Metallic Tungsten.—Up to the present time, tungsten had been isolated only in small quantities, or in form of a highly infusible powder, or otherwise unsuitable for use. It is now stated that a Swedish metallurgist has discovered a method of reducing tungsten, by which he obtains it at once in the state of fusion, and that ingots of the pure metal, weighing several pounds, have been on exhibition at Stockholm. As obtained by the new process, tungsten does not cost more than a few shillings per pound. If really obtainable so cheaply, and providing also it can be worked, a metal of so great density, and which bears exposure to so intense heat without undergoing fusion, is almost sure to prove of very great value in certain of the arts. While the specific gravity of platinum is 21.5, and that of gold about 19.4, that of tungsten is not less than 17.5; so that this last takes rank among the heaviest known metals.

Iron from Titaniferous Ores.—The metal recently obtained at West Bromwich and elsewhere, England, by the smelting of a titaniferous iron-sand brought from New Zealand, is spoken of as an "almost unprecedentedly fine quality of

iron." It can be puddled in one-half the time commonly occupied, and the loss is no more than one-fourth that usually taking place. The good qualities of the iron so obtained are owing to its freedom from both sulphur and phosphorus, as well as to its containing titanium. This iron is said completely to resist the action of chlorhydric acid.

It being admitted that a small quantity of titanium improves both iron and steel, attention is beginning to be directed toward the titaniferous iron, or "ilmenite," existing in so vast quantities in Sweden, Norway, Russia, Canada, and elsewhere, and which, while it is to be had much more cheaply than the iron-sand, holds forty per cent. of an oxide of titanium against but from nine to thirteen per cent. in the latter. There are difficulties in the way of smelting an ore containing so much titanium, but it is proposed to mix the titaniferous, in small proportions, with the ordinary ores.—*Mechanics' Magazine*, September, 1865.

Gases contained in Molten Iron and Steel.—It has long been known that a disengagement of combustible gases often, if not always, occurs at the moment of pouring molten iron or steel into the moulds. This had been supposed due to the decomposition of the moisture contained in the sand of the mould; but M. Cailletet, in a note to the Academy of Sciences, November 13, 1865, presents facts which disprove such supposition. His experiments leave no doubt that combustible gases are liberated from molten iron during its cooling, and when the iron has not come in contact with sand or other body containing moisture; and those gases he finds to consist mainly of carbonic oxide and hydrogen.

The author succeeded best in his experiments by use of a conical vessel, without bottom, but having attached to its upper part an apparatus for collecting the gases. This vessel, previously heated to redness to free it of moisture, is then plunged down into the molten metal; and, its temperature being still lower than that of such mass, a portion of the latter entering its interior rapidly cools there, and in so doing evolves in all cases the gases which have been named. With these is always mixed some nitrogen, coming in part or wholly from air in the apparatus.

In case of an English gray cast-iron, smelted with coke, the gases obtained consisted, in 100 parts, of carbonic oxide 57.9, hydrogen 33.7, and nitrogen 8.4; and in case of French iron, smelted with charcoal, of carbonic oxide 49.2, hydrogen 38.6, and nitrogen 12.2. M. Cailletet could not succeed in collecting, by the same method, the gases evolved by molten steel, the temperature being so high as instantly to liquefy the vessel used. Collecting those gases, however, by another method, he found them to consist, in like manner, chiefly of carbonic oxide and hydrogen.—*Mechanics' Magazine*, December 15, 1865.

Reduction of Certain Metals by Zinc.—M.

Poumerède has employed the vapor of zinc as a reducing agent, and by use of it has obtained a number of interesting products. By this means, for example, he has procured in metallic form some of the more difficultly reducible of the heavy metals, as chromium, cobalt, nickel, and manganese, and with ease especially from their chlorides or fluorides. M. Peligot exhibited to the Academy of Sciences, March 28, 1864, specimens of nickel and cobalt thus prepared, and also magnificent crystals of iron.

New Smelting Furnace for Copper, etc.—Gen. Raschette, director of the works of Prince Demidoff, in view of the fact that, in the ordinary furnaces with a circular interior, the ores, metals, combustible matters, etc., descend less rapidly about the sides than in the middle—an inconvenience which several engineers have proposed to remedy by making the cavity elliptical—has adopted, instead, the oblong form. He makes the throat quite large, and the height of the furnace moderate, that for working of copper ores being thirteen feet. The fire is placed in the foundations, and two rows of blast-pipes, alternating upon the two long faces of the interior, throw in the blast. Three furnaces of this sort are in operation in the department of the Ural, one being at Perm. Great economy of fuel appears thus to be secured, whilst the slag contains little copper, and the furnaces last longer than the old ones of prismatic form. M. Raschette is, however, probably too sanguine in supposing, as it appears he does, that his form of furnace is the best for all possible ores, and for the extraction of all metals—iron, copper, gold, silver, lead, tin, zinc, platinum, etc.

Utilization of Copper Smoke.—During the last fifty years, several attempts have been made in England, and it appears also on the Continent, to abate the nuisance of the copper smoke given off from the works in which the ores of that metal are calcined, and that by means of utilizing the chief deleterious products—the sulphurous gases, including mainly sulphurous acid—resulting from the sulphur of the ore; but, up to a recent period, these attempts had all proved ineffectual. The smoke from the great copper-smelting establishments of Swansea has for years had the effect of destroying vegetation for many miles over the country around; and the copper-smelters of that district have been in the habit of paying large sums as compensation for the damage thus done.

The roasting of the ores has hitherto been performed either in kilns, grate-furnaces, or muffles. In the first case, the stamped ores are previously mixed with clay or loam, formed into balls and dried. When muffles are used, the pounded pyrites is spread on plates of fire-clay, and requires to be kept continually stirred, to expose fresh surfaces to the air. It appears that no method proposed in connection with these processes has yet practically served the desired purposes of abstracting from the fur-

nace smoke the sulphurous gases, and securing economically their conversion into sulphuric acid.

Messrs. Vivian and Sons, the eminent copper-smelters of Swansea, have of late years been making earnest attempts toward the utilization of the sulphurous gases of the smoke from their works. To this end they have, during the year 1865, examined the new furnace invented by M. Gerstenhöfer, a German chemist, and have purchased his patent for the sum of £4,000. Near the close of the year Mr. Thomas Bell brought forward another invention for the purpose, which excited some interest; and the same firm has invited him to test the practical working of his method. Mr. Peter Spence, who is at the head of the Pendleton Alum Works, probably the largest of the kind in the world, has meanwhile had in operation during three years past a form of copper-ore calcining furnace, devised by him with a view to the utilization of the copper smoke, and for which he claims, over M. Gerstenhöfer's, the merit at least that it does not necessitate a previous pulverizing of the ores.

The value of the sulphur wasted in the copper smoke at Swansea alone has been estimated at £250,000 per annum. But Mr. Spence, taking the amount of ores there worked at about 5,000 tons weekly, and the proportion of sulphur in them as averaging 24 to 28 per cent., finds this equivalent to 3,300 tons weekly of brown oil of vitriol, and to a yearly value, at present prices, of more than £500,000. The quantity of acid named would go far toward meeting the requirements of the staple commercial manufactures of the country, and at a time when so many parts of the world are being ransacked for ores of sulphur. It is now confidently expected that, by means of Spence's or of some other form of smoke-collecting furnace, the sulphur hitherto worse than wasted at the copper works, will hereafter be made to yield to the smelters instead a handsome return in profits.

Spence's Copper-Ore Calcining Furnace.—This furnace is of about fifty feet length from end to end, consisting of two chambers one above the other, separated by a thin partition of fire-brick, and between which no communication exists. The lower chamber, having the fire-place at one end, and opening at the other into the chimney, alone contains and discharges the products of combustion. In each side of the upper or ore-chamber are six apertures, respectively about eight feet apart, through which the workmen can, at the proper intervals, move the ores forward from the less to the more highly heated end of the chamber, these apertures being ordinarily closed with doors. An opening at one end of this chamber also admits continually, while the furnace is in action, a current of air; and this, taking up in its course, the sulphurous and other gases disengaged during calcining by the ores, escapes loaded with these at the opposite end into

sulphuric-acid chambers. Fresh batches of ore, about 1,000 lbs. weight, are introduced every two hours at the end of the ore-chamber farthest from the fire-place (and so the less heated), and are evenly spread out on its floor; and, after the first one or more charges have been put in, these are, of course, just previously raked forward eight feet each, to make room for the new one; the doors are then closed, and the whole is left undisturbed until the time again for a new charge. The first batch put in is withdrawn at the end of twelve hours; and thereafter one is withdrawn and one introduced at the end of every two hours. The action of the furnace is thus unintermitting, and it calcines about six tons of ore in each twenty-four hours. The ores being exposed in their transit to a gradually increasing temperature, clotting is entirely prevented; and their sulphur, combining with oxygen, forms *sulphurous acid*, to be subsequently converted into *sulphuric* in the proper chambers and in the usual way.

Mr. Spence states the cost of calcining by his furnace at only 2s. 1½d. per statute ton of ore, which is less than the cost of calcining by the furnaces generally in use; while, further, for every five tons of ore calcined, £9 worth of oil of vitriol is obtained, at a cost of not more than £1, and from constituents which the ordinary furnaces turn to no account. For the three years during which this furnace has been in use, all the sulphuric acid used at Mr. Spence's works, whether at Pendleton or at Goole, have been produced through its agency.—*Mech. Magazine*, October 13, 1865.

Gerstenhöfer's Copper Furnace.—This consists of a rectangular vertical chamber, constructed of fire-brick, and having within it, from above downward, a succession of flat horizontal bars or bearers of the same material, and so arranged that those in any one series do not stand directly over those of the next. The ore, previously finely divided, is admitted in regulated supply between feed-rollers, situated within the roof of the furnace and a little above the uppermost row of bars; and first piling up on these, it gradually flows over and descends upon those below, until, by the time it escapes at the bottom of the furnace, it is supposed to have parted with all its sulphur. Below all the bars is an open space in which a grate of ignited wood or charcoal is kept well supplied till the charge in the furnace is thoroughly fired, but is then withdrawn—the sulphur of the ore afterwards keeping up the combustion. Just above the upper bars are channels in the sides of the furnace, through which escapes the air of the blast or draught—continually thrown in from below—and bearing with it the products of combustion, first, into a chamber in which it deposits the dust from the ores and also arsenious acid, and then into the usual sulphuric-acid chambers. The regulated current of air mechanically thrown in to form the draught, is previously conducted in pipes about the exit channels, and economizes much of the heat of the escap-

ing blast, by taking it up and returning it again into the furnace. The calcined ore falls at last into a space below, from which it can be drawn off into wagons, to be transferred to the next operation.

Among the advantages claimed by the inventor for this furnace, are: the large and continually-renewed surfaces exposed by the finely-divided ore; perfect contact of the draught throughout with the ore; regulation of the supply of ore as required; *do.* of the supply of air, both in reference to the amount of ore, and also for obviating the effect of storms; and finally, the economizing of waste heat of the blast. It has been questioned whether the cost of pulverizing, of the blast, and of the necessary attention, may not exceed the value of the acid obtained. M. Gerstenhöfer states, however, that at the Royal Saxon Sulphuric-Acid Works this furnace is now exclusively employed for the roasting of the pyrites used, and with success.—*Mech. Magazine*, October 6, 1865, etc.

Saving from Slag of Copper Furnaces.—Mr. Spence finds, that besides the loss of sulphur at the Swansea and other copper works, there has been at the former—in respect to which he has made examination—a rejection of much copper, the slag here containing rarely less than 0.5 per cent. of the metal. He has patented the use of a flux which saves a considerable portion of this copper, the flux being simply the spent shale of the alum manufacture—the residue of the shale of the coal-measures, after the latter has been acted on by sulphuric acid for the production of alum.

Non-metallic Impurities of Refined Copper.—Obviously, metallic impurities in copper must exert considerable influence on the quality of the metal; but of these analysis can already detect the smallest traces. Prof. F. A. Abel (London Chem. Society, March 3, 1864) states that of non-metallic elements oxygen is very generally present, and that it is known to have a marked effect on the quality of the copper containing it. Copper being highly oxidable, and its suboxide to a considerable extent soluble in the fused metal, the latter, as prepared by the ordinary metallurgical processes, can scarcely be free from oxygen.

The author had found the process of ascertaining the quantity of oxygen, by reduction with hydrogen, untrustworthy. He proposes a new one, in which it is only necessary to convert a known weight of copper into its nitrate, by digesting it in an aqueous solution of neutral nitrate of silver: along with reduced silver and soluble nitrate of copper, there is obtained also a quantity of insoluble basic nitrate of copper, and which is proportional to the amount of suboxide that had been present in the metal. The author gives a mode of treating the products obtained with sulphuric acid—the account being too long for insertion in this place—and through which the proportion of suboxide in any sample becomes known.

Kapunda copper, a very pure and free arti-

cle, invariably showed some deterioration from oxygen contained in it, and in amount varying from .12 to .33 of 1 per cent. By prolonged fusion of ordinary copper in a closed crucible, under a layer of charcoal, and allowing the metal to cool out of contact of air, Prof. Abel prepared a copper wholly free of oxygen; and the metal in this condition possessed remarkable toughness. Samples of "dry" copper showed .42 to .50 of 1 per cent of oxygen, corresponding to 4.5 per cent. of suboxide. Prof. Abel treats also of carbon, selenium, and sulphur, as impurities in copper, but of which the amounts are very small.—*Chemical News*, March 12, 1864.

Coppering of Cast-Iron.—M. Dullo presents in *Le Technologiste*, May, 1865, a method of coppering articles of cast-iron, which (as he states) serves to avoid the imperfections and sometimes even failure liable to follow the ordinary processes in case of that metal, while it is easy of practice, and affords with every sort of cast-iron excellent results.

The piece to be coppered is first scoured with chlorhydric acid, with very particular care, freeing it of all oxide, and not touching it afterward with the fingers; and it is then left in slightly acidulated water until the moment of transferring it to the coppering bath. This bath is prepared by dissolving the oxide of copper in chlorhydric acid, in the proportions of 25 grammes (about $\frac{7}{8}$ oz. avoirdupois) of the oxide to 170 grammes (nearly 6 oz. by weight) of the acid, and for every such quantity adding 1 litre (1.76 pints) of a mixture, in equal parts of alcohol and water. The piece of iron, still wet, is plunged in this bath; and after the lapse of some hours it will be found quite equally covered with a thick and strongly adhering layer of copper. If the acid of the bath be either too much concentrated or too dilute, the coppering will not succeed, the iron becoming covered with crystals of chloride of copper, or the deposit of the metal occurring speedily but in a thin film only. Alcohol, a poor conductor of electricity, affords the means of enfeebling at will the galvanic action in the bath in which, generally, certain metals are to be coated with certain others; so that, up to a certain limit, an increased proportion of alcohol in the mixture retards the deposition and favors an increase of thickness in the coating; though it is not well to dispense with water altogether.

An inconvenience sometimes attending the above process is the deposit, over a thin layer of the copper, of a layer of its chloride, which requires some time to give place to the metal; where haste is important, it may be necessary to remove the piece from the bath, and, with the same precautions as before, to wash it alternately, twice in succession, first with dilute chlorhydric acid and then with soda lye, finally drying in a dry place. Objects coated as above described can be covered again with a coating of iron nearly as white as silver and of

fine appearance, by plunging them in a solution of 10 grammes of chloride of iron in half a litre of alcohol at 60° C., and in contact with metallic zinc.

New Processes for Covering Metals with an Adherent and Brilliant Coating of other Metals.

—The foregoing process may perhaps have been suggested by those of M. Fred. Weil, described in *Le Technologiste*, February, 1865, and also in *Annales de Chimie et de Physique*, for the same year (translated in *Chem. News*, January 5, 1866). In regard to these processes, Prof. Miller, before the British Association in 1865, remarked as follows:

“An extensive branch of industry is now springing up in the improved methods of voltaic deposition of the metals. Weil has, by the use of an alkaline solution of tartrate of copper, contrived to coat iron and steel with a tough closely adherent sheathing of copper, by simply suspending the articles to be coated by means of a wire of zinc in the metallic bath. No battery is required. Lead and tin may in a similar manner be deposited on copper, iron, or steel, if the oxide of tin or of lead be dissolved in a bath of strong solution of caustic soda.”

M. Weil employs baths of salts or oxides of the metals, held in alkaline solution (sodic or potassic), either, as more commonly, by means of inoffensive organic matters which tend to prevent precipitation of oxide by the fixed alkali, such as tartaric acid, glycerine, albumen, etc., or by the excess of the fixed alkali itself; and the deposit is secured, according to difference of the cases, either with or without the coöperation and contact of metallic zinc or lead, and at ordinary temperatures or those less or more elevated.

The most usual coatings, and generally speaking the most valuable, are those of copper and of bronze, and particularly as applied upon iron, cast-iron, and steel. The metals to be operated on do not require a previous coating of foreign conducting matters, as black lead; but they are to be thoroughly cleansed with water acidulated with sulphuric acid to 2° B, the action being continued from 5 to 20 minutes, then washed in plain water, and finished in water made alkaline with soda; then cleaned with a scratch-brush, again washed, and plunged into the copper bath in contact with zinc. For this purpose, it is more economical to suspend simply with zinc wire than to use zinc plates; and the time of immersion may vary, according to the effect sought, from 3 to 72 hours.

A copper solution giving very satisfactory results is formed by dissolving in 10 litres of water 350 grammes of crystallized sulphate of copper, 1,500 *do.* of sodio-potassic tartrate, and 80 *do.* of soda lime, containing from 50 to 60 per cent. of free soda. The solution does not attack iron, cast-iron, or steel, or other metals whose oxides are insoluble in potash and soda. Care is to be taken that the iron or other articles

to be coppered do not touch each other. The coating of copper increases within certain limits with the duration of the immersion, and it adheres firmly; but when it is necessary to fit this for resisting alternations of moisture and dryness or the action of sea-water, additional thickness must be given by employment of a battery, either with an acidulated copper solution or with the special solutions above indicated. In cases in which such additional thickness is not necessary, after sufficiently long immersion in the bath, the liquid is drawn off through a tap, and the coppered articles are washed in water, then cleaned with a scratch-brush, and dried, first in sawdust and then in a stove.

When, after a great number of copperings, the liquids become exhausted, they may be renewed by precipitating the zinc in solution by sulphide of sodium, not in excess, and recharging the solution with sulphate of copper. The incidental ingredients, such as soda, sodio-potassic tartrate, glycerine, etc., serve for an indefinite time. In the second of the accounts above referred to, methods are indicated for keeping the copper solution saturated, or of a given strength, throughout operations conducted on a large scale.

The advantages claimed by the author for his process are: 1, the perfect adherence of the copper deposited on iron, cast-iron, and steel; 2, rapidity, simplicity, and economy; 3, faithful reproduction in the coating of the most delicate details; 4, beauty of the colors and tones secured by deposits of different materials or under different conditions; 5, harmlessness and stability of the solution; 6, the power of repairing a damaged copper or other coating secured by these processes.

Yellow bronzes in copper baths bronze in beautiful tints, and without contact with zinc. The finest tints were furnished by an alloy of copper, 83; zinc, 14; lead, 0.6; tin, 1.3; nickel, 1.1. Iron and other metals immersed in contact with zinc in a copper bath to which is added some stannate of soda, or solution of bichloride of tin with soda, are covered with a true bronze (coating of alloy of copper and tin). The zining of copper or coppered articles is speedily effected by immersing them in a concentrated solution of caustic potash or soda, heated to nearly or quite 100°C.; and in a longer time, when the solution is cold. By adding to such solution a salt of tin or of lead, and heating to from 50° to 100°C., the articles just named, as well as iron, cast-iron, and steel, can (in contact with zinc) be *tinned* or *lead*ed; though the deposit will contain some zinc. To secure a deposit of tin, pure, and of increasing thickness, place in a vessel containing the tin solution a porous vase holding the alkaline lixivium and the metallic zinc; and then, plunging the article to be tinned into the outer vessel, connect it by a conducting wire with the zinc. In tartro-alkaline baths containing cobalt or nickel instead of copper, and heated, articles in the last-

named metal or previously coppered become covered with a white deposit, consisting of an alloy of zinc and cobalt, zinc and nickel, etc.

New Method of Preparing Aluminium.—The method thus far generally employed for the preparation of the new metal, aluminium, has been that originated by M. Deville, at the works of Salyndre, and which in essential features is identical also with that described under the title **MAGNESIUM**, as in use for the separation of the metal named—the magnesian being of course, however, replaced by aluminic chloride in the process. It is quite fully stated in the *Annuaire Encyclopédique* for 1864, and is in fact now generally well known to metallurgists. The general steps involved in it are three—1, the preparatory reduction of sodium; 2, fabrication of the double chloride of aluminium and sodium; 3, reduction of aluminium by reaction of the two materials named, and by aid of heat. Besides the largest item of expense in this method—the cost of preparing the sodium—another source of increased cost in the product exists in the apparently necessary use of the rare mineral *cryolite*, and which contains both the metals involved in the process, as a flux in the final reduction.

M. Basset, however, has lately revived in more successful form the use of zinc, proposed some years since, for the reduction of aluminium. He fuses the chloride of aluminium with excess of zinc; and he states that the results are a chloride of zinc and an alloy of zinc and aluminium, from which latter all the zinc (volatilizable at such temperature) may be driven off at a white heat. It is stated that by this plan the cost of aluminium is likely to be greatly reduced, so that the metal may be made cheap enough for many ordinary mechanical uses.

Mr. Corbelli separates aluminium from clay, by first purifying the latter from foreign matters, then drying, treating with six times its weight of sulphuric acid to remove iron, allowing the clay to settle and drying again, mixing with about twice its weight of prussiate of potash—the quantity of this, however, to be increased or diminished according to the amount of silica in the clay, adding to the mixture common salt to the amount of one and a half times the entire weight, and then heating the whole together in a crucible to white heat. After cooling, the reduced aluminium will be found at the bottom of the crucible. The principal manufacturers at the present time of aluminium, in England, are Messrs. John Bell & Co., of Newcastle.

Supposed Passive State of Metals.—M. W. Heldt has made numerous experiments in connection with the subject of the so-called passive state of metals, or that in which it has for some years past been supposed that certain metals have been rendered insusceptible of being acted on by ordinary chemical agents. He finds that the change actually taking place is

one that is confined merely to the surface of the metals in question—those, namely, the nitrates of which are insoluble in nitric acid; and that the passivity belongs to this insoluble layer only, and does not indicate any particular electro-dynamic state or polarization. It is, in fact, only those metals the nitrates of which are soluble in dilute nitric acid and insoluble in the concentrated acid that present the phenomena of apparent passivity. With copper and tin the insoluble layer is visible to the naked eye; with other metals it may be seen by aid of a lens. Acidulated water easily removes it, and the metal returns to its normal condition: the liquid contains nitric acid and also metallic oxide. If iron that has been rendered inactive be subsequently touched with copper, zinc, or even iron itself, and either in the liquid or after being withdrawn from it, the disengagement of gas recommences, and the chemical action is renewed, and that simply because the protecting coating has been disturbed.

Many other curious results are noted in connection with the subject, for which the reader must be referred to the abstract of M. Heldt's paper, *Chemical News*, November 26, 1864, or to the original, in *Les Mondes*.

METEORS AND METEORITES. Under the first of these terms may be included the familiar and constant phenomenon of the so-called "shooting" or "falling stars," which disappear in the upper atmosphere, and without leaving any discoverable traces of their substance, and also those solitary incandescent bodies—likewise known as *meteors*, in the most specific sense, and as *fire-balls* or *bolides*—which at rarer and irregular intervals make their appearance within our atmosphere, moving in any direction and at various rates of speed, emitting light along their course, in many instances bursting into fragments with an audible report, and sometimes in form of such fragments, or else entire, reaching the earth's surface, perhaps to bury themselves in the soil; while under the second term are to be included the various solid masses thus coming from the regions of space, either unobserved or as visible meteors, and the peculiar and now known characters of which, in respect to structure and composition, decide that they have not been of terrestrial, but of cosmical origin—these bodies being also known as *meteoric stones*, and as *aéroliths* or *aérolites*. That these are all but so many forms of one and the same phenomenon, is now generally admitted, and grounds for the conclusion will appear in course of this article. Many details of the papers from which we collate are excluded by want of space; and the scientific reader, in particular, must be referred to the original articles for the data and trains of reasoning upon which rest many of the results to be stated. Brief notices of some of the observations of the past three years will first be in place.

November Period.—In the year 1863 observa-

tions were made at many points in this country, as at the Naval Observatory, Washington, by Mr. Ferguson and others (see below, *a*); at another locality in the same city by Mr. C. A. Schott and others (*b*); at Haverford College by Prof. S. J. Gummere and others (*c*); at Germantown by Mr. B. V. Marsh (*d*); at the Miami University by Prof. O. N. Stoddard and others (*e*); at Kenyon College (*f*); and also elsewhere—the results at the places indicated being as follows:

(*a*.) Time, night of November 13–14th, 10^h 10^m P. M. to 5^h 7^m A. M.—213 meteors; average of estimated durations of flight, 0.37 seconds.

(*b*.) Same night, 8^h P. M. to 2^h A. M.—107 meteors; average duration in 49 of the instances, 0.41 seconds.

(*c*.) Same night, 10^h 38^m P. M. to 5^h 16^m A. M.—316 meteors; about 200 of these being located upon a chart, the lines indicated a radiation from the sickle in the constellation Leo.

(*d*.) Same night, 1^h to 5^h 20^m A. M.—97 meteors; rate, allowing for time lost in recording, 26 per hour; $\frac{1}{4}$ ths of all from the radiant just given, or from near ϵ Leonis.

(*e*.) Night of 11–12th, 10^h P. M. to 3^h A. M.—105 meteors—67 of them conformable [to the radiant already named]; and night of 12–13th, 10^h P. M. to 2^h A. M.—129 meteors—76 of them conformable.

(*f*.) November 11–12th, 210 minutes from 11^h 22^m P. M.—185 meteors; and 12–13th, 331 minutes from 10^h 20^m P. M.—193 meteors; lengths of arc of the flights mapped, from 2° to 25°.

In latitudes higher than that of New York, generally, the state of the sky was unfavorable. The results show a larger number of meteors on November 13–14th than on ordinary nights, and also than on the corresponding nights of some years preceding (*American Journal of Science*, vol. xxxvii., p. 141). Mr. R. P. Greg, of Manchester, England, reports the same year, in reference to Europe generally, that the number of the November meteors has been increasing from year to year, and that the hourly numbers for the 14th exceed those for the 13th of the month. The information met with in regard to the November period of 1864 is too limited to require insertion.

In 1865, night of November 12–13th, Professors Newton and Whitney, with two others (at New Haven, it appears), saw, during 110 minutes from 3^h 55^m A. M., 360 meteors reckoned as conformable—their paths, extended backwards, cutting the area bounded by the stars in the curve of the sickle in Leo—and 70 unconformable; the rate in all being 235 per hour. The radiant appeared to be a small area having its centre near that of the curve of the stars already referred to—say, in R. A. 148°, Dec. + 23°—dimensions probably not more than 3° to 4° in any direction. The unconformable meteors were generally less bright than the conformable. From the morning of

the 13th to that of the 14th, both the whole number of meteors and the proportion of the conformable ones to the whole had diminished; and it is inferred that the earth was nearer the node of the November “ring” on Monday morning than on Tuesday, and that by Wednesday morning it had nearly or quite emerged from the group.—*American Journal of Science*, January, 1866.

August Period.—Observations were made in this country, August 9th and 10th, 1864, at various points, though at many of these the state of the sky was not favorable. At Chicago, night of 9–10th, in the periods, 10^h 11^m–12^h—1^h 2^h—3^h—3^h 3^m, Mr. F. Bradley and others observed, respectively, 41, 139, 152, 260, 322, and 112 meteors, only a small proportion of the whole unconformable.

On the morning of August 9, 1865, Prof. A. C. Twining observed, from 2^h 20^m to 3^h 45^m, 10 meteors, of which 9 conformed to a radiant in R. A. 47°, N. P. D. 33°; on the morning of the 10th, 2^h 25^m to 3^h 50^m, 19 meteors, all conformable to a radiant of some 8° in R. A., and centering in R. A. 42°, N. P. D. 34°; on the night of the 12th–13th, 10^h 45^m P. M., to 0^h 45^m A. M., 16 meteors, 12 of them conformable to a radiant in R. A. 52°, N. P. D. 32°; and on the morning of the 14th, 0^h 10^m to 1^h 35^m 20 meteors, generally slow in angular velocity, and scarcely belonging to any single radiant. The author believes that no mistake can exist in regard to the shifting of the radiants during the proper August period, which he extends from the first morning hours of the 9th to, at farthest, 11^h P. M. of the 12th. From observations made by Prof. Newton and several others at New Haven, August 15–16th, in which 178 meteors were counted in 8 hours, the former inferred that the whole number of flights visible during a given time at one place will be at least 4.5 times—but not greater than 5 times—the number that can be seen by one person.

Mr. Greg states that the radiant for the August period (1863, Mr. Herschel's summary), is near γ Persei. Signor Secchi and his assistants, at the two stations of Rome and Civita Vecchia (telegraphically connected), and on the nights of August 5th to 10th, inclusive, observed during a total time of 9 hours 26 minutes an average of 41 meteors per hour, 93 of which in all were satisfactorily observed at both stations. The hourly numbers increased till the 8th only; and the general radiant was between Cepheus and Cassiopeia. But the length of the base-line (65 kilometres) sufficed to show many of the meteors in different constellations from the two stations. This fact of parallax, the author thinks, has been too much overlooked: it amounted, in some of the instances referred to, to from 15° to 40°; and it was generally less for the smaller meteors, indicating that the brighter are as a rule nearer to the earth.

Other Periods.—Several other periods of unusual displays of shooting-stars, with corresponding radiant points, have recently been made out.

Mr. Glaisher names the 2d of January, the 10th and 20th of April, the 30th of November, and the 6th of December. Mr. Greg (quoted in *Amer. Jour. of Science*, xxxvii. 445) states that the 2d of January is as prolific, for several of the 24 hours during which it lasts, as is the period of August 9th and 10th, the radiant being about the head of Boötes; that for the 9th-15th of February the radiant is in Leo Minor; that for a moderate number of meteors of very low velocity, of March 6th-10th, a radiant exists in the head of Lynx; and that for the 5th-13th of December, showing of late years a fine shower, a radiant appears half way between α Gemini and β Aurigæ. He states also that the meteors of the Nov. 13th-14th period are not visible in Australia, while those of the August and other periods are so. The subject of radiants will be again referred to.

Tables of Meteors, and Question of Altitudes.

—Various estimates of the heights, at appearance and disappearance, of meteors, are given in connection with the question of the height of the atmosphere, in the article *ATMOSPHERE*; the conclusions therein stated being to some extent those of Prof. Newton's paper (with tables, 1798 to 1863), in the *Amer. Jour. of Science*, July, 1864; and of his article on the altitudes of the November and August meteors, 1863, in the same journal, September, 1865. Mr. A. S. Herschel gives, for meteors observed at five stations in England, August 9th-10th, 1863, the averages of the estimated heights as $82\frac{1}{2}$ and 58 miles; length of paths, from 18 to 100 miles; durations, from $\frac{1}{2}$ to 3 seconds; velocities, from 23 to 71 miles a second.

Incandescence and Dissipation of Meteors.—

It has already become generally admitted by physicists that the explanation of the incandescence of meteoric bodies, and of that dissipation of their substance which occurs in much the greater proportion of instances, is to be found in the law of the convertibility and definite equivalence of mechanical and certain other forms of force, with *heat*. Thus, every *unit* of mechanical force (equal to a lift of 772 pounds avoirdupois through one foot height, at the sea-level), destroyed as motion by friction or other obstacle, generates a *unit* of heat (equal to that which can warm one pound avoirdupois of water through 1° Fahr.). Most of the movements of bodies with which we are familiar are such as do not suffice to produce appreciable rise of temperature. Moreover, any atmosphere existing at heights of from 50 to 100 miles or more above the earth must be extremely rare. But it appears to be ascertained with certainty, that meteors, after becoming visible, move through this thin atmosphere at the enormous velocities of from 18 to at least about 70 miles a second; while the equivalent in heat of their motion varies, not as the simple velocity, but as its square (Faye); and evidently, every meteor had a still higher velocity before it became luminous than it has after acquiring such condition. Prof. Bunsen, in course of a paper on the meteoric iron

of Atacama, calculated the loss of active force during the fall of a solid coming into the terrestrial atmosphere, and with a planetary speed, to be sufficient to heat such body to $1,000,000^{\circ}$ C.; so that, if .998 of the entire heat were lost in the ambient medium, such body could still reach the earth heated to $2,000^{\circ}$ C.

Thus, then, through retardation by direct resistance and by friction, the previously dark and invisible masses of meteoric bodies become suddenly heated to luminosity, usually (it is probable) undergoing a sort of combustion, and leaving behind them trains of the disgregated and glowing particles, until they are completely consumed; sometimes (as would be expected) exploding into fragments; and sometimes, from large amount of substance, or low velocity, or both, outlasting the action of the air, and reaching the earth in a hot, and perhaps glowing condition. Still, the extreme rarity of the atmosphere in the usual meteoric altitudes, compels the adoption of low estimates for the weights of the meteoric bodies. Further, by a law of vision, as well as by diffusion of the glowing material, and perhaps by that of the light also, at the source, there is a tendency to enhance the apparent magnitudes of these objects. Dr. Haidinger suggests that non-productive fire-balls (those not reaching the earth), and shooting stars, are of loosely compacted substance—one reason for their not penetrating the atmosphere to greater depths before extinction; and from the like view also it would follow that their size generally is (for solids) out of proportion to their weight. In Mr. Herschel's paper on August meteors of 1863, an attempt is made, by considering the *apparent light* of meteors, and the amount of coal gas which would yield the same at given distances, in connection also with the estimated velocity of those bodies, to determine the *heat* developed in the latter, and then from this (in connection, it would appear, with the length of flight) to infer what must have been the *masses* or *weights* of the meteors. [R. P. Greg, quoted in *American Journal of Science*, xxxvii., 445.] Though such a calculation must proceed upon a large amount of assumption, the result, even as an approximation, is still of great interest. And such result, Mr. Greg states, is to place the weights of the bodies considered at from 20 grains to $7\frac{1}{2}$ lbs. avoirdupois, an average mass being about $1\frac{1}{2}$ lbs. Mr. Glaisher concludes that the largest of the fire-balls included in his catalogue must have weighed nearly 100 lbs.

Herschel has suggested that the principle of dissociation (*see* *CHEMISTRY*) may explain the luminous trail of meteoric bodies—the violent heat sufficing to suspend chemical affinity at the meteoric surface, while the glowing particles of reduced metals and other elements left behind, on cooling to a certain temperature, undergo combustion anew, of course giving out additional light from this cause. The spectrum of a brilliant shooting star, near Capella, was recently observed by Herschel. Its slow move-

ment he followed for more than a second. The spectrum was as continuous as that of Capella, and a little more extended; so that the mass must have been a solid or liquid substance, and not a gas or incandescent vapor. (See *Nebula, ASTRONOMICAL PHENOMENA*, etc.)

Including, then, the known chemical composition of aërolites, all the lines of evidence go to show that all so-called shooting stars and other meteors are in reality originally so many minute planet-like masses, asteroidal bodies of the least possible magnitudes, just as the asteroids properly so called are the (as yet) least possible of visible planets. As Faye intimates, there may be a gradation in magnitude of such bodies, from the smallest known asteroids down to masses which become visible as shooting stars.

Of the distribution of these bodies, more presently: at least, none of them of a magnitude approaching that of the asteroids appear to circulate through the spaces traversed by the earth. Some singular confirmations of the views just stated have been obtained. Dr. Schmidt observed some time since, with one of the powerful telescopes of the Observatory at Athens, the explosion of a meteor, the result being a shower of incandescent fragments; and M. Heis declares that, at 8^h 31^m P. M., October 4, 1864, as he was observing with a telescope the Milky Way, he distinctly saw where a dark mass slowly moved along the half-illuminated sky, eclipsing the stars in its path.—*Reader*, January 21, 1865.)

Our knowledge of luminous meteors is no longer confined to the rarely occurring and wonderful November star-showers, nor even to such phenomena as the ordinary frequency of meteors at periods like those of November and August. Through the recent labors especially of Prof. Newton in this country, of A. S. Herschel, Greg, and Sorby, in England, and of Quetelet, Heis, Secchi, Schmidt, and others on the Continent, very much relating to the phenomena of meteors in general has already been brought as distinctly within the domain of astronomical science as are the orbits and periodical return of comets.

The November Period due to a Heliocentric Meteoroid Ring.—Prof. Newton has in the *Amer. Jour. of Science*, vol. xxxvii., p. 377 (May, 1864), a highly interesting and complete discussion of this subject, under the title of "The original accounts of the displays in former times of the November Star-Shower," etc., its conclusion appearing in vol. xxxviii., p. 53—a paper in regard to which Mr. Glaisher remarks, that "it constructs the elements of the November meteoric ring solely from historical data, and in such a manner as to leave very little for further observations to supply." From various works and records are gleaned the dates and descriptions of the great 33-yearly November star-showers, beginning with A. D. 902, and ending with the still remembered and very remarkable display of the year 1833. From

the data thus obtained, the author deduces among others the following conclusions:

From the middle of the first of the given displays, say October 13th, A. D. 902, at 5^h A. M., Italian time, to the middle of the last shower, November 13th, 1833, there were 931 (terrestrial) periods, of 865.271 days each. This time comprises 28 cycles, of 33.25 years each,—the years 902 and 1833 happening, it would appear, to occupy approximately corresponding places in their cycles. The length of that part of a cycle during which extraordinary displays may occur, is at least 2 years 3 months, while the numbers of shooting stars may be greater than usual for at least 5 or 6 years. The meteoroid bodies which afford the November showers, move in a nearly circular orbit about the sun, its inclination to the ecliptic being 17°, and their motion in their orbit being retrograde. The revolutions appear to be $1 + \frac{1}{33.25}$ in a terrestrial year; so that the annual revolution of the ring—supposing the showers of A. D. 902 and 1833 to have the same places in their cycles—occupies 354.621 days; and within the whole time given 959 revolutions, nearly, have occurred. The meteoroid bodies, however, would appear not to form a ring of uniform density, but a compact elongated group or cloud, its length $\frac{1}{10}$ th to $\frac{1}{100}$ th the periphery of the ring—actual length more than 40,000,000 miles; while, if a shower lasts 5 hours, the thickness of the ring would be the distance passed over by the earth in that time \times the sine of the inclination of the orbit = more than 100,000 miles. Allowing for the earth's attraction, the velocity with which the bodies enter our atmosphere is about 20.17 English miles per second. We have most reason to expect the next star-shower on the usual days (November 13th, 14th), of the year 1866, and that it will be central over the western Atlantic. The author does not, however, state this as a prediction. The anticipation implied in the paper, of star-showers in the years 1864-'65, appears scarcely to have been realized.

Shooting Stars from other Radiants, and Sporadic: Question of Other Rings.—In the *Amer. Jour. of Science*, March, 1865, appears an abstract of another elaborate and highly original memoir by Prof. Newton, which was read before the National Academy of Sciences, August 6, 1864, but of which a bare outline only can here be given.

The author undertakes to investigate the phenomena of shooting stars generally, as seen on all clear nights; and he makes his table (1798 to 1863), already referred to, the basis of the computations, combining with its data observations from a variety of other sources. Disregarding the instances of which the middle point of path is at altitudes less than 30, or greater than 180 kilometres, he finds for these successive intervals of elevation, 30—60—90—120—150—180 kilom., the numbers of meteors, 114, 243, 277, 106, and 57, respectively; the mean altitude of middle point of path being

thus 95.55 kilom. = 60 miles nearly. The relative frequency of meteor-paths in different parts of the visible heavens varies in the main with the zenith distance only; and about 1 in 50 of all shooting stars seen at a place should have the middle points of their apparent paths within 10° of the zenith. The number of shooting stars visible within a given period over the whole earth is to be considered as 10,460 times the number visible at one place. Admitting that one observer will see an average of $7\frac{1}{2}$ meteors per hour, and that the number visible at one place is at least 4 times this, we have then the whole number of meteors that traverse the atmosphere daily, and that—sun, moon, and clouds permitting—should be visible to the naked eye, equal to $10,460 \times 7\frac{1}{2} \times 4 \times 24$, or more than seven and a half millions. Of 1,016 paths, the mean length was found to be 12'.6. The meteor-yielding mass, before it has become luminous by entering the earth's atmosphere, the author terms a *meteoroid*. Now, taking into account the much greater number of shooting stars visible with the telescope than with the naked eye, say 1,582 hourly with a comet-seeker, if the whole heavens could be watched, we have for the whole number of meteoroids coming daily into the air, at least $10,460 \times 1,582 \times 24$ —more than 400,000,000! The mean actual length of the visible part of meteor-paths is found from the data under consideration to be less than 65, and greater than 39 kilometres; the smaller of the two limits being probably nearest the truth. The mean duration of 368 meteors observed at Geneva, Switzerland, in one night, was 0.49 sec.; that of 499 estimates made in August and November, 1864, 0.418 sec.; mean of the 867 flights, 0.45 sec. From such length of path, and duration, may be inferred a mean actual velocity of between 78 and 130 kilometres per second, the least of these (more than 48 miles) being twice and a half the velocity of the earth in its orbit about the sun. This does not seem consistent with the supposition that most of the meteoroids move in closed orbits about the sun; but qualifying considerations are introduced, as that the assumed altitudes may be too great, the estimated times too small, etc. At least three suppositions respecting the distribution of orbits of meteoroids are naturally suggested:

"1st. They may form a number of rings, like the August group, cutting or passing near the earth's orbit at many points along its circuit. The sporadic shooting stars may be outliers of such rings.

"2d. They may form a disc in or near the plane of the orbits of the planets.

"3d. They may be distributed at random, like the orbits of comets.

"According to the first of these suppositions, there should be a succession of such radiant, corresponding to the several rings. Dr. Heis and Mr. Greg believe that they have detected such a series."

It may here be remarked that some writers

have admitted as already determined 56 radiant points of shooting stars, corresponding to as many known epochs in every year, and in which meteors proceeding from those definite positions in the heavens may be expected to be visible. Prof. Newton's discussion of the subject, however, leads him, in view of the apparent distribution of meteors throughout the 24 hours (that is, as entering the atmosphere from all directions in space), and in view of the seeming fact that their mean velocity considerably exceeds that of the earth, to conclude—though not yet with absolute certainty—that the orbits of the sporadic meteors generally, are not approximately circular, but that they resemble more the orbits of the comets.

Finally, apart from the space occupied by our atmosphere, there are in the mean, in each volume of the size of the earth, of that space which the earth is traversing in its orbit about the sun, as many as 18,000 small bodies, each body such as would furnish a shooting star visible under favorable circumstances to the naked eye; while, if telescopic meteors were counted, the number would be increased at least fortyfold. It is not probable that the space near the earth's orbit is much more thickly strewn with these bodies than other parts of the solar system. Their velocity, different from that of the earth, implies that they are not grouped closely about the earth's orbit. These bodies cannot be regarded as the fragments of former worlds, but are rather the materials from which the worlds are forming. It may here be added, that some writers have regarded meteoroids, at least those large and compact ones which reaching the earth constitute meteorites—those "pocket-planets," as Humboldt has termed them—as being portions scattered by the disruption of parent planets which were too small and powerless to reclaim their own fragments.

Accounts and Descriptions of Some Meteorites, mostly recent.—In the *Philos. Magaz.*, new series, vol. xxviii., will be found an account, by Dr. Haidinger, of the meteorite of Albereto, in the Modenese, and in relation to which—falling in July, 1766—a pamphlet has been left by Troili. This contained disseminated through it grains of the native protosulphide of iron, since named Troilite. In the same volume appears a notice by Maskelyne of a meteorite falling, June 16, 1860, near the village of Kusial in India, and which contained much of the white flocculence abounding in some only of these bodies; and also; an abstract of a paper by Mr. H. C. Sorby, on the mineralogical structure of meteorites. An article on the physical history of meteorites appears also, along with a republication of that last named, in the *Amer. Jour. of Science*, January, 1866.

In the *Amer. Jour. of Science*, vol. xxxvii. (1864), will be found the analysis, by Prof. C. A. Joy, of New York, of a meteorite from Chili (noticed also in vol. xxxviii., p. 386); while in the volume last mentioned will also be found accounts, including analyses, of sev-

eral other meteorites, with notes on meteoric irons. In the same journal, for March, 1865, an interesting *résumé* is given of investigations respecting the meteor and meteorites of Orgueil, the latter falling near the village of that name, in France, on the evening of May 14, 1864; and in the number for September, 1865, a description and analysis, by Prof. J. L. Smith, of Louisville, of a meteorite from Arkansas. (See METEORIC IRON, CYC., 1861.)

Composition of Meteorites.—By a very minute analysis of the Chili meteorite, Prof. Joy finds in this, in 100 parts, Fe, 48.298; Ni, 5.298; Co, 0.838; Mn, 0.375; Cu, 0.040; S, 2.693; P, 0.115; SiO₂, 20.689; MnO, 0.976; Cr₂O₃, 0.477; NiO, CoO, 0.073; FeO, 10.417; CaO, 1.548; Al₂O₃, 3.772; MgO, 4.278; SnO₂, 0.189—total, 100.076; and he deduces the mineralogical composition of the meteorite, as, Nickel iron (with Co, Mn, and Cu), 48.689; sulphide of iron, FeS, 7.405; chrome iron, Cr₂O₃·FeO, 0.701; Schreibersite (Fe, Ni, and P), 1.563; olivine, 11.677; Labradorite, 29.852; tin-stone, SnO₂, 0.189. In the meteorite of Bishopville, S. C., 1843, M. Rammelsberg finds silica, alumina, sesquioxide of iron with some Mn₂O₃, magnesia, and lime, besides a small loss, probably of alkalies. For the composition of the whole Orgueil meteorite, M. Pisani gives, SiO₂, 26.08; MgO, 17.00; FeO, 6.96; MnO, 0.36; CaO, 1.85; NaO, 2.26; KO, 0.19; Al₂O₃, 0.90; with chromic iron, 0.49; magnetic iron, 12.03; nickeliferous sulphide of iron, 16.97; water, and supposed organic substances, 14.91—total, 100.

The last-named meteorite was examined also by other chemists, among whom MM. Cloëz and Wöhler conclude that a black amorphous substance contained to the amount of 6 per cent. in it is a true organic substance—a kind of *humus*, consisting of carbon, hydrogen, and oxygen in proportions quite similar to those occurring in lignite and peat. This fact, if it be such, is somewhat startling, in view of the conclusion drawn from it, that, from whatever portion of space this meteor may have come, organic matter, and hence living organisms, must probably there have had an existence.—Note in *Reader*, February 11, 1865.

Thus it still remains true, that the meteoric stones which reach the earth and have been examined reveal in their composition only such elements as have long been known as entering into the earth's solid and liquid mass and its atmosphere; though some differences present themselves in the forms of combination entered into by those elements. Indeed, very many terrestrial chemical elements, both among such as are abundant, and among such as are very rare and till recently unknown, have not yet been detected in any meteorites analyzed.

Structure of Meteorites.—Mr. Sorby, in the first of the papers by him already referred to, applies to the case of meteorites the principles he had before developed in his study of terrestrial rocks (*Quarterly Jour. Geolog. Soc.*, 1858, vol. xiv). Thus, he had shown that the pres-

ence in crystals of *fluid*-, *glass*-, *stone*-, and *gas-cavities*, respectively, enable us to determine in a very satisfactory manner under what conditions the crystals were formed. The olivine of meteorites, like that of lavas, contains excellent *glass-cavities*, proving that the material was at one time in a state of fusion; and the former, also *gas-cavities*, indicating the presence of some gas or vapor (Parnallee, etc.). The vitreous substance, found both within and without the cavities, is of a claret-brown color, with the structure and optical properties of artificial glasses. Some isolated portions of meteors have also a structure very similar to that of stony lavas, the crystals having evidently formed during solidification and where found. In others, the mass is one apparently of broken fragments afterwards compacted by mechanical and chemical actions (L'Aigle), the structure here resembling that of consolidated volcanic ashes. The particles in some cases indicate a breaking-up after cooling from fusion; in others, being globular, a breaking-up while in the fused or semi-fused condition (Parnallee, etc.). Thus, in certain peculiarities of physical structure, meteorites are connected with volcanic rocks, while in others they differ most characteristically.

In the second of his papers referred to, Mr. Sorby proceeds from the conclusions he had reached in the first, regarding it as proved that the material of meteorites has been to some extent fused, in some part, at least, compacted from minute detached particles, and in other portions showing evidence of having been condensed from a state of vapor; while, at the same time, he declares it extremely improbable that masses so constituted have ever been portions of the moon or of a planet. In accordance with the observed facts of structure, he traces hypothetically a history of the formation of such masses, from the time in which their materials must have existed in a vaporous condition, as the black lines of the spectrum prove that certain metals now do in the atmosphere of the sun, down through their aggregation into a sort of cometary cloud, to that of a fused and crystallizing mass, broken and comminuted by movements pervading it, and later compacted again, and under the influence of heat undergoing a sort of metamorphism. The view presented may be regarded as a modified form of the nebular hypothesis. The relative amounts of metallic constituents in meteorites would appear to have increased with lapse of time: various iron-compounds, in particular, appear as if having entered and been condensed within them, from the vaporous state; though some irons may have separated from the general mass through difference in specific gravity. Meteorites are thus, probably, records of the existence in planetary space of physical conditions more or less similar to those now confined to the immediate neighborhood of the sun, and at a period indefinitely more remote than that

of the occurrence of any of the facts revealed to us by the study of geology—at a period, in fact, which might be called *pre-terrestrial*.

Classification of Meteorites.—Mr. R. P. Greg has published a pamphlet, containing an arrangement of meteorites based on mineralogical and structural characters. Of this an outline only can be given, the reader being referred for the definitions of the groups to an abstract in the *American Journal of Science*, November, 1865. The system is as follows:

CLASS I.—ÆROLITES.

ORDER A. Specific gravity mostly between 1.7 and 3.2, and containing little or no metallic iron. *Groups*—*a*, Carbonaceous; *b*, Howarditic; *c*, Feldspathic; *d*, Crystalline (magnesian-silicates); *e*, Vesicular.

ORDER B. Sp. gr. mostly between 3.25 and 3.9. *Groups*—*a*, Variolitic; *b*, Sommitic (Mt. Somma, Vesuvius); *c*, Tufaceous; *d*, Psammitic (2 forms); *e*, Chondritic (2 forms); *f*, Blanskitic (Blansko meteorite); *g*, Erxlebenitic (Erxleben *do.*).

CLASS II.—SIDEROLITES.

ORDER C. Sp. gr. 4–7, meteoric iron, containing or mixed with stony material and silicates. *Groups*—*a*, Pallasites (2 forms); *b*, partly or irregularly mixed with silicates; *c*, containing ærolithic fragments, imbedded in iron.

CLASS III.—METEORIC IRONS, OR ÆROSIDERITES.

ORDER D. Sp. gr. between 7 and 8. *Groups*—*a*, Agrammic (2 forms); *b*, Microgrammic; *c*, Eugrammic; *d*, Spora-grammic (2 forms); *e*, Nephelic; *f*, Undetermined.

METHODISTS. The year 1866 being the centenary of American Methodism, and the General Conference of 1864 having passed a resolution to celebrate it in an appropriate manner, the attention of the Church was prominently occupied with the necessary preparations. The programme for the celebration of the year was definitely agreed upon in the meeting of the General Centenary Committee, held on November 8, 1865. The most important points of this programme were the following: A “Centenary Educational Fund” is to be placed before the people as the prominent object for connectional contributions. This fund is to be placed in the hands of a board of 12 members (2 bishops, 4 ministers, 6 laymen), to be called the “Centenary Connectional Educational Board of the Methodist Episcopal Church.” To contributors desiring to specify the precise objects of their centenary subscriptions in whole or in part, it shall be open to include the following objects, namely: 1. The Centenary Educational Fund. 2. The Garrett Biblical School at Evanston. 3. The Methodist General Biblical Institute at Concord, to be removed to the vicinity of Boston. 4. A Biblical Institute in the Eastern Middle States. 5. A Biblical Institute in Cincinnati or vicinity. 6. A Biblical Institute on the Pacific coast. 7. The erection of Centenary Missionary buildings for the Mission House at New York. 8. The

Irish Connectional Fund. 9. The Biblical School at Bremen, Germany. 10. The Chartered Fund. (Such sums as contributors may desire to appropriate in that way to the support of worn-out preachers, their widows and orphans.)

A separate Sunday-School Children’s Fund is to be established, for the purpose of assisting meritorious Sunday-School scholars of either sex who may need help in obtaining a more advanced education.

The membership of the Methodist Episcopal Church, in 1865, was, according to the “Methodist Almanac for 1866,” as follows:

CONFERENCES.	NUMBERS IN SOCIETY.		
	Members.	Probation'rs.	Total.
Baltimore	12,087	1,698	13,785

Decrease	8,519	3,035

The number of effective preachers in 1865 was 6,121, of superannuated 872, of local preachers 8,113. The contributions received by the Missionary Society amounted to \$607,607; those by the Sunday-School Union to \$19,389; those by the Tract Society to \$22,581. There were in connection with the Church 22 colleges and universities, and four theological institutions, at Evanston, Ill.; Concord, N. H.; Bremen, Germany; New Orleans, La.* The "foreign missions" of the Church in Liberia, South America, China, Germany, India, Bulgaria, Scandinavia, embraced in 1865 161 missionaries and 7,022 members, and the "domestic missions" among the Germans, Indians, Scandinavians, French, and Welsh of the United States, 286 missionaries and 26,138 members. In addition to those employed in the above work, there are nearly a thousand ministers who are engaged on the frontiers or in destitute localities, in city missions, among the freedmen, and as missionaries to the South, in charges that cannot support themselves. Besides the missions enumerated above, there has been established a third class, designated as "Missions in the United States and Territories, not included in the bounds of any Annual Conference." This class includes all the missions in Arizona, New Mexico, Utah, Eastern Idaho, Montana, and the Southern States where the war broke up or put an end to all religious organizations existing before its commencement. The General Missionary Committee, at their session in November, 1865, appropriated for the year 1866, \$1,000,000, namely: Foreign Missions, \$275,657.83; foreign populations of the U. S., \$15,550; Indian Missions, \$4,550; American Domestic Missions, \$321,150; Third Class of Missions, \$301,092.17; French Methodist Conferences, 12,000; Contingent Fund, Incidental and Office Expenses, \$70,000.

The statistics of the "Sunday-School Union" in 1865, as given in the annual report published in January, 1866, are as follows: Schools, 13,365; Officers and Teachers, 153,039; Scholars, 914,587; Volumes in Library, 2,542,087; Bible Classes, 16,987; Infant Scholars, 136,337; Expenses, \$285,829; Contributions for Sunday-School Union, \$17,738; Conversions, 25,122; Copies of "Sunday-School Advocate" taken, 230,386.

The receipts of the "Tract Society," according to the 18th annual report published in January, 1866, were \$13,566. Average monthly issue of the "Good News," 74,600. The Society's list of Tracts now numbers 573.

A board of "General Conference Trustees" was elected by the General Conference in 1864, and incorporated under the laws of the State of Ohio in 1865. This board is authorized to receive and apply, under the General Conference, all donations, bequests, grants, etc., to the M. E. Church.

A new Methodist Church Society was organized by the last General Conference, under the denomination of "The Church Extension Society of the Methodist Episcopal Church." The object of the organization is to enable the several Annual Conferences to establish and extend their Christian influence and power throughout the United States and Territories, by aiding, wherever necessary, to secure suitable houses of public worship, and such other Church property as may promote the general design. The society is controlled by a Board of Managers, consisting of twenty-five laymen and as many clergymen—not exceeding that number—as shall be determined at each annual meeting; and by a General Committee of nine members, chosen by the bishops from nine districts into which the Annual Conferences are divided. The annual meetings of the Society are held in the city of Philadelphia, in November. The first meeting was held in November, 1865, and appropriated, for purposes of Church extension, the sum of \$200,000.

The following table shows the number of members of the M. E. Church in every State and Territory of the Union, in 1864:

States & Territories.	No. in Socy.	States & Territories.	No. in Socy.
Arkansas	262	Nebraska	1,557
California	4,269	Nevada	281
Colorado Territory	265	New Hampshire	10,135
Connecticut	18,179	New Jersey	45,516
Delaware	12,389	New York	160,886
District of Columbia	4,450	Ohio	115,689
Illinois	89,131	Oregon	2,685
Indiana	87,968	Pennsylvania	105,583
Iowa	87,527	Rhode Island	3,268
Kansas	5,574	Vermont	14,525
Kentucky	3,205	Virginia	658
Maine	23,144	Washington Territory	321
Maryland	56,575	West Virginia	15,848
Massachusetts	30,816	Wisconsin	23,495
Michigan	32,408		
Minnesota	7,778		
Missouri	9,861		
		Total	922,512

The bishops of the Methodist Church had, on June 15th, a meeting at Erie, at which it was resolved to occupy, as far as practicable, those fields in the Southern States which may be opened and which give promise of success. The bishops declared themselves, however, to have no authority to originate any plans of union, and to be bound to adhere strictly to the provisions of the discipline and the directions of the General Conference.

Early in 1865 the bishops received information that a number of ministers and members of the "Methodist Episcopal Church" in East Tennessee, desired to attach themselves to the "Methodist Episcopal Church," and Bishop Clark was solicited to visit that section of the State to receive them formally to the fellowship of the Church. He went, accordingly, and in Athens, Tenn., on the 1st day of June, 1865, organized the Holston Conference of the Methodist Episcopal Church. At this organization the preachers reported the following statistics from the several charges, namely: members, whites, 5,284, colored, 128, giving 5,412; probationers, 695; local preachers, 55; total, 6,462; Church property valued at \$31,250; Sunday-Schools,

* In February, 1866, a new "Biblical Institution" was organized at Charleston, S. C.

49; officers and teachers, 336; Sunday-School scholars, 2,425. Subsequent reports from this conference announced a rapid growth by the accession of other pastors and people in East Tennessee and Western North Carolina.

A second Annual Conference in connection with the Methodist Episcopal Church was organized in the South by Bishop Thomson, at New Orleans, December 25, 1865, under the name, "The Mississippi Mission Conference." The Conference reported the following statistics: members, 2,216; probationers, 476; deaths, 64; local preachers, 13; baptisms, adults, 145; infants, 272; number of churches, 5; value of church property, \$47,000; Sunday-Schools, 9; officers and teachers, 95; scholars, 1,386; volumes in library, 1,476. The bounds of the Conference embrace the States of Louisiana, Mississippi, and Texas. The great majority of its members are colored. The Conference concluded to establish at once a Biblical Institute ("Thomson Biblical Institute") and a weekly organ ("N. O. Advocate").

The missions in the other Southern States were, for convenience of administration, distributed by the General Missionary Committee at its meeting held in November, 1865, into the three following departments: Middle Department, including so much of the State of Tennessee as is not comprised in the Holston Conference, the State of Alabama and Western Georgia; Southern Department, including the State of Florida, Eastern Georgia, and the State of South Carolina; Northern Department, including Eastern North Carolina, and so much of Virginia as is not included in the Baltimore Conference.

While thus the Church received considerable accessions in Tennessee, Louisiana, and other States, she lost part of an Annual Conference in Virginia and Maryland. Those ministers of the Baltimore Conference who are stationed in Virginia, with many of those stationed in Maryland, showed a tendency toward secession from their Church when the General Conference of 1860 adopted a stricter antislavery rule. They refused, however, to join the Southern Methodist Church, and kept up throughout the war a separate organization. At their meeting held at Staunton, Va., on June 29 and 30, 1865, they resolved not only to continue their separate organization, but, still regarding themselves as the Baltimore Conference of the Methodist Episcopal Church, to reoccupy gradually the entire territory of the Baltimore Conference in Maryland. In February, 1866, at the meeting held in Alexandria, they passed a resolution to join the Southern Methodist Church, and they were consequently received into that body by Bishop Early. As the churches and parsonages within the bounds of the Baltimore Conference are all deeded to the "Methodist Episcopal Church," an order from the President of the United States restored all the churches and parsonages within the bounds of the Baltimore Annual Conference, embraced in the State of Vir-

ginia, to the Methodist Episcopal Church of the United States, held by said Church prior to 1861. This order further states that such possession shall be valid until the civil courts shall have determined in whom the legal title vests.

At the end of the war the Southern Methodist Church was in a greatly disorganized condition. Many of the churches were without pastors, or closed by the Government, or transferred, temporarily, to the missionaries of the Methodist Episcopal Church. The Book-Concern in Nashville had likewise been closed by the Government, and all the papers of the Church had been discontinued. Some, both North and South, expressed a desire or expectation that new efforts might be made for a reunion of the "Methodist Episcopal Church South" with the "Methodist Episcopal Church." But the Southern Church soon declared itself almost unanimously against reunion, and in favor of continuing an independent organization. On August 17th three of the Southern bishops—Andrew, Paine, and Pierre—met at Columbus, Ga., and from there issued a "Pastoral Letter" to "The Preachers and Members of the Methodist Episcopal Church South," in which they at length defined the position which the Southern Church occupied with regard to the Methodist Episcopal Church, the negro race, the slavery question, and the Government of the United States. Of the relation of the Church to the negroes, they speak as follows:

In the change from slaves to freedmen which has providentially befallen the negroes of the Southern States, our obligations to promote their spiritual welfare have not ceased. We are still debtor to them free, as before to them bond. Under the divine blessing, our Church has done a great work for this people. Their moral training, and generally diffused knowledge of the cardinal truths of Christianity, and their ecclesiastical discipline, have justly won the admiration of many who have lately come in contact and acquaintance with them. It has accomplished more; it has materially contributed to their subordination and inoffensive behavior through the late defenceless and exciting times, when prophecies were confident and opportunities frequent for domestic insurrections. And their safe though sudden passage from a state of bondage to liberty, a transition accompanied by no violence or tumult on their part, is largely due to these causes.

Though often reviled while prosecuting the evangelization of the colored people by those who claimed to be their better friends, the Southern Methodists have persevered in it, with blessed results. We might have done more, but we should be thankful to the grace of God that we have not done less. Our labor has not been in vain in the Lord. Multitudes have been saved, who will be our crown of glory in "that day." And that the good effects of our religious teachings bestowed upon them in bondage will follow the race into their new condition, and help to prepare them for it, is matter of pleasing reflection for us. Our numerous membership among them of over two hundred and forty thousand, exclusive of the congregations and catechumens who receive instructions from our pastors and missionaries, has been much reduced by recent changes and casualties. If it be still further reduced, we need not be surprised. Defections, doubtless, will take place from their ranks to churches offering greater social inducements for their adhesion. If they elect to leave us, let them go with the assurance that as heretofore we

have been, so we will continue to be, their friends, and in every suitable way aid their moral development and religious welfare.

After reviewing in full the relations of the Southern Methodist Church to the Methodist Episcopal Church, they gave the following reasons for their opposition to a reunion of the two Churches:

The abolition, for military and political considerations, of the institution of domestic slavery in the United States does not affect the question that was prominent in our separation in 1844. Nor is this the only difference or principal one between us and them. While testifying with pleasure to the nobler conduct and sentiments of many brethren among them, we must express with regret our apprehension that a large portion, if not a majority, of Northern Methodists have become incurably radical. They teach for doctrine the commandments of men. They preach another gospel. They have incorporated social dogmas and political tests into their Church creeds. They have gone on to impose conditions upon discipleship that Christ did not impose. Their pulpits are perverted to agitations and questions not healthful to personal piety, but promotive of political and ecclesiastical discord, rather than of those ends for which the Church of the Lord Jesus Christ was instituted. Without such a change as we see no immediate prospect of, in their tone and temper and practice, we can anticipate no good result from even entertaining the subject of reunion with them. Let us abide in our lot, and be true to our calling, doing what we can to spread scriptural holiness through these lands, and to oppose the tide of fanaticism which threatens their overflow.

We therefore more earnestly would exhort you, brethren, to stand firmly on our platform of doctrine and discipline. Know your high calling. Preach Christ and Him crucified. Do not preach politics. You have no commission to preach politics. The divinity of the Church is never more strikingly displayed than when it holds on its even, straightforward way in the midst of worldly commotions. Be not turned aside from your path by local, specious, temporary influences. And in all your teaching and administration of discipline, keep in view that rule of our faith which declares that "the Holy Scriptures contain all things necessary to salvation; so that whatever is not read therein, nor may be proved thereby, is not to be required of any man."

The conduct of certain Northern Methodist bishops and preachers, in taking advantage of the confusion incident to a state of war to intrude themselves into several of our houses of worship, and in continuing to hold these places against the wishes and protests of the congregations and rightful owners, causes us sorrow and pain, not only as working an injury to us, but as presenting to the world a spectacle ill calculated to make an impression favorable to Christianity. They are not only using, to our deprivation and exclusion, churches and parsonages which we have builded, but have proceeded to set up a claim to them as their property; by what shadow of right, legal or moral, we are at a loss to conceive. We advise our brethren who suffer these evils to bear them patiently, to cleave closely together, and not indulge in any vindictive measures or tempers. A plain statement of the case and an appeal to the justice of those in authority cannot fail to defeat such scandalous designs, and secure us the full restoration of all our rights.

While some talk of reunion of the two Churches, we forewarn you of a systematic attempt, already inaugurated, and of which the foregoing is only an instance, to disturb and if possible disintegrate and then absorb our membership individually. In the meeting of their bishops and missionary secretaries, alluded to, it was resolved to send preachers and

plant societies in our midst wherever there is an opening. Their policy is evidently our division and ecclesiastical devastation. Against all this be on your guard. Internal dissensions will do us much more harm than such outward antagonism. Be true to your principles, and under the divine favor they will triumph. In this connection you will be pleased to hear that our people are steadfast. The border conferences, under special trials, present a noble example of steadfastness.

They announce that the next General Conference of the Church would meet in New Orleans, on the Wednesday after the first Sunday in April, 1866. They close their address with "an urgent and explicit recommendation" to Southern Methodists to adjust themselves "as citizens of the United States promptly, cheerfully, and in good faith" to all their "duties and responsibilities." This course the bishops deem to be called for on the part of Southern Methodists both by a "sound judgment" and an "enlightened conscience." All the Annual Conferences which were held in 1865, as well as all the Church papers, which, after the close of the war, were gradually reestablished,* expressed their concurrence with the bishops.

The only serious attempt to pass resolutions in favor of a speedy reunion of the Southern and Northern Methodist Churches was made in the "Kentucky Conference" (embracing the eastern portion of the State of Kentucky). At the annual meeting of the Conference at Covington, in September, the majority of the committee on the state of the Church (eleven members) brought in a report declaring that there existed no longer any satisfactory reason for the continued separation of the two Methodist Churches, and expressing a wish that the Southern General Conference take appropriate steps for bringing about a reunion. The Conference, after a long and animated debate, rejected the majority report, and instead adopted the following minority report:

Resolved, That we hold ourselves ready to consider, through our chief council, the General Conference of the Methodist Episcopal Church South, any terms presented it by competent authority of the Methodist Episcopal Church, as to a union of the two great coordinate branches of Episcopal Methodism in the United States.

2. That we do earnestly maintain our present relation until such time as the proper authorities on both sides shall mutually agree on terms of union honorable, equitable to each of the parties, and acceptable to our people.

The vote stood: for the majority report 25, for the minority report 37. Eighteen of the minority of 25 withdrew thereupon from the Conference, and were received by Bishop Morris into the M. E. Church. These were followed by several thousand lay members of the Conference.

* In March, 1866, the following papers of the Methodist Episcopal Church South had been reestablished: "Richmond Christian Advocate," "Episcopal Methodist," Richmond, Va.; "Southern Christian Advocate," Macon, Ga.; "New Orleans Christian Advocate," "Arkansas Christian Advocate," Little Rock, Arkansas; "Nashville Christian Advocate," "Memphis Christian Advocate," "Christian Advocate," St. Louis and Louisville; "Spectator," San Francisco, Cal.

On June 21st a convention of delegates from the four non-episcopal bodies of Methodists in the United States (Methodist Protestant, Wesleyan Methodist, Free Methodist, and Independent Methodist) met at Cleveland, Ohio, for the purpose of deliberating on the subject of a permanent union between these bodies. The convention was attended by about 150 delegates, and passed the following resolutions:

1. That the union of the Methodist bodies here represented is respectfully recommended to the early consideration of the Annual Conferences of the Methodist Protestant Church, of the Wesleyan Methodist Connection, of the Free Methodist Church, of the Independent Methodist Conference, here represented, and any others of like character who may desire to unite with these.

2. That we recommend the calling of a convention,

to be held in Union chapel, Cincinnati, on the second Wednesday of May, 1866, and constituted on the following basis of representation, namely, one minister and one layman for each five hundred members, and fractions of over half of five hundred. Said convention to be fully authorized to fix upon a basis of union and the mode of its consummation, subject to such confirmatory action by the bodies here represented as may be agreed upon by said convention.

3. That we recommend that the plan of union shall fully and entirely secure the liberty of the local churches on New Testament principles; that an efficient itinerant ministry shall be maintained; and that annual and general conferences shall be maintained, with power to make such regulations consistent with the principles and institutions of the New Testament as may be necessary to carry into effect the great principles of Scriptural Christianity.

The following table presents a statistical summary of all the bodies of Methodists in 1865:

DESIGNATION.	Bishops.	Conferences.	Preachers.	Members.	Probationers.	Sunday Schools.	Officers and Teachers.	Scholars.

* Statistics last reported (1860). Since then this denomination has lost a large number of members in consequence of the war.

MEXICO. At the commencement of 1865 the imperialists were firmly established in all the important places of central Mexico, and controlled probably more than three-fourths of the population of the entire country. The republican party had its principal strength in the extreme southern States and in the thinly-populated States bordering on the territory of the United States, though scarcely a town of importance, save Oajaca, in the State of that name, and the seaport Acapulco, was in its possession. At Oajaca an army of seven thousand men under Porfirio Diaz, aided by secret subsidies from the Church party, now in fierce opposition to the imperial cause, had been collected during the latter part of 1864, and was prepared to do battle for the republic. Juarez, with the bare nucleus of an army and a government, occupied the town of Chihuahua, in the State of the same name, and between that place and Michoacan, a distance of about eight hundred miles, were scattered small and imperfectly organized bodies of republican troops under Arteaga, Ortega, Negrete, and others, which maintained

scarcely a show of resistance to the imperialists. The system of strategy adopted by these generals was to avoid pitched battles, and to rely upon their superior knowledge of the country to surprise and defeat detached parties of the enemy, to interrupt communications, and generally to harass and weaken the imperial forces. The regular troops in the republican service, if indeed such an organization can be said to have been in existence since 1864, probably did not exceed fifteen thousand in number, and were poorly armed and clad, and without discipline. The well-trained foreign troops of the Emperor found little difficulty in defeating them whenever a battle was risked, and their lack of small-arms, artillery, and munitions made them decidedly inferior even to the native troops in the imperial service. But in the guerrilla bands, which infested every province of the country and prowled around the gates of populous and well-guarded cities (the capital itself proving no exception), the republican cause had a most formidable auxiliary; nor could the utmost severity or vigilance of the imperial generals

exterminate this element of resistance. Influenced partly by hatred of the invaders, but principally by a desire for plunder, the guerrillas pursued their devastations with little regard for friend or foe, and were not unfrequently guilty of atrocities too shocking to relate. Utterly without discipline, they were easily scattered by an inferior force of trained soldiery; but if driven from one locality, it was only to appear suddenly in another with apparently no diminution of force, and, if possible, with increased vindictiveness, until it may be said no road in the country, which was not lined with troops, was safe from their attack. Strange as it may appear, the road between the capital and Vera Cruz, the most important and perhaps the most travelled in the country, and that by which the imperial army received its chief supplies, was frequently the scene of guerrilla outrages, against which no precautionary measures seemed to avail. The guerrillas, when captured, were of course summarily shot, as were also all persons suspected of sympathizing with or harboring them; but such severity was totally ineffectual to lessen their numbers or their atrocities, and the first year of Maximilian's reign found the country in a more unsettled and unhappy condition than ever before, notwithstanding upward of sixty thousand veteran troops, commanded by officers of experience, were employed in the work of reconstruction. Under these circumstances European intervention could scarcely be called a success, and those who had submitted to it, as a means of peace and security, began to doubt whether these ends could now be obtained. Of hearty, undoubted supporters the government of Maximilian possessed but few among the native population. The republicans, if subdued for the time, hated it not less than at the landing of the first detachment of French troops; while the Church or reactionary party, which had helped to build it up, turned against it with fierce but impotent rage when the Emperor announced his intention to confirm the decrees for the secularization of ecclesiastical property, promulgated under the former republican administration. Utter weariness of the anarchy under which the country groaned, and a disposition, for the sake of peace, to side with the stronger party, alone made the imperial rule tolerable to liberals or reactionists.

The final rupture between the Church party and the Emperor was related in the previous volume of this work, but the former now found to its dismay that its power to injure the imperial cause was miserably small. With the promulgation of the decree of March 9, 1865, expired the last lingering hope that Maximilian would restore to the Church its confiscated possessions, and with them its once enormous power. By this instrument the Council of State was authorized to revise all the operations of the amortization and naturalization of ecclesiastical property, executed in consequence of the laws of the 25th of June, 1859; to remedy excesses and injustice commit-

ted by fraud, and confirm all lawful operations, executed without fraud, and in accordance with the laws cited; and these acts of the Council were declared to be irrevocable. Such transactions as might be found irregular or fraudulent and declared null and void, could be revised "on condition that they be brought forward in accordance with the terms of the law of the 13th July, 1859; that there is paid into the Treasury in money a fine of twenty-five per cent. on the total value of the estate or capital adjudged; and that no loss is caused to a third party by rights acquired previous to the revision of the claim." Other articles provided for the protection of the interests of the parties who had acquired Church property under the reform laws, and which might be affected by the revision of the proceedings under which they acquired claims; and further provided for the establishment of an office to be called "The Administration of Nationalized Property," which is to assist in the revision of claims, and put into practice the administrative and economical operations contingent on each act of revision. The following are four of the most important articles of the decree:

ART. 17. All the funds or capital of nationalized property that may not have been transferred or redeemed; those which are recovered by revision, and those which proceed from the transfer of estates which were afterwards made, shall be in the charge of the office of nationalized property, which will see that they are properly administered, and collect their rents while carrying out their functions.

ART. 18. No right which directly or originally proceeds from mortmain transactions or nationalization shall be exercised or be made of any value, judicial or extra-judicial, while it is not shown in due and proper form that the operation whence it proceeded has been properly and correctly revised.

ART. 19. Although their revision may not be complete, if it be shown in due form that the process to obtain it has been presented, the rights to which the previous article refers may be exercised; but those who obtain it for them must give security to the satisfaction of the Chief Judge (*Jefe de primera instancia*) or keep the matter in judicial course until the revision is complete.

ART. 20. Nor shall any right or privilege, judicial or extra-judicial, be exercised in relation to nationalized estates which may not have been included in operation of mortmain or nationalization, or which may have been returned to ecclesiastical corporations. The possessors or detainers of these estates must show cause within two months in the form prescribed by the enactments of this law.

Before the promulgation of this decree the Church party was suspected of having aided with money and supplies the republican troops in the southern States, with whom hatred of a common enemy caused them to be temporarily affiliated; and in the early part of 1865 they even made some abortive attempts at open resistance to the Imperial Government. These were easily quelled, and the men organizing them, despairing of success in independent operations, soon became merged in that party which maintained its contest against the empire from more patriotic motives than disappointed ambition or the lust of power. The despoilment of the Church no longer formed the burden of the

reactionist complaints, but hatred of the empire and the rule of foreigners united in one party all the elements of opposition. Hence the protests of prominent ecclesiastics, which in former years had been voluminous and bitter, if without much influence over the Government, ceased to be presented. The negotiations of the Emperor with the Papal nuncio, Monsignor Meglia, with reference to the adoption of a concordat, were, of course, suspended after the promulgation of the decree for the secularization of Church property, above referred to, and that relating to religious toleration, and in the spring of 1865 the nuncio returned to Europe. But Maximilian, himself a strict Catholic, could not rest easy under the imputation of having quarrelled with the Holy See, and in the latter part of the year sent to Rome an agent of his own, the Abbé Fischer, to assure the Pope of his sincere desire to come to some amicable arrangement, and to explain the difficulties in the way of making as many concessions as could be wished. Without withdrawing his decrees (which he could not do without prejudicing the interests of many resident Frenchmen who had purchased largely of the confiscated estates of the Church), he signified his intention to make such modifications of his views and policy as would result in a fair settlement of all vexed questions. The result of these renewed negotiations has not yet been made public, but the Pope is said to have been so deeply offended with Maximilian, that it is doubtful whether concessions will be made by him.

As a minute account of the military events of the year would require more space than their importance demands, a brief sketch only will be presented. Early in January Marshal Bazaine left the capital to direct the campaign against Diaz, in Oajaca. For several weeks the republican forces, concentrated in the city of that name, sustained the attacks of the imperialists, but finally, on February 9th, surrendered at discretion to the number of seven thousand, and were treated as prisoners of war. As soon as the capitulation was known to the citizens and the inhabitants of the surrounding districts, they went out to meet the French general, and gave in their act of adhesion to the Imperial Government, "manifesting at the same time," says the imperial account, "the greatest gratitude to the brave troops who had just liberated them from the dreadful tyranny by which they were oppressed." This was the most severe disaster which the republican cause had sustained in the southern States, where hitherto the French had made little progress, and the war in that quarter thenceforth degenerated into a mere guerrilla contest, accompanied with all the excesses previously described as characteristic of this kind of warfare in Mexico. About the time of this reverse the republicans gained some trifling advantages in the neighborhood of Mazatlan, on the Pacific coast, and for a while laid siege to the town; but a concentration of French troops there soon turned the

scale in favor of the imperialists. At Tacambaro, in the State of Michoacan, a body of three hundred Belgian troops, of the foreign contingent of the imperial army, was in April surprised and cut to pieces by a republican force under Gen. Regules; but this exploit being unconnected with any general plan of operations, its success was of no appreciable benefit to the republican cause. In the North, however, for a time matters looked more hopefully for Juarez. On April 10th a considerable republican force, under Gen. Negrete, drove the imperialists under Olvera and Lopez out of Saltillo, and following up their advantage, a few days later occupied Monterey, the imperialists retreating upon Matamoras. Negrete marched at once upon the latter place, where Mejia, the imperial generalissimo, had collected all available troops, and was making vigorous preparations to withstand a siege. In the latter part of April Negrete, reinforced by Cortinas and other chiefs, invested Matamoras, but from his want of artillery was unable to commence approaches in regular form. Every day added to the strength of the works defending the town, on which Mejia caused the inhabitants to labor, besides calling into requisition all available horses and mules. The exterior lines were defended by ramparts of cotton-bales. Reinforcements meanwhile arrived from Vera Cruz, and an imperial column marched north from San Luis Potosi to reoccupy Saltillo and Monterey, which was accomplished in the early part of June. Finding the prospect of compelling a surrender of Matamoras hopeless with his inadequate force and means, Negrete risked an assault upon the place, and was disastrously repulsed. He maintained, however, a threatening attitude until June 7th, when, alarmed by the news of the approach of the French column from the south in his rear, he raised the siege and retreated toward Chihuahua, where he arrived in the succeeding month with a mere remnant of his army. Five hundred men, it was said, perished on the march, and many more were lost by desertion or capture.

At this time the imperial forces were more widely distributed over the country, and in a condition of greater efficiency, than ever before. By a decree of April, Mexico was divided into eight military divisions, each of which was intrusted to a general of division, general of brigade or colonel, who, in the discharge of their duties, looked for instructions from the Minister of War, Gen. Juan de D. Peza. In ordinary matters they were directed by the civil members of the ministry. The regulations for the government of the several divisions were minute, and adapted to promote the efficiency of the service. The army, on June 1st, was estimated at the following strength:

	Men.
The French Legion <i>Etrangère</i>	8,000
The Austrian Legion (about).....	6,000
The Belgian Legion (about).....	6,000
Mexican troops (about).....	20,000
Total.....	40,000

In addition to these troops about twenty thousand of the French expeditionary force still remained in the country, which would give an effective army of about sixty thousand men. Marshal Bazaine, having under him Donai, Castagny, Neigre, and other French officers, was still the commander-in-chief of the Franco-Mexican army; and the Mexican army proper was commanded by Mejia, a pure Indian, like Juarez, and a man of considerable ability.

Aided by this systematic organization, and by an army incomparably superior to any thing the republicans could put into the field, the imperialists made steady progress northward during the summer months; and in the latter part of August Juarez was compelled to remove to El Paso, in the extreme northern part of the State of Chihuahua, on the Rio Grande, which, by an order issued early in September, was declared to be the seat of Government. Here, at the very limit of the country over which, but four years previous, he had been the sole acknowledged ruler, he upheld the republican cause with a courage and constancy which won the admiration even of his imperial enemies, expressing his firm belief that the time was not far distant when the French troops would be compelled to evacuate the country and leave its people to govern themselves. It must not be supposed, however, that every element of opposition was overpowered with the advance of the imperialists. In Durango, in Michoacan, and in Guerrero, were bodies of republican troops under Patoni, Arteaga, and Alvarez; while Ugalde, Figueroa, and other fierce partisan chiefs carried terror through the central States of the country. At the very moment when Juarez had established his fugitive government at El Paso, accounts from the city of Mexico showed that the whole country was given up to brigandage and anarchy, save where the presence of the imperial troops afforded a temporary security. In the early part of September the French took possession of Acapulco, driving out Alvarez with a poorly-equipped but enthusiastic force of fifteen hundred men. The veteran chief, accompanied in his retreat by the greater part of the Mexican population of the town, took refuge in the mountain fastnesses of the interior of Guerrero, where he announced his confidence of maintaining the cause of Juarez.

Believing that Juarez, when driven out of Chihuahua, had taken refuge within the limits of the United States, Maximilian, on October 2d, issued a proclamation officially announcing the departure of the Republican President from Mexican territory. "The issue," he said, "which Don Benito Juarez has sustained with so much valor and constancy, has at last succumbed, not only to the national will, but also to the law which he invoked in support of his title" (meaning that the term for which Juarez had been elected president had expired), "and even the brigandage of small parties into which his cause had degenerated, must be abandoned

by the departure of this chief from his native territory." He added:

Lawlessness and disorder are still kept up by misguided leaders of demoralized troops and an unbridled soldiery, and, therefore, the struggle in future will be between honest men and gangs of criminals and bandits. The Government, strong in its power, will be inflexible in its punishment of the latter criminals, in order that the laws of civilization, humanity, and morality may be upheld.

This proclamation was confirmed by an imperial decree, dated October 3d, in the fifteen articles of which the most vigorous measures were pronounced against parties in arms against the Government, and those who should in any manner aid them. All caught in violation of these articles were to be instantly tried by court-martial, and if convicted, to be sentenced within twenty-four hours thereafter. All persons harboring or supplying money, provisions, or information to the guerrillas, were to be summarily dealt with. The severity of the punishment threatened against the opponents of the empire, induced many republicans to lay down their arms and make application for pardon. In those who continued to hold out for Juarez, it kindled a more deadly resentment than ever against the Imperial Government, and under the provocation which it offered brigandage for the time seemed respectable. A few days after the promulgation of the decree the republicans experienced their second great military reverse of the year in the defeat and dispersal of the Army of the Centre, commanded by Arteaga in Michoacan, the best-disciplined and appointed body of troops yet remaining in the service. This force, divided into three parts, was put *hors de combat* within the period of a few days. One division, under Palacio, endeavored to surprise Morelia, the capital of Michoacan, but was defeated by the foreign troops garrisoning the place. Another party, under Lepeda, marched toward Reges, but was cut to pieces by Col. Carriedo; while the remaining division of twelve hundred men, under Arteaga himself, was on October 18th surprised and dispersed at Santa Anna Amatlan. Gens. Arteaga and Salazar, with a number of inferior officers, were taken prisoners. In accordance with the decree above mentioned, Arteaga and Salazar and several republican colonels were a few days later summarily shot, notwithstanding it is reasonable to suppose that the Imperial Government must by that time have been aware that its decree had been issued under false reports of the abandonment of the republican cause by Juarez, and that the prisoners were entitled to the treatment usually accorded to prisoners of war. Arteaga was a brave soldier, a true patriot, and a man of unblemished probity, and his loss was felt to be a severe blow to the republican cause. The circumstances attending the execution of himself and his fellow-officers were made the subject of diplomatic correspondence, as will be seen further on. The remnants of the Army of the Centre were subsequently collected by Gen-

Regules, who, with nearly three thousand men, continued to oppose the imperialists in Michoacan. Other successes of less importance were gained by the imperial arms about this time. The guerrilla leader, Figueroa, was routed near Tehuacan; Ugalde's band was cut to pieces in Queretaro by a detachment of Zouaves; and at Alamos, in Sonora, Gen. Rosales, the most prominent republican leader in the northwest, was killed, with a number of his officers and men. No reverses, however, seemed to intimidate the guerrilla bands; and at the very time when Artesaga experienced his defeat in Michoacan, a party of four hundred of them seized the Vera Cruz Railroad at Tejeira, a few miles distant from Orizaba. The trains were stopped, and the passengers taken some three miles from the station, where the Spanish, Mexican, German, and American travellers were released, while the French, civil and military, were put to death after several hours of dreadful torture. "It appears," says the "Journal" of Orizaba, "that the French seized by the guerrillas were fourteen, five officers, seven sergeants and soldiers, and two civilians. All have suffered a most horrible death, preceded by some hours of agony. The pen will not describe the barbarous outrages committed on these unfortunate men, and decency imposes complete silence. After suffering the fate of 'Abelard,' and remaining in this condition for some time, they were riddled by stabs and then cut to pieces."

Undeterred by the ill success of their attempt upon Matamoras in the spring, the republicans organized another attack in October. On the 19th of that month Gen. Escobedo, recently appointed by Juarez commander-in-chief in the northern States, aided by Cortinas and Canales, invested the town with three thousand men and twelve guns. The garrison, numbering about seventeen hundred, was under command of Mejia, and had a great superiority in artillery. On the 25th Escobedo hazarded an assault upon the defences of the town, which, though successful at first, was finally repulsed with loss. The siege continued, however, for some time longer, although every day lessened the chances of capturing the place. Meanwhile intelligence reached Escobedo from Col. Trevenio, commanding a republican force in the neighborhood of Monterey, that the French had evacuated that place, leaving in the forts only a few hundred troops. Escobedo immediately hurried to Monterey, and on November 24th took possession of the town. The French troops in the mean time had started on their return from Saltillo, to which place they had marched, and the advance of two hundred men reached Fort Obispaño, in the vicinity of Monterey, on the morning of the 25th. The liberal commander, hearing of this, and realizing his inability to contend with the combined forces, ordered the immediate evacuation of the place, which was accomplished with insignificant loss, though the column was pursued for a short distance by a detachment of mounted Frenchmen. Escobedo

continued his retreat to Camargo, on the Rio Grande, where he arrived in the beginning of December. Before this time the siege of Matamoras had been abandoned, although Cortinas and his band still hovered around the outskirts of the town.

The presence of a large United States force at Brownsville, opposite Matamoras, subsequent to May, excited serious apprehensions in the imperial commander at the latter place, as both troops and officers were known to sympathize with the Mexican liberal party. Naturally enough, great sensitiveness was felt by both liberals and imperialists with reference to an observance of the neutrality laws by the United States authorities on the Rio Grande; and during the siege of Matamoras, in October and November, complaints were almost daily sent from both parties to Maj.-Gen. Weitzel, commanding at Brownsville. Investigation, however, invariably showed that these were unfounded, or were based upon trivial occurrences, which the narrowness of the river and the long line of occupation rendered it impossible to prevent. On November 6th, the officer in command of the French squadron off the Rio Grande sent a communication to Gen. Weitzel, directly accusing him of furnishing men, stores, and munitions of war to Escobedo's troops. The letter was immediately returned to the writer, on the ground that it was couched in disrespectful language. A few days later Mejia complained to Weitzel that the steamboat *Antonia*, on her passage up the river to Matamoras, had been fired upon from the Texan shore, to which the American general replied that there was no satisfactory evidence that the firing had proceeded from the Texan side of the river, and that he had always endeavored, as far as lay in his power, to prevent any violation of neutrality by officers or soldiers of his command. "You complain," he said, "that my officers and men affiliate with the liberals and welcome them. This is not strange. The liberals claim that they fight for their freedom. Their cause, then, is one that has awakened the warmest sympathies in every American breast. It would be as impossible for me to prevent this, even if I felt so disposed, as it would be to stop the motion of the earth. But I do not feel so disposed. During our late war the officers and men of French and English men-of-war lying in ports in our military possession, affiliated continually and exclusively with our enemies (as at New Orleans and Norfolk), and yet it was not thought necessary to communicate with them on the subject. They were permitted to choose their own associates." He subsequently remonstrated with Mejia against the impressment of American citizens into the imperial service, and not receiving a satisfactory reply, announced, in accordance with instructions from Gen. Sheridan, commanding the Military Division of the Gulf, that if such outrages should be repeated, no excuses or personal apologies would be accepted. He also

stated that he had been directed to stop all intercourse with any garrison during a siege, except that which humanity should dictate. This communication was returned to him by Mejia as being improper in language, and thenceforth the correspondence between the two commanders was brief and of a purely formal character. In December, R. Clay Crawford, formerly an officer of volunteers in the United States army, arrived at Brownsville with a commission as general in the Mexican republican army, and authority to recruit an American division for the republican service under his command. He established recruiting offices at Brownsville and other places in Texas, where enlistments were made so rapidly as to greatly alarm the imperialists in Matamoras. The defences of the place were immediately strengthened, and Mejia issued an order forbidding all communication with the American side of the river, and requiring all citizens of Matamoras to take an oath of allegiance to the Emperor Maximilian. Crawford was, however, soon arrested and sent a prisoner to New Orleans, his recruiting offices were closed, and the year ended with comparative tranquillity on both sides of the river.

Early in November news reached Juarez, in El Paso, that the imperialists had evacuated Chihuahua. He immediately departed for that place with his cabinet, the members of the Supreme Court, and other functionaries, and on the 20th reestablished there the capital of the republic. On December 9th he was compelled by the return of the imperial troops to evacuate Chihuahua and retire to El Paso, where he arrived on the 18th, and where he was established at the close of the year. On December 11th the imperialists reoccupied Chihuahua.

At this time a new element of danger to the republican cause was developed. As the constitutional term of President Juarez would expire by limitation on November 13, 1865, and, in consequence of the unsettled condition of country, no successor had been elected, the question arose whether, under the circumstances, the Government should be transferred, according to the provisions of the Constitution, to Gen. Ortega, the President of the Supreme Court, or retained by the man who had so long and so heroically upheld the sinking fortunes of the country, and who, in the opinion of many, was the only Mexican living competent to discharge the duties of President of the republic. A change of leaders at such a moment, it was urged, would prove a great misfortune to the cause. Accordingly, after consultation with many influential republicans, soldiers and civilians, Juarez, on November 9th, issued a decree extending his presidential term until a new election could be held, and urging at length the necessity for such action. A circular was published at the same time by the Minister of the Interior, censuring Gen. Ortega for prolonged absence from his command without leave, and ordering him to report forthwith

for trial. In a letter written immediately after the promulgation of the decree, Juarez stated that the commanding officers and political leaders of the frontier States had all approved of the extension of his term of office, and that he had reason to believe that a similar assent could be obtained in the other States of the republic. Unfortunately for the harmony of the republican cause this arrangement did not meet the approval of one of the parties most interested in the matter, Gen Ortega, who forthwith issued the following protest:

To Señor SEBASTIAN LERDO DE TEJADA, Minister of Internal Affairs and Government:

The unjust and impolitic act executed by Don Benito Juarez in issuing, through your department, the two decrees dated on the 8th of November last past, has placed me in the painful position, in view of the circumstances in which the Mexican Republic now stands, of being obliged to protest, as I now do before the nation, against the contents of the said decrees. I do so—

1. Because they are contrary to the express provisions of the political constitution of the republic, and consequently illegal, arbitrary, and unjust.

2. Because they create a dictatorship, to be exercised by Don Benito Juarez, who will thus be enabled to remove and replace at his caprice the authorities of one of the independent and sovereign Federal powers, who have received their appointment and prerogatives through the votes of the nation, destroying in this manner a republican principle and the basis of legal order, which is the form of government laid down in the Constitution.

3. Because they are contrary to the powers delegated to the Executive by Congress, which, notwithstanding the war existing between Mexico and France, declared, in granting said powers by the decree of December 11, 1861, that the Executive should be "entirely authorized to take such measures as he may deem advisable under existing circumstances, without any further restriction than to sustain the independence and integrity of the national territory, the form of government established by the Constitution and the principles and laws of reform;" and the law of October 27, 1862, contains the express and decisive restriction that "he [Juarez] shall not act contrary to the provisions of article 4 of the Constitution;" otherwise, that he shall not have power to determine whether it be advisable or not to proceed against public officers—a restriction whose sole object was to prevent the President from making an abuse of power and destroying constitutional order.

4. Because the said decrees seriously jeopard the national independence, by depriving its defenders of a legitimate government, which is the only one that can serve as a centre, united under one flag, and substituting therefor an illegal government, devoid of any justification save the anti-constitutional decree that has been recently issued.

5. Because these decrees imply an insult to the Mexican people, and to those who have fought for the rights of Mexico beneath her flag, inasmuch as the text clearly leads to the inference that the blood shed by the Mexican people, the thousands of victims, and the heroic efforts of all classes in support of a principle, have had no other object than to protect the person of Don Benito Juarez, and that if this individual does not save Mexico, Mexico is unable to save herself.

6. Because not only the grounds upon which these decrees are based are fallacious, but, further, because recourse has been had to calumny, directed against me personally.

The solemn oath which I took as constitutional President of the Supreme Court of Justice, based upon the Constitution of the Republic, has been loy

ally and patriotically observed on my part, and the national will and rights of the people, as laid down in that instrument, remain intact. Upon recovering its rights, the nation will call to account those who have infringed its laws. JESUS G. ORTEGA, Constitutional President of the Supreme Court of Justice of the Mexican Republic.

EAGLE PASS, December 21, 1865.

Thus matters remained with respect to the presidency at the close of the year. Juárez had, on his side, possession of the office and the sympathy of almost all patriotic republicans; while Ortega was fortified by a technical right, which the emergency of the country alone prevented from being recognized and respected, but which he seemed nevertheless determined to assert.

At the close of the year, notwithstanding the imperialists had been victorious in nearly every engagement, their gains of territory were inconsiderable, however formidable they might seem in the description. Their successes in Sonora, Sinaloa, Chihuahua, Durango, and other northern States, had proved but barren conquests—easy enough to acquire, but difficult to retain. A vindictive and unwearied foe continually hung round their line of march, cutting off trains and stragglers, and by the rapidity of their movements and their knowledge of the country defying pursuit; and it frequently happened that, from the impossibility of preserving communications with a military base of operations, tracts of territory had to be relinquished almost as soon as conquered. In a country so extensive and so thinly settled, a larger force than Maximilian could put into the field was indispensable to perform the work allotted to it. It is not surprising, therefore, to learn that in November and December the imperialists were reported falling back from the northern States and concentrating at San Luis Potosi and other central places, either for the purpose of reorganizing new campaigns in the north, or because the attempt at conquest in that direction was unprofitable and hopeless. At the same time efforts were making to put the route between Mexico and Vera Cruz in such a state of defence, that a repetition of such outrages as had been committed there by guerrillas during the year would be impossible. A French official return shows that the Mexican expedition has cost France, up to the close of 1865, no less a sum than \$135,000,000. The losses in the French forces, land and sea, have been 11,414 men, viz.: killed, 3,819; died from wounds or effects of climate, etc., 4,928; disabled for life, 3,167.

By a decree issued in April, Maximilian defined the provisional status of the Imperial Government, pending the organization of a definitive government. The form of government was declared to be a limited hereditary monarchy, with a Catholic prince at the head; and in case of the death of the Emperor, or of any other event incapacitating him for the use of his powers, "his august spouse, the Empress," was to be *ipso facto* Regent of the Empire. The Emperor or Regent, upon assuming power,

must take this oath: "I swear to God by the Holy Evangelists to further, by all means in my power, the welfare and prosperity of the nation, to defend its independence, and preserve the integrity of its territory." The territory of Mexico was defined as bordered on the north by the lines decided upon with the United States at the conventions of Guadalupe Hidalgo and Mesilla; on the east by the Gulf of Mexico, the Sea of the Antilles, and the English establishment at Balize; on the south by the republic of Guatemala; and on the west by the Pacific Ocean. The Government guaranteed to all the inhabitants of the empire equality in the eye of the law, security of person and property, and liberty of free speech; and its acts were to be directed by nine ministers, representing as many departments. A decree of May 10th defined the extent of freedom to be allowed the press, which was to be subject to about the same restrictions as in France and Austria. Several changes took place in the ministry during the year, and at its close the departments were in charge of the following persons:

Department of the Imperial Household.	Juan N. Almonte.
" of State.	José F. Ramirez.
" of Foreign Affairs.	M. de Castillo.
" of the Interior.	J. M. Esteve.
" of Justice.	Pedro E. y Echanove.
" of Public Instruction.	Señor Artigas.
" of Public Works.	Luis Robles.
" of War.	Juan de D. Peza.
" of Finance.	M. Langlais.

A new council of state was also appointed, with José Maria Sanchez president. Several of the governors and officers appointed by Maximilian having pronounced against him, the "*Estafette*," a semi-official journal published at the capital, announced in May its profound conviction that "Mexico must be ruled for many years yet without calling Mexican statesmen to power." Whether or not this opinion was shared by Maximilian, it is certain that, in despair of finding a competent financier in Mexico, he was compelled to employ a Frenchman, M. Langlais, sent to him by the Emperor Napoleon for that purpose, to direct the finances of the empire.

A decree, promulgated in August, prescribed rules for the establishment and direction of the diplomatic corps, which was placed under the immediate direction of the Minister of Foreign Affairs. The Emperor reserved to himself the right of appointing and dismissing all his representatives to foreign nations. The salary of ambassadors was fixed at \$12,000, that of envoys extraordinary and ministers plenipotentiary at \$10,000, and that of ministers resident at \$8,000. The imperial dignity was further enhanced by the creation, by decree of April 10th, of three orders, that of Our Lady of Guadalupe, that of the Eagle of Mexico, and that of St. Charles. The first was originally founded by the Emperor Iturbide in 1822, and was temporarily revived by Santa Anna in 1853-'55. The last is open only to females, on whom it is to be conferred by the Empress for exemplary acts of piety, humility, or charity. Decorations

of the first two orders have already been widely distributed in Mexico and Europe.

From the moment of assuming the imperial crown, Maximilian was troubled with questions respecting the succession. No issue had resulted from his marriage with the Empress, and the hostility manifested toward his government by a large portion of the Mexican people satisfied him that no solution of the difficulties in which he was involved could be obtained by a future transfer of the imperial dignity to another prince of European extraction. The stigma of foreign usurpation would still attach to him. A native prince, however, might form a rallying point for a national party, to include all persons in favor of a strong government, and under the prestige of such a name, in connection with the succession, his own rule might be tolerated, and perhaps become popular. Fortunately for his purpose, Mexico, soon after its independence had been secured, was erected into an empire under Augustin Iturbide. Although this form of government was annulled in less than a year, and the Emperor himself was banished and subsequently shot, two of his sons and several grandchildren still survive, and in them, if in any native Mexican, the traditions of imperial power would seem to centre. Hence the idea was conceived of nominating one or more of this family as successors to the empire established in 1864, in case Maximilian should die without issue. Such an act, it was urged, would go far toward disarming the prejudices of those who still held out against the empire, and would, perhaps, induce Juarez and the republicans to cease their opposition. In the hope, therefore, that the Mexicans would look with complacency upon the prospect of the throne being filled by a native dynasty after the death of the reigning monarch, two of the grandchildren of the Emperor Iturbide are said to have been designated as princes imperial, next in the line of succession after Maximilian and his consort Carlotta. It having been reported that one of these, the child of an American woman, had been removed from his mother's protection, and that the latter had been compelled to leave Mexico, a resolution was adopted in the United States House of Representatives, requesting information "in regard to the kidnapping of the child of an American lady in the city of Mexico, by the usurper of that republic, the so-called Emperor, under the pretence of making such child a prince." In reply, the State Department announced that no official information had been received in regard to the kidnapping referred to, and no other information upon the subject which it was deemed advisable to make public at the present time.

The termination of the rebellion in the Southern States of the American Union in the spring of 1865, cast adrift many restless spirits, who, accustomed to the excitement of military life, ill relished the idea of settling down to peaceful, industrial pursuits. Many of these naturally looked at once toward Mexico, with the

republican party of which they heartily sympathized, as a new field for adventure, and the Imperial Government entertained grave apprehensions that thousands of discharged American soldiers would hasten to enlist in the service of Juarez. That the Mexican republicans should wish to fill their wasted and demoralized ranks with such material was natural enough; and scarcely had the first disbanded regiments of United States volunteers returned from the battle-fields of the South, than offices were opened in the Northern cities for registering the names of persons wishing to emigrate to Mexico, where, it was alleged, liberal inducements to settle, in the shape of grants of lands, were offered to them. As Gen. Ortega was in the United States at the time, it was generally reported that he was the promoter of this scheme, which was also said to be connected in some manner with his election to the Presidency of Mexico. However that might be, no doubt seems to have been entertained that the so-called emigrants were intended for military service in the republican army; and the question arose, whether the United States Government was not bound, under the provisions of its neutrality act, to prevent their departure. The solution of this question might have involved a rupture with France, with which country our relations were of an exceedingly delicate nature; but such an issue was avoided by the difficulty which those having charge of the emigration scheme encountered in raising the necessary funds to equip and despatch men to Mexico. The long distance to be traversed before reaching their destination, the obstacles which the French fleet could oppose to a landing on the coast, and the utter impossibility of putting the emigrants in an effective condition when landed, presented grave obstacles to the scheme, in view of which it was ultimately abandoned, without the necessity of interference on the part of the United States Government.

Relieved from the apprehensions excited by the prospect of American emigrants enlisting in the service of Juarez, the Imperial Government proceeded to perfect a plan of its own for encouraging emigration into the country. The arrival of foreign colonists, bringing with them habits of industry, a love of order, and a spirit of activity and progress, it was supposed, would exert a beneficial influence upon the native population, and tend to develop the national resources. At the close of 1864 rumors were very prevalent that Dr. Gwin, an ex-Senator from the United States, had been appointed by Maximilian prefect of several of the northern States of Mexico, with a view of encouraging thither an extensive emigration from the Southern States of the American Union, or of developing the mineral resources of that part of the country; and it was further hinted that this portion of the empire was to be ceded to France as some sort of indemnity for the expenses undergone by her in establishing Maximilian on his throne. The appointment of Dr. Gwin as prefect

was denied by one Luis de Arroyo, said to be the agent of Maximilian in New York, who stated in a letter, published in the papers of that city in May, that "although for some time present in Mexico, Dr. Gwin never had any relations with the persons composing his Majesty's Government." He also denied that any Mexican territory had been ceded to France. Notwithstanding this denial, it was subsequently charged by the representative of Juarez at Washington, Señor Romero, and it is believed by many, that an armed emigration from the Southern States of the American Union into Northern Mexico was in contemplation previous to the close of the rebellion; also that the Emperor Napoleon was cognizant of and friendly to the scheme; and that Dr. Gwin was to have been his agent, first in promoting the emigration, and then in procuring the cession of the territory to France. If any such project was entertained, its consummation was effectually prevented by the overthrow of the rebellion in the United States, which left that country free to oppose any further encroachments on Mexican territory by foreign powers.

Meanwhile, with the close of the war in the United States, several of the Southern leaders determined to leave the country and settle in Mexico. Among these were Gens. Sterling Price and Magruder, of the Southern army, and ex-Governors Polk and Harris, who went there, as pioneers or agents, in behalf of such persons as had resolved to expatriate themselves rather than live under the authority of the United States. They were subsequently joined by Matthew F. Maury, formerly director of the Observatory at Washington, and who had been known throughout the war as a determined and irreconcilable enemy of the Union. Instigated by their favorable reports, a number of discontented citizens of the Southern States emigrated to Mexico during the summer of 1865, where they formed the nucleus of a colony of Americans. So promising appeared the prospects of a large influx of this class of emigrants that the Imperial Government in September issued a decree guaranteeing to them certain privileges and advantages, the most important of which were the following: the introduction, free of duty, of their seeds and instruments of labor, machinery, etc.; naturalization immediately after their arrival, if it should be desired; grants of lands at low rates, and even donations of lands, should the emigrants be without the means of purchasing, and their capital be needed to establish them successfully; exemption from conscription in the military service during the first years of their residence in the country; assistance by the Government to colonies destitute of private capital; and authority to bring negroes in the capacity of free apprentices, engaged by contract for a certain number of years, upon conditions which the Imperial Government will regard as suited to the age and sex of the apprentice, and which will establish the respective rights of proprietor

and workman. This last privilege, which, in its practical operation, amounts to the establishment of slavery, was brought to the notice of the United States Government by Señor Romero, in the following words:

It is really an extraordinary thing, and almost incomprehensible, that when slavery has received a death-blow in the only country that could revive it, and when it has been shown by facts that its existence is an evil, social, moral, and political, there can be in the world a usurper who, without having established his authority in the country he tries to dominate over, should attempt to reestablish that odious system for the purpose of strengthening himself, merely changing the name for the purpose of deluding the world.

As this system of labor might be taken for what in Mexico is called peonage, and as that may be considered here as an institution equivalent to slavery, I think it expedient to show to you that on some estates in the *tierras calientes*, to the south of Mexico, there has in fact been, through the abuses of the proprietors, and the influence they enjoyed, something that might be compared in its practical effects with what the ex-Archduke of Austria has now established in his aforesaid decree; but such abuses, besides being restricted to a very narrow district, were never sanctioned by the Mexican laws, and the national government of that republic has taken especial care to correct them and root them out. It was reserved for the ex-Archduke of Austria to sanction such an abusive practice by a law which, if it goes into force, will be executed throughout the whole extent of the Mexican territory.

To encourage still further emigration from the Southern States of the American Union, Maximilian soon after appointed Maury, who had previously been made an honorary councillor, imperial-commissioner of colonization, and Gen. Magruder chief of the land office of colonization. The former immediately issued several circulars, couched in persuasive language, in one of which, besides praising the climate and soil of Mexico, he eulogized the "wise and mild rule of Maximilian," whom he declared to be "beloved by the imperialists and respected by all." The empire, he said, was continually gaining ground, many important works of internal improvement were in progress, and property and life were daily becoming more secure; but as a curious corollary from this, he advises emigrants "at first to establish themselves in villages, as well for mutual convenience as for protection against the bands of lawless marauders, who are ever ready to pounce upon the helpless farmers." After advising settlers to select lands lying along the slopes bordering on the *tierras calientes* or low lands of the coast, he gives the following information respecting the progress of Southern emigration in Mexico:

Bryant from Arkansas has established a colony in Chihuahua. Mitchell, of Missouri, another on the Rio Verde, in the Department of San Luis Potosi. Terry, of Texas, another in Jalisco. They rent at first, with the privilege of purchase in the mean time at a stated price.

Then there is the fine colony of Carlotta, near Cordova, where the lands were abandoned. There were a number of haciendas in that neighborhood that were indebted for more than they were worth to the Church, and which, by the Juarez Government, were

confiscated. These have been expropriated by the empire, and applied to colonization. These lands are sold to immigrants at one dollar per acre in five equal annual instalments. Generals Price and Shelby, of Missouri, Governor Harris, of Tennessee, Judge Perkins, of Louisiana, the Rev. Mr. Holman, of Missouri, and a number of others, have already established themselves there. They are all highly pleased with their prospects. By the time the railway through to Vera Cruz is completed, and the last instalment falls due, they will have improved their farms, when the most staid among them expect that these farms will be worth ten, twenty, and even fifty dollars the acre. A gentleman from Louisiana has been there for seven or eight years. He established a coffee plantation of eighty acres, which is now in good bearing, and the crop from which last year was valued at \$16,000. The Cordova coffee sells in the New York market as Java, and the tobacco equals that of Cuba.

Each married man there is allowed six hundred and forty acres, but it is now generally admitted that one-fourth of that quantity will probably be quite as much as one family will be able to cultivate; it is so fertile and wonderfully productive.

Agents have been established at various convenient points to assist emigrants on their arrival in the country, by giving them information and furnishing them with the necessary certificates and passports to enable them to pass the custom-houses, to enjoy all the rights, privileges, and exemptions of the Emperor's decree.

At present the following agencies have been established, namely: L. Orotosa, at Vera Cruz; John Perkins, formerly of Louisiana, at Cordova; John T. Lux, formerly of Louisiana, at Monterey; Alonzo Ridley, of California, at Mazatlan; Captain of port of Tampico, at Tampico; Captain of port of San Blas, at San Blas; Captain of port of Matamoros, at Matamoros; Mr. Ramon de la Vega, President de la Junta de los Mejores de Colima, at Manzanillo.

Favorable inducements were also held out to European emigrants, several companies of whom, from Germany, Italy, and Belgium, were at the close of the year reported on their way to Mexico. In June a proposition was made by the Minister of Agriculture and Manufactures, to introduce one hundred thousand laborers from the coast of Africa to cultivate the *tierras calientes*, which would otherwise have to be abandoned, as the white race cannot support the heat of the climate. He estimated the consequent increase of national wealth at fifty millions of dollars annually. On the authority of Mr. Arroyo, the imperial agent in New York, Maximilian later in the year expressly declined to permit the introduction of this class of emigrants. According to the same person, an importation of Chinese coolies was forbidden, "on account of the conditions imposed upon said workmen, which reduce them to a state of virtual slavery." Mr. Arroyo was further authorized to announce, that "not even a shadow of slavery would be tolerated in the empire, and that colonization would be made with freemen, under no other conditions than those to which the civilized world consents, and the law of the empire demands."

The financial condition of the empire proved to Maximilian and his ministers a source of great and constantly increasing perplexity. The inexperience and unpractical character of the committee of Mexicans appointed in 1864 to devise a system of finance, prevented,

as might have been supposed, the adoption of any sensible measure. Meanwhile the expenses of the empire so largely exceeded the receipts, that unless some means were speedily taken either to enhance the revenue or to retrench, the permanence of the Government would become exceedingly questionable. From a pamphlet published in Washington in the interest of the friends of the Mexican Republican Government, we derive the following statement of the public debt of the country at the close of 1865:

	Public Debt.	Annual Int.
Foreign debt, as recognized by the constitutional Government in 1862.	\$78,772,643	\$2,589,428
Indebtedness acknowledged to the French Government by Maximilian for the expenses of the intervention to July 1, 1864, of which \$10,000,000 were paid out of the first loan, and the balance funded at 3 per cent., viz.	40,000,000	1,200,000
First loan put out for account of Maximilian, at 6 per cent. interest.	40,000,000	2,400,000
To pay France the above \$10,000,000 and more on account of reclamations to French subjects further bonds (as an additional loan) were put in circulation, to the amount of,	20,870,370	1,222,222
Second loan put out for account of Maximilian in Paris, being the lottery loan, at 6 per cent. interest, amounting to,	92,592,592	5,555,555
	\$271,735,005	\$12,966,204

From this it would appear that the public debt has been increased by the experiment of intervention, and the establishment of an empire, \$190,103,045 over the sum total under the republic. The contrast between the annual expenditures of the two governments is equally striking, as the following tables show:

Annual expenditures of the Government of the Republic as established by law of Congress August 16, 1861.

Interest on the foreign debt,	\$2,760,022
For foreign relations,	\$210,340
For home departments,	1,738,050
For finance,	1,573,624
For war,	4,746,895
	8,927,418

Total annual expenditures of the national Government,

Annual expenditures of the Government of Maximilian.

Interest on his foreign debt (of which interest \$10,877,777 is to France),	\$12,966,204
Annual cost of his lottery scheme in Paris,	1,391,287
Personal expenses and civil list of Maximilian \$10,500 per day (paid daily),	3,832,500
25,000,000 francs per annum on account of expenses of French contingent, according to treaty of Miramar,	4,629,629
400,000 francs per voyage subvention to the French line of transport steamers from St. Nazaire,	888,888
Ministers, legations, consulates, agents, employes, pensions, gifts, travelling expenses, military and civil expenses, and charges of his foreign armed force,	26,220,568

Total annual expenses under Maximilian,

Annual expenses as fixed by the national Congress under the republic,

Annual increase under Maximilian,

* This should more properly, perhaps, be stated at \$61,632,560. The sum of \$2,559,917, which represents the debts recognized under the republic as due to French subjects, is included in the additional loan of \$20,870,370, given lower down in the table.

No budget for 1865 has been published by the Imperial Government, and the above figures cannot therefore be substantially verified. Other estimates place the annual expenses at about \$42,000,000. But all accounts agree that the expenditures for the current fiscal year will more than double the amount of receipts, and that under the present Government it will be impossible to meet the annual deficit otherwise than by loans. As has been previously stated, the Emperor Napoleon sent to the assistance of Maximilian an able financier, M. Langlais, to extricate him from his embarrassments. He at once proposed, as one of the first reforms to be instituted, to reduce the large appropriation annually made for the support of the imperial establishment; and unless these economies were acceded to, refused to accept the office of Minister of Finance, which he was expected to fill. The Emperor was equally opposed to this species of reduction, and for a time all schemes of retrenchment failed. Meanwhile the imperial treasury was so nearly drained of funds, that in December a loan of \$300,000 was thankfully received from Marshal Bazaine, on account of the French Government, to meet current demands; and measures were in progress to secure another European loan of \$100,000,000. Finally, the Emperor acceded to the demands of M. Langlais, who thereupon accepted office, and proceeded to institute several important financial reforms. At the close of the year his plan had not been fully developed, but it was understood that he intended to cut down the personal expenses and civil list of the Emperor to \$3,000 per day, and to do away with several superfluous ministries which entailed a useless expense. At this moment it would seem that the existence of the Imperial Government depends upon the negotiation of the new loan. Should that fail, it is supposed that a general forced loan will be resorted to, which, it is feared, would lead to an uprising of the people.

In October the Republican Government of Mexico through its agents, John W. Corlies and Co., put into the New York market a loan of \$30,000,000. Faithful payment of the bonds and interest was guaranteed by the General Government, of the republic of Mexico and of the States of Tamaulipas and San Luis Potosi, and was declared to be further secured by the special pledge, having the effect of a national mortgage, of 5,000,000 of acres of agricultural and 500,000 of mineral lands in the States of Tamaulipas and San Luis Potosi. The agricultural lands thus pledged are estimated at the value of from one to fifty dollars per acre, and the mineral lands at the minimum value of one hundred dollars per acre, which would make the aggregate specific security, at the lowest price, amount to \$55,000,000. Mr. Romero, the Mexican minister at Washington, certified that the loan had been authorized in November, 1864, and was duly offered by the

proper agents. At the close of the year the bonds were reported to have had a fair sale. A resolution was about that time offered in Congress that the United States Government should pledge itself for the payment of the loan, but no action has yet been taken upon it.

Whatever may be the fate of the imperial sway in Mexico, the country undoubtedly owes to it the present vigorous prosecution of the line of railway which is to unite the capital with Vera Cruz. Throughout the year this work, surpassing in the magnitude of the difficulties to be overcome almost any road ever projected, was pushed forward with great activity, and it is now estimated that the portion between Puebla and the city of Mexico will be completed in the summer of 1866. A section from the capital to Chalco, thirty-six miles in length, was successfully opened in October. This road, which, after leaving Puebla, passes through Orizaba on its way to the coast, is under charge of an English company, who have sub-let a portion of the work to a French company. Another line, from Puebla to Vera Cruz, passing through Jalapa and Perote, has also been projected; also a road from Guaymas to Libertad on the Gulf of California. The Emperor has granted to Messrs. Clute and Co. the right to establish three lines of telegraph, viz.: from Guanajuato to Matamoras, passing through San Luis, Saltillo, and Monterey; from Matamoras to Vera Cruz, passing through Victoria, Tampico, and Tuxpan; and from San Luis to Durango, passing through Aguas Calientes, Zacatecas, Fresnillo, and Sombrerete. These are in addition to one already projected between the capital and Vera Cruz. In December an imperial decree granted to J. Stanley Keeling the right for ten years to run a line of steamers between Vera Cruz and New York.

During 1865 the United States Government continued to be represented in the city of Mexico by W. H. Corwin, acting chargé in the absence of the Hon. Thomas Corwin, the regularly accredited minister to the constitutional Government. No minister was accredited by the Imperial Government to the United States; and from official expressions of the State Department, it may be presumed that none would have been recognized. In compliance with a resolution of the House of Representatives, adopted December 18th, requesting "information in regard to steps taken by the so-called Emperor of Mexico, or by any European power, to obtain from the United States a recognition of the so-called empire of Mexico, and what action has been taken in the premises by the Government of the United States," the President sent to Congress an elaborate diplomatic correspondence, from which it appears that on July 17th the French minister, M. Montholon, called at the Department of State and informed Mr. Seward that a special agent had arrived from Mexico, bearing a letter from Maximilian to the President of the United States, with papers making certain explanations relative to

transactions on the Rio Grande, upon which the United States Government had made representations to the Imperial Government of France. On the 18th of July Mr. Seward, after conference with the President, returned the letter to M. Montholon, saying that the United States was in friendly communication with the Republican Government of Mexico, and therefore that the President declined to receive the letter, or to hold intercourse with the agent who brought it.

On the 1st of August M. Romero, the Mexican minister, informed the Department that Don Luis Arroyo assumed to act as commercial agent in New York without an exequatur or other recognition by the United States Government, and asked whether the Government recognized the right of Maximilian to make such appointment. Mr. Seward replied, August 9th, that no law of the United States prevents a person from advertising himself as consul, but that the United States Government in all its official correspondence has recognized no other government in Mexico except that of Juarez; and that such a commercial agent can perform no consular act relating to the affairs of his countrymen in the United States. "To prohibit him from attesting invoices and manifests," said the Secretary, "would be tantamount to an interdiction of trade between the United States and those Mexican ports which are not in possession of the Republican Government of that country. The consuls of the United States in Mexico, who have their exequatur from that Government only, themselves discharge duties as commercial agents in the ports which are not under the control of the Government in all respects like those which the person, Arroyo, in the same way and to the same extent, claims to do in New York in respect to said ports."

Although the evacuation of Mexico by the French troops had been expressly provided for in the convention concluded between France and Mexico in 1864, and M. Drouyn de Lhuys had stated the intention of Napoleon to withdraw his troops as soon as the government of Maximilian was established, and they could with propriety depart, few indications were afforded in 1865 of any desire or preparation to lessen the foreign contingent in the imperial service. Bodies of troops, it is true, were from time to time sent home, but their places were generally filled by others arriving from France, and at the close of the year precisely the same condition of affairs existed as had in former years caused remonstrances from the United States Government. These remonstrances were repeated during the year with undiminished earnestness by Mr. Seward. On July 13th he wrote to Mr. Bigelow, acting chargé in Paris, enclosing a number of intercepted letters received from the Mexican minister in Washington, which went to show complicity on the part of the French authorities in Mexico in Gwin's colonization scheme heretofore mentioned.

These he requested him to present to M. Drouyn de Lhuys, and frankly inform him that the sympathies of the American people are already considerably excited in favor of the republic of Mexico; and because they are disposed to regard with impatience the continued intervention of France in the country, any favor shown to the proceedings of Dr. Gwin by the titular Emperor of Mexico or by the Imperial Government of France, with reference to those agents, will tend greatly to increase the popular impatience, because it will be regarded, perhaps justly, as imparting dangers to, or at least as a menace against the United States. Under date of November 6th Mr. Seward represented to Mr. Bigelow that the presence and operations of a French army in Mexico, and its maintenance of authority there, was a cause of serious concern to the United States. Nevertheless the objections of the United States were still broader, and included the authority itself which the French army was thus maintaining. That authority, he said, was in direct antagonism to the policy of this Government and the principle on which it is founded. "Every day's experience of its operation only adds some new confirmation of the justice of the views which this Government expressed at the time the attempt to institute that authority first became known. The United States have hitherto practised the utmost frankness on that subject. They still regard the attempt to establish permanently a foreign and Imperial Government in Mexico as disallowable and impracticable, for the reasons they could not now agree to compromise the position they have heretofore assumed. They are not prepared to recognize or to pledge themselves hereafter to recognize any political institutions in Mexico which are in opposition to the Republican Government with which we have so long and so constantly maintained relations of amity and friendship." He said, in closing, that "it is hardly necessary to say that we should not be dwelling so earnestly upon this branch of political relations if it had not been our conviction that those relations of the present moment supersede those of commerce in the consideration of the American people." Mr. Bigelow, under date of November 30th, reports reading the despatch of Mr. Seward to M. Drouyn de Lhuys, who thanked him, though he felt obliged to say that he derived neither pleasure nor satisfaction from its contents.

On the 3d of November Mr. Seward wrote to Mr. Bigelow with reference to the summary execution of Gen. Arteaga and his brother officers, saying: "I am directed by the President to request you to ask the serious attention of the French Government to the military proceedings in Mexico, by which native Mexicans taken captives while adhering in war to their own Republican Government are denied rights which the law of nations invariably accords to prisoners of war." Mr. Bigelow communicated to the French Government this protest of the United States against the atrocious acts of Na-

oleon's agent; and on the 30th of November he received an official reply, in which M. Drouyn de Lhuys, on the part of the Emperor, formally repudiated not merely the acts of Maximilian, but that person himself. The following is Mr. Bigelow's report of the interview :

M. Drouyn de Lhuys referred to the representation I had made in regard to the shooting of the Mexican prisoners taken in war, and also to the case of Madame de Iturbide. "Why," he said, "do you not go to President Juarez? We are not the Government of Mexico, and you do us too much honor to treat us as such. We had to go to Mexico with an army to secure certain important interests, but we are not responsible for Maximilian or his Government. He is accountable to you, as to any other Government, if he violates its rights, and you have the same remedies there that we had."

Full details respecting these and other diplomatic questions arising between France and the United States, will be found under the head of **DIPLOMATIC CORRESPONDENCE.**

MICHIGAN. The Legislature of Michigan convened at Lansing on January 4, 1865, and was organized by the choice of Republican officers in both houses. Gilbert E. Reed was elected speaker of the House of Representatives. Austin Blair, the retiring Governor, delivered his valedictory message, and Henry H. Crapo, the Governor elect, was inaugurated. Among the acts passed by this Legislature was one submitting to the people at the fall election of 1866 an amendment to the State Constitution allowing colored men to vote, and one authorizing a loan of \$1,000,000 for the purpose of paying a State bounty of \$150 each to volunteers enlisting in the service of the United States subsequent to February 15, 1865.

The receipts and expenditures of Michigan for the fiscal year ending November 30, 1865, are exhibited in the following table :

Balance in treasury November 30, 1864.....	\$440,041 27
Receipts for fiscal year 1865.....	1,954,318 63

Total available funds for 1865	\$2,394,360 43
Total payments for fiscal year 1865.....	1,925,964 14
Balance in treasury December 1, 1865.....	468,399 29

The number of men entitled to the bounty of \$150 was estimated at 5,000; and with a view of raising the required sum, about \$750,000, the Treasurer of the State visited New York in May, and offered at private sale the bonds authorized to be issued in payment of the bounties. Public attention being then absorbed in investments in national securities, he met with no success; and upon advertising proposals for the bonds in Michigan soon after, he received bids for only \$41,000, the greater part of which were considerably below par. Under these circumstances he adopted the expedient of exchanging the bonds for the bounty certificates given to the recruits upon enlisting, and in this way disposed of \$345,000, which is somewhat less than half the amount required. By the provisions of an "act authorizing a war bounty loan," approved February 5, 1864, a loan of \$500,000 was authorized for bounty purposes. The money arising from this loan was

applicable to bounties to fill the quotas of 1864. Under the provisions of this act the Treasurer issued the balance of these bonds to the amount of \$270,000, all of which was purchased by the treasury office for the sinking fund. The war fund account stands as follows :

Amount received for bonds under act No. 24, 1864.....	\$270,000 00
Amount received for bonds under act No. 85, 1863.....	345,000 00
Accrued interest received of buyers of above bonds.....	3,298 79
Of the amount levied in 1864, taxes for interest on War Loan, the amount actually paid is credited to this fund.....	86,555 00
Received for a coupon paid by mistake.....	3 50
	<hr/> \$704,857 29

The War Fund was overdrawn at the close of the fiscal year 1864.....	73,218 43
The payments on account of this fund for the fiscal year 1865, were.....	617,911 17
Leaving a balance to the credit of the fund of...	13,727 69
	<hr/> \$704,857 29

During the fiscal year 1865, the sum of \$279,591 was set apart for the several sinking funds authorized by law. The funded interest-bearing debt of the State is as follows :

Renewed Loan Bonds, 6's, due January 1, 1873.....	\$216,000 00
Two Million Loan Bonds, 7's, " " 1, 1868.....	250,000 00
" " " 6's, " " 1, 1873.....	500,000 00
" " " 6's, " " 1, 1878.....	500,000 00
" " " 6's, " " 1, 1883.....	750,000 00
War Loan Bonds, 7's, due January 1, 1886.....	1,122,000 00

------------	----------------

The charges of the State against the General Government, from the commencement of the war to May 1, 1865, amount to \$723,318.42. This includes clothing, equipage, pay, transportation, food, etc., and every thing under instructions of the Treasury Department chargeable; and the proper accounts and vouchers have been forwarded to the Secretary of the Treasury. The war tax apportioned to this State, by act of Congress, was \$501,763.33. Fifteen per cent. of this tax, under instructions of Secretary Chase, was deducted, and \$92,000 has been paid to the State by the General Government, leaving the claim of the State \$204,819.58 subject to adjustment.

The number of troops raised by the State under all calls was, according to the report of the United States Provost Marshal General, 90,119, or, reduced to a three years' standard, 80,865.

The population of Michigan, according to the State census of 1864, was given in our volume for last year. From the statistics of the census published early in 1865 by the Secretary of State, it appears that Michigan contains 35,995,520 acres of land, of which but 3,647,645 acres are improved, and but 12,086,660 returned as taxable. There are, if equally apportioned, about $4\frac{1}{2}$ acres of improved land for every man, woman, and child in the State. The following table gives the amount of the crops raised in the State in the two years immediately preceding the censuses of 1854 and 1864:

	Census of 1854.	Census of 1864.
Wheat, acres.....	473,571	841,881
Wheat, bushels.....	7,027,982	9,687,627
Corn, acres.....	527,856	427,529
Corn, bushels.....	7,630,668	11,007,284
Other grain, bushels.....	2,294,420	4,195,244
Potatoes, bushels.....	2,917,434	4,059,271
Hay, tons.....	496,041	843,346
Pork, pounds.....	11,258,841	88,187,002
Butter, pounds.....	7,924,896	18,836,452
Cheese, pounds.....	779,580	1,580,945
Sugar, pounds.....	1,611,462	4,044,399
Horses.....	91,584	176,083
Work oxen.....	67,038	60,643
Milk cows.....	139,260	232,188
Other neat cattle.....	141,273	210,880
Sheep.....	964,333	2,053,363
Swine.....	239,392	825,239
Mules.....	106	1,115

The wheat crop of Michigan for 1863 averaged but $11\frac{1}{2}$ bushels to the acre, being much below the ordinary yield. The hay crop is the next in value, being worth more than \$15,000,000 for 1863. The average amount of butter made per cow in 1863 was 59 lbs. 9 oz., and of cheese 6 lbs. 13 oz. Sorghum and imphee are not mentioned in the table, but the total manufacture of sugar in 1864 was 4,044,399 lbs., or more than five pounds for each inhabitant.

The number of sheep in Michigan has nearly doubled since the taking of the last State census, and in 1863 the average yield per head was 3 lbs. $8\frac{3}{4}$ oz., or nearly one pound greater than in the whole country in 1859. There were, in 1863, 2,053,363 sheep in the State, the clip from which amounted to 7,294,934 pounds, or nearly one-tenth of the whole quantity produced in the United States. This shows an annual increase of 796,769 pounds since 1859. The clip of 1864 was estimated at 1,000,000 pounds more than that of 1863. From these data it would seem that Michigan is destined to become one of the leading, if not the first, wool-growing State in the Union.

The following table exhibits the lumber product, which is one of the chief sources of wealth possessed by the State:

	1854.	1864.	Aggregate increase.	Per cent.
Number of saw mills.....	922	1,073	151	16.4
Persons employed.....	4,579	7,747	3,168	69.2
Feet of lumber sawed.....	392,920,714	621,477,904	228,557,190	58.2
Capital invested.....	\$2,442,573	\$6,109,070	\$3,666,497	150.5
Value of product.....	\$3,272,086	\$5,363,550	\$2,091,464	105.5

A number of mills made no returns. Adding the number of feet sawn by these to the above

figures, the annual amount of lumber produced in Michigan is estimated by the Secretary of State at nearly 8,000,000 feet. Of this amount upward of 3,000,000 feet came from the Saginaw River district.

The statistics of mining products are incomplete. It appears, however, that 273,000 tons of iron ore were produced in 1863, an amount only exceeded by Pennsylvania in 1860. Between 1854 and 1864 the number of copper mines increased nearly 120 per cent., and the amount of copper mined over 180 per cent. The following is a statement of the shipments of copper during 1865:

	Tons.	Lbs.
Portage Lake district.....	4,596	856
Keweenaw district.....	3,234	1,673
Ontonagon district.....	2,140	845
Total shipments.....	9,971	3,374

Or within twenty-eight tons of a grand total of 10,000 tons. In each district there has been a considerable increase over the product of 1864, the greatest being in Keweenaw district. The following are the amounts of increase, as near as can be ascertained:

	Tons.	Lbs.
Keweenaw district.....	775	1,598
Ontonagon district.....	420
Portage Lake district.....	350	1,431
Total increase.....	1,546	1,027

TABLE OF SHIPMENTS.

	Tons.		Tons.
1845 to 1854.....	7,642	1862.....	9,062
1855 to 1857.....	11,312	1863.....	8,548
1858.....	3,500	1864.....	8,472
1859.....	4,200	1865.....	9,971
1860.....	6,000		
1861.....	7,400	Total.....	76,107

An impulse is likely to be given to the production of copper in Michigan by the building of a harbor and ship canal at Portage Lake, Keweenaw Point, Lake Superior, in aid of which Congress in 1865 granted a large tract of land. Whenever the State shall be fully reimbursed for advances in this work, such tolls only are to be charged as shall pay the expenses of the canal.

Michigan promises to become one of the chief apple-raising States of the Union. The shipments in 1865 were estimated at 410,000 barrels, which, at an average price of \$3.50 per barrel, were worth nearly \$1,500,000. They were sent to all parts of the country, the winter fruit going principally to the Eastern and Middle States. Connected with this subject is the new method of preserving fruit in storehouses, from which the natural dampness of the atmosphere has been eliminated, and in which the proportion of oxygen has been diminished. A model building of this description has recently been erected in Detroit, having a capacity of storing 30,000 bushels of fruit. In the gradual ripening of fruit hydrogen and carbon are constantly given off; the former unites with the oxygen of the air and forms water—the latter carbonic acid. This process in any confined vessel filled with fruit, consumes all the oxygen, especially if the fruit be ripe and the air warm,

in about forty-eight hours. The rooms of this house will be gas-tight, and when filled with fruit, if closed up for two days, a candle will go out in them almost instantly. The fruit will be then surrounded by an atmosphere composed of the nitrogen of the air and carbonic acid. The former is destitute of all active properties, good or bad. The latter is not sufficiently acid, unless under heavy pressure, to produce any action on fruits immersed in it. Hydrogen and carbon then cease to be evolved from the fruit, as there is now no agent to unite with them, in the same way that they cease to be evolved from a burning candle, when the air is removed. Decomposition ceases in both cases, and for the same reason. The principle is thus stated by Liebig: "Decay is much retarded in the absence of moisture, and by the substance being surrounded with an atmosphere of carbonic acid, which prevents the air from coming in contact with decaying matter."

From the census returns of 1864 we extract the following table of towns containing over five thousand inhabitants:

	Population, 1860.	Population, 1864.
Adrian.....	6,194	7,044
Ann Arbor.....	4,447	5,731
Detroit.....	45,875	53,170
East Saginaw.....	3,005	5,725
Grand Rapids.....	8,090	9,770
Jackson.....	4,799	6,544
Kalamazoo.....	6,075	6,597

The only election held in the State in 1865 took place on April 3d, and was for an Associate Justice of the Supreme Court and two Regents of the University. The Democrats having made no nomination for the former office, Isaac P. Christiancy, Republican, was almost unanimously elected, receiving 59,720 votes out of a total vote of 59,892. The vote for Regents of the University was as follows: Republicans—E. C. Walker, 52,334; G. Willard, 50,843. Democrats—O. C. Comstock, 19,383; E. Wells, 19,426. Average Republican majority, 32,184.

MILITARY COMMISSIONS. Trials for offences by military commissions greatly increased during the year. These tribunals took jurisdiction of such offences as were submitted to their decision, including murder, the passing of counterfeit money, and election frauds.

The most important trials were those of the conspirators for the murder of President Lincoln, and that of Capt. Wirz for cruelty to the Union prisoners at Andersonville. Before ordering the trials of any persons charged with the murder of Mr. Lincoln, President Johnson applied to the Attorney-General of the United States, Mr. Speed, for his opinion as to whether such persons were subject to the jurisdiction and legally liable before a military commission. Mr. Speed gave his opinion that they were so liable, and in July the reasons of that opinion are given in a letter to the President. This opinion contains all that has been advanced in favor of the jurisdiction and legality of such tribunals. It is as follows:

ATTY-GENERAL'S OFFICE, WASHINGTON, July —, 1865.

SIR: You ask me whether the persons charged with the offence of having assassinated the President can be tried before a military tribunal, or must they be tried before a civil court.

The President was assassinated at a theatre in the city of Washington. At the time of the assassination a civil war was flagrant, the city of Washington was defended by fortifications regularly and constantly manned, the principal police of the city was by Federal soldiers, the public offices and property in the city were all guarded by soldiers, and the President's house and person were, or should have been, under the guard of soldiers. Martial law had been declared in the District of Columbia; but the civil courts were open and transacted business as in times of peace.

Such being the facts, the question is one of great importance—important, because it involves the constitutional guaranties thrown about the rights of the citizen, and because the security of the army and the Government in time of war is involved—important, as it involves a seeming conflict betwixt the laws of peace and of war.

Having given the question propounded the patient and earnest consideration its magnitude and importance require, I will proceed to give the reasons why I am of the opinion that the conspirators not only may be, but ought to be, tried by a military tribunal.

A civil court of the United States is created by a law of Congress under and according to the Constitution. To the Constitution and the law we must look to ascertain how the court is constituted, the limits of its jurisdiction, and what its mode of procedure.

A military tribunal exists under and according to the Constitution in time of war. Congress may prescribe how all such tribunals are to be constituted, what shall be their jurisdiction and mode of procedure. Should Congress fail to create such tribunals, then, under the Constitution, they must be constituted according to the laws and usages of civilized warfare. They may take cognizance of such offences as the laws of war permit; they must proceed according to the customary usages of such tribunals in time of war, and inflict such punishments as are sanctioned by the practice of civilized nations in time of war. In time of peace neither Congress nor the military can create any military tribunals, except such as are made in pursuance of that clause of the Constitution which gives to Congress the power "to make rules for the Government of the land and naval forces." I do not think that Congress can, in time of war or peace, under this clause of the Constitution, create military tribunals for the adjudication of offences committed by persons not engaged in or belonging to such forces. This is a proposition too plain for argument. But it does not follow because such military tribunals cannot be created by Congress under this clause, that they cannot be created at all. Is there no other power conferred by the Constitution upon Congress or the military under which such tribunals may be created in time of war?

That the law of nations constitutes a part of the laws of the land must be admitted. The laws of nations are expressly made laws of the land by the Constitution, when it says that "Congress shall have power to define and punish piracies and felonies committed on the high seas and offences against the laws of nations." To define, is to give the limits or precise meaning of a word or a thing in being; to make, is to call into being. Congress has power to define, not to make, the laws of nations; but Congress has power to make rules for the government of the army and navy. From the very face of the Constitution, then, it is evident that the laws of nations do constitute a part of the laws of the land. But very soon after the organization of the Federal

Government, Mr. Randolph, then Attorney-General, said: "The law of nations, although not specifically adopted by the Constitution, is especially a part of the law of the land. Its obligation commences and runs with the existence of a nation, subject to modification on some points of indifference." (See opinion, Attorney-General, vol. i., page 27.) The framers of the Constitution knew that a nation could not maintain an honorable place among the nations of the world, that does not regard the great and essential principles of the law of nations as a part of the law of the land. Hence Congress may define those laws, but cannot abrogate them, or, as Mr. Randolph says, may "modify on some points of indifference."

That the laws of nations constitute a part of the laws of the land is established from the face of the Constitution upon principle and by authority.

But the laws of war constitute much the greater part of the law of nations. Like the other laws of nations, they exist and are of binding force upon the departments and citizens of the Government, though not defined by any law of Congress. No one that has ever glanced at the many treaties that have been published in different ages of the world by great, good, and learned men, can fail to know that the laws of war constitute a part of the law of nations, and that those laws have been prescribed with tolerable accuracy.

Congress can declare war. When war is declared, it must be, under the Constitution, carried on according to the known laws and usages of war among civilized nations. Under the power to define those laws, Congress cannot abrogate them or authorize their infraction. The Constitution does not permit this Government to prosecute a war as an uncivilized and barbarous people.

As war is required by the framework of our Government to be prosecuted according to the known usages of war among the civilized nations of the earth, it is important to understand what are the obligations, duties, and responsibilities imposed by war upon the military. Congress not having defined, as under the Constitution it might have done, the laws of war, we must look to the usage of nations to ascertain the powers conferred in war, on whom the exercise of such powers devolve, over whom, and to what extent do those powers reach, and in how far the citizen and the soldier are bound by the legitimate use thereof.

The power conferred by war is, of course, adequate to the end to be accomplished, and not greater than what is necessary to be accomplished. The law of war, like every other code of laws, declares what shall not be done, and does not say what may be done. The legitimate use of the great power of war, or rather the prohibitions upon the use of that power, increase or diminish, as the necessity of the case demands. Where a city is besieged and hard pressed, the commander may exert an authority over the non-combatants which he may not when no enemy is near.

All wars against a domestic enemy or to repel invasions are prosecuted to preserve the Government. If the invading force can be overcome by the ordinary civil policy of a country, it should be done without bringing upon the country the terrible scourge of war; if a commotion or an insurrection can be put down by the ordinary process of law, the military should not be called out. A defensive foreign war is declared and carried on because the civil police is inadequate to repel it; a civil war is waged because the laws cannot be peacefully enforced by the ordinary tribunals of the country through civil process and by civil officers. Because of the utter inability to keep the peace and maintain order by the customary officers and agencies in time of peace, armies are organized and put into the field. They are called out and invested with the powers of war to prevent total anarchy, and to preserve the Government. Peace is the normal condition of a country, and war abnormal, neither being without law, but each having

laws appropriate to the condition of society. The maxim *inter arma silent leges* is never wholly true. The object of war is to bring society out of its abnormal condition; and the laws of war aim to have that done with the least possible injury to persons or property.

Anciently, when two nations were at war, the conqueror had or asserted the right to take from his enemy his life, liberty, and property; if either was spared, it was as a favor or act of mercy. By the laws of nations, and of war as a part thereof, the conqueror was deprived of this right.

When two governments, foreign to each other, are at war, or when a civil war becomes territorial, all of the people of the respective belligerents become by the law of nations enemies of each other. As enemies they cannot hold intercourse, but neither can kill or injure the other except under a commission from their respective governments. So humanizing have been and are the laws of war, that it is a high offence against them to kill an enemy without such commission. The laws of war demand that a man shall not take human life except under a license from his government; and under the Constitution of the United States no license can be given by any department of the Government to take human life in war, except according to the law and usages of war. Soldiers regularly in the service have the license of the Government to deprive men, the active enemies of their Government, of their liberty and lives. Their commission so to act is as perfect and legal as that of a judge to adjudicate, but the soldier must act in obedience to the laws of war, as the judge must in obedience to the civil law. A civil judge must try criminals in the mode prescribed in the Constitution and the law; so soldiers must kill or capture according to the laws of war. Non-combatants are not to be disturbed or interfered with by the armies of either party except in extreme cases. Armies are called out and organized to meet and overcome the active, acting public enemies. But enemies with whom an army have to deal are of two classes:

1st. Open, active participants in hostilities, and soldiers who wear the uniform, move under the flag, and hold the appropriate commission from their Government. Openly assuming to discharge the duties and meet the responsibilities and dangers of soldiers, they are entitled to all belligerent rights, and should receive all the courtesies due to soldiers. The true soldier is proud to acknowledge and respect those rights, and ever cheerfully extends those courtesies.

2d. Secret but active participants, as spies, brigands, bushwhackers, jayhawkers, war rebels, and assassins. In all wars, and especially in civil wars, such secret, active enemies rise up to annoy and attack an army, and they must be met and put down by the army. When lawless wretches become so impudent and powerful as not to be controlled and governed by the ordinary tribunals of a country, armies are called out and the laws of war invoked. Wars never have been and never can be conducted upon the principle that an army is but a *posse comitatus* of a civil magistrate.

An army, like all other organized bodies, has a right, and it is its first duty to protect its own existence, and the existence of all its parts, by the means and in the mode usual among civilized nations when at war. Then the question arises, do the laws of war authorize a different mode of proceeding and the use of different means against secret active enemies from those used against open active enemies?

As has been said, the open enemy or soldier in time of war may be met in battle and killed, wounded or taken prisoner, or so placed by the lawful strategy of war as that he is powerless. Unless the law of self-preservation absolutely demands it, the life of a wounded enemy or a prisoner must be spared. Unless pressed thereto by the extremest necessity, the laws of war condemn and punish with great severity

harsh or cruel treatment to a wounded enemy or a prisoner.

Certain stipulations and agreements, tacit or express, betwixt the open belligerent parties are permitted by the laws of war, and are held to be of very high and sacred character. Such is the tacit understanding, or it may be usage of war, in regard to flags of truce. Flags of truce are resorted to as a means of saving human life, or alleviating human suffering. When not used with perfidy, the laws of war require that they should be respected. The Romans regarded ambassadors betwixt belligerents as persons to be treated with consideration and respect. Plutarch, in his *Life of Cæsar*, tells us that the barbarians in Gaul having sent some ambassadors to Cæsar, he detained them, charging fraudulent practices, and led his army to battle, obtaining a great victory.

When the Senate decreed festivals and sacrifices for the victory, Cato declared it to be his opinion that Cæsar ought to be given into the hands of the barbarians, that so the guilt which this breach of faith might otherwise bring upon the State might be expiated by transferring the curse on him who was the occasion of it.

Under the Constitution and laws of the United States, should a commander be guilty of such a flagrant breach of law as Cato charged upon Cæsar, he would not be delivered to the enemy, but would be punished after a military trial. The many honorable gentlemen who hold commissions in the army of the United States, and have been deputed to conduct war according to the laws of war, would keenly feel it as an insult to their profession of arms for any one to say that they could not or would not punish a fellow-soldier who was guilty of wanton cruelty to a prisoner, or perfidy toward the bearers of a flag of truce.

The laws of war permit capitulations of surrender and paroles. They are arguments betwixt belligerents, and should be scrupulously observed and performed. They are contracts wholly unknown to civil tribunals. Parties to such contracts must answer any breaches thereof to the customary military tribunals in time of war. If an officer of rank, possessing the pride that becomes a soldier and a gentleman, who should capitulate to surrender the forces and property under his command and control, be charged with a fraudulent breach of the terms of surrender, the laws of war do not permit that he should be punished without a trial, or, if innocent, that he shall have no means of wiping out the foul imputation. If a paroled prisoner is charged with a breach of his parole, he may be punished if guilty, but not without a trial. He should be tried by a military tribunal constituted and proceeding as the laws and usages of war prescribe.

The laws and usage of war contemplate that soldiers have a high sense of personal honor. The true soldier is proud to feel and know that his enemy possesses personal honor, and will conform and be obedient to the laws of war. In a spirit of justice, and with a wise appreciation of such feelings, the laws of war protect the character and honor of an open enemy. When, by the fortunes of war, one open enemy is thrown into the hands and power of another, and is charged with dishonorable conduct and a breach of the laws of war, he must be tried according to the usages of war. Justice and fairness say that an open enemy, to whom dishonorable conduct is imputed, has a right to demand a trial. If such a demand can be rightfully made, surely it cannot be rightfully refused. It is to be hoped that the military authorities of this country will never refuse such a demand, because there is no act of Congress that authorizes it. In time of war the law and usage of war authorize it, and they are part of the law of the land.

One belligerent may request the other to punish for breaches of the laws of war, and, regularly, such a request should be made before retaliatory measures

are taken. Whether the laws of war have been infringed or not, is of necessity a question to be decided by the laws and usages of war, and is cognizable before a military tribunal. When prisoners of war conspire to escape, or are guilty of a breach of appropriate and necessary rules of prison discipline, they may be punished, but not without trial. The commander who should order every prisoner charged with improper conduct to be shot or hung, would be guilty of a high offence against the laws of war, and should be punished therefor, after a regular military trial. If the culprit should be condemned and executed, the commander would be as free from guilt as if the man had been killed in battle.

It is manifest, from what has been said, that military tribunals exist under and according to the laws and usages of war in the interests of justice and mercy. They are established to save human life, and to prevent cruelty as far as possible. The commander of an army in time of war has the same power to organize military tribunals and execute their judgments that he has to set his squadrons in the field and fight battles. His authority in each case is from the law and usages of war.

Having seen that there must be military tribunals to decide questions arising in time of war betwixt belligerents who are active and open enemies, let us next see whether the laws of war do not authorize such tribunal to determine the fate of those who are active, but secret, participants in the hostilities.

In Mr. Wheaton's "*Elements of International Law*" he says: "The effect of a state of war, lawfully declared to exist, is to place all the subjects of each belligerent power in a state of mutual hostility. The usage of nations has modified this maxim by legalizing such acts of hostility only as are committed by those who are authorized by the express or implied command of the State; such are the regularly commissioned naval and military forces of the nation and all others called out in its defence, or spontaneously defending themselves, in case of necessity, without any express authority for that purpose. Cicero tells us in his '*Offices*,' that by the Roman feudal law no person could lawfully engage in battle with the public enemy without being regularly enrolled and taking the military oath. This was a regulation sanctioned both by policy and religion. The horrors of war would indeed be greatly aggravated if every individual of the belligerent States were allowed to plunder and slay indiscriminately the enemy's subjects without being in any manner accountable for his conduct. Hence it is that, in land wars, irregular bands of marauders are liable to be treated as lawless banditti, not entitled to the protection of the mitigated usages of war, as practised by civilized nations."—(Wheaton's "*Elements of International Law*," page 406, 3d edition.)

In speaking upon the subject of banditti, Patrick Henry said, in the Virginia Convention: "The honorable gentleman has given you an elaborate account of what he judges tyrannical legislation, and an *ex post facto* law (in the case of Josiah Phillips); he has misrepresented the facts. That man was not executed by a tyrannical stroke of power, nor was he a Socrates; he was a fugitive murderer and an outlaw; a man who commanded an infamous banditti, and at a time when the war was at the most perilous stage he committed the most cruel and shocking barbarities; he was an enemy to the human name. Those who declare war against the human race may be struck out of existence as soon as apprehended. He was not executed according to those beautiful legal ceremonies which are pointed out by the laws in criminal cases. The enormity of his crimes did not entitle him to it. I am truly a friend to legal forms and methods, but, sir, the occasion warranted the measure. A pirate, an outlaw, or a common enemy to all mankind, may be put to death at any time. It is justified by the law of nature and

nations."—(3d volume Elliott's "Debates on the Federal Constitution," page 140.)

No reader, not to say student, of the law of nations can doubt but that Mr. Wheaton and Mr. Henry have fairly stated the laws of war. Let it be constantly borne in mind that they are talking of the law in a state of war. These banditti that spring up in time of war are respecters of no law, human or divine, of peace or of war; are *hostes humani generis*, and may be hunted down like wolves. Thoroughly desperate and perfectly lawless, no man can be required to peril his life in venturing to take them prisoners—as prisoners, no trust can be reposed in them. But they are occasionally made prisoners. Being prisoners, what is to be done with them? If they are public enemies, assuming and exercising the right to kill, and are not regularly authorized to do so, they must be apprehended and dealt with by the military. No man can doubt the right and duty of the military to make prisoners of them, and, being public enemies, it is the duty of the military to punish them for any infraction of the laws of war. But the military cannot ascertain whether they are guilty or not without the aid of a military tribunal.

In all wars, and especially in civil wars, secret but active enemies are almost as numerous as open ones. That fact has contributed to make civil wars such scourges to the countries in which they rage. In nearly all foreign wars the contending parties speak different languages, and have different habits and manners; but in most civil wars that is not the case, hence there is a security in participating secretly in hostilities that induces many to thus engage. War, prosecuted according to the most civilized usage, is horrible; but its horrors are greatly aggravated by the immemorial habits of plunder, rape, and murder practised by secret but active participants. Certain laws and usages have been adopted by the civilized world in wars between nations that are not of kin to one another, for the purpose and to the effect of arresting or softening many of the necessary cruel consequences of war. How strongly bound are we, then, in the midst of a great war, where brother and personal friend are fighting against brother and friend, to adopt and be governed by those laws and usages!

A public enemy must or should be dealt with in all wars by the same laws. The fact that they are public enemies, being the same, they should deal with each other according to those laws of war that are contemplated by the Constitution. Whatever rules have been adopted and practised by the civilized nations of the world in war to soften its harshness and severity should be adopted and practised by us in this war. That the laws of war authorized commanders to create and establish military commissions, courts, or tribunals, for the trial of offenders against the laws of war, whether they be active or secret participants in the hostilities, cannot be denied. That the judgments of such tribunals may have been sometimes harsh, and sometimes even tyrannical, does not prove that they ought not to exist, nor does it prove that they are not constituted in the interest of justice and mercy. Considering the power that the laws of war give over secret participants in hostilities, such as banditti, guerrillas, spies, etc., the position of a commander would be miserable indeed, if he could not call to his aid the judgments of such tribunals; he would become a mere butcher of men, without the power to ascertain justice, and there can be no mercy where there is no justice. War, in its mildest form, is horrible; but take away from the contending armies the ability and right to organize what is now known as a Bureau of Military Justice, they would soon become monster savages, unrestrained by any and all ideas of law and justice. Surely no lover of mankind, no one that respects law and order, no one that has the instinct of justice, or that can be softened by mercy, would in time of war take away from the commanders the right to

organize military tribunals of justice, and especially such tribunals for the protection of persons charged or suspected with being secret foes and participants in the hostilities. It would be a miracle if the records and history of this war do not show occasional cases in which those tribunals have erred; but they will show many, very many cases in which human life would have been taken, but for the interposition and judgments of those tribunals. Every student of the laws of war must acknowledge that such tribunals exert a kindly and benign influence in time of war. Impartial history will record the fact that the Bureau of Military Justice, regularly organized during this war, has saved human life and prevented human suffering. The greatest suffering patiently endured by our soldiers, and the hardest battles gallantly fought during this protracted struggle, are not more creditable to the American character than the establishment of this bureau. This people have such an educated and profound respect for law and justice—such a love of mercy—that they have, in the midst of this greatest of civil wars, systematized and brought into regular order tribunals that before this war existed under the law of war, but without general rule. To condemn the tribunals that have been established under this bureau is to condemn and denounce the war itself, or, justifying the war, to insist that it shall be prosecuted according to the harshest rules, and without the aid of the laws, usages, and customary agencies for mitigating those rules. If such tribunals had not existed before, under the laws and usages of war, the American citizen might as proudly point to their establishment as to our inimitable and inestimable constitutions. It must be constantly borne in mind that such tribunals and such a bureau cannot exist except in time of war, and cannot then take cognizance of offenders or offences where the civil courts are open, except offenders or offences against the laws of war.

But it is insisted by some, and doubtless with honesty, and with a zeal commensurate with their honesty, that such military tribunals can have no constitutional existence. The argument against their constitutionality may be shortly, and I think fairly, stated thus:

Congress alone can establish military or judicial tribunals. As Congress has not established military tribunals, except such as have been created under the articles of war, and which articles are made in pursuance of that clause in the Constitution which gives to Congress the power to make rules for the government of the army and navy, any other tribunal is and must be plainly unconstitutional, and all its acts void. This objection thus stated, or stated in any other way, begs the question. It assumes that Congress alone can establish military or judicial tribunals. Is that assumption true?

We have seen that when war comes, the laws and usages of war come also, and that during the war they are part of the laws of the land. Under the Constitution, Congress may define and punish offences against those laws, but in default of Congress's defining those laws and prescribing a punishment for their infraction, and the mode of proceeding to ascertain whether an offence has been committed, and what punishment is to be inflicted, the army must be governed by the laws and usages of war as understood and practised by the civilized nations of the world. It has been abundantly shown that these tribunals are constituted by the army in the interest of justice and mercy, and for the purpose and to the effect of mitigating the horrors of war.

But it may be insisted that though the laws of war being a part of the law of nations, constitute a part of the laws of the land, those laws must be regarded as modified so far and whenever they come in direct conflict with plain constitutional provisions. The following clauses of the Constitution are principally relied upon to show the conflict between the laws of war and the Constitution:

"The trial of all crimes, except in cases of impeachment, shall be by the jury; and such trial shall be held in the State where the said crime shall have been committed; but when not committed within any State the trial shall be at such place or places as the Congress may by law have directed."—(Art. III. of the original Constitution, sec. 2.)

"No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in actual service, in time of war or of public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb, nor shall be compelled, in any criminal case, to be witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation."—(Amendments to the Constitution, Art. V.)

"In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and be informed of the nature and cause of the accusation; to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defence."—(Art. VI. of Amendments to the Constitution.)

These provisions of the Constitution are intended to fling around the life, liberty, and property of a citizen all the guaranties of a jury trial. These constitutional guaranties cannot be estimated too highly or protected too sacredly. The reader of history knows that for many weary ages the people suffered for the want of them; it would not only be stupidity, but madness, in us not to preserve them. No man has a deeper conviction of their value, or a more sincere desire to preserve and perpetuate them, than I have.

Nevertheless, these exalted and sacred provisions of the Constitution must not be read alone and by themselves, but must be read and taken in connection with other provisions. The Constitution was framed by great men, men of learning and large experience, and it is a wonderful monument of their wisdom. Well versed in the history of the world, they knew that the nation for which they were forming a government would, unless all history was false, have wars, foreign and domestic. Hence the Government framed by them is clothed with the power to make and carry on war. As has been shown, when war comes, the laws of war come with it. Infractions of the laws of nations are not denominated crimes, but offences. Hence the expression in the Constitution that "Congress shall have power to define and punish * * * offences against the laws of nations." Many of the offences against the law of nations for which a man may, by the laws of war, lose his life, his liberty, or his property, are not crimes. It is an offence against the law of nations to break a lawful blockade, and for which a forfeiture of the property is the penalty, and yet the running a blockade has never been regarded as a crime. To hold communication or intercourse with the enemy is a high offence against the laws of war, and for which those laws prescribe punishment, and yet it is not a crime; to act as a spy is an offence against the laws of war, and the punishment for which, in all ages, has been death, and yet it is not a crime; to violate a flag of truce is an offence against the laws of war, and yet is not a crime of which a civil court can take cognizance; to unite with banditti, jayhawkers, guerrillas, or any other unauthorized marauders, is a high offence against the laws of war; the offence is complete when the band is organized or joined. The atrocities committed by such a band do not constitute the offence, but make the reasons,

and sufficient reasons they are, why such banditti are denounced by the laws of war. Some of the offences against the laws of war are crimes, and some are not. Because they are not crimes they do not cease to be offences against those laws; nor because they are not crimes or misdemeanors do they fail to be offences against the laws of war. Murder is a crime, and the murderer, as such, must be proceeded against in the form and manner prescribed in the Constitution. In committing the murder an offence may also have been committed against the laws of war; for that offence he must answer to the laws of war, and the tribunals legalized by that law.

There is, then, an apparent but no real conflict in the constitutional provisions. Offences against the laws of war must be dealt with and punished under the Constitution as the laws of war, they being a part of the law of nations, direct; crimes must be dealt with and punished as the Constitution, and laws made in pursuance thereof, may direct.

Congress has not undertaken to define the code of war, nor to punish offences against it. In the case of a spy, Congress has undertaken to say who shall be deemed a spy, and how he shall be punished. But every lawyer knows that a spy was a well-known offender under the laws of war, and that under and according to those laws he could have been tried and punished without an act of Congress. This is admitted by the act of Congress when it says that he shall suffer death "according to the law and usages of war." The act is simply declaratory of the law.

That portion of the Constitution which declares that "no person shall be deprived of his life, liberty, or property, without due process of law," has such direct reference to, and connection with, trials for crime or criminal prosecutions, that comment upon it would seem to be unnecessary. Trials for offences against the laws of war are not embraced or intended to be embraced in those provisions. If this is not so, then every man that kills another in battle is a murderer, for he deprived "a person of life without that due process of law" contemplated by this provision; every man who holds another as a prisoner of war is liable for false imprisonment, as he does so without that due process of law contemplated by this provision; every soldier that marches across a field in battle array is liable to an action of trespass, because he does it without that same due process. The argument that flings around offenders against the laws of war these guaranties of the Constitution would convict all the soldiers of our army of murder; no prisoners could be taken or held; the army could not move. The absurd consequences that would of necessity flow from such an argument show that it cannot be the true construction—it cannot be what was intended by the framers of the instrument. One of the prime motives for the Union and a Federal Government was to confer the powers of war. If any of the provisions of the Constitution are so in conflict with the power to carry on a war as to destroy and make it valueless, then the instrument, instead of being a great and wise one, is a miserable failure, a *felo de se*.

If a man should sue out his writ of *habeas corpus*, and the return shows that he belonged to the army or navy, and was held to be tried for some offence against the rules and articles of war, the writ should be dismissed, and the party remanded to answer the charges. So, in time of war, if a man should sue out a writ of *habeas corpus*, and it is made to appear that he is in the hands of the military as a prisoner of war, the writ should be dismissed, and the prisoner remanded to be disposed of as the laws and usages of war require. If the prisoner be a regular unoffending soldier of the opposing party to the war he should be treated with all the courtesy and kindness consistent with his safe custody; if he has offended against the laws of war, he should have such trial and be punished as the laws of war require.

A spy, though a prisoner of war, may be tried,

condemned, and executed by a military tribunal without a breach of the Constitution. A bushwhacker, a jayhawker, a bandit, a war rebel, an assassin, being public enemies, may be tried, condemned, and executed as offenders against the laws of war. The soldier that would fail to try a spy or bandit after his capture would be as derelict in his duty as if he were to fail to capture; he is as much bound to try and execute, if guilty, as he is to arrest; the same law that makes it his duty to pursue and kill or capture, makes it his duty to try according to the usages of war. The judge of a civil court is not more strongly bound under the Constitution and the law to try a criminal than is the military to try an offender against the laws of war.

The fact that the civil courts are open does not affect the right of the military tribunal to hold as a prisoner and to try. The civil courts have no more right to prevent the military, in time of war, from trying an offender against the laws of war, than they have a right to interfere with and prevent a battle. A battle may be lawfully fought in the very view and presence of a court; so a spy, a bandit, or other offender against the laws of war, may be tried, and tried lawfully, when and where the civil courts are open and transacting the usual business.

The laws of war authorize human life to be taken without legal process, or that legal process contemplated by those provisions in the Constitution that are relied upon to show that military judicial tribunals are unconstitutional. Wars should be prosecuted justly as well as bravely. One enemy in the power of another, whether he be an open or a secret one, should not be punished or executed without a trial. If the question be one concerning the laws of war, he shall be tried by those engaged in the war; they and they only are his peers. The military must decide whether he is or not an active participant in the hostilities. If he is an active participant in the hostilities, it is the duty of the military to take him a prisoner without warrant or other judicial process, and dispose of him as the laws of war direct.

It is curious to see one and the same mind justify the killing of thousands in battle because it is done according to the laws of war, and yet condemning the same law when, out of regard for justice and with the hope of saving life, it orders a military trial before the enemy are killed. The love of law, of justice, and the wish to save life and suffering, should impel all good men in time of war to uphold and sustain the existence and action of such tribunals. The object of such tribunals is obviously intended to save life, and when their jurisdiction is confined to offences against the laws of war, that is their effect. They prevent indiscriminate slaughter; they prevent men from being punished or killed upon mere suspicion.

The law of nations, which is the result of experience and wisdom of ages, has decided that jayhawkers, banditti, etc., are offenders against the laws of nature and of war, and as such amenable to the military. Our Constitution has made those laws a part of the law of the land. Obedience to the Constitution and the law, then, requires that the military should do their whole duty; they must not only meet and fight the enemies of the country in open battle, but they must kill or take the secret enemies of the country, and try and execute them according to the laws of war. The civil tribunals of the country cannot rightfully interfere with the military in the performance of their high, arduous, and perilous but lawful duties. That Booth and his associates were secret, active public enemies, no mind that contemplates the facts can doubt. The exclamation used by him when he escaped from the box on the stage, after he had fired the fatal shot, "*Sic semper tyrannis*," and his dying message, "Say to my mother that I die for my country," show that he was not an assassin from private malice, but that he acted as a public foe. Such a deed is expressly laid down

by Vattel in his work on the law of nations, as an offence against the laws of war, and a great crime. "I give, then, the name of assassination to a treacherous murder, whether the perpetrators of the deed be the subjects of the party whom we cause to be assassinated or of our own sovereign, or that it be executed by any other emissary introducing himself as a suppliant, a refugee, or a deserter, or, in fine, as a stranger."—(Vattel, 329.)

Neither the civil nor the military department of the Government should regard itself as wiser and better than the Constitution and the laws that exist under or are made in pursuance thereof. Each department should, in peace and in war confining itself to its own proper sphere of action, diligently and fearlessly perform its legitimate functions, and in the mode prescribed by the Constitution and the law. Such obedience to and observance of law will maintain peace when it exists, and will soonest relieve the country from the abnormal state of war.

My conclusion, therefore, is, that if the persons who are charged with the assassination of the President committed the deed as public enemies, as I believe they did—and whether they did or not is a question to be decided by the tribunal before which they are tried—they not only can, but ought to be, tried before a military tribunal. If the persons charged have offended against the laws of war, it would be as palpably wrong for the military to hand them over to the civil courts, as it would be wrong in a civil court to convict a man of murder who had, in time of war, killed another in battle.

I am, sir, most respectfully,

Your obedient servant,

JAMES SPEED, Attorney-General.

To the President.

Having received this opinion, the following order was issued for the trial of the assassins:

EXECUTIVE CHAMBER, WASHINGTON CITY, May 1, 1865.

Whereas, the Attorney-General of the United States has given his opinion that the persons implicated in the murder of the late President Lincoln, and the attempted assassination of the Hon. Wm. H. Seward, Secretary of State, and an alleged conspiracy to assassinate other officers of the Federal Government at Washington City, and their aiders and abettors, are subject to the jurisdiction of, and legally triable before, a military commission, it is ordered:

First. That the Assistant Adjutant-General detail nine competent military officers to serve as a commission for the trial of said parties, and that the Judge Advocate General proceed to prefer charges against said parties for their alleged offences, and bring them to trial before said military commission; that said trial or trials be conducted by the said Judge Advocate-General as recorded thereof in person, aided by such assistant or special judge advocates as he may designate, and that said trials be conducted with all diligence consistent with the ends of justice, and said commission to sit without regard to hours.

Second. That Brevet Maj.-Gen. Hartranft be assigned to duty as special Provost Marshal General for the purpose of said trial and attendance upon said commission and the execution of its mandates.

Third. That the said commission establish such order or rules of proceeding as may avoid unnecessary delay, and conduct to the ends of public justice.

(Signed)

ANDREW JOHNSON.

Adj't-General's Office, Washington, D. C., May 16, 1865.

(Official copy.)

(Signed)

W. A. NICHOLS, A. A. Gen.

In compliance with this order, the following officers were detailed as members of the military commission:

President, Maj.-Gen. David Hunter.

Members.—Maj.-Gen. Lew Wallace, Brevet Maj.-Gen. August V. Kantz, Brig.-Gen. Albion

P. Howe, Brig.-Gen. Robert S. Foster, Brig.-Gen. James A. Ekin, Brig.-Gen. Thos. M. Harris, Col. Chas. H. Tompkins, Brevet Col. D. R. Clendenin.

The prosecution was conducted by Brig.-Gen. Joseph Holt, Judge Advocate General; assisted by Brevet Colonel H. L. Burnett, of Indiana, and Hon. John A. Bingham, of Ohio, Assistant Judge Advocates.

The prisoners selected for their counsel, Rev. Erdy Johnson, of Maryland; Thomas Ewing, of Kansas; W. E. Doster, of Penn.; Fred. A. Aikin, District of Columbia; Walter S. Cox, John W. Clampt, and F. Stone, of Maryland.

The Commission having organized, the following charges and specifications were presented:

Charge 1.—For maliciously, unlawfully, and traitorously, and in aid of the existing armed rebellion against the United States of America, on or before the 6th of March, A. D. 1865, and on divers other days between that day and the 15th day of April, A. D. 1865, combining, confederating, and conspiring together with one John H. Surratt, John Wilkes Booth, Jefferson Davis, George N. Sanders, Beverly Tucker, Jacob Thompson, William C. Cleary, Clement C. Clay, George Harper, George Young, and others unknown, within the military department of Washington, and within the fortified and intrenched lines thereof, to kill and murder Abraham Lincoln, late, and at the time of the combining, confederating, and conspiring, President of the United States of America, and Commander-in-chief of the army and navy thereof; Andrew Johnson, now President of the United States aforesaid; Wm. H. Seward, Secretary of State of the United States aforesaid; and Ulysses S. Grant, Lieutenant-General of the army of the United States aforesaid, then in command of the armies of the United States, under the direction of the said Abraham Lincoln, and in pursuance of and in prosecuting said malicious, unlawful, and traitorous conspiracy, aforesaid, and in aid of said rebellion, afterwards—to wit: on the 14th day of April, A. D. 1865—within the military department of Washington aforesaid, and within the fortified and intrenched lines of said military department, together with the said John Wilkes Booth and John H. Surratt, maliciously, unlawfully, and traitorously murdering the said Abraham Lincoln, then President of the United States and Commander-in-chief of the army and navy of the United States, as aforesaid, and maliciously, unlawfully, and traitorously assaulting, with intent to kill and murder, the said Wm. H. Seward, then Secretary of State of the United States, as aforesaid; and lying in wait, with intent maliciously, unlawfully, and traitorously to kill and murder the said Andrew Johnson, then being Vice-President of the United States; and the said Ulysses S. Grant, then being Lieutenant-General, and in command of the armies of the United States, as aforesaid.

Specification 1.—In this that they, the said David E. Harold, Edward Spangler, Lewis Payne, John H. Surratt, Michael O'Laughlin, Samuel Arnold, Mary E. Surratt, George A. Atzerott, and Samuel A. Mudd, incited and encouraged thereunto by Jefferson Davis, George N. Sanders, Beverly Tucker, Jacob Thompson, William C. Cleary, Clement C. Clay, George Young, and others, unknown citizens of the United States aforesaid, and who were engaged in armed rebellion against the United States of America within the limits thereof, did, in aid of said armed rebellion, on or before the 6th day of March, A. D. 1865, and on divers other days or times between that day and the 15th day of April, A. D. 1865, combine, confederate, and conspire together, at Washington City, within the military department, and within the intrenched fortifications and military lines of the said United States, there combine unlawfully, malicious-

ly, and traitorously, to kill and murder Abraham Lincoln, then President of the United States aforesaid, and Commander-in-chief of the army and navy thereof, and unlawfully, maliciously, and traitorously to kill and murder Andrew Johnson, then Vice-President of the United States, upon whom, on the death of the said Abraham Lincoln, after the 4th day of March, A. D. 1865, the office of President of the said United States, and Commander-in-chief of the army and navy thereof, would devolve; and to unlawfully, maliciously, and traitorously kill and murder U. S. Grant, then Lieutenant-General, under the direction of said Abraham Lincoln, in command of the armies of the United States aforesaid; and unlawfully, maliciously, and traitorously to kill and murder William H. Seward, then Secretary of State of the United States aforesaid, whose duty it was by law, upon the death of said President and Vice-President of the United States aforesaid, to cause an election for electors of President of the United States. The conspirators aforesaid designing or intending by the killing and murder of the said Abraham Lincoln and Andrew Johnson, Ulysses S. Grant and William H. Seward as aforesaid, to deprive the army and navy of the United States of a constitutional commander-in-chief, and to deprive the armies of the United States of their lawful commander, and to prevent a lawful election of President and Vice-President of the United States aforesaid; and by the means aforesaid to aid and comfort the insurgents engaged in armed rebellion against the said United States aforesaid, and thereby to aid in the subversion and overthrow of the said United States; and being so combined, confederated, and conspiring together in the prosecution of said unlawful and traitorous conspiracy on the night of the 14th day of April, A. D. 1865, at the hour of about ten o'clock and fifteen minutes p. m., at Ford's Theatre, on Tenth Street, in the city of Washington, and within the military department and military lines aforesaid, John Wilkes Booth, one of the conspirators aforesaid, in pursuance of said unlawful and traitorous conspiracy, did then and there, unlawfully, maliciously, and traitorously, and with intent to kill and murder the said Abraham Lincoln, discharge a pistol then held in the hands of him, the said Booth, the same being then loaded with powder and a leaden ball, against and upon the left and posterior side of the head of the said Abraham Lincoln, and did thereby there and then inflict upon him, the said Abraham Lincoln, then President of the said United States, and Commander-in-chief of the army and navy thereof, a mortal wound, whereof afterwards, to wit, on the 15th day of April, A. D. 1865, at Washington City aforesaid, the said Abraham Lincoln died; and thereby, then and there, in pursuance of said conspiracy, the said defendant, and the said John Wilkes Booth, did, unlawfully, traitorously, and maliciously, and with the intent to aid the rebellion as aforesaid, kill the President of the United States as aforesaid; and further, in prosecution of the unlawful traitorous conspiracy aforesaid, and of the murderous and traitorous intent of the said conspiracy, the said Edward Spangler, on the said 14th day of April, A. D. 1865, at about the same hour of the day aforesaid, within the military department and the military lines aforesaid, did aid and assist the said John Wilkes Booth to obtain entrance to the box in the theatre in which the said Abraham Lincoln was sitting at the time he was assaulted and shot as aforesaid by John Wilkes Booth, and also did then and there aid said Booth in barring and obstructing the door of the box of said theatre so as to hinder and prevent any assistance to a rescue of the said Abraham Lincoln against the murderous assault of the said John Wilkes Booth, and did aid and abet him in making his escape after the said Abraham Lincoln had been murdered in manner aforesaid.

And in further prosecution of said unlawful, murderous, and traitorous conspiracy, and in pursuance

thereof, and with the intent as aforesaid, the said David E. Harold did, on the night of the 14th of April, A. D. 1865, within the military department and military lines aforesaid, aid, abet, and assist the said John Wilkes Booth in the killing and murder of the said Abraham Lincoln, and did then and there aid and abet and assist him, the said John Wilkes Booth, in attempting to escape through the military lines aforesaid, and did accompany and assist the said J. Wilkes Booth in attempting to conceal himself and escape from justice after killing and murdering said Abraham Lincoln, as aforesaid; and, in further prosecution of said unlawful and traitorous conspiracy, and of the intent thereof as aforesaid, the said Lewis Payne did, on the same night of the 14th day of April, A. D. 1865, about the same hour of 10 o'clock and 15 minutes P. M., at the city of Washington, and within the military department and military lines aforesaid, unlawfully and maliciously make an assault upon the said William H. Seward, Secretary of State aforesaid, in the dwelling-house and bed-chamber of him, the said William H. Seward; and there, with a large knife held in his hand, unlawfully, traitorously, and in pursuance of the said conspiracy, strike, stab, cut, and attempt to kill and murder the said William H. Seward, and did, thereby, then and there, and with the intent aforesaid, with said knife, inflict upon the face and throat of the said William H. Seward divers grievous wounds; and the said Lewis Payne, in further prosecution of the said conspiracy, at the same time and place last aforesaid, did attempt, with the knife aforesaid, and a pistol held in his hand, to kill and murder Frederick W. Seward, Augustus W. Seward, Emerick W. Hansell, and George F. Robinson, who were then striving to protect and rescue the said William H. Seward from murder by the said Lewis Payne; and did then and there, with the said knife and pistol held in his hands, inflict wounds upon the head of the said Frederick W. Seward and upon the persons of the said Augustus W. Seward, Emerick W. Hansell, and George F. Robinson.

And in the further prosecution of the said conspiracy, and its traitorous and murderous designs, the said George A. Atzerott did, on the night of the 14th of April, A. D. 1865, and about the same hour of the night aforesaid, within the military department and the military lines aforesaid, lie in wait for Andrew Johnson, then Vice-President of the United States aforesaid, with the intent unlawfully and maliciously to kill and murder him, the said Andrew Johnson.

And in the further prosecution of the conspiracy aforesaid, and of its murderous and treasonable purposes aforesaid, on the night of the 13th and 14th of April, 1865, at Washington City, and within the military department and military lines aforesaid, the said Michael O'Laughlin did then and there lie in wait for Ulysses S. Grant.

And in the further prosecution of the said conspiracy, the said Samuel Arnold did, within the military department and military lines aforesaid, on or before the 6th day of March, A. D. 1865, and on divers other days and times between that day and the 15th of April, A. D. 1865, combine, conspire with, and aid, counsel, and abet, comfort, and support the said John Wilkes Booth, Lewis Payne, George A. Atzerott, Michael O'Laughlin, and their confederates in the said unlawful, murderous, and traitorous conspiracy, and in the execution thereof, as aforesaid; and, in the further prosecution of the said conspiracy, Mary E. Surratt did, at Washington City, and within the military department and military lines aforesaid, on or before the 6th day of March, A. D. 1865, and on divers other days and times between that day and the 20th day of April, A. D. 1865, receive, entertain, harbor, and conceal, aid and assist the said John Wilkes Booth, David E. Harold, Lewis Payne, John H. Surratt, Michael O'Laughlin, George A. Atzerott, Samuel Arnold, and their confederates, with a knowledge of the murderous and traitorous conspiracy aforesaid, and with intent to aid, abet, and assist

them in the execution thereof, and in escaping from justice after the murder of the said Abraham Lincoln, as aforesaid, with intent to aid, abet, and assist them in the execution thereof, and in escaping from justice, after the murder of the said Abraham Lincoln, in pursuance of the said conspiracy in the manner aforesaid.

By order of the President of the United States.

J. HOLT, Judge Advocate General.

The Commission commenced the trial May 13th, and were engaged on it until the 29th of June. A great number of witnesses were examined, and the testimony taken is very voluminous. On the last day named their finding was made, and transmitted to the President for approval. On the 6th of July the following order was issued, approving of the findings and sentences:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, July 5, 1865. }

To Major-General W. S. Hancock, United States Volunteers, commanding the Middle Military Division, Washington, D. C.

Whereas, by the Military Commission appointed in paragraph 4, Special Orders, No. 211, dated War Department, Adjutant-General's Office, Washington, May 6, 1865, and of which Major-General David Hunter, United States Volunteers, was president, the following named persons were tried, and, after mature consideration of evidence adduced in their cases, were found and sentenced as hereinafter stated, as follows:

First. David E. Harold.—Finding of the specification, guilty, except combining, confederating, and conspiring with Edward Spangler, as to which part thereof, not guilty; of the charge guilty, except the words of the charge, that he combined, confederated, and conspired with Edward Spangler; as to which part of the charge, not guilty.

Sentence.—And the Commission does, therefore, sentence him, the said David E. Harold, to be hanged by the neck until he be dead, at such time and place as the President of the United States shall direct, two-thirds of the Commission concurring therein.

Second. George A. Atzerott.—Finding of the specification, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty. Of the charge, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty.

Sentence.—And the Commission does, therefore, sentence him, the said George A. Atzerott, to be hung by the neck until he be dead, at such time and place as the President of the United States shall direct, two-thirds of the Commission concurring therein.

Third. Lewis Payne.—Finding of the specification, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty. Of the charge, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty.

Sentence.—And the Commission does therefore sentence him, the said Lewis Payne, to be hung by the neck until he be dead, at such time and place as the President of the United States shall direct, two-thirds of the Commission concurring therein.

Fourth. Mary E. Surratt.—Finding of the specification guilty, except as to receiving, sustaining, harboring, and concealing Samuel Arnold and Michael O'Laughlin, and except as to combining, confederating, and conspiring with Edward Spangler; of this, not guilty. Of the charge guilty, except as to combining, confederating, and conspiring with Edward Spangler; of this, not guilty.

Sentence.—And the Commission does, therefore, sentence her, the said Mary E. Surratt, to be hung by the neck until she be dead, at such time and place as the President of the United States shall direct, two-thirds of the members of the Commission concurring therein.

And whereas, the President of the United States has approved the foregoing sentences in the following order, to wit:

EXECUTIVE MANSION, July 5, 1865.

The foregoing sentences in the cases of David E. Harold, G. A. Atzerott, Lewis Payne, Mary E. Surratt, are hereby approved; and it is ordered that the sentences in the cases of David E. Harold, G. A. Atzerott, Lewis Payne, and Mary E. Surratt, be carried into execution by the proper military authority, under the direction of the Secretary of War, on the 7th day of July, 1865, between the hours of 10 o'clock A. M. and 2 o'clock P. M. of that day.

ANDREW JOHNSON, President.

Therefore you are hereby commanded to cause the foregoing sentences, in the cases of David E. Harold, G. A. Atzerott, Lewis Payne, and Mary E. Surratt, to be duly executed in accordance with the President's order.

By command of the President of the United States.

E. D. TOWNSEND, Assistant Adjutant-General.

In the remaining cases of O'Laughlin, Spangler, Arnold, and Mudd, the findings and sentences are as follows:

Fifth.—Michael O'Laughlin.—Finding of the specification guilty, except the words thereof as follows: And in the further prosecution of the conspiracy aforesaid, and of its murderous and treasonable purposes aforesaid, on the nights of the 13th and 14th of April, 1865, at Washington City, and within the military department and military lines aforesaid, the said Michael O'Laughlin did there and then lie in wait for Ulysses S. Grant, then Lieut.-General and commander of the armies of the United States, with intent then and there to kill and murder the said Ulysses S. Grant—of said words not guilty; and except combining, confederating, and conspiring with Edward Spangler; of this, not guilty. Of the charge—guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty.

Sentence.—The Commission sentence O'Laughlin to be imprisoned at hard labor for life.

Sixth. Finding—Edward Spangler, of the specification, not guilty, except as to the words "the said Edward Spangler, on said 14th day of April, A. D. 1865, at about the same hour of that day, as aforesaid, within said military department and the military lines aforesaid, did aid and abet him (meaning John Wilkes Booth) in making his escape after the said Abraham Lincoln had been murdered in manner aforesaid," and of these words, guilty. Of the charge not guilty, but guilty of having feloniously and traitorously aided and abetted John Wilkes Booth in making his escape after having killed and murdered Abraham Lincoln, President of the United States, he, the said Edward Spangler, at the time of aiding and abetting as aforesaid, well knowing that the said Abraham Lincoln, President as aforesaid, had been murdered by the said John Wilkes Booth as aforesaid. The Commission sentenced Spangler to hard labor for six years.

Seventh. Samuel Arnold.—Of the specifications, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty. Of the charge, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty. The Commission sentenced him to imprisonment at hard labor for life.

Eighth. Samuel A. Mudd.—Of the specification, guilty, except combining, confederating, and conspiring with Edward Spangler; of this, not guilty; and excepting receiving, and entertaining, and harboring, and concealing said Lewis Payne, John H. Surratt, Michael O'Laughlin, George A. Atzerott, Mary E. Surratt, and Samuel Arnold; of this, not guilty.

Of the charge guilty, except combining, confederating, and conspiring with Edward Spangler; of this part guilty. The Commission sentenced Mudd to be imprisoned at hard labor for life.

The President's order in these cases is as follows: It is further ordered, that the prisoners, Samuel Arnold, Samuel A. Mudd, and Michael O'Laughlin, be confined at hard labor in the penitentiary at Al-

bany, New York, during the period designated in their respective sentences.

ANDREW JOHNSON, President.

Efforts were subsequently made to review the proceedings, by bringing up the case of Mrs. Surratt, on *habeas corpus*; but the writ, although allowed, was suspended by order of the President, and those who had been condemned to death were executed in accordance with the order issued—those who were sentenced to imprisonment were transported to Fort Jefferson, Dry Tortugas, to serve out the period of their incarceration.

The trial of Capt. Henry Wirz was second in importance and interest to that of the assassins. Capt. Wirz had been in charge of the Confederate prison at Andersonville, and it was alleged that through his cruelty thousands of Union prisoners of war had lost their lives. The Commission before which he was tried was convened by order of August 19, 1865, directing the officers detailed for that purpose to meet as a special military Commission on the 21st of August, for the trial of such prisoners as might be brought before it. The Commission assembled on the day named, and Wirz was arraigned on the charges and specifications. The first charge was for traitorously conspiring with others to injure the health and destroy the lives of soldiers in the service of the United States, held and being at the time prisoners of war. The second charge was for murder, in violation of the laws and customs of war, with thirteen specifications.

After argument on a motion to quash the charges and specifications as too general and uncertain, and that the offenses charged were cognizable by civil and not by military courts, which motion was overruled by the court, the prisoner pleaded not guilty, and on suggestion of the Judge Advocate, Wirz was remanded to prison, and the court adjourned *sine die*.

On the 23d of August, at a meeting of the Commission, the Judge Advocate read an order from the War Department, dated August 22d, directing that the Commission convened on the 20th, by the order of the President, be dissolved, and another order convening a special Commission to assemble on the 23d, for the trial of Henry Wirz, and such other prisoners as might be brought before it, the detail of officers being the same as that of the previous commission.

The charges and specifications against the prisoner were substantially the same as those on which he was at first arraigned.

The trial was very lengthy and tedious—large numbers of witnesses being examined, and the Commission found Wirz guilty, and he was, in accordance with the sentence of the Commission, executed on the 10th day of November.

An additional interest is given to trials by military Commissions in consequence of the decision of the Supreme Court of the United States, holding that they had no jurisdiction in the case known as the Indiana conspirators.

MINNESOTA. The Republicans of Minnesota met in convention at St. Paul, on September 6th, and nominated for Governor Gen. W. R. Marshall, and a full ticket of State officers. Their resolutions declared that the "measure of a man's political rights should be neither his religion, his birthplace, his race, his color, nor any merely physical characteristics;" that it would be "subversive both of the form and spirit of our institutions, to permit any portion of our population to remain in a degraded and abject caste, taxed to support and compelled to obey a Government in which they have no voice;" that the administration of the General Government by President Johnson meets their "heartly approval and concurrence;" that, as soon as the reestablished credit of the nation will permit, the indebtedness of the United States ought to be made to bear a less rate of interest than at present; that the United States will not permit an Imperial Government to rule in Mexico, and ought to compel the withdrawal of the invaders of that country. It was also resolved that the Senators and Representatives of Minnesota in Congress should be requested to use their influence to secure an amendment to the Constitution of the United States "whereby the basis of representation be established upon the aggregate number of legal voters, instead of upon the number of population."

The Democratic Convention met at the same place in August, and adopted a long series of resolutions, the most important of which were those recognizing "with the highest satisfaction" President Johnson's policy of reorganization, and pledging to his administration the hearty support of the Democracy of Minnesota, "so long and so far as he adheres to the fundamental and historic dogmas of the Government, which in the past have been cardinal doctrines of the Democratic faith;" accepting "with unfeigned satisfaction the extinction of slavery as an accomplished result of the war, and as an acknowledged condition of peace;" protesting against the continued suppression of the writ of *habeas corpus* in certain parts of the country; recommending the absorption of outstanding national bonds by new issues, bearing a less rate of interest, and subject to taxation; opposing a protective tariff; recommending the application and enforcement of the Monroe doctrine to the present condition of the Mexican Republic; opposing the project to confer the elective franchise upon the negroes of the State; and favoring, in the absence of Congressional action upon the subject, some measure of State aid to Minnesota soldiers disabled in the war. The convention reassembled at St. Paul on September 7th, and nominated for Governor Hon. Henry M. Rice, and a full ticket for State officers. The election took place on November 7th, with the following result for Governor:

W. R. Marshall, Republican.....	17,885
Henry M. Rice, Democrat.....	18,864
Majority for Marshall.....	3,471

The other candidates on the Republican ticket were elected by majorities differing little from the above. The result of the election of members of the Legislature was as follows:

	Senate.	House.	Joint Ballot.
Republicans.....	14	29	43
Democrats.....	7	13	20
Republican majority.....	7	16	23

In accordance with a resolution adopted by the Legislature of 1865, the people were called upon at this election to vote upon an amendment to the Constitution, striking out the word "white" from the qualifications of voters. In a total vote of 27,010, there was a majority of 2,670 against the amendment.

The receipts into the State Treasury for the year ending December 1, 1865, were \$489,120.46, and the disbursements during the same period amounted to \$416,318.60, leaving a balance of \$72,801.86 on hand. The estimated disbursements for 1866 are \$268,474.81, and the receipts \$269,442.91. At the close of the year, the floating debt, for the first time in the history of the State, was announced to be substantially cancelled; and a claim of \$108,000 against the United States for expenditures in suppressing Indian hostilities was put forward. The land offices in the State disposed, during 1865, of 804,982 acres, and the railroad companies of about 200,000. Of school lands, 156,048 acres were sold, at an average price of about \$6.30 per acre, realizing \$983,528. If the remainder of these lands should sell for the same price, the school fund will amount to \$16,000,000. The land registry shows entries during the year of 139,232 acres.

Minnesota contributed to the national forces during the late civil war, 24,263 men of all arms, a number equivalent to three-fourths of those who voted in 1860, or to about one-seventh of her entire population in that year. Notwithstanding this large number of men taken from the State, the population, according to the census of 1865, was 250,099, comprising 131,323 males and 118,776 females, showing a gain of 78,077, equivalent to about 45 per cent., over the census of 1860. The return of volunteers at the close of military operations, and the annual emigration, brought the population, it was estimated, up to 275,000 by the close of 1865.

The railroad interest of Minnesota is witnessing a great development, and when the lines now in progress shall be completed, the State is destined to become rich and populous. During 1865 upwards of two hundred and ten miles of track was completed, and one hundred and thirty-two graded, and it is estimated that four hundred and seventy-four additional miles will be completed by the close of 1866. Of the railroad communications with the Eastern and Western States, Gov. Miller, in his message to the Legislature of 1866, upon the occasion of retiring from office, says: "The Chicago and Northwestern Company have given assurances that their road shall be completed to Winona

at an early day; thus, by means of the St. Paul and Pacific and Winona and St. Peter's lines, a continuous railroad communication will be formed from almost every populous district of the State to Chicago and other Eastern markets. The city of St. Louis will be reached by the Minnesota Central Railroad and its connections, while our wealthy tier of counties bordering on the Iowa line, will be equally well cared for by the completion of the Southern Minnesota road."

In the latter part of 1865 Professor Eames, the State geologist for Minnesota, returned from an exploring expedition from the region around Vermilion Lake, which lies in the northeast corner of the State, about eighty miles north of Lake Superior, and two hundred and thirty from St. Paul. He reported in the vicinity of this lake, and, in fact, throughout nearly the entire country between the lake and Lake Superior, extensive formations of gold and silver-bearing quartz, and immense bodies of iron ore of a superior quality. The field accurately examined in the vicinity of the lake exhibited a formation of talcose and silicious slate, which the ore-bearing quartz veins traverse, upward of six miles in width and ten in length. All the indications went to show that this mineral range is very extensive. Both the talcose and silicious slates are very rich in veins of gold and silver. Within a distance of half a mile eight veins were examined, varying from one inch to ten feet in width, and all of them are auriferous or silver-bearing. Some of these veins were traced to the distance of seven miles. Numerous specimens of this quartz have been assayed at the United States mint and elsewhere, and, though they were taken from the surface, have yielded \$80 of gold and silver to the ton.

An immense iron range was also discovered in the same vicinity, its first exposure being about two miles long and three-quarters of a mile wide, extending northeast. It was examined to the thickness of fifty feet, and it is supposed that it extends much below this depth.

The effect of these announcements was to greatly excite the speculative spirit of the people, and the spring of 1866 will doubtless witness a considerable emigration to Vermilion Lake, where a plentiful supply of timber and unlimited water-power offer facilities for the prosecution of quartz crushing and solid mining. The locality is in the neighborhood of the Chippewa reserves, and trouble is anticipated from the Indians, who have been led to believe by traders and others that the auriferous regions were not included in the territory ceded by them by the treaty of 1854. No steps have yet been taken to remove this tribe beyond the limits of the State, but the popular feeling in favor of such removal grows every year stronger, and it will doubtless soon take place.

The fur trade continues to form an important item of industry, and employs several

thousand persons, white men and Indians. The value of the furs obtained in 1865 was between \$400,000 and \$500,000, which is somewhat under the yield of former years. Three-fourths of the whole number are taken to New York to be disposed of. The chief kinds taken are mink, muskrat, otter, and beaver skins. Deer skins have become comparatively scarce in consequence of the great destruction of deer caused by the Sioux Indians previous to their expulsion from the State.

Ten million bushels of wheat were raised in Minnesota in 1865, the average yield being twenty-five bushels per acre. Seven hundred thousand bushels are reported to have been exported, at remunerative prices.

MISSISSIPPI. In this State the military operations during the last four months of the war were of comparatively little importance; but the people were much impoverished; Confederate money was, of course, valueless; and the only currency was the notes of the Mississippi and Tennessee Railroad Company, and Mississippi cotton bonds. Industry was in a great measure paralyzed. Immediately after the surrender of the Confederate forces east of the Mississippi River, movements were set on foot looking to the restoration of the State to the Federal Union. Judge Barwell issued an appeal to the people, calling for the appointment of delegates to a convention at Vicksburg. Gov. Clarke called an extra session of the State Legislature to be held at Jackson on the 18th of May, and, with a view to the preservation of order and the protection of property, issued the following proclamation:

MERIDIAN, MISS., May 6, 1865.

To the People of Mississippi:

Gen. Taylor informs me that all Confederate armies east of the Mississippi River are surrendered, with all Government cotton, quartermaster, commissary, and other stores. Federal commanders will only send such troops as may be necessary to guard public property. All officers and persons in possession of public stores will be held to a rigid accountability, and embezzlers will certainly be arrested.

Arrangements will be made to issue supplies to the destitute. I have called the Legislature to convene on Thursday, the 18th instant. They will, doubtless, order a convention. The officers of the State Government will immediately return with the archives to Jackson.

County officers will be vigilant in the preservation of order and the protection of property. Sheriffs have power to call out the *posse comitatus*, and the militia will keep arms and other orders for this purpose, as in times of peace.

The State laws must be enforced as they now are until repealed. If the public property is protected and peace preserved, the necessity of Federal troops in your counties will be avoided. You are, therefore, urged to continue to arrest all marauders and plunderers. The collection of taxes should be suspended, as the laws will doubtless be changed.

Masters are responsible, as heretofore, for the protection and conduct of their slaves, and they should be kept at home as heretofore. Let all citizens fearlessly adhere to the fortunes of the State. Assist the returning soldiers to obtain civil employment, condemn twelfth-hour vaporers, and meet facts with fortitude and common sense.

CHARLES CLARKE, Governor of Miss.

The Legislature met at the time and place appointed. Gov. Clarke, in his message, after adverting to the responsibility he had assumed in calling the Assembly together, and the trying circumstances under, which they met, admitted that the war had ended, and with it the power of the Confederacy. He expressed satisfaction that his own part had been performed with fidelity to his State and in obedience to her laws. He admitted that the Southern States would return to the Union, but feared that the presence of a military power would render reorganization a delicate and difficult task, and to aid in its accomplishment advised the adoption of the speediest measures possible consistent with the rights of the States and the liberties of the people. He alluded to the unanimity with which the people, through their delegates in convention, had severed their connection with the Union, but said their action on that occasion was not hasty, and that the subject had occupied their minds for many years. There were causes, he said, which justified revolution and impelled to secession, and that with no purpose of aggression, but for defence alone, had the people taken up arms. The people of the Northern States, who had demonstrated the earnestness of their determination to preserve the Union as essential to free government and liberty, and had by the exhibition of their power astonished the world, could not now, he said, desire the abasement of a people whom they had found equal to themselves in all except numbers and resources. He recommended the calling of a convention to repeal the ordinance of secession, to remodel the State Constitution, and to enlarge the power of the Legislature.

The Legislature continued in session three days. The most important business transacted was the passage of a bill for the election of members of a State Convention on the 19th of June, to assemble at Jackson, on the 3d of July, to repeal the ordinance of secession and perform such other acts as the situation seemed to demand for the return of the State to the Union. At a public meeting held at Holly Springs on the 29th of May, a series of resolutions was adopted, approving the course of Gov. Clarke in calling the extra session of the Legislature, and of the action of that body in providing for a State Convention; favoring a speedy return of the State to the Union; expressing horror and detestation of those bad men, who, "overleaping all the restraints of law and civilized society, have intensified the trials and sufferings inseparable from a state of war, by the commission of the crimes of assassination, rapine, and theft;" asserting it to be the duty of all good citizens "unitedly and persistently to use every effort to suppress lawlessness, wrong, and violence;" and "to revitalize, as far as in them lies, the energy and authority of the civil power;" and counselling the "cultivation of sentiments of loyalty toward the Constitution and laws of the United States no less than of their own State government."

The action of Gov. Clarke and of the Legislature was, however, not recognized by the Federal Government. On the 13th of June the President issued a proclamation, appointing William L. Sharkey Provisional Governor of the State of Mississippi, and recognizing a portion of the previous institutions of the State. This was the same, except as to date, the name of the State and Governor, as that appointing Lewis C. Parsons Provisional Governor of Alabama. (*See ALABAMA.*) Gov. Sharkey immediately entered upon the duties of his office, and on the 1st of July issued the following proclamation:

Fellow-Citizens of the State of Mississippi:

The President of the United States, by virtue of the power vested in him by the Constitution of the United States, has been pleased to appoint the undersigned Provisional Governor of the State of Mississippi, "for the purpose of enabling the loyal people of said State to organize a State government, whereby justice may be established, domestic tranquillity insured, and loyal citizens protected in all their rights of life, liberty, and property;" and, to accomplish this object, has directed me, "at the earliest practicable period, to prescribe such rules and regulations as may be necessary and proper for convening a convention of delegates, to be chosen by that portion of the people of said State who are loyal to the United States, and no others, for the purpose of altering or amending the Constitution thereof," so that the State may be able to resume its place in the Union. And being anxious to carry out the wishes of the President, and to restore the dominion of civil government as speedily as possible, I do hereby ordain and declare as follows, to wit:

First.—To avoid the delay which would necessarily occur from the separate organization of each county by special appointments of the several county officers, the persons who exercised the functions pertaining to the following named officers, on the day when the archives and other public property were taken possession of by the forces of the United States, to wit, the 22d day of May, 1865, are hereby appointed to fill those offices in each county, to wit: the office of judge of probate and clerk of the probate court, the office of sheriff and coroner, the office of justice of the peace and constable, the office of board of county police, the office of county treasurer and collector, and assessor and county surveyor, and the several municipal offices of every incorporated city or town whose organizations have been regularly kept up. This general appointment of officers is not intended to revoke any special appointment made by me prior to the date of this proclamation. And inasmuch as it is necessary that these several offices should be filled by incumbents who are loyal to the United States Government, I reserve the power to remove any one who may be exceptional in this respect; and I earnestly invoke the loyal citizens of each county to give me timely and the most authentic information that can be procured in regard to any officer who is obnoxious to this serious objection.

Second.—These several officers, before they enter upon the discharge of the duties of their respective offices, shall take and subscribe the amnesty oath prescribed in the President's proclamation of the 29th May, 1865, and must immediately transmit the oath so taken to this office. At the end of the amnesty oath, after the word "slaves," must be added the words "and will faithfully discharge the duties of my office to the best of my ability." And any one who may undertake to act in his official capacity without compliance with this requisition, will subject himself to punishment. This oath may be taken before any commissioned officer, civil, military, or naval, in the service of the United States, or before

the judges of probate hereby appointed, or heretofore appointed by me, after they shall have taken the oath themselves, or before the Judge of the Criminal Court of Warren County. But no one can hold any of these offices who is exempted in the President's proclamation from the benefits of the amnesty unless first specially pardoned by the President.

Third.—In counties which have been disorganized, or where there are no persons who can fill the several county offices, either in consequence of death or otherwise, special appointments will be immediately made when the necessity for such appointments shall be made known to me.

Fourth.—The sheriffs hereby appointed, or in case there be no sheriffs the judge of probate or the coroner, or any justice of the peace, in the order in which they are here placed, shall hold an election at the several election precincts in each county, on Monday, the 7th day of August next, for delegates to a convention for the purposes mentioned in the President's proclamation. Voters for delegates to this convention must possess the qualifications required by the Constitution and laws as they existed prior to the 9th day of January, 1861, and must also produce a certificate that they have taken, before a competent officer, the amnesty oath prescribed by the proclamation of the 29th of May, 1865, which certificate shall be attached to or accompanied by a copy of the oath, and no one will be eligible as a member of this convention who has not also taken this oath. The sheriff shall give public notice of the election by posting up this proclamation or otherwise.

Fifth.—Each county and town entitled to separate representation shall be entitled to be represented in the convention by the same number of representatives they were entitled to in the lower branch of the Legislature prior to the 9th day of January, 1861.

Sixth.—The returning officers of the election shall give to the persons having the highest number of votes a certificate of election, and the delegates so elected shall assemble at the city of Jackson, on Monday, the 14th day of August next, and shall organize a convention by electing proper officers, and adopting necessary rules, and after taking an oath to support the Constitution of the United States, may proceed in the discharge of their duties.

Seventh.—The Trustees of the University of Mississippi are required to meet at Oxford, on Monday, the 31st day of July, for the purpose of putting the institution in operation.

Eighth.—Crime must be suppressed and guilty persons punished. The commanding general at this post has kindly offered to use the forces under his command for the protection of the people and for the apprehension of offenders against the law; and it is hoped the people will give him timely information, and render such assistance as will enable him to carry out this laudable object. I would advise the people, when it may be necessary in consequence of their remoteness from a military force, to organize themselves into a county patrol, for the apprehension of offenders, who, when arrested, if they cannot be safely confined in the county, may be brought to Jackson for confinement in the military prison until they can be disposed of by civil law. In taking recognizances the justices of the peace will make them returnable to the text term of the circuit court as now established by law, or that may hereafter be established by law.

Probably there are some persons who have some conscientious scruples about taking the amnesty oath, because they believe the emancipation proclamation unconstitutional. I allude to the subject only because I have understood there are a few such. This objection certainly cannot be raised with propriety by such as denied that they were subject to the Constitution of the United States as the supreme law when the proclamation was issued. Whether it be constitutional or not is a question

which the people have no right to determine; the determination of that question rests with the supreme judicial department of the Government. Legislative bodies often pass unconstitutional acts, but they must be regarded as valid, and they must be observed as the law, until the proper department of the Government declares them void. Every presumption is in favor of their validity. And it is precisely the same case with executive acts. This proclamation, therefore, must be regarded as valid until the Supreme Court shall decide otherwise. When it does so decide, parties will be absolved from the obligation of the oath. Perhaps, however, parties who believe the proclamation void are over-sanguine in the correctness of their opinions. There is a general principle in the law of nations which authorizes one belligerent party to do toward his enemy whatever will strengthen himself and weaken his enemy, limited, of course, by the laws of humanity. Some writers of high authority hold that legitimate power in war, toward an enemy, is coextensive with necessity. Even the desolating of a country and the burning of towns and villages are held to be justifiable acts in certain cases. Whether these principles be broad enough to cover the taking of slaves, as they certainly are with regard to other property, is not for me to determine, and I mention them only to show to those who entertain this opinion that perhaps it does not rest on as solid a foundation as they imagine it does. The people of the Southern States were in rebellion; the President of the United States had a right to prescribe terms of amnesty; he has done so, and it is hoped the people will all cheerfully take this oath, with a fixed purpose to observe it in good faith. Why should they now hesitate or doubt since slavery has ceased to be a practical question? It was the ostensible cause of the war; it was staked on the issue of the war, and that issue has been decided against us. It is the part of wisdom and of honor to submit without a murmur. The negroes are now free—free by the fortunes of war—free by the proclamation—free by common consent—free practically, as well as theoretically, and it is too late to raise technical questions as to the means by which they became so. Besides, it would be bad policy now to undertake to change their condition if we could do so. It would be nothing less than an effort to establish slavery where it does not exist. Therefore let us cordially unite in our efforts to organize our State Government, so that we may, by wise legislation, prepare ourselves to live in prosperity and happiness in the changed condition of our domestic relations. Fellow-citizens, I accept the office of Provisional Governor in full view of the troubles and responsibilities incident to it. I was actuated by no other motive than a desire to aid the people in organizing a civil government preparatory to the restoration of their harmonious relations with the Government of the United States. That I shall commit errors I know full well; but I know also that I shall very soon leave the office, and that I shall carry with me the consoling reflection that I endeavored to subserve the best interest of the people in this critical and trying conjunction of public affairs. The people of the South have just passed through a most terrible and disastrous revolution, in which they have signally failed to accomplish their purpose. Perhaps their success would have proved to be the greatest calamity that could have befallen their country, and the greatest calamity to the cause of civil liberty throughout the world. The true patriot finds his greatest enjoyment in the noble and pleasing reflection that his government is to live after him with an honored name, to shed its blessings on millions through future centuries. And as good governments are things of growth, improved by the lights of experience and often by revolutions, let us hope—sad and disastrous as this revolution has been—that the lessons it has taught us will not be destitute of value. The business of improving our government, if it

should be found to need it, and of promoting reconciliation between the Northern and Southern people, are now prominent duties before us, so that we may hereafter live in the more secure and perfect enjoyment of the great patrimony left us by our fathers, and so that those who are to come after us may long enjoy in their fullest functions the inestimable blessing of civil liberty, the best birthright and noblest inheritance of mankind.

Done at the city of Jackson, on the 1st day of July, A. D. 1865.

W. L. SHARKEY.

By the Governor:

JAMES R. YERGER, Secretary of State.

On the 17th of July the Governor ordered a tax of one dollar on each bale of cotton sent to market, toward paying the expenses of the State Convention provided for as above, and on the 21st issued an order doubling the tax in cases where payment was refused, and authorizing the sheriff to seize and sell at public auction a sufficient quantity of cotton to pay the tax. The election of delegates was characterized by an unusual degree of quiet, and, pursuant to the Governor's proclamation, the Convention, the first to meet under the call of a provisional Governor, assembled at Jackson on the 14th of August. James R. Yerger was chosen president, and made a short address, in which he expressed the hope that they were entering on an era of restoration, peace, and prosperity, and of security to the generations to come after them.

After the election of a secretary, the oath to support the Constitution of the United States was administered to all the delegates. On the 17th a memorial was adopted, to be presented to the President of the United States, praying him not to garrison the State with negro troops. This was presented to Gen. Osterhaus, to be forwarded. On the 21st the following amendment to the State Constitution was adopted, after an earnest debate, by a vote of 86 to 11:

The institution of slavery having been abolished by the State of Mississippi, neither slavery nor involuntary servitude, otherwise than in punishment of crime, of which the party shall have been duly convicted, shall hereafter exist in this State; and the Legislature at the next session, and thereafter, as the public welfare may require, shall provide for the protection and security of the persons and property of the freedmen of this State, and guard them and the State against the evils that may arise from their sudden emancipation.

On the same day an ordinance was passed, providing for a general election according to the constitution, and the election laws of the State as they existed on the 1st of January, 1861, for Representatives in Congress, State officers, and members of the Legislature, and for a special election of county, district, judicial, and ministerial officers, both to be held on the 2d of October. On the 22d an ordinance was passed, declaring the ordinance of secession null and void, and repealing all the ordinances of the Convention of 1861, except the revenue ordinance, which was left for the Legislature to act upon. On the 23d an ordinance was passed, ratifying all laws and official acts passed

since the act of secession, not repugnant to the Constitutions of the United States and Mississippi, prior to January, 1861, except the laws concerning crimes and the acts enabling railroads to pay moneys borrowed by them; also repealing all laws authorizing the payment of dues to the State in Confederate scrip, and all laws authorizing the distillation of spirits on State account; ratifying all official accounts, proceedings, judgments, decrees, etc., of the several courts; legalizing all sales made by administrators and others acting in a judicial capacity; authorizing executors and others to compromise with persons against whom they held notes, as to the real value of the property for which such notes were given; authorizing *ex parte* testimony to be taken to prove whether or not contracts which had been made contemplated specie or currency payments; ratifying all marriages consummated since January, 1861, whether celebrated with the usual forms or not. On the 24th Governor Sharkey sent in to the Convention the following despatch from President Johnson:

EXECUTIVE MANSION,
WASHINGTON, D. C., Aug. 15, 1865. }

Gov. Wm. L. Sharkey, Jackson, Miss. :

I am gratified to see that you have organized your convention without difficulty. I hope that without delay your convention will amend your State constitution, abolishing slavery and denying to all future Legislatures the power to legislate that there is property in man; also that they will adopt the amendment to the Constitution of the United States abolishing slavery. If you could extend the elective franchise to all persons of color who can read the Constitution of the United States in English and write their names, and to all persons of color who own real estate valued at not less than two hundred and fifty dollars and pay taxes thereon, you would completely disarm the adversary and set an example the other States will follow. This you can do with perfect safety, and you would thus place Southern States in reference to free persons of color upon the same basis with the free States. I hope and trust your convention will do this, and as a consequence the radicals, who are wild upon negro franchise, will be completely foiled in their attempts to keep the Southern States from renewing their relations to the Union by not accepting their Senators and Representatives.

ANDREW JOHNSON, President United States.

On the same day, after laying on the table a proposition to submit the constitutional amendment to the people for ratification or rejection, and nominating Judge E. S. Fisher for Governor, the Convention adjourned *sine die*. At an informal meeting of the delegates in their individual capacity, a petition to President Johnson, praying him to pardon Jefferson Davis and Gov. Clarke, was read, and a resolution was adopted requesting the President of the Convention to forward the memorial to the President of the United States.

A good deal of excitement was occasioned by the taking of a man, named Potter, out of the custody of a civil magistrate, by Gen. Osterhaus, while he was undergoing trial for shooting a negro in the act of robbery. Gen. Osterhaus published, in the Jackson "News" of the 2d of September, a reply to some strictures made in

that paper with regard to his course, alleging that what he had done was strictly within the scope of his instructions, which were as follows :

General Orders No. 18.

HEADQUARTERS DEPARTMENT OF MISSISSIPPI, }
VICKSBURG, Miss., Aug. 15, 1865. }

The following endorsement on a communication regarding jurisdiction of military courts in certain cases, which was addressed to the Assistant Judge Advocate General, and by him referred to the Judge Advocate General of the army, and which is approved by the Secretary of War, is published for the information of all concerned :

WAR DEPARTMENT, BUREAU OF MILITARY JUSTICE, }
July 25, 1865. }

Respectfully returned to Col. W. M. Dunn, Assistant Judge Advocate General.

The trials by military commission of the within named citizens of Mississippi (Cooper, Downing, and Saunders), charged with capital and other gross assaults upon colored soldiers of our army (and in one instance of a similar treatment of a colored female), should be at once proceeded with; and all like cases of crime in that locality should be promptly and vigorously prosecuted. That the President has accorded a Provisional Government to the State of Mississippi is a fact which should not be allowed to abridge or injuriously affect the jurisdiction heretofore properly assumed by military courts in that region during the war. And especially is the continued exercise of that jurisdiction called for, in cases—1st, of wrong or injury done by citizens to soldiers (whether white or black); and 2d, of assault or abuse of colored citizens generally; where, indeed, the local tribunals are either unwilling (by reason of inherent prejudice) or incapable (by reason of the defective machinery, or because of some State law declaring colored persons incompetent as witnesses) to do full justice or properly punish the offenders.

The State of Mississippi, in common with other insurgent States, is still in the occupation of our forces, and—embraced, as it is, in a military department—is still, to a very considerable extent, under the control of the military authorities. Moreover, the rebellion, though physically crushed, has not been officially announced or treated, either directly or indirectly, as a thing of the past; the suspension of the *habeas corpus* has not been terminated, nor has military law ceased to be enforced, in proper cases, through the agency of military courts and military commanders, in all parts of the country.

It is to be added that the charges against the within named parties have been examined and found to be generally substantially correct in form. A few changes only in the allegations have been noted as proper to be made before these charges are served upon the accused.

(Signed) A. A. HOSMER,
Major and Judge Advocate.

(In the absence of the Judge Advocate General.)

Approved : E. M. STANTON,
(Signed) Secretary of War.

July 27, 1865.

By order of Maj.-Gen. SLOCUM,
J. WARREN MILLER, Assistant Adjutant-General.

The rule laid down as above by Judge Advocate Hosmer, and endorsed by Secretary Stanton, constituted also, it would seem, a sufficient justification of Gen. Slocum in the following transactions. On the 19th of August Gov. Sharkey issued the following proclamation, calling on the people to organize under the militia laws of the State a force for the apprehension of offenders and the prevention of crime :

EXECUTIVE OFFICE, JACKSON, August 19, 1865.

Information having reached me that parties of bad men have banded together in different parts of the State for the purpose of robbing and plundering, and for violating the law in various ways, and that outrages of various kinds are being perpetrated, and the military authorities of the United States being insufficient to protect the people throughout the entire State, I do therefore call upon the people, and especially on such as are liable to perform military duty and are familiar with military discipline, to organize volunteer companies in each county in the State, if practicable, at least one company of cavalry and one of infantry, as speedily as possible, for the detection of criminals, the prevention of crime, and the preservation of good order. And I urge upon these companies, when formed, that they will be vigilant in the discharge of their duties. These companies will be organized under the law in relation to volunteer companies, as contained in the Revised Code and the amendment thereto passed on the 10th day of February, 1860, except that as soon as the proper number shall volunteer the election of officers may take place immediately and without further order, and commissions will be issued as soon as returns are received, and the election may be held by any justice of the peace. I most earnestly call upon the young men of the State, who have so distinguished themselves for gallantry, to respond promptly to this call, which is made in behalf of a suffering people.

It will be the duty, as I hope it will be the pleasure, of these companies to pursue and apprehend all offenders against law, and by vigilance to prevent crime; to aid the civil authorities, and to contribute all in their power to the restoration of good order in the community. Arms will be procured, if possible, for such as may not have them; but I would advise an immediate organization with such arms as can be procured.

Given under my hand, and the great seal of the State affixed.

W. L. SHARKEY,
Provisional Governor of Mississippi.

On the 24th Gen. Slocum issued an order interfering with the proposed organization of the State militia, as follows :

General Orders No. 22.

HEADQUARTERS DEPARTMENT OF MISSISSIPPI, }
VICKSBURG, Miss., August 24, 1865. }

The attention of District Commanders is called to a proclamation of the Provisional Governor of the State of Mississippi, of the 19th inst., which provides for the organization of a military force in each county of the State.

While the General Government deems it necessary to maintain its authority here by armed forces, it is important that the powers and duties of the officers commanding should be clearly defined.

The State of Mississippi was one of the first that engaged in the recent rebellion. For more than four years all her energies have been devoted to a war upon our Government. At length, from exhaustion, she has been compelled to lay down her arms; but no orders have as yet been received by the military authorities on duty here indicating that the State has been relieved from the hostile position which she voluntarily assumed toward the United States.

The General Government, earnestly desiring to restore the State to its former position, has appointed a Provisional Governor, with power to call a convention for the accomplishment of that purpose. Upon the military forces devolve the duties of preserving order and of executing the laws of Congress and the orders of the War Department. The orders defining the rights and privileges to be secured to freedmen meet with opposition in many parts of the State, and the duties devolving upon military officers, in the execution of these orders, are often of a delicate nature. It has certainly been the desire of the Depart-

ment Commander, and, so far as he has observed, of all officers on duty in the State, to execute these orders in a spirit of conciliation and forbearance; and while obeying implicitly all instructions of the President and the War Department, to make military rule as little odious as possible to the people. While the military authorities have acted in this spirit, and have been as successful as could have been anticipated, the Provisional Governor has thought proper, without consultation with the Department Commander, or with any other officer of the United States on duty here, to organize and arm a force in every county, urging the "young men of the State, who have so distinguished themselves for gallantry," to respond promptly to his call; meaning thereby that class of men who have as yet scarcely laid down the arms with which they have been opposing our Government. Such force, if organized as proposed, is to be independent of the military authority now present, and superior in strength to the United States forces on duty in the State. To permit the young men who have so distinguished themselves to be armed and organized independently of United States military officers on duty here, and to allow them to operate in counties now garrisoned by colored troops, filled, as many of these men are, not only with prejudice against those troops, and against the execution of orders relative to freedmen, but even against our Government itself, would bring about a collision at once, and increase in a tenfold degree the difficulties that now beset the people. It is to be hoped that the day will soon come when the young men called upon by Governor Sharkey and the colored men now serving the United States will zealously cooperate for the preservation of order and the promotion of the interests of the State and nation. It will be gratifying to the friends of the colored race to have the assurance in an official proclamation from the Provisional Governor that the day has already arrived when the experiment can safely be attempted. But as the questions on which these two classes will be called to cooperate are those with regard to which there would undoubtedly be some difference of opinion, particularly as to the construction of certain laws relative to freedmen, the Commanding General prefers to postpone the trial for the present. It is the earnest desire of all military officers, as it must be of every good citizen, to hasten the day when the troops can, with safety, be withdrawn from this State, and the people be left to execute their own laws; but this will not be hastened by arming at this time the young men of the State.

The proclamation of the Provisional Governor is based on the supposed necessity of increasing the military forces in the State to prevent the commission of crime by bad men. It is a remarkable fact that most of the outrages have been committed against Northern men, Government couriers, and colored people. Southern citizens have been halted by these outlaws, but at once released and informed that they had been stopped by mistake; and these citizens have refused to give information as to the parties by whom they were halted, although frankly acknowledging that they knew them.

Governor Sharkey, in a communication written after his call for the organization of militia forces was made, setting forth the necessity for such organization, states that the people are unwilling to give information to the United States military authorities which will lead to the detection of these outlaws, and suggests, as a remedy for these evils, the arming of the very people who refuse to give such information.

A better plan will be to disarm all such citizens, and make it for their interest to aid those who have been sent here to restore order and preserve peace. It is therefore

Ordered, That District Commanders give notice at once to all persons within their respective districts

that no military organizations, except those under the control of the United States authorities, will be permitted within their respective commands; and that, if any attempt is made to organize after such notice, those engaged in it will be arrested. Whenever any outrages are committed upon either citizens or soldiers, the commander of the post nearest the point where the offence is committed will report the fact to the District Commander, who will forthwith send as strong a force to the locality as can be spared.

The officer in command of such force will at once disarm every citizen within ten miles of the place where the offence was committed. If any citizen possessing information which would lead to the capture of the outlaws refuses to impart the same, he will be arrested and held for trial. The troops will be quartered on his premises, and he will be compelled to provide for the support of men and animals. These villains can be arrested, unless they receive encouragement from some portion of the community in which they operate, and such communities must be held responsible for their acts, and must be made to realize the inevitable consequences of countenancing such outrages.

By order of Major-General SLOCUM.
J. WARREN MILLER, Assistant Adjutant-General.

On the 29th the President received a despatch from Gen. Carl Schurz, expressing doubts of the propriety of Gov. Sharkey's course, and deprecating any action by the President adverse to the order issued by Gen. Slocum. Next day the President telegraphed to Gen. Schurz as follows:

EXECUTIVE MANSION,
WASHINGTON, D. C., August 30, 1865. }

Major-General Carl Schurz, Vicksburg, Miss. :

I presume Gen. Slocum will issue no order interfering with Gov. Sharkey in restoring the functions of the State government without first consulting the Government, giving the reasons for such proposed interference. It is believed there can be organized in each county a force of citizens or militia to suppress treason, preserve order, and enforce the civil authority of the State and of the United States, which would enable the Federal Government to reduce the army and withdraw to a great extent the forces of the United States, thereby reducing the enormous expenses of the Government. If there was any danger from an organization of the citizens for the purpose indicated, the military are there to detect and suppress on the first appearance any move insurrectionary in its character. One great object is to induce the people to come forward in the defence of the State and Federal Government. General Washington declared that the people of the militia was the army of the Constitution, or the army of the United States, and as soon as it is practicable, the original design of the Government must be resumed, and the government administered upon the principles of the great chart of freedom handed down to the people by the founders of the republic.

The people must be trusted with their government, and, if trusted, my opinion is they will act in good faith and restore their former constitutional relations with all the States composing the Union. The main object of Maj.-General Carl Schurz's mission to the South was to aid, as far as practicable, in carrying out the policy adopted by the Government for restoring the States to their former relations with the Federal Government.

It is hoped such aid has been given. The proclamation authorizing restoration of State governments requires the military to aid the Provisional Governor in the performance of his duties as prescribed in the proclamation, and in no manner to interfere or throw impediments in the way of consummating the object

of his appointment, at least without advising the Government of the intended interference.

ANDREW JOHNSON,
President United States.

On the 2d of September the President received a despatch from Gov. Sharkey, stating that Gen. Slocum had issued an order preventing the execution of his proclamation of August 19th, and acknowledging the receipt of a copy of the despatch sent to Gen. Carl Schurz. A similar despatch was subsequently sent to Gov. Sharkey. On the same day the following despatch was sent to Gen. Slocum:

WAR DEPARTMENT, WASHINGTON, Sept. 2d.

To Maj.-Gen. Slocum:

Upon the 19th of August Gov. Sharkey issued a proclamation calling for the formation of military companies in each county to detect criminals and prevent crime and preserve good order in places where the military forces of the United States were insufficient to do so. If you have issued any order countermanding this proclamation or interfering with its execution, you will at once revoke it. Acknowledge the receipt of this order and telegraph your action.

By order of the President of the United States,
T. T. ECKERT, Acting Ass. Sec. War.

Gen. Slocum promptly issued the following order, revoking his order of August 24th:

General Orders No. 23.

HEADQUARTERS DEPARTMENT OF MISSISSIPPI, }
Vicksburg, Miss., Sept. 4, 1865. }

By direction of the President of the United States, General Orders No. 23, current series from these headquarters, is hereby revoked.

No officer will, in any manner, interfere with the organization of troops pursuant to the proclamation of the Provisional Governor.

The order which is hereby revoked was issued, as stated therein, from apprehension of danger of conflict between the State troops and colored troops serving the United States, and in the firm belief that it was in accordance with the policy of the Government.

It is the imperative duty of every United States officer serving in this department to be guarded in the execution of all orders; to avoid giving offence; and in case of conflict with either officers or soldiers serving under the State authorities, to postpone action in the matter, if possible, until it has been referred to the district or department commander for decision.

By order of Major-General SLOCUM.

J. W. MILLER, A. A. G.

The condition and relations of the freedmen became the subject of much discussion in Mississippi. Many of the negroes remained with their old masters; others roamed about the country in idle vagrancy. Almost all of them had very extravagant notions of their newly acquired rights and privileges. Their late owners and the white population generally, on the other hand, though accepting the new order of things in good faith as an inevitable necessity, were for the most part unprepared to grant equal rights to the negroes. Some even expected the restoration of slavery sooner or later. Little trouble, however, actually occurred between the freedmen and their employers. All labor was contracted for, and owners of plantations were anxious to make contracts for

1866, being apprehensive that laborers would be procured with difficulty at the beginning of the season. The admission of negro testimony in courts of justice and the right to sue and be sued, incident to the right to protection of person and property guaranteed by the amended State constitution, met with much opposition; and Col. Thomas, Assistant Commissioner of the Freedmen's Bureau, having proposed to turn over the business of his court to the civil authorities, Gov. Sharkey issued the following proclamation:

EXECUTIVE OFFICE, JACKSON, September 25, 1865.

By an order bearing date the 20th inst., Col. Samuel Thomas, Assistant Commissioner of the Freedmen's Bureau in this State, proposes to transfer to the civil authorities of the State the right to try all cases in which the rights of freedmen are involved, either for injuries done to their persons or property. This proposition is made, however, on condition that "the judicial officers and magistrates of the provisional government of the State will take for their mode of procedure the laws now in force in this State, except so far as those laws make a distinction on account of color, and allow negroes the same rights and privileges as are accorded to white men before their courts;" by which I understand that negroes shall be allowed to testify in cases where their interest is involved. And believing that the late constitutional amendment which abolished slavery abolishes all laws which constituted a part of the policy of the system of slavery, and in declaring that the negro shall be protected in his person and property, establishes principles which, of themselves, entitle the negro to sue and be sued, and as a necessary incident to such right, that he is made competent as a witness, according to the laws of evidence of the State: Now, therefore, I, William L. Sharkey, Provisional Governor of Mississippi, with a view of securing to our citizens the rights of trial before their own officers, and under their own laws, rather than by a military tribunal and by military law, do hereby proclaim and make known that in all cases, civil or criminal, in which the rights of negroes are involved, either for injuries done to their persons or property, or in matters of contract, the testimony of negroes may be received, subject to the common rules of evidence, as regards competency and credibility, which prevail in regard to white persons. And I do therefore accept the proposition of Col. Samuel Thomas, Assistant Commissioner of the Freedmen's Bureau of this State, and request that no freedmen's court shall hereafter be organized, and that those already in existence be closed, and instructed to transfer the cases before them to civil authorities; and I hereby instruct all judicial officers and magistrates to act accordingly, until the Legislature shall act upon this subject.

Given under my hand and the great seal of the State affixed this day and date above written.

W. L. SHARKEY,

Provisional Governor of Mississippi.

The State election took place on the 2d of December, and resulted in the choice of Gen. Benj. G. Humphreys for Governor, H. J. Harris for Secretary of State, T. T. Swann for Auditor, Gen. John H. Echols for Treasurer, and O. E. Hooker for Attorney-General. Five Congressmen were also elected. The total vote of the State for Governor was 44,916. In 1860 the total vote for President was 69,120. Both houses of the Legislature convened and organized on the 16th. Gov. Sharkey was chosen United States Senator, to fill the unexpired

1st. The amount of Cotton Notes issued under an act entitled "an act authorizing the issuance of Treasury Notes, as advances upon cotton," approved December 19, 1861.....	\$5,000,000 00
--	----------------

ANDREW JOHNSON, President

This letter of President Johnson was not without effect. It became apparent that there was only one way in which the State might be rid of the presence of a military force, and the rule of the civil authorities be fully restored. On the 20th Gov. Humphreys sent a message to the Legislature, in which, though he used some very strong language in condemnation of the Freedmen's Bureau, he argued that as the amended State constitution guaranteed protection to the person and property of the freedman, and that as this could not be effected except through an independent and enlightened judiciary, the courts must be thrown open to the negro; but that this would be idle if he were not permitted to testify himself and introduce such testimony as he or his attorney might deem essential to establish the truth and justice of his case. He added: "It is an insult to the intelligence and virtue of our courts and juries of white men, to say or suspect that they cannot or will not protect the innocent, whether white or black, against the falsehoods and perjury of black witnesses." He recommended, therefore, that negro testimony should be admitted in the courts, not only for the protection of the freedman, but for the security of society against the crimes of both races.

The Legislature before adjourning passed a bill conferring civil rights upon freedmen, free negroes, and mulattoes, according to the provisions of which they may sue and be sued in all the courts of the State, and may devise and inherit property; negro marriages are legalized; the marriage of a white person with a negro is made felony, and punishable with confinement in the State penitentiary for life; negroes are competent witnesses in all suits in which negroes are parties; every negro must have a legalized certificate of his mode of employment; all contracts made by negroes for hire for longer periods than one month must be in writing, and if a negro without just cause leave his employer he forfeits all wages; every civil officer is required to take back to his employer a negro deserting him, both parties having the right of appeal to the circuit court; justices may issue warrants for the arrest of freedmen who desert their employers; negroes employed cannot be hired by others; negroes may make affidavits and begin suits in courts of law and equity; the penal code of the State is made the same for whites and blacks, except in cases otherwise specially provided by statute.

An act was passed to ascertain the number of maimed State and Confederate soldiers in the State, with a view to providing them with artificial limbs. An exemption law, and a stay law suspending the laws for the collection of debts till the 1st of January, 1868, were both passed over the Governor's veto. The amendment to the Constitution of the United States was ratified, with the qualification that this ratification is expressly made and adopted upon the conditions and with the reservations following:

1. It shall not be construed into an approval or endorsement of the political principles or doctrine that the reserved rights of a State can, without the consent of such State, be usurped or abridged by the Federal Government, through the instrumentality of a Constitutional amendment.

2. It shall not be construed into expressed or implied consent on the part of the Legislature that Congress shall abolish slavery where it lawfully exists in any State that may refuse to ratify said amendment.

3. The emancipation of slavery in this State being a fixed fact—distinctly recognized by her constitution, and by recent legislative enactments, designed in good faith to maintain and protect the civil rights of the freedmen appertaining to their new condition of freedom—the second section of said amendment shall not be construed as a grant of power to Congress to legislate in regard to the freedmen of this State; but so far as relates to this State it shall be construed simply as a grant of power to Congress by appropriate legislation to prohibit and prevent the reestablishment of slavery therein.

MISSOURI. On January 6th the State Constitutional Convention assembled at St. Louis, and the State Legislature at Jefferson City. The first important action of the convention, after its organization, was the passage of an ordinance abolishing slavery in the State. The ordinance, and the proceedings relative thereto, are reported in the *ANNUAL CYCLOPEDIA* for 1864. Governor Fletcher, on the 11th, issued a proclamation, stating the action of the convention, and declaring "that henceforth and forever no person within the jurisdiction of the State shall be subject to any abridgment of liberty, except such as the law shall prescribe for the common good, or know any master but God." The occasion was celebrated in St. Louis by the suspension of business during the day, and the decoration of the houses with flags, and at night by an illumination.

The next measure considered by the convention was the Bill of Rights.

The first and second sections of the bill were such as are usually inserted. The third section reported was as follows:

That no person can, on account of color, be disqualified as a witness, or be disabled to contract, or be prevented from acquiring, holding, and transmitting property, or be liable to any other punishment for any offence than that imposed upon others for a like offence, or be restricted in the exercise of religious worship, or be hindered in acquiring education, or be subjected in law to any other restraints or disqualifications, in regard to any personal rights, than such as are laid upon others under like circumstances.

It was moved to amend by inserting after the word "contract" the words "except contracts of marriage between persons of African descent and white persons." For this amendment the following substitute was adopted: "otherwise than as others are disabled," and the section was passed. The fourth section recognized the people as the source of all political power. An amendment was offered that "civil government is ordained of God, and is essential to the peace and welfare of human society;" but the people have the right to determine the form of government they will adopt, etc. After much discussion, the amend-

ment was rejected. Section fifth recognized the exclusive right of the people to regulate, alter, or abolish their form of government, etc., "but every such right should be exercised in pursuance of law and consistently with the Constitution of the United States." It was moved to strike out the words "in pursuance of law and," which, after debate, was withdrawn. The sixth and seventh sections were adopted as follows, without debate:

That this State shall ever remain a member of the American Union, that the people thereof are a part of the American nation, and that all attempts, from whatever source or upon whatever pretext, to dissolve said Union or to sever said nation, ought to be resisted with the whole power of the State.

That every citizen of this State owes paramount allegiance to the Constitution and Government of the United States, and that no law or ordinance of this State in contravention thereof can have any binding force.

The eighth section recognized the right of the people peaceably to assemble and petition for a redress of grievances, and was adopted without debate. The first part of the ninth section was as follows:

That all men have a natural and indefeasible right to worship Almighty God according to the dictates of their own consciences; that no person can, on account of his religious opinions, be rendered ineligible to any office of trust or profit in this State.

After the word "State" the followings words were added as an amendment, "nor be disqualified from testifying," and the section was adopted. The other sections of the Bill of Rights are generally similar to the Constitutions of other States. The third section of the second article relating to the Elective Franchise, provides that at any subsequent State or local election no person shall be deemed a qualified voter who has ever been in armed hostility to the United States or to the lawful authorities thereof; or to the Government of the State; or has ever given aid, comfort, countenance, or support to any persons engaged in such hostility; or has ever, in any manner, adhered to the enemies, foreign or domestic, of the United States, either by contributing to them or by unlawfully sending within their lines money, goods, letters, or information; or has ever disloyally held communication with such enemies; or has ever advised or aided any person to enter the service of such enemies; or has ever, by act or word, manifested his adherence to the cause of such enemies, or his desire for their triumph over the arms of the United States; or his sympathy with those engaged in exciting or carrying on rebellion against the United States; or has ever, except under overpowering compulsion, submitted to the authority, or been in the service of the so-called "Confederate States of America;" or has ever left this State and gone within the lines of the armies of the so-called "Confederate States of America," with the purpose of adhering to said States or armies; or has ever been a member of, or connected with, any order, society, or organization inimical to

the Government of the United States, or to the Government of this State; or has ever been engaged in guerrilla warfare against loyal inhabitants of the United States, or in that description of marauding commonly known as "bushwhacking;" or has ever knowingly and willingly harbored, aided, or countenanced any person so engaged; or has ever come into or left this State for the purpose of avoiding enrolment for or drafted into the military service of the United States; or has ever with a view to avoid enrolment in the militia of this State, or to escape the performance of duty therein, or for any other purpose, enrolled himself, or authorized himself to be enrolled, by or before any officer, as disloyal or as a Southern sympathizer; or in any other terms indicating his disaffection to the Government of the United States in its contest with rebellion, or his sympathy with those engaged in such rebellion; or having ever voted at any election by the people in this State, or in any other of the United States, or in any of their Territories, or held office in this State, or in any other of the United States, or in any of their Territories, or under the United States, shall thereafter have sought or received under claim of alienage the protection of any foreign Government, through any consul or other officer thereof, in order to secure exemption from military duty in the militia of this State, or in the army of the United States; nor shall any such person be capable of holding in this State any office of honor, trust, or profit under its authority; or of being an officer, councilman, director, trustee, or other manager of any corporation, public or private, now existing or hereafter established by its authority; or of acting as a professor or teacher in any educational institution, or in any common or other school; or of holding any real estate or other property in trust for the use of any church, religious society, or congregation. But the foregoing provisions in relation to acts done against the United States shall not apply to any person not a citizen thereof, who shall have committed such acts while in the service of some foreign country at war with the United States, and who has, since such acts, been naturalized, or may hereafter be naturalized under the laws of the United States; and the oath of loyalty hereinafter prescribed, when taken by any such person, shall be considered as taken in such sense.

A system of registration was required in every county of the State to be prescribed by the Legislature. Previous to the adoption of such a system, every voter was required to take an oath. After its adoption he was required to take the same oath upon the registry of his name; and no one unregistered could vote at an election; nor one registered, unless his name had been entered ten days previous. Mere registry does not confer the right to vote. The oath prescribed is designated in the Constitution as the Oath of Loyalty, and is in the following form:

I, A B, do solemnly swear, that I am well acquainted with the terms of the third section of the second article of the Constitution of the State of Missouri, adopted in the year eighteen hundred and sixty-five, and have carefully considered the same; that I have never, directly or indirectly, done any of the acts in said section specified; that I have always been truly and loyally on the side of the United States, against all enemies thereof, foreign and domestic; that I will bear true faith and allegiance to the United States, and will support the Constitution and laws thereof, as the supreme law of the land, any law or ordinance of any State to the contrary notwithstanding; that I will, to the best of my ability, protect and defend the Union of the United States, and not allow the same to be broken up and dissolved, or the Government thereof to be destroyed or overthrown, under any circumstances, if in my power to prevent it; that I will support the Constitution of the State of Missouri; and that I make this oath without any mental reservation or evasion, and hold it to be binding on me.

The sections seventh, etc., to the fourteenth, prescribing the application of the oath, were adopted by the Convention, in the following words:

7. Within sixty days after this Constitution takes effect, every person in this State holding any office of honor, trust, or profit under the Constitution or laws thereof, under any municipal corporation, or any of the other offices, positions, or trusts mentioned in the third section of this article, shall take and subscribe the said oath. If any officer or person referred to in this section shall fail to comply with the requirements thereof, his office, position, or trust shall *ipso facto* become vacant, and the vacancy shall be filled according to the law governing the case.

8. No vote in any election by the people shall be cast up for, nor shall any certificate of election be granted to any person who shall not, within fifteen days next preceding such election, have taken, subscribed, and filed said oath.

9. No person shall assume the duties of any State, county, city, town, or other office, to which he may be appointed, otherwise than by a vote of the people; nor shall any person after the expiration of sixty days after this Constitution takes effect, be permitted to practise as an attorney or counsellor at law; nor, after that time, shall any person be competent as a bishop, priest, deacon, minister, elder, or other clergyman of any religious persuasion, sect, or denomination, to teach or preach or solemnize marriages, unless such persons shall have first taken, subscribed, and filed said oath.

10. Oaths taken in pursuance of the seventh, eighth, and ninth sections of this article, shall be filed as follows: by a State civil officer, or a candidate for a State civil office, and by members and officers of the present General Assembly, in the office of the Secretary of State; by a military officer in the office of the Adjutant-General; by a candidate for either house of the General Assembly in the clerk's office of the county court of the county of his residence, or in that of the county where the vote of the district is required by law to be cast up, and the certificate of election granted; by a city or town officer in the office where the archives of such city or town are kept; and in all other cases, in the office of the clerk of the county court of the county of the person's residence.

11. Every court in which any person shall be summoned to serve as a grand or petit juror, shall require him, before he is sworn as a juror, to take said oath, in open court; and no person refusing to take the same shall serve as a juror.

12. If any person shall declare that he has conscientious scruples against taking an oath, or swearing in any form, the said oath may be changed into a

solemn affirmation, and be made by him in that form.

13. In addition to the oath of loyalty aforesaid, every person who may be elected or appointed to any office, shall, before entering upon its duties, take and subscribe an oath or by affirmation that he will, to the best of his skill and ability, diligently and faithfully, without partiality or prejudice, discharge the duties of such office according to the Constitution and laws of this State.

14. Whoever shall, after the times limited in the seventh and ninth sections of this article, hold or exercise any of the offices, positions, trusts, professions, or functions therein specified, without having taken, subscribed, and filed said oath of loyalty, shall, on conviction thereof, be punished by fine not less than five hundred dollars, or by imprisonment in the county jail not less than six months, or by both such fine and imprisonment; and whoever shall take said oath falsely, by swearing or by affirmation, shall, on conviction thereof, be adjudged guilty of perjury, and be punished by imprisonment in the penitentiary not less than two years.

Non-residents, whether Americans or foreigners, not otherwise disqualified, can vote after a residence of one year, or one year after having declared an intention to become naturalized. After January 1, 1876, no person unqualified can become a qualified voter, unless, in addition to the previous requisites, he shall be able to read and write; cases of physical disability are excepted. The disqualifications of the third section can be removed from persons who subsequently entered the military service of the United States and were honorably discharged. A majority of both houses of the Legislature, after the year 1871, can suspend or repeal any part of the third section relating to the qualifications of voters merely, and after 1875 all parts of the 3d, 4th, 5th, 6th, 8th, 9th, 10th, 11th, 12th sections may be repealed. But no such suspension or repeal shall dispense with the taking, by every person elected or appointed to office, so much of the oath of loyalty as follows the word "domestic;" subsequently, at the pleasure of the Legislature, the sections so suspended or repealed may be reinstated in the Constitution with full force and effect.

On February 15th the State Convention adopted a resolution, declaring that in their election the people intended "not only that slavery should be abolished and disloyalty disfranchised, but that the Constitution should be carefully revised and amended, to adapt it to the growth of the State." Under this view the Convention proceeded to make an entirely new Constitution. The previous Constitution had been in operation nearly forty-five years, during which great improvements had been made in the local institutions of various States. The efforts of the Convention were, therefore, directed to introduce or extend these beneficial changes to the institutions of Missouri. It is unnecessary to repeat the plan for the organization of the judiciary; the system of free schools under which gratuitous instruction is afforded to all between the ages of five and twenty years; the creation of corporations, which were to be authorized on general principles, and

other changes similar to those generally adopted in the Northern States. It was made a section of the Constitution that the Legislature should have "no power to make compensation for emancipated slaves." It was further provided that the Constitution should be submitted to the approval or rejection of the people on June 6th ensuing, and if approved by them it should take effect on the 4th of July. The voters in the military service of the United States were authorized to vote, whether within or without the State, after choosing two of their officers to act as officers of the election. No person was to be allowed to vote unless he was a qualified voter under the terms of the second article of the Constitution, as above mentioned, the same as if this article had been previously adopted, and was in full force and effect, including the oath above mentioned. The Convention also passed an ordinance, declaring vacant on the May 1st ensuing, the offices of the judges of the Supreme Court, of all circuit courts, and of all courts of records, established by any act of the General Assembly, and those of the justices of all county courts, of all circuit attorneys and their assistants, and of all sheriffs and county recorders. The vacancies so created, and all others which might occur, were to be filled for the remainder of the term of each by appointment by the Governor. Every person so appointed was required to make affidavit, as prescribed in the ordinance adopted June 10, 1862, which disfranchised all persons engaged in rebellion subsequent to December 17, 1861. The ordinance further provided as follows:

No person shall be prosecuted in any civil action, or criminal proceeding, for or on account of any act by him done, performed, or executed, after the 1st day of January, one thousand eight hundred and sixty-one, by virtue of military authority vested in him by the United States, or that of this State, to do such act, or in pursuance of orders received by him or them from any person vested with such authority; and if any action or proceeding be brought or instituted against any person for the doing of any such act, the defendant may plead in bar thereof, and give this ordinance in evidence. The provisions of this section shall apply in all cases where suits are now pending, in the same manner and with like effect as in suits or actions hereafter brought.

On the motion to strike out the word "white" as a qualification for voters, senators, and representatives, the Convention was so evenly divided, that the question was lost by one vote. One of the Senators in Congress from the State (Mr. Brown), in a letter on the Constitution, thus refers to the qualification of color:

Other and subsequent efforts to abolish the phraseology in the Constitution recognizing distinctions, founded on color and race alone, in the matter of electors, were made and with the same result, showing about an equally divided sentiment in the Convention.

Still, failure as the attempt was to open up the franchise to the attainment of all, it left in the minds of nearly all the Radical members of the Convention a keen appreciation of the need of so doing at an early day, and without doubt this was one of the moving considerations for empowering the Legislature to initiate constitutional amendments by a ma-

jority vote, ratified by the people. Let it be borne in mind that this power to alter embraces the subject matter of suffrage and elections as well as every other part of the Constitution. Authorizing the Legislature, therefore, to liberalize and extend the franchise was in effect a reference back to the people of the question of universal suffrage, leaving the approximations to be regulated by the popular demand. Certainly this is no limitation on the power of the people, and they who are most strenuous for universal suffrage have no cause to complain that the right of appeal to the people is forever reserved to them by the Constitution itself. They do and will always deplore that a Convention of Radical men commissioned to build up the foundations of a great commonwealth anew should have foregone so providential an opportunity to link their names with immortality and set the example of true and noble reconstruction, by establishing an equal freedom as the ground-work of their structure. They believe, furthermore, that it will hereafter be a source of equal mortification to many who are responsible for this omission, and that they too will derive their chief consolation from the fact that the facility of amendment guarantees a speedy success to that agitation which can only end when here in Missouri, as all over this Union of States, all men stand equal before the law.

On March 7th, Gov. Fletcher issued a proclamation, stating that no organized force of the enemies of the Federal Government existed in the State, and calling upon the civil officers to resume their duties in all parts of the State, under the laws thereof, and to arrest and bind over all offenders against the criminal laws of the United States, as they were authorized to do. On March 17th, Maj.-Gen. Pope, in command of the Military Department, issued his orders to aid in carrying out the proclamation of the Governor. All provost marshals were relieved from all duties except those of a military character, whenever notified that the civil courts were in operation, and required to turn over all matters, not military, to the civil authorities, and render their assistance when desired.

The total vote on the new Constitution, on June 6th, was 85,578, of which 43,670 were in favor, and 41,808 against it. It was therefore adopted by a majority of 1,862 votes. In 1860 the vote of the State for President was 131,462, and in 1864 it was 104,428.

Some exciting scenes ensued upon the adoption of measures to enforce the ordinances of the Convention and the provisions of the Constitution. The first arose under the ordinance above mentioned, vacating the public offices. The judges of the higher courts declined to vacate. The Circuit Court of St. Louis County decided that there was no legal validity in the ordinance. New judges, David Wagner and Walter E. Lovelace, were appointed by Governor Fletcher to the bench of the Supreme Court of the State, in place of Judges Bay and Dryden. An order from the new judges was served on the clerk of the court on June 12th, demanding the delivery of the records. In consequence, the old court in session issued the following order, which was attached to the doors of the clerk's office and of the court-room:

IN THE SUPREME COURT OF MISSOURI, }
HELD AT ST. LOUIS, Monday, June 12, 1865. }

It is ordered by the Supreme Court of Missouri: That no person or persons shall touch, handle, or remove from the court-room or office of the clerk of this court any of the books or records of the same without the consent of A. W. Mead, the clerk thereof; and any person or persons disobeying this order shall be deemed guilty of contempt of this court, and shall be punished accordingly.

A true copy from the record.

Attest:

A. W. MEAD, Clerk.

On the 13th an injunction was issued by the Circuit Court of St. Louis, restraining the new judges and all others from meddling in any manner with the records, without the consent of the old clerk. On the next day the Supreme Court of the State being in session, the commander of the enrolled militia, Gen. D. C. Coleman, appeared and presented to the judges on the bench the following order from Governor Fletcher:

EXECUTIVE DEPARTMENT, June 13, 1865.

SIR: By the ordinance of the State Convention vacating certain offices, the offices of the judges of the Supreme Court became vacant on the first day of May last. By virtue of the authority conferred on me by that ordinance, as Governor of the State of Missouri, I have caused commissions to be issued in legal form to Hon. David Wagner, Hon. Walter E. Lovelace, and Hon. Nathaniel Holmes, as judges of the Supreme Court, and who have qualified as such judges.

The ordinance referred to is the supreme law on that subject, and it is my imperative duty to enforce it, which duty I shall pursue the most summary course in performing, and will treat as they deserve any acts on your part done in furtherance of a design to intrude yourselves into and usurp the powers of the office of a judge of the Supreme Court.

Respectfully yours,

THOS. C. FLETCHER, Governor of Missouri.

The Judges Bay and Dryden informed the General that they declined to yield compliance to the threat, adding that the Governor had no warrant or authority for interrupting them in the discharge of their duties. The General then withdrew, and in a half hour returned with the following order from the Governor:

Special Order.

HEADQUARTERS STATE OF MISSOURI, June 14, 1865.

1. The usurping judges of the Supreme Court will be compelled to submit to the ordinance of the State Convention vacating certain offices.

2. David Wagner, Walter E. Lovelace, and Nathaniel Holmes will be put in possession of the Supreme Court room, in the court-house, at St. Louis, with all the records, seals, furniture, books, and papers of the office of the clerk of the Supreme Court.

3. Brig.-Gen. D. C. Coleman is charged with the execution of this order, and will employ such force for that purpose as he may deem necessary, and arrest all persons who may oppose him.

THOMAS C. FLETCHER,

Governor and Commander-in-Chief.

HEADQUARTERS STATE OF MISSOURI, June 14, 1865.

GENERAL: Herewith please find special order directing you to enforce the ordinance of the State Convention, vacating certain offices by putting the recently appointed judges of the Supreme Court into the possession of the court-room, records, etc., of that court.

You will proceed to the court-house, and, on the arrival of Messrs. Dryden and Bay, deliver to each of them the sealed note addressed to them respec-

tively. An officer of the city police will accompany you, and will have a force of the city police at hand.

If, after delivering the notes, the said Bay and Dryden do any act to disturb Messrs. Lovelace and Wagner in entering on said discharge of their duties as judges, you will direct the policemen to arrest them, and take them before the City Recorder, and at once inform me of that fact.

In case Messrs. Bay and Dryden do not come to the court-house at 9 o'clock or soon thereafter, you will cause the note referred to to be delivered to them at their rooms.

In putting the judges into possession of the court-room and clerk's office, you will, as far as is convenient in your judgment, avoid the use of violent means; but if in your judgment necessary, do not hesitate to employ all the force it may require.

THOMAS C. FLETCHER.

To Gen. DAVID C. COLEMAN.

The subsequent proceedings in the court were thus reported: "Judges Bay and Dryden refused also to recognize the authority of this order, and again protested against any interruption of themselves or their business at the hands of Gen. Coleman. This gentleman informed the Judges that, as an officer, he must obey the orders of his superiors. At first, he desired the Judges should consider themselves removed by force. This they declined acceding to. He then proposed to lay his hands upon them, and that they should consider that as an arrest. This also was declined, and he was informed that they would only yield to the presence and command of a force which they could not successfully resist. The General then informed them that a force of police was waiting in the hall of the court-house. The police were then introduced, the Judges taken from their seats by the police, by whom they were escorted as prisoners to the office of Recorder Wolf.

"When there, they found the following complaint on file against them:

To the Judge of the Recorder's Court of St. Louis County:

I do complain of Wm. V. N. Bay and John S. Dryden for disturbing the peace by interference with the Supreme Court. Please summon as witnesses.

Very respectfully,

THOMAS C. FLETCHER.

David Wagner,
Walter E. Lovelace,
Thomas C. Fletcher,
D. C. Coleman,
— Bomen.

"On this charge these gentlemen gave bond to appear before the recorder on the next morning.

"Directly after this ejection, Messrs. Wagner and Lovelace entered the Supreme Court room, and seated themselves upon the judges' bench. They attempted to transact no business, and after a short time adjourned their court until 3 o'clock p. m. During this time Gen. Coleman and his *posse comitatus* were in and in the vicinity of the Supreme Court room.

"At 3 o'clock Messrs. Wagner and Lovelace again took their seats on the judges' bench and opened their court.

"After a suspense of some minutes, an attorney arose and inquired in what order 'the

Court' would proceed to hear cases? To this Mr. Wagner responded that 'the Court' had not yet considered that matter, but would do so in a few days.

"Immediately after the eviction of Judges Bay and Dryden, Gen. Coleman demanded possession from Mr. A. W. Mead, Clerk of the Supreme Court, of the books, records, seal, etc., belonging to the court, with which order he necessarily complied, and thus had his official career as 'summarily' interrupted as was that of the Judges themselves."

On the next day the complainants did not appear before the Recorder's Court, and the persons arrested were discharged.

It was objected to these proceedings that the vacating ordinance was not within the scope of the act calling the Convention, and therefore beyond the power of the Convention to adopt; that it had never been submitted to the people, nor incorporated in or made a part of the Constitution which had been submitted; that it was the business of the courts to pass on the constitutionality of laws, and not that of the Governor; that it belonged to the old court and not to the new one to decide the question, or the whole theory of liberty, based on a constitutional judiciary, passes away, etc. There was also an interference of the military with courts in other parts of the State. Subsequently a civil suit was commenced in the Circuit Court by Judge Dryden against the Governor and General and others for unlawful interference while in the discharge of their duties, and asking as damages \$50,000. It had not reached a decision at the close of the year.

The oath required of professional men, also created much excitement. The Missouri Baptists, at their thirteenth annual meeting, held on August 19th and 20th, agreed to decline taking the oath required of ministers and teachers by the new Constitution. About fifty members were present. The reasons for this action were briefly that the oath was in conflict with the Constitution of the United States; interfered with the freedom of worshipping God; was *ex post facto* in its operations, and made every minister who refused to take it become a witness against himself; that the oath was unjust and unequal in its operations; that its purpose was to punish ministers for what was really no crime against any human law; that to take it was to acknowledge an authority in the State that does not belong to it, and that human authority was above divine. The Catholic Archbishop of St. Louis addressed the following letter to his clergy:

ST. LOUIS, 23th July, 1865.

REVEREND SIR: Since under the new Constitution a certain oath is to be exacted of priests, that they may have leave to announce God's word, and officiate at marriages, which oath they can in nowise take without a sacrifice of ecclesiastical liberty, I have judged it expedient to indicate to you my opinion in the matter, that you may have before your eyes a rule to be followed in a case of this delicacy. I hope that the civil power will abstain from exacting such

an oath. But should it happen otherwise, I wish you to inform me of the particular circumstances of your position, that I may be able to give you counsel and assistance.

I am, Rev. Sir, your obedient servant in the Lord,
 †PETER RICHARD, Archbishop St. Louis.

The Bishop of the Protestant Episcopal Church thus expressed his views:

ST. LOUIS, August 29, 1865.

Editors Missouri Democrat.

A friend has called my attention to the following in your paper of Monday, the 28th:

We learn that Bishop Hawks, of the Episcopal Church in this State, has advised the clergy of his diocese to take the constitutional oath, or if they cannot conscientiously do so, to abandon preaching in this State.

I do not know who authorized you to say so much. My real position is this:

I am opposed to the oath pressed upon the clergy, not because by it the State infringes upon my divine commission. In my judgment it does not. If I thought that it did, I would never take the oath—and I have taken it. My opposition is that it is retrospective in its action, and that it also singles out particular classes for its application.

My advice to all clergymen who have asked it (and there are many of various Christian denominations who have done so) has been always—If you can take the oath conscientiously, do so; if not, then do not take it.

Of the wisdom of the Convention in framing and ordering such an oath I say nothing—my view is manifest. I hope that it may soon be repealed, and that in the mean time the civil authority will not attempt to enforce it.

Yours respectfully,
 C. O. HAWKS.

A number of prosecutions were commenced against non-juring clergymen, who were in the meanwhile confined in the cells of prisons.

Members of the legal profession were also required to take the oath. At the September term of the criminal court in St. Louis, Judge Prim, after opening the court, informed the attorneys present, that he considered it to be his duty to declare, that no person would be permitted to practise as an attorney or counsellor-at-law in the court, without having taken and filed the oath of loyalty prescribed by the Constitution. In his opinion the courts had always been the judges of the qualifications of attorneys, that is, whether they had complied with the requirements of the law before engaging in practice, and it was the duty of the courts now, as heretofore, to permit no person to practice who was not a legally constituted attorney. Robert McDonald then addressed the court, expressing the opinion, that this action amounted to a prejudgment of the rights of parties who might be arraigned for trial before it, for a refusal to take, subscribe, and file the oath. The cases set for trial were postponed one or two days, but the court proceeded to swear the panel of grand jurors, when three of the jurors objected to being sworn. One objected, that in 1861 he was loyal to the United States, but sought to subvert the State Government under Gov. Jackson. Another was opposed to the provisions of the Constitution, believed the instrument was contradictory and in contravention to the

Constitution of the United States. A third stated that his conscience would not permit him to indict a minister who had failed to take the oath for preaching the gospel, and therefore was not competent to sit as a grand juror, especially as this question would probably be before the jury. The court refused to excuse them, stating that the reasons assigned by them were not valid, and that they were not judges of their disqualifications. The court then charged the grand jury, and upon a review of the sections of the Constitution arrived at the following conclusions:

1st. That the office of any officer or person referred to in the third section becomes vacant at once, by a failure on the part of such officer or person to take, subscribe, and file the oath of loyalty in the proper archive, within sixty days from the 4th day of July, 1865.

2d. That any such officer or person, who, after the expiration of the said sixty days, shall hold or exercise his office without having taken, subscribed, and filed the oath of loyalty, is liable to fine or imprisonment, or both.

3d. That after the expiration of said sixty days, no person shall assume the duties of any State, county, city, town, or other office to which he may be appointed, otherwise than by a vote of the people; and no person shall be permitted to practise as an attorney or counsellor-at-law; and no person shall be competent as a bishop, priest, deacon, minister, elder, or other clergyman of any religious persuasion, sect, or denomination, to teach or preach, or solemnize marriages, without having first taken, subscribed, and filed the oath of loyalty, under the penalty of fine and imprisonment as before stated; and,

4th. That persons taking the oath of loyalty falsely, by swearing or affirmation, are liable to be adjudged guilty of perjury, and to be punished by imprisonment in the penitentiary for a term of not less than two years.

The Judge further added:

But I charge you that it is your sworn duty to enforce this law, by presenting all offenders against its provisions, no matter what their estate or condition.

Some of you, too, may possibly entertain similar opinions; but such opinions must yield to the mandates of a law which your oath requires you to enforce, and which it is not within your competency to repeal or invalidate.

Before the adjournment of the court a motion was made to set aside the rule. This motion, after argument on a subsequent day, was overruled by the court.

The operation of the law was very unequal. In some cases grand juries adjourned without finding indictments against a minister, teacher, corporation officer, trustee, deacon, or elder. In other cases individuals made complaints before justices of the peace against teachers, male and female, who had not taken the oath. Many of the clergy, especially Catholic, were cast into prison.

Maj.-Gen. Pope, who was in command of the Department, adopted the policy of withdrawing the military force as fast as the people gave a sign of their willingness to return to the protection of the courts, and to enforce and obey the laws. In August, the number of military posts had been reduced to less than a dozen, which were kept up chiefly for the protection

of Government property. Martial law was nowhere applied to any but strictly military offences, and practically was, at this early day, at an end.

On November 1st, the total receipts into the treasury for the fiscal year ending September 30, 1865, were \$2,463,909.03, and total expenditures \$1,854,661.77, leaving a balance in the treasury of \$609,247.26, of which balance \$105,535.28 was in currency, and \$503,711.98 in Union military bonds and other issues of the State. The total bonded debt of the State, exclusive of bonds loaned the several railroads, was \$602,000, of which amount \$402,000 matured in 1862 and 1863. For these matured bonds, in pursuance of an act of January 2, 1864, new bonds, having twenty years to run, to the amount of \$260,000, had been exchanged. The total amount of bonds of the State loaned to the railroads, including the bonds guaranteed by the State, was \$23,701,000, on which the accrued and unpaid interest up to January, 1866, was \$1,307,780. The amount of the war debt of the State reached \$7,546,575. This debt was incurred by the State for the payment of the six months' militia, the enrolled militia, and the different organizations called out by the order of the Federal commanders. Of the gross amount, the sum of \$3,016,657 had been paid or cancelled. It was in progress of payment by the increased taxation upon persons immediately benefited by the objects for which the debt was incurred. It was believed that within two years the entire debt would be extinguished.

The railroads of the State continued to progress. The one from St. Louis to the western State line, known as the Pacific Railroad, was completed during the year. The Southwest Branch and Iron Mountain became by the operation of law the property of the State; and the Governor, in a message to the Legislature, recommended its sale on such terms as would insure its completion. The liability of the State on account of the road was \$4,000,000, with overdue interest amounting to \$1,350,000. The construction of 550 miles of road, in addition to that built on this route, would connect St. Louis with Galveston.

The Governor urged upon the Legislature the creation of a Department of Agriculture in connection with the State University. This measure is required by the new Constitution. The grant of Congress to the State, for the endowment of an Agricultural College, amounts to 380,000 acres of land.

By the new Constitution, it is provided that the right of suffrage of every male now ten years of age, shall depend upon his ability to read and write when he becomes twenty-one. The Governor urges the Legislature to avail themselves of the power granted by the Constitution to compel parents to send their children to school. The Constitution also directs the establishment and maintenance of a State University, with departments for instruction in

agriculture and the natural sciences, and a normal professorship. The State University at Columbia is situated in the central and a fertile portion of the State. The buildings are large, substantial, and elegant, and were erected without cost to the State. This institution is endowed with the fund arising from the sale of the land granted by the act of Congress of March 6, 1820, to the State, for the use of a seminary of learning. Of this fund \$1,000,000 is invested in the stock of the State Bank of Missouri, and 20,000 in the stock of the Branch Bank of Chillicothe. The sixth section of the ninth article of the Constitution requires that this stock should be sold or invested in United States or other securities.

The University, notwithstanding the small amount derived for its support from the dividend of three per cent. per annum declared by the State Bank, is in a healthy and flourishing condition, maintaining a high rank among the institutions of learning in the West.

The State holds in trust for the Common School Fund \$678,967.96, which is invested in stock of the State Bank of Missouri. The Constitution requires that this stock shall be sold.

The Missouri Military Institute, provided by the act of May 13, 1861, has not been organized. The Governor has not been able to find the deed contemplated by the eleventh section of that act, the delivery of which to the Governor is a condition precedent to the taking effect of the law. The buildings which were erected by the Masonic Order at a large cost have been almost entirely destroyed by the acts of the public enemy.

A board of emigration, created by an act of the Legislature of the previous year, has been engaged for six months in disseminating in the other States and in Europe information concerning the peculiarities and capabilities of the soil of the State, the numerous localities of the minerals, extent of timber, availability of water-courses, nature of the climate, and opportunities for education. The peaceful attitude which public affairs, soon after the war, assumed, greatly aided the people in recovering from their disasters.

MORNY, CHARLES AUGUSTE LOUIS JOSEPH, Duc de, President of the French Legislative body, born in Paris, October 23, 1811, died in that city, March 10, 1865. His parentage was purposely involved in mystery, but he is generally understood to have been the illegitimate child of Queen Hortense, the mother of Louis Napoleon, and the Count de Flahault, and thus a half brother of the Emperor. He was brought up under the care of his grandmother, Madame de Sousa, and was early remarked for his proficiency in his studies and the elegance of his manners; and to give him a position in society, the Count de Morny, a nobleman resident in the Isle of France, was induced to adopt him as his son, receiving the sum of 800,000 francs for the act. At the age of nineteen the young Count was placed at a military school, and

after two years received his commission as sub-lieutenant in a regiment of lancers then quartered at Fontainebleau; here he showed the versatility of his mind by frequenting the library of the palace, where for a time he devoted his attention to theological and metaphysical studies. He soon after joined the French army in Africa, where he took part in the expedition to Mascara and the siege of Constantine. At Mascara he performed the feat of crossing the whole army of Abd-el-Kader to join that of the French; at Constantine he was wounded with four balls, and at the end of the campaign was nominated Chevalier of the Legion of Honor, for having saved the life of General Trezel beneath the walls of that stronghold. In 1837 Queen Hortense died, leaving him an annuity of 40,000 francs, and soon after he retired from the army, and with his capital plunged into commercial speculations, his first essay being as a manufacturer of beet-root sugar at Clermont. He subsequently engaged in other speculations, with more or less success. In 1842 he was elected to the Chamber of Deputies for Puy-de-Dome, and, after eight years' service, was elected to the Legislative Assembly, when he at once identified himself with the policy of Louis Napoleon. During the *coup d'état* he was one of the few who were in the confidence of the Emperor, and was one of his most effective assistants in its consummation. After that event he held the office of Minister of the Interior, being appointed December -2, 1851, but resigned his position January 23, 1852, on account of the confiscation of the property of the Orleans family. Subsequently he became a member of the Legislative Body, and from 1854 to the time of his death officiated as its president. In 1857 the Count was sent to Russia as ambassador extraordinary to represent the French Emperor at the coronation of the Czar, when the relations between the two Governments were restored to an amicable footing, and a treaty of commerce negotiated. During his stay in Russia, M. de Morny married the young and wealthy Princess Troubetskoi, who had been brought up at the institution of the imperial maids of honor. As a wedding present, he is said to have given his bride diamonds costing 2,000,000 francs. He also purchased, in the name of his wife, a seigniorial estate belonging to the Sevlosky family, situated about twelve miles from St. Petersburg. Political affairs, however, by no means claimed his exclusive attention; on the contrary, for the last ten years he was associated in numerous industrial undertakings, and entered largely into important speculations connected with railroads, canals, mines, credit, societies, etc. He had also a decided taste for paintings, of which he had gathered quite a valuable collection. Of his political character, it may be said that he exercised no useless tyranny. His strategy consisted in profiting by circumstances, and demeaning himself courteously toward those he

had put down. The influence he had in the Chamber proceeded entirely from this tendency of his character, audacity in great moments of crisis, and conciliation when the danger was over and the battle won.

MORRIS, Brevet Brigadier-General WILLIAM WALTON, U. S. army, colonel 2d U. S. artillery, born at Ballston Springs, N. Y., in 1801, died at Fort McHenry, Baltimore, Dec. 11, 1865. He came of distinguished ancestors, whose names had been honorably associated with the history of our nation from its birth; entered West Point at the close of the second War of Independence in 1815, and graduated July 1, 1820, as second lieutenant of the 6th infantry. With that regiment he distinguished himself in Indian warfare near Council Bluff, Iowa, for which services he received the promotion of first lieutenant. In 1824 Lieutenant Morris was honored by a transfer from the infantry to the artillery; receiving a first lieutenancy in the 4th regiment of the latter service. When the war with the Seminole Indians in Florida began, General Thomas S. Jessup, who had assumed command of the army in the Creek Nation (now Alabama), organized a battalion of mounted Creek volunteers for service against the Seminoles, and gave the command to Lieutenant Morris, with the volunteer rank of major. At the head of this force Major Morris formed the advance of General Jessup's command, marching into Florida to the assistance of Governor R. K. Call and Colonel Zachary Taylor, and arrived in time to take part in the "great" Indian battle of Wahoo Swamp, on November 21, 1836. The battle was a total defeat for the Indians. They were driven across the Withlacoochee, with a loss of fifty killed, while our loss was only eight killed and nineteen wounded. For his conduct on this occasion Major Morris was promoted to a captaincy in the 4th artillery, the promotion dating December 17, 1836. He was also engaged in several other affairs with the Indians, the most important of which were the battles of the Okeechobee (December 25, 1837), the affairs at Hatcheluskee Creek (January 27, 1837), Camp Moore, Clear River, Waccassassa, and Mosquito Inlet. His conduct in those several engagements gained him a brevet promotion. His brevet, which was that of major, was dated January 27, 1837 (the day of the Hatcheluskee affair), and read that it was given "for gallant conduct on several occasions, and general efficiency in the war against the Florida Indians."

When the war with Mexico began, Captain Morris had become irregularly attached to the Judge Advocate's department of the army, and though actively engaged and distinguished at the battles of Palo Alto and Resaca de la Palma, the reputation which he won in that war was more that of a military lawyer than a warrior. During the nine years of garrison life, from 1837 to 1846, he had won a reputation as one of the ablest military lawyers in the service; and after the famous campaign of

General Scott against the city of Mexico had fairly opened, Captain Morris was employed as his legal talent rendered most appropriate. He was made Military Governor and alcalde of the city of Tampico on the occupation of that city, being removed shortly after to assume the same duties in the more important post of Puebla. Here he remained until the close of the war. Captain Morris was promoted major, November 4, 1853, and attached to the 4th artillery, and placed on duty as commandant of Fort Kearny, Nebraska Territory. He was relieved of this command by Colonel D. S. Miles in 1860, and ordered to the command of Fort Ridgely, Minn., where he was on duty until shortly before the commencement of the late war, when he was ordered to Fort McHenry, Baltimore. He was in command at this point on the memorable 19th of April, when the riots occurred in the streets of that city, and he caused much surprise and no little indignation among the secessionists by his promptness in training his guns on the riotous city. Here General Morris remained during the entire war, his career marked by no startling events, but his conduct always distinguished by firmness, fortitude, and faithfulness.

It was shortly after assuming command at Fort McHenry that Colonel Morris (he had been promoted lieutenant-colonel, May 14, 1861) took the important step of refusing to answer a writ of *habeas corpus* granted by a Maryland judge, in order to obtain possession of a soldier of the garrison of Fort McHenry. Against the advice and arguments of all his friends, legal advisers and fellow officers, Colonel Morris deliberately concluded to refuse the surrender of the culprit; and though the *habeas corpus* had not been formally suspended, he decided that the commencement of hostilities necessarily suspended it. He was the first officer who resisted the execution of the writ of *habeas corpus* after the war began, though hasty historians have given the credit to General B. F. Butler. He always acted with a firmness only intensified by its deliberation and coolness. He possessed great perseverance, and was of iron will, though mild mannered and affectionate to an unusual degree. He was a man of fine personal appearance, and dignified and courtly manners. Colonel Morris received his full promotion to the colonelcy of the 2d artillery on November 1, 1861, and his brevet of brigadier-general in the regular army was dated June 9, 1862, "for meritorious service."

MOTT, VALENTINE, M. D., LL. D., an eminent American surgeon, for many years at the head of his profession in the world, born at Glen Cove, Oyster Bay, Long Island, August 20, 1785, died in New York city, April 26, 1865. His father, Dr. Henry Mott, a native of Hempstead, L. I., practised medicine for many years in New York, and died in 1840, at the age of 83. Valentine Mott received his classical instruction from private instructors at New-

town, L. I., and in 1804 entered Columbia College as a medical student, becoming a private pupil in medicine at the same time, of his relative, Dr. Valentine Seaman. In 1806 he was graduated M. D., and proceeded almost immediately to Europe, where he visited regularly for months, St. Thomas', Bartholomew's, and Guy's Hospitals, where he enjoyed the advantage of the clinical instruction of Abernethy, Sir Charles Bell, and Sir Astley Cooper, choosing the latter as his private preceptor, and attending also the lectures of Currie and Haighton. From London he went to Edinburgh, where he attended the lectures of Hope, Playfair, and Gregory, as well as the prelections of Dugald Stewart. His skill and intrepidity as an operator, even at this early period, began to win him renown; and on his return to the United States in 1809, he was at once called to fill the chair of surgery in Columbia College. This responsible position he held with credit to himself and the college till the medical department of Columbia College was merged in 1818 in the College of Physicians and Surgeons, when he was immediately called to the same chair in the new college, where he remained till 1826, when some difficulties arising between the trustees and professors on the principles of collegiate government, he resigned, withdrew from the school, and with Drs. Hosack, Mitchill, Francis, and others, founded the "Rutgers Medical College," which, however, was prevented from further action by the Legislature, in consequence of an alleged invalidity of its charter, after an existence of four years. In 1830 Dr. Mott returned to the College of Physicians and Surgeons as Professor of Surgery, where he remained till 1840, when he became President of the Faculty and Professor of Surgery and Relative Anatomy in the new University Medical School. Of the science of Relative Anatomy, one of the greatest importance to the surgeon, he is considered the author. In 1860 he retired from the active duties of his professorship, after a service of more than fifty years, and was immediately elected Professor Emeritus. In this capacity he occasionally lectured to the classes during each subsequent year. He was the first to introduce in this country clinical instruction in surgery.

But while maintaining a high character as a lecturer and teacher of surgical science, Dr. Mott was winning a magnificent reputation as a practical surgeon. Cool, calm, and always thoroughly self-possessed, he spared no labor or pains to make himself perfectly master of the anatomy of whatever portion of the body was to be the subject of his operations. Through life it was his uniform practice never to perform an important operation upon the living subject until he had first performed it on the cadaver. When but thirty-three years of age, in 1818, he placed a ligature around the brachio-cephalic trunk or arteria innominata, only two inches from the heart, for aneurism of the right sub-clavian artery, for the first

time in the history of surgery. The patient survived the operation twenty-eight days, and thus demonstrated the feasibility of this hazardous and thus far unparalleled undertaking. He discovered in this case that though all supply of blood to the blood-vessels of the right arm was apparently cut off, the circulation was kept up by the interosculating blood-vessels, the pulsation at the wrist maintained, and no evidence of loss of vitality or warmth manifested in the limb. The patient finally died from secondary hemorrhage. In July, 1864, Dr. A. W. Smyth, of New Orleans, performed the operation successfully, and the patient entirely recovered, thus demonstrating that it was both possible and justifiable.

In 1828 he excised the entire right clavicle for malignant disease of that bone, where it was necessary to apply forty ligatures, expose the pleura, and look for arteries displaced to an almost incredible degree, by the abnormal growth of a cancerous tumor. This, the most dangerous and difficult operation which can be performed on the human body, had never before been attempted, and though completely successful (the patient still living and enjoying perfect health), it was thirty years before it was again performed, either in Europe or America. In 1821 he performed the first operation for osteo-sarcoma of the lower jaw. In 1822 he introduced his original operation for immobility of the lower jaw. He was the first surgeon who removed the lower jaw for necrosis, and the first to tie successfully the primitive iliac artery for aneurism. Other of his original operations were—cutting out two inches of the deep jugular vein, inseparably imbedded in a tumor, and tying both ends of the vein, and closing, with a fine ligature, wounds of large veins of a longitudinal or transverse kind, even where an olive sliced piece had been cut out. He tied the common carotid artery forty-six times; cut for stone one hundred and sixty-five times; and amputated nearly one thousand limbs. Sir Astley Cooper, his former preceptor, himself one of the most eminent surgeons of modern times, said of him: "He has performed more of the great operations than any man living, or that ever did live." Yet it would be doing a great injustice to Dr. Mott's memory, to intimate that he was ambitious to operate under all circumstances. No surgeon ever investigated his cases with more conscientious care and thoroughness, or weighed with more deliberation the question, "Is an operation necessary?" That he decided in favor of operating when some of his associates hesitated, as was sometimes the case, was due rather to his large experience than to an overweening fondness for the use of the knife. Gifted with a constitution of remarkable vigor and nerves of extraordinary steadiness, he continued to operate with his usual success, and to lecture on surgery with great ability, till within a few days of his decease. But though surgery was his favorite depart-

ment of the profession, he had also a large medical practice, and was for a series of years the favorite accoucheur in a large circle of families in New York. Unlike many practitioners in the decline of life, he was always ready to adopt any improvements in practice, or any adjuvants to it, which bore the test of practical trial. The introduction of anæsthetics was welcomed by him with great cordiality, and perhaps no member of the profession administered them more frequently, or with better general effect. Though himself the inventor of many admirable surgical and obstetrical instruments, he always manifested his gratification at any successful inventions of other surgeons. In 1835, wearied by his incessant labors, Dr. Mott visited Europe, and spent two or three years in travel throughout Great Britain, the Continent, and the East. He was received with great distinction, his reputation having preceded him. In Paris he was most cordially welcomed by the great surgeons of that capital, and enjoyed the special friendship of the King of the French, Louis Philippe, and his family. In Constantinople he was called to remove a tumor from the head of the reigning Sultan, Abdul Medjid, and was invested by that sovereign with the order of Knight of Medjidiechi of Constantinople for his success. On his return, he published the results of his tour under the title of "Travels in Europe and the East" (N. Y., 1842), and not long after a translation of "Velpeau's Operative Surgery," with extensive additions and annotations, in four volumes, 8vo. Besides these works, Dr. Mott had published a "Sketch of the Life of Wright Post, M. D.," an "Anniversary Discourse before the Graduates of the University of New York" (1860); "Discourse before the Binghamton (N. Y.) Inebriate Asylum;" "Eulogy on John W. Francis, M. D., before the New York Academy of Medicine;" and

twenty-five papers on surgical topics, many of them of great length, and illustrated with numerous drawings. A selection of his clinical lectures, reported by Dr. S. W. Francis, was published in 1860. In 1864, though nearly eighty years of age, he accompanied several other eminent physicians to Annapolis and elsewhere, to investigate the condition of the starved and cruelly maltreated Northern prisoners, and contributed his testimony to their deplorable condition.

Literary and scientific honors were showered upon Dr. Mott with a liberal hand. The University of Edinburgh conferred upon him the honorary degree of M. D.; the Regents of the University of New York honored him with the degree of LL. D.; he was a Fellow of the medical societies of several of the States, Fellow of the Imperial Academy of Paris, of the Clinical Society of Paris, and of the Medical and Chirurgical Societies of London and Brussels. Kings and Queen's College of Physicians of Ireland, which has elected but twenty new members in two hundred years, elected him an Honorary Fellow. He had served for many years as President of the Faculty of the University Medical College, and for a considerable period as President of the New York Academy of Medicine, and at the time of his death was President of the New York Inebriate Asylum. His death, which was the result of a very brief illness, was induced by the shock he experienced on receiving the intelligence of President Lincoln's assassination. His genial temper, fine constitution, and temperate habits, had enabled him to bear up under his vast load of care and his constant and abundant labors to a good old age, with a far greater measure of health and vigor than usually falls to the lot of professional men; and when at last the Nestor of the profession was taken away, he was widely and almost universally mourned.

N

NASSAU, a German duchy. Duke, Adolf I., born July 24, 1817, succeeded his father on August 20, 1839. Heir apparent, Prince Wilhelm, born April 22, 1832. The legislature of the duchy consists of two Chambers, meeting annually, and elected for the term of six years. Area, 1,802 English square miles. Population in 1864, 468,311. Capital, Wiesbaden, with a population of 26,573 inhabitants. As to their religious denominations, the inhabitants were divided, in 1863, as follows: Protestants, 241,384; Roman Catholics, 213,335; Mennonites, 104; German Catholics, 309; Israelites, 7,252. Contingent of Nassau to the Federal Army, 5,498.

NAVY, CONFEDERATE. The surrender of the naval vessels of the Confederates on the rivers is related under **ARMY OPERATIONS**. For

the facts relative to the ocean steamers *see* **NAVY, U. S., and DIPLOMATIC CORRESPONDENCE**.

NAVY, UNITED STATES. Until the termination of hostilities in the spring of 1865, the six squadrons, established in the early part of the war, continued to be maintained, viz.: the North Atlantic Squadron, Rear-Admiral D. D. Porter; the South Atlantic Squadron, Rear-Admiral J. A. Dahlgren; the East Gulf Squadron, Acting Rear-Admiral O. K. Stribling; the West Gulf Squadron, Acting Rear-Admiral H. K. Thatcher; the Mississippi Flotilla, Acting Rear-Admiral S. P. Lee; and the Potomac Flotilla, Commander Foxhall A. Parker. In addition to these there were the usual squadrons in foreign waters, which, in the summer and autumn, were greatly increased in numbers and effectiveness.

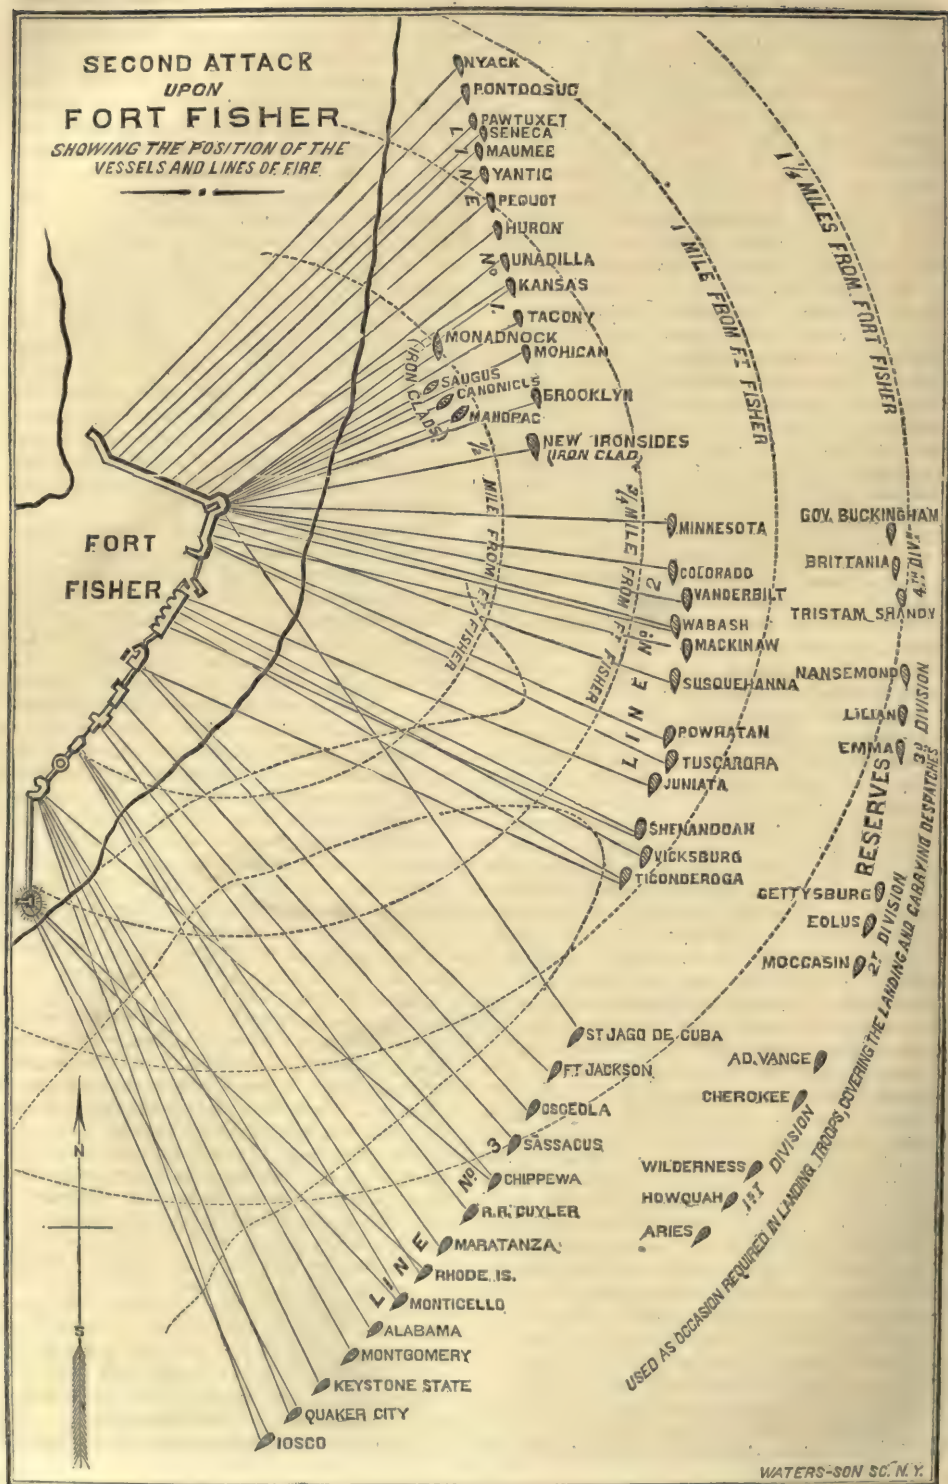

D. E. Farragut

The most important operations of the navy during the year were those performed by the North Atlantic Squadron, acting in cooperation with the large land force under Gen. Terry, in the successful attack upon Fort Fisher, on January 13th and 15th, of which, as they were intimately connected with the history of the first attack, in December, 1864, a full account was given, under the head of "Operations of the United States Navy," in our volume for 1864. Of this remarkable attack full details, not accessible when our narrative was written, were included in the documents accompanying the report of the Secretary of the Navy for 1865. Although the vessels participating in that engagement varied in size from small gunboats of five hundred tons to powerful frigates like the Wabash or Colorado, or the New Ironsides, yet in weight of metal and in the rapidity and force of their fire they probably exceeded any fleet that ever attacked fortifications. The accompanying diagram illustrates the position of every vessel in the attack, and the manner in which their fire was concentrated upon the fort. The attacking squadron numbered forty-four vessels, mounting upward of five hundred guns. Admiral Porter declared that the same fleet which was used at Fort Fisher could silence Fortress Monroe, considered the strongest and most important work in the United States, in a day, and dismount all the conspicuous guns; and that the iron-clads could demolish all the casemates in a few hours. The result of the engagement convinced him that the old maxim, that "one gun on shore is equal to many on shipboard," was no longer true, at least with respect to forts of earth or masonry, having guns mounted according to the present system; and that turrets, similar to those in monitor vessels, must be employed to protect the guns of land defences from such a fire as an effective fleet of iron-clads can concentrate upon them. In view of the experience derived at Fort Fisher, he advised that all works hereafter constructed shall be earthworks, and that those already built shall be covered with earth, the guns to be mounted in monitor turrets, which can be constructed of any thickness of iron deemed necessary. In this way only, he thinks, can the advantage formerly possessed by forts over ships be restored. The fall of Fort Fisher compelled the abandonment by the enemy of Forts Caswell, Campbell, and Shaw, and other works defending the entrances to Cape Fear River, which were immediately occupied by the navy. In February a number of the light-draught vessels ascended the river and cooperated with the troops under Gens. Schofield and Terry in the reduction of the strong works guarding the approaches to Wilmington. The capture of this place in the latter part of the month enabled Admiral Porter to reinforce the squadron in the James River. The enemy upon their retreat from Wilmington took the large iron-clad Chickamauga some distance up the Cape Fear River, and sunk her across the stream at Indian

Wells. On March 12th the gunboat Eolus passed safely up the river and opened communications with Gen. Sherman, at Fayetteville. Nothing else of interest in which the navy participated occurred on this station previous to the termination of hostilities. In the latter part of March Admiral Porter went up the James River, to superintend whatever duties might devolve upon the navy in the final series of battles around Petersburg and Richmond. As the operations were almost exclusively of a military character, his vessels were not actively employed. After the evacuation of Richmond, the gunboats proceeded up the river, removing torpedoes and other obstructions to navigation. At Richmond the unfinished ram Texas, and the tug gunboat Beaufort, were found uninjured. The following vessels had been blown up by the enemy: Virginia, flagship, four guns, iron-clad; Richmond, four guns, iron-clad; Fredericksburg, four guns, iron-clad; Nansemond, two guns, wooden; Roanoke, one gun, wooden; Torpedo, tender; Shrapnell; and Patrick Henry, school-ship.

The operations of the South Atlantic Squadron had little of that stirring character noticeable in former years of the war. Admiral Dahlgren rendered efficient service in January in transferring a part of Sherman's army to Beaufort, S. C.; and in the succeeding month a division of his squadron demonstrated along the approaches from Bull's Bay to Mount Pleasant, with a view of embarrassing the Confederate commander at Charleston and deceiving him as to the Federal plan of campaign. The city was meanwhile carefully watched, and on the morning of February 18th it fell without a struggle into the hands of the naval and military forces of the United States. Previous to their departure from Charleston, the enemy destroyed most of their effective vessels afloat; but the ram Columbia, which had grounded in coming out of her dock in January, was left by them, and was floated on the 26th of April. She was pierced for six guns, and was plated on her casemate with six inches of iron. The harbor was found to be plentifully filled with obstructions, and the numerous powerful earthworks, which had so long defied the efforts of the fleet, were uninjured. Georgetown and other places on the coast were immediately occupied by the gunboats. On the night of January 15th, the monitor Patapsco, Lieut.-Com. Quackenbush, while engaged in covering the scout and picket boats, which were searching the entrance to the lower harbor of Charleston for obstructions and torpedoes, struck and exploded a large torpedo on her port side, and almost immediately sank. Five officers and thirty-eight men were saved, and sixty-two officers and men were lost. Two other vessels were lost during the year. The Dai Ching gunboat, having grounded in the Combahee River, under the fire of a Confederate battery, was destroyed by her commander, after she had been much cut up and her guns disabled in a seven hours' engagement.

All the officers and crew were brought off safely, except five. On the morning of March 1st the flagship of the squadron, the *Harvest Moon*, having on board Admiral Dahlgren, was struck by a torpedo while steaming down the bay of Georgetown, and sank soon after. But one life was lost. The operations of the East Gulf Squadron, being far removed from the seat of war, were of comparatively little interest. They were confined chiefly to petty expeditions on the Florida coast, the destruction of salt works, etc. The record of the Mississippi and Potomac flotillas is equally barren of stirring events.

In the Department of the Gulf, the chief interest centred around the investment and capture of the strong works which defended Mobile. The naval force employed to cooperate with the troops under Gen. Canby in these operations was early in the year increased by several light-draught iron-clads detached from the Mississippi Squadron, and which were well adapted to navigate the shallow waters of the Mobile Bay. A naval reconnaissance on March 11th having shown that the enemy had not evacuated their works in the neighborhood of the city, Admiral Thatcher covered the landing of the troops on the left bank of Fish River, and in the latter part of March and the early part of April cooperated in the joint military and naval attack upon Fort Alexis and Spanish Fort. The upper bay was found to be thickly planted with torpedoes, and a large force was employed in dragging for and removing them. In spite of these precautions, however, two river monitors, the *Milwaukee* and *Osage*, and the "tin-clad" *Rodolph*, were destroyed by torpedoes between March 28th and April 1st, the casualties amounting to twenty-seven. On April 14th the gunboat *Sciota* was lost by the same means, and during the operations in the bay several small tugs and launches met a similar fate. On the night of April 8th Fort Alexis and Spanish Fort yielded to the joint attack of the army and fleet; and on the 10th a detachment of iron-clads, in consequence of the thorough dragging of the Blakely River, moved up nearly abreast of Spanish Fort, from which point Forts Huger and Tracy were so persistently shelled that they were evacuated by the enemy on the succeeding day. On the 12th the troops were conveyed across the bay to attack Mobile on its west side, but before any demonstration could be made the city was surrendered by the mayor. The Confederate army and fleet, on evacuating the city, retreated up the Tombigbee, whither preparations were making to follow and attack them, when, on May 4th, a proposition was received from Commodore Ferrand, their naval commander, to surrender all the vessels in those waters. This was accepted, and the surrender took place on the 10th at Nanna Hubba Bluff, the terms being the same accorded by Gen. Grant to Gen. Lee. Four vessels were surrendered, the *Morgan*, *Baltic*, *Nashville*, and *Black Diamond*, and four hundred and twenty-one officers and men

were paroled. The *Huntsville* and *Tuscaloosa*, two powerful rams, were sunk in Spanish River before the evacuation of Mobile. Full details of the operations before Mobile will be found under the head of "ARMY OPERATIONS." Subsequent to the fall of the city the fleet was employed in occupying the principal forts along the Gulf coast; but no further fighting took place. On the 24th of April the Confederate ram *W. H. Webb*, having run the blockade of Red River, steamed rapidly down the Mississippi past New Orleans, with the intention of getting out to sea and making for Havana. So unexpected was her appearance in front of New Orleans, that she received only two shots in her hull while passing. She was immediately pursued by a detachment of gunboats, and when about twenty-five miles below the city was encountered by the corvette *Richmond*, coming up the river. Her commander, seeing escape hopeless, ran her on shore and blew her up. Her cargo consisted of cotton, rosin, and turpentine. The crew dispersed among the swamps, but were eventually nearly all captured.

Although in 1864 the privateers *Alabama*, *Florida*, and *Georgia*, constituting the chief naval force the enemy then had afloat, were destroyed or captured by national cruisers, their resources were not yet exhausted. The shipyards and foundries of Great Britain still supplied them with vessels and guns, and to the same country they were indebted for trained seamen and gunners in numbers always equal to the demand. Early in 1865 two new vessels, of power superior to those which had already so crippled our commerce, were put into the service, and, but for the vigilance of United States naval officers and the termination of the war, might have wrought serious mischief. One of these was the iron-clad ram *Stonewall*, Captain Page, originally built for the Danish Government, and subsequently purchased by the rebels. Some difficulty in procuring an armament and crew was at first experienced, but in January she was met by an English steamer off the coast of France, and her armament, which was made in England, with supplies for a cruise and an English crew, were transferred to her. When fully equipped and manned she was a formidable antagonist, having a heavy ram projecting from her bow, and two turrets, mounting one three hundred pound rifle gun and two others of less calibre. She was easily managed, and could steam at the rate of ten knots an hour. On February 4th the *Stonewall* arrived at Ferrol, on the north-west coast of Spain, where she received some slight repairs, and probably took in additional supplies. About this time the U. S. vessels *Niagara* and *Sacramento*, which had received tidings of her whereabouts, arrived at the neighboring port of Corunna, and kept a strict watch over her movements. Notwithstanding their superiority in numbers and guns, so formidable did the iron-clad seem likely to prove in a contest with the wooden vessels, that the two sides were

about equally matched. In smooth water the Stonewall, owing to the rapidity with which she could be turned, probably had the advantage, while under other circumstances the superiority rested with her adversaries. Thus matters remained for several weeks, no occasion offering when both sides were willing to risk an engagement. In the latter part of March the Stonewall effected her escape from Ferrol, and put into Lisbon on the 27th, being followed thither by the Niagara and Sacramento. She was immediately ordered away by the Portuguese authorities, and the United States vessels were required to remain twenty-four hours after her departure. While attempting to change their anchorage in the Tagus, the vessels were fired upon from Belem Castle, under the supposition that they were attempting to run out and follow in the traces of the Stonewall before the twenty-four hours had expired. Fortunately no lives were lost, and ample apology was rendered for the outrage by the Portuguese Government. Captain Craven, commanding the Niagara, was subsequently court-martialed for neglecting to attack the Stonewall off Ferrol, and sentenced to two years' suspension from duty. This sentence was set aside by the Secretary of the Navy. Upon leaving Lisbon the Stonewall proceeded to Teneriffe and thence to Havana, where she arrived on May 11th. On the 28th Acting Rear-Admiral Godon arrived at Havana with the squadron destined for the Brazil station, together with several iron-clads, and soon afterward the Stonewall was surrendered by her commander to the Spanish authorities. She was subsequently placed at the disposal of the United States by the Spanish Government, and conveyed to Washington.

The Shenandoah, the second of the two vessels above referred to, was built in Glasgow, in 1863, and called the Sea King. Her registered tonnage was seven hundred and ninety tons, her framework being iron with wood planking; and she was propelled by engines of two hundred horse power. She was originally owned by William Wallace, of London, and, like so many other rebel vessels, was entirely of British origin and equipment. In September, 1864, she was sold to Richard Wright, of Liverpool, and soon after cleared in ballast at London, as an ordinary merchant vessel, for Bombay. In the mean time, another vessel, called the Laurel, of Liverpool, was taking on board all the necessary armament, stores, etc., several Confederate officers, and a large number of men. On the same day that the Sea King sailed from London for Bombay, the Laurel sailed from Liverpool for Nassau. The two vessels met at Madeira, and thence proceeded in company to an island near by, where, within Portuguese waters, the armament and men were speedily transferred from the Laurel to the Sea King, both vessels being still under the British flag. The Sea King was then renamed Shenandoah, hoisted the rebel flag, and set forth on her piratical cruise, under

the command of J. I. Waddell, formerly of the U. S. navy. Her armament consisted of six guns, viz., four 68-pounders and two 32-pounders, with a full crew of British sailors. The first heard of her after she left Madeira was that she had destroyed a few vessels in the neighborhood of the Island of St. Helena. Her next performance was to double the Cape of Good Hope, and cruise around in the Bay of Bengal and the Straits of Sunda. She then made her appearance in the port of Melbourne, Australia, and having coaled, provisioned, and received a reinforcement of men, sailed on February 8th for the North Pacific, where, between April 1st and July 1st, she destroyed and bonded twenty-nine vessels, thus entirely breaking up the whaling season in that quarter. Although notified by some of his victims that the Confederate armies had surrendered, Waddell gave no heed to the intelligence, but continued his work of destruction until four months after the fall of Richmond, when he was advised by an English vessel that Lee was on parole and Davis a prisoner. Nothing remained for the Shenandoah after this but to return for refuge to the country of her origin, and on November 6th she cast anchor in the Mersey. Capt. Waddell having in a formal letter surrendered his vessel to the English Government, she was by the latter given up to the American consul at Liverpool. The depredations of the Shenandoah upon American commerce naturally formed the subject of diplomatic correspondence with Great Britain, from which, though it was clearly shown that the British Government, if disposed to do so, might have prevented the sailing or the refitting of cruisers at various times during the war, no practical redress seems to have been obtained.

From the commencement to the termination of the war, about thirty vessels of all descriptions were fitted out by the enemy to prey upon American commerce; and although but seven of these, viz., the Sunter, Nashville, Alabama, Florida, Georgia, Tallahassee, and Shenandoah, were in any respect formidable, their operations were disastrous to our mercantile navy afloat, and almost broke up the carrying trade of the country. Careful statistics show that during the war 275 vessels, of nearly 100,000 tons in the aggregate, were captured by these privateers. These comprised 4 steamers, 78 ships, 43 brigs, 82 barks, and 68 schooners. The value of the vessels and their cargoes it is not easy to compute, but it amounted to many millions.

On the other hand, the number of vessels captured and sent to United States admiralty courts, for adjudication, from May 1, 1861, to the close of the war, was 1,149, of which there were steamers, 210; schooners, 569; sloops, 139; ships, 13; brigs and brigantines, 29; barks, 25; yachts, 2; small boats, 139; rams and iron-clads, 6; gunboats, torpedo boats, and armed schooners and sloops, 10; class unknown, 7—making a total of 1,149. The numbers of vessels burned, wrecked, sunk, and otherwise de-

stroyed during the same time were: steamers, 85; schooners, 114; sloops, 32; ships, 2; brigs, 2; barks, 4; small boats, 96; rams, 5; iron-clads, 4; gunboats, torpedo boats, and armed schooners and sloops, 11; total, 355—making the whole number of vessels captured and destroyed, 1,504. During the war of 1812 the naval vessels, of which there were 301 in service at the close, made 291 captures. There were 517 commissioned privateers, and their captures numbered 1,428. Nearly all the captures of value in the recent war were vessels built in so-called neutral ports, and fitted out and freighted for the purpose of running the blockade. The gross proceeds of property captured since the blockade was instituted, and condemned as prize prior to the 1st of November, 1865, amount to \$21,829,543.96; costs and expenses, \$1,616,223.96; net proceeds for distribution, \$20,501,927.69. At the close of the year there were a number of important cases still before the courts, which will largely increase these amounts. The Secretary of the Navy estimates that the value of the 1,143 captured vessels will not be less than \$24,500,000, and of the 355 vessels destroyed at least \$7,000,000, making a total valuation of not less than \$31,500,000, much of which was British property.

As early as the fall of Fort Fisher, which sealed the last of the Atlantic ports easily accessible to blockade-runners, measures were taken for the reduction of the squadrons on the Atlantic coast. But this process, which was intended to be gradual, was pushed forward so rapidly after the overthrow of the rebellion in April and May, that at the close of the latter month the entire force remaining in domestic waters did not exceed one hundred vessels. Early in July, this force was further reduced to thirty steamers, which, with storeships and tenders, comprised the entire squadrons on the Atlantic and Gulf coasts. In June, the North and South Atlantic Squadrons were consolidated into one, known as the Atlantic Squadron, and commanded by Acting Rear-Admiral Radford, who, in June, was succeeded by Commodore Joseph Lanman. A similar consolidation of the two Gulf Squadrons was effected, Admiral Thatcher remaining in command. On July 31st the Potomac Flotilla passed out of existence, and on August 14th the Mississippi Squadron, which had been gradually reduced, was wholly discontinued. Alluding to the extensive scale on which the reductions had been made, the Secretary of the Navy, in his last annual report, said: "There were in the several blockading squadrons in January last, exclusive of other duty, four hundred and seventy-one vessels, and two thousand four hundred and fifty-five guns. There are now but twenty-nine vessels remaining on the coast, carrying two hundred and ten guns exclusive of howitzers. Disposition has been made of all the others. Some of the vessels are laid up in ordinary, some with their crews are on foreign service, but

many have been sold, and, with most of the men that were actively engaged in hostile operations, are now employed in peaceful occupations." At the commencement of December, 1865, when this was written, of the great naval armament which had been employed in overthrowing the enemy and maintaining the national dignity abroad, there were in actual commission but one hundred and seventeen vessels of all descriptions.

The domestic troubles of the country having been appeased, measures were at once taken to reestablish or strengthen the various foreign squadrons. These, though not greatly increased over former years, either in the number of vessels or of guns, were, nevertheless, from the superiority of steam over sails for naval war-vessels, and the improvement and new patterns of ordnance, of greatly augmented efficiency and power. Four foreign squadrons, the European, the Brazilian, the East India, and the Pacific, were on a permanent footing at the close of 1865, and measures were in progress to revive the West India Squadron, on account of the proximity of those waters to the United States, and of our intimate commercial relations with the islands therein. It was also proposed to make considerable additions to the Pacific Squadron and ultimately to divide it, in view of the extensive limits of the station and the rapidly developing interests of the United States in the South American republics.

After recapitulating the facts connected with the expansion of the navy, between 1861 and 1865, from insignificant proportions to an almost unexampled size and power, and the principal achievements performed by it, the Secretary, in his last annual report, gives the following interesting statistics:

Three hundred and twenty-two officers traitorously abandoned the service. The embarrassment caused by these desertions in the moment of trial was temporary. Better men from the merchant marine, educated and vastly more efficient, promptly volunteered their services, in many instances at great pecuniary sacrifice, to fight the battles of the Union. About seven thousand five hundred of these gallant and generous spirits have, after examination, received appointments and been employed in the navy. Most of the volunteer officers have received an honorable discharge, and returned to their peaceful professional pursuits.

From seven thousand six hundred men in service at the commencement of the rebellion, the number was increased to fifty-one thousand five hundred at its close. In addition to these, the aggregate of artisans and laborers employed in the navy yards was sixteen thousand eight hundred and eighty, instead of three thousand eight hundred and forty-four previously in the pay of the Government. This is exclusive of those employed in the private ship yards and establishments, under contracts, constituting an almost equal aggregate number. Two hundred and eight vessels have been commenced and most of them fitted for service during this period. A few of the larger ones will require still further time for completion. Only steamers, the propellers also having sailing power, have been built by the Government during my administration of the department.

Since the 4th of March, 1861, four hundred and eighteen vessels have been purchased, of which

three hundred and thirteen were steamers, at a cost of \$18,866,681.83, and of these there have been sold three hundred and forty vessels, for which the Government has received \$5,621,800.27.

With the close of the war it became necessary to take measures for laying up the iron-clad vessels which were already afloat, and those approaching completion. As fresh water is indispensable for the preservation of this class of vessels, and as none of the navy yards possessed this requisite, the Secretary was induced, in the absence of any Congressional appropriation for a suitable dock yard or station in fresh water, to select League Island, in the Delaware River, which a committee, appointed in 1862, in pursuance of an act of Congress, had reported the most suitable location for a new yard, "so far as iron vessels are concerned." To this place were accordingly conveyed from time to time during the year all the iron-clads on the Atlantic coast not in commission. On the Mississippi River, where there is as yet no public navy yard, the station at Mound City has been retained, and the iron-clads belonging to the Mississippi Squadron have there their headquarters. Several vessels of this class which were built at St. Louis and attached to the West Gulf Squadron, where they rendered good service, particularly in the Bay of Mobile, have been laid up at Algiers, opposite New Orleans. In view of the great advantages possessed by League Island, and the contracted and altogether insufficient area of the Philadelphia navy yard, the Secretary of the Navy has strongly urged the transfer of the latter to the former place. On July 22, 1865, the iron-clad ram Dunderberg, commenced three years previous at the ship yard of W. H. Webb in New York, was successfully launched. In size, in strength, in offensive power by means of her armament and ram, and in her almost complete impregnability, she is perhaps the most formidable vessel ever constructed; and, although destined to be completed long after the termination of the recent rebellion, she will prove of inestimable value as an engine of offence or defence in any future struggle. While due care has been taken to render the Dunderberg safe in a heavy sea-way, the prime necessity of offering the utmost resistance to the missiles of an enemy has not been neglected. For this end the advantage of an angular surface to receive the enemy's fire has been combined with a great mass of timber and the protective powers of four and one-half inch solid armor plating. In her general appearance she resembles a huge fort embrasured for a score of the heaviest ordnance yet placed upon the deck of any vessel, and her magnitude and novel design are rendered pleasing to the eye by her spars and outward fittings. The hull contains several thousand feet of solid timber of the finest quality and choicest selection. The bottom is flat, the sides angular, extremely sharp, and surmounted by a casemate in which are to be placed sixteen guns, although it is

pierced for twenty-one. The hull is built in layers of square logs, securely bolted together, having no openings between them, and is caulked inside as well as outside. This massive structure is strongly trussed with diagonal braces of iron fastened inside of the solid frame, securely strengthening her, and in such a manner that it seems almost impossible that she could be damaged by any ordinary disaster. The hull is three hundred and eighty feet four inches in extreme length, and seventy-two feet ten inches extreme beam. The main hold is twenty-two feet seven and a half inches in depth. Her tonnage is set down by the naval authorities in the register as five thousand and ninety tons. The ram is a portion of the ship itself, being literally the bow fashioned into a huge beak. To form this ram the vessel is a solid mass of timber from her stem backward fifty feet, rendering it impossible for any shock to break it off. It is arranged with a wrought-iron jacket or front-piece to protect it, not only from shot but from abrasion in contact. The side armor is of the best hammered iron plates, three and a half inches in thickness, and screw-bolted to the armor cushion by one and a half inch bolts. The plates are placed vertically, and not horizontally, as is the case with the iron-clad vessels of Europe. The armor which covers the casemate is four and a half inches in thickness, and is also placed vertically on the sloping sides. The top of the casemate will have a light bomb-proof armor. The main deck outside of the casemate will be covered with thick armor, and will be secured to the deck by three-quarter inch iron bolts with counter-sunk heads. The armor will extend out over the shelf which serves as a protection to the screw and the two rudders. The casemate is constructed of square logs, each one foot in thickness, built up to the height of seven feet, and covered over with a bomb-proof deck on which it was originally intended to place two turrets, similar to those in use on board of the monitors. The casemate will contain twelve to fourteen eleven-inch Dahlgren, and four fifteen-inch Rodman smooth-bore guns, making it the heaviest armament of its number ever placed on the deck of any vessel.

The following table recapitulates the general dimensions of this formidable vessel:

Extreme length.....	380 feet 4 inches.
Extreme beam.....	72 " 10 "
Depth of main hold.....	22 " 7 "
Height of casemate.....	7 " 9 "
Length of ram.....	50 "
Draught when ready for sea.....	21 "
Displacement.....	7,000 tons.
Tonnage.....	5,090 "
Weight of iron armor.....	1,000 "

Dimensions of Engines, Boilers, &c.

Cylinders (two), each.....	100 inches.
Stroke of pistons.....	45 "
Boilers—6 main and 2 donkey.	
Depth of boilers.....	18 feet.
Height of boilers.....	17 feet 6 inches.
Front of boilers.....	21 " 6 "
Weight of boilers.....	450 tons.
Boiler surface.....	30,000 feet.
Grate surface.....	1,200 "

Condenser surface.....	12,000 square feet.
Diameter of propeller.....	21 feet.
Pitch of propeller.....	27 to 30 feet.
Weight of propeller.....	84,680 pounds.
Capacity of coal-bunkers.....	1,000 tons.
Actual horse-power.....	5,000 horse.
Nominal horse-power.....	1,500 horse.

Some interesting facts and statistics concerning the comparative healthiness of iron-clads and wooden vessels are given in the report of the Chief of the Bureau of Medicine and Surgery, which accompanies the annual report of the Secretary of the Navy. An examination of the sick-reports, covering a period of over thirty months, shows that so far from being unhealthy, there was less sickness on board the monitor vessels than on the same number of wooden ships with an equal number of men, and in similarly exposed positions. Not less valuable testimony respecting the offensive power and seaworthy qualities of iron-clads of the type of the *Monadnock*, which is double turreted, carries four guns, and has a tonnage of fifteen hundred and sixty-four tons, is afforded in a report of Admiral Porter, written soon after the fall of Fort Fisher. Speaking of the conduct of the monitors in a gale off New Inlet, he said: "The smaller monitors, *Mahopac* and *Canonicus*, at times almost disappeared from sight, and the commander of the former vessel complained of discomfort, owing to the decks leaking; but the vessels were in no danger at any time. As to the *Monadnock*, she could ride out a gale at anchor in the Atlantic Ocean. She is certainly a perfect success, so far as the hull and machinery are concerned, and is only defective in some minor details, which, in the building of these vessels, require the superintendence of a thorough seaman and a practical and ingenious man. The *Monadnock* is capable of crossing the ocean alone (when her compasses are adjusted properly), and could destroy any vessel in the French or British navy, lay their towns under contribution, and return again (provided she could pick up coal) without fear of being followed. She certainly could clear any harbor on our coast of blockaders in case we were at war with a foreign power." Elsewhere, in the same report, he says, that in a fight the *Monadnock* would prove more than a match for the *New Ironsides*, which has been considered the most powerful vessel in the navy. A further test of the sea-going qualities of the *Monadnock* was afforded in her voyage around Cape Horn, for the purpose of joining the Pacific Squadron. In the roughest weather she behaved in a manner to excite the admiration of all who witnessed her performances. "In the long seas of the Pacific," says Commander Rodgers, "I observed that the *Monadnock* took very little water on her decks, rising above the waves easily and buoyantly." He further reported that her machinery worked well, with the exception of a temporary disorder in one of her condensers, which was soon repaired; and also that she made good speed, sailing at a maximum rate of a hundred and

ninety-five knots a day, and a minimum rate of a hundred and fourteen.

The navy yards now in active use are those at Kittery, Me.; Charlestown, Mass.; Brooklyn, N. Y.; Philadelphia, Pa.; Washington, D. C.; and Mare Island, Cal.; besides those at Norfolk, Va., and Pensacola, Fla., which suffered considerably during the time they were in the hands of the rebels. Secretary Welles complains that they are all of limited area, and insufficient for our present navy. "Not one of them," he says, "presents the full requisite conveniences and facilities for promptly fitting out, in a rapid and efficient manner, more than a single vessel at a time. Vessels which ought to be repaired in three months are often detained for a year, and officers ordered to their ships, which should be ready for sea, have been kept waiting for months at great expense to themselves and the country, and to the injury of the service. There is not a public yard where an iron vessel can be constructed, an iron plate made, or where shafting can be forged, or steam machinery manufactured, except on a moderate scale; nor, with the exception of Mare Island, in California, and Norfolk, have we a navy yard with sufficient room to erect the necessary works for even present wants. England, besides her great public navy yards, with which ours can bear no comparison, possesses even several private establishments, in each of which there are more mechanical appliances than are possessed by our whole country." Entertaining such opinions, he recommends the enlargement of the yards at Charlestown and Brooklyn, the rebuilding of those at Norfolk and Pensacola, the completion of that of Mare Island, and the transfer of that at Philadelphia to League Island. Congress, however, has taken no measures to carry out these suggestions, and the outbreak of a new war, a few years hence, would find the country as inadequately supplied with proper navy yards and facilities for building or repairing ships as at the commencement of 1861.

The Naval Academy, which in 1861 was temporarily removed from Annapolis, Md., to Newport, R. I., was in September, 1865, restored to its quarters in the former place, and at the close of the year contained four hundred and fifty-one midshipmen. In October Admiral Porter succeeded Commodore Blake as superintendent. The present buildings, designed originally for one hundred and eighty midshipmen, being wholly inadequate to accommodate the large number of pupils, additional buildings and grounds are imperatively needed. The cost of these is estimated by the late superintendent at \$800,000. The Secretary of the Navy, in view of the temptations thrown in the way of students by the location of the school in the midst of a large town, recommends some other site on Chesapeake Bay. The report of the board of visitors for 1864 shows that many of the boys entering the school have neither the mental nor physical qualities to fit them for the naval service, and

are obliged to leave before the conclusion of the course. A special department for instruction in the principles and practice of naval engineering is now connected with the school. With a view of improving the quality of the enlisted men in the navy, the apprentice system has been revived, and as an inducement to parents to send their boys for instruction in seamanship, it is recommended that half the annual appointments to the Naval Academy be made from among the naval apprentices who have served two years on board of a practice ship. By this plan, it is believed, the physical standard of the midshipman will be greatly improved, while a better class of boys will be obtained for naval apprentices.

The naval pension-fund on January 1, 1866, amounted to about \$10,000,000, and in July last it paid as interest, in currency, the sum of \$292,783.59. This fund is wholly derived from the Government's share in the proceeds of captured and condemned prize property; most of it was foreign capital, embarked in foreign bottoms to aid the insurgents. The income from this source will, if rightly husbanded, be ample to meet the requirements of the Government for the payment of naval pensions, without any tax upon the people. On November 1, 1865, the navy pension roll was as follows:

981 Invalids, with annual pensions amounting to \$68,587 50
1,096 widows and orphans, annually receiving.... 179,942 00

2,027 persons, receiving total amount of.....\$248,529 50

Being an increase during the year of four hundred and eighteen persons, receiving pensions amounting to \$58,870.40.

The total expenses of the Naval Department from the 4th of March, 1861, to the 30th of June, 1865, embracing a period of four years and four months, and covering not only the ordinary expenses of the navy, but such as have arisen in the purchase, construction, and equipment of vessels and in the maintenance of the large naval force required during the war, were \$314,170,960.68—an average annual expenditure of \$72,500,990.93. The navy has cost the Government less than one-tenth of the whole expenses entailed by the war.

The following tables of expenses and estimates, exhibit the great reductions which will follow the peace establishment:

The available resources for the fiscal year ending June 30, 1865, were.....\$140,091,125 90
Expenditures during the same time..... 116,751,675 95

\$23,809,450 04
Appropriations not wanted and carried to surplus fund..... 900,459 89

Leaving a balance at the commencement of the present fiscal year of..... 22,408,990 65
The appropriations for the current year are.. 110,882,928 75

Making the total available resources from appropriations for the fiscal year ending June 30, 1865.....\$142,291,919 40

This is exclusive of what has been and may be derived from the sale of vessels and other property which the close of the war has enabled the department to dispose of.

The whole of this amount will not be needed for disbursement during the year, and several of the bureaus will have balances sufficiently large to cover their expenditures for the succeeding fiscal year. The estimates for the year ending June 30, 1867, are as follows:

Pay of the navy.....	\$9,386,638 00
Bounties to discharged seamen.....	800,000 00
Equipment of vessels.....	1,000,000 00
Navy yards, pay of superintendents, etc.....	7,185,536 00
Navigation, Naval Academy, Observatory, etc.....	436,779 00
Surgeons' necessaries and hospitals.....	265,750 00
Marine corps.....	1,757,754 50
Contingent and miscellaneous.....	8,200,000 00

Total.....\$23,982,457 50

This amount includes the sum of \$5,500,000 for the erection of barracks for the accommodation of seamen now quartered on board receiving-ships; for the erection of additional dwelling-houses for officers in the several navy yards; the purchase of land, and other improvements of a permanent character.

NETHERLANDS, THE, or HOLLAND, a kingdom in Europe. King William III., born February 19, 1817, succeeded his father, on March 17, 1849. Heir apparent to the throne, Prince William, born September 4, 1840. The sovereign has a civil list of 600,000 guilders, and 300,000 more guilders is allowed for the princes or princesses of the royal family, and the maintenance of the court. According to the constitution of 1848, the Upper House, or first Chamber, consists of thirty-nine members, elected by the Provincial Diets from among the most highly assessed inhabitants; the second Chamber numbers seventy-two members, elected by ballot. The right of voting is made contingent upon the paying of a tax of 120 guilders. Of the members of the second Chamber, one-half retire every second year, and of the Upper Chamber one-third every third year. Area, 10,905 square miles. Population in 1864, 3,699,744. Capital, Amsterdam, with 261,455 inhabitants. The largest cities next to Amsterdam, are Rotterdam, with 114,052 inhabitants, and The Hague with 85,689. There were, in 1863, thirty-six towns having a population of more than 10,000 inhabitants. As to their religious denominations, the inhabitants were, in 1859, classified as follows: Reformed (Calvinists), 1,942,387; Lutherans, 64,539; Catholics, 1,234,486; Greeks, 32; Israelites, 63,890. The Netherlands, in 1857, had 2,478 public schools, with 4,638 schoolmasters and 134 schoolmistresses; 186,766 boys and 136,001 girls; 944 higher schools, with 1,842 male and female teachers, and 40,493 male and 40,652 female pupils; 63 additional "Latin schools," with 1,802 pupils; three universities—Leyden, Groningen, and Utrecht—with 1,327 students.

The colonial possessions of the Netherlands contained, in 1863, the following population:

East Indies.....	10,119,494
West Indies.....	61,063
Coast of Guinea.....	120,000

The most important of the East India possessions are the following:

Colonies.	Inhabitants.
Java and Madura	18,649,680
Sumatra (Western Coast).....	1,070,758
Borneo "	841,073
Do. Eastern Coast.....	610,679
Celebes.....	294,418
Timor.....	907,184

The number of Europeans living in the Dutch East Indies, is 33,194, of whom 27,565 were born in the colonies. But this number does not include the East India army, which comprises 12,474 Europeans. The number of Chinese in the East India colonies is 234,263. In the Dutch West Indies, slavery was abolished on July 1, 1863. Before that date the slave population amounted to 35,371. The budget for 1865 estimates the revenue at 103,-348,076 guilders; the expenditures at 103,652,-597 guilders. The public debt amounted, in 1865, to 999,266,882 guilders. The budget for the colonies showed, in 1863, a surplus of 8,780,609 guilders. The army consisted, in 1865, of 1,837 officers, and 59,249 men. The East India army numbered in 1862, 24,544 infantry; 2,823 artillery; 624 cavalry; 937 engineers; 1,264 officers. The fleet in 1865 consisted of 154 vessels, carrying 2,150 guns. The value of imports amounted, in 1863, to 442,-438,906 guilders (from the United States 8,661,955); of exports, to 374,730,947 guilders (to the United States 3,279,722). The movement of shipping was as follows:

	ENTERED.		CLEARED.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
1862.....	8,861	1,757,625	9,078	1,839,281
1863.....	8,394	1,662,291	8,618	1,740,387
Total.....	17,255	3,419,916	17,691	3,579,618

The merchant navy consisted, in December, 1863, of 2,231 vessels, of an aggregate tonnage of 510,152.

The leading measure of the session of the States-General which closed in 1865, was the repeal of the Municipal Excise Act—an act which authorized every municipality to impose excise duties on whatever articles of consumption they thought proper. Thus, scarcely an article of domestic use was allowed to pass any of the city gates without paying the town excise—a system attended with immense inconvenience both to merchants and consumers. The repeal of the Excise Act was to come into operation on January 1, 1866, and its first effect was expected to be to give a great impetus to the trade in French wine with Holland, on which a mere nominal duty was to be placed, in conformity with the recent commercial treaty concluded between France and the Netherlands. The great failure of the session was the withdrawal, by the Minister of Finance, of the bill for the repeal of the Newspaper Stamp Act. When this bill was introduced it met with so much opposition that the minister thought it prudent to withdraw it rather than go to a division. The chief domestic event of the session was the withdrawal of M. Groen

Van Prinsterer, the able leader of the "Church and State" (conservative) party, from political life, in consequence of increasing infirmities.

NEVADA. The Legislature was convened for its second session at Carson City, on January 1, 1865, and was organized by the choice of Republican officers in both houses. It continued in session about two months, and among its proceedings was the passage, on February 16th, of a joint resolution ratifying the anti-slavery amendment to the Constitution. There was but one vote in each house in the negative, both being thrown by Democrats.

An election was held in November for a member of Congress and members of the Legislature. The resolutions of the Democratic Convention endorsed the policy of the administration, and urged a speedy admission of the reconstructed States into the Union. Those of the Republicans were as follows:

Resolved, That we endorse our national and State administrations, conducted as they have been with patriotism, wisdom, and economy; and will, in the future as in the past, give to both that support which they have so well deserved at the hands of the Union organization.

Resolved, That there must be no imprudent haste in admitting representatives from the conquered rebel States into the national Congress; and we are inflexibly opposed to according these communities a position of equality in power and dignity, and participation in the administration of the Federal Government with the loyal States, until most conclusive and unmistakable proof has been furnished of profound contrition for the past and devoted patriotism in the future.

Resolved, That the Government of the United States, alike by virtue of the Constitution and under the laws of nations, as a victorious belligerent, may, in consideration of the withdrawal of its military power and the restoration to their ancient status in the Federal Union of the so-called Confederate States, subject such States to such conditions as may place the peace, integrity, and existence of the nation beyond the hazard of future disturbance; and, in all its intelligent, earnest efforts to secure this great end, the Union men of Nevada will support the administration of Andrew Johnson.

Resolved, That, inasmuch as the right of suffrage is limited by the Constitution and laws of the State of Nevada to the loyal white man, we are, therefore, opposed to changing our organic and statutory law in this respect, and are in favor of the Federal Government, in the reorganization of the State governments of the so-called seceded States, limiting this right to the loyal white man, until time and experience shall demonstrate that it is impracticable to reorganize said State governments on such basis.

The following is the result of the vote for member of Congress:

Delos R. Ashley, Republican.....	3,691
H. K. Mitchell, Democrat.....	2,115

Majority for Ashley.....1,576

The Legislature elected is reported to be unanimously Republican in both branches.

The public debt of Nevada amounted, on January 1, 1866, to \$436,500, of which \$60,000 were due on January 10th; \$49,000 on February 1st; \$5,775 on July 1st; and \$11,250 on August 1, 1866, which would leave the debt on the last-named date \$310,475. The third section of the ninth article of the Constitution provides that,

"for the purpose of enabling the State to transact business on a cash basis from its organization, the State may contract public debts; but such debts shall never in the aggregate, exclusive of interest, exceed the sum of three hundred thousand dollars, except for the purpose of defraying extraordinary expenses, such as would be necessary in time of war or insurrection." Under this provision it is contended that, as the State debt already exceeds the limit allowed, no more money can be raised by loan until the present indebtedness is reduced, and that the expenses of the next fiscal year will have to be met by taxation.

Her silver mines still continue to be the great source of wealth to Nevada; and notwithstanding several districts have enjoyed an ephemeral notoriety, the "Washoe" region still maintains its preeminence, and will, in all probability, do so for many years to come. The following table shows the average monthly production of the four principal mining centres of Nevada, during the first nine months of 1865:

Washoe (Virginia and Gold Hill Districts).....	\$1,286,275
Austin (Reese River District).....	75,000
Aurora (Esmeralda District).....	19,000
Unionville (Humboldt District).....	1,282
Total monthly average.....	\$1,381,557

Of this amount by far the greater part comes from the celebrated Comstock lode, near the town of Virginia, in Western Nevada, which may be described as a ledge of ore running along the mountain side for three miles, and having a width of from fifty to one hundred feet, and a depth at present incalculable. Over thirty companies, formed principally by Eastern capital, were at work on this ledge in 1865, but so variable is the soil in mineral richness that probably not half of them have paid dividends. One company has spent already a million of dollars, without striking a bed of "pay ore," that is, ore rich enough to pay for mining. The success of other companies, again, has been of the most remarkable character. The Gould & Curry, which is the largest and most famous enterprise on the Comstock ledge, has mined to the depth of eight hundred feet, excavated five millions of cubic feet of earth, and produced twelve millions of bullion, of which four millions were clear profit. It is said that, but for extravagance in the management and the necessity of expensive experiments, the net profits would have reached six millions. This company has now more than two miles of underground passages, and has consumed more lumber to brace up the walls of its tunnels than the entire town of Virginia, containing from ten to twelve thousand inhabitants, has used for all its buildings. In May, 1865, for the first time since the discovery of the Comstock lode in 1859, its annual production began to diminish, and so materially to diminish, that fears are entertained lest the mines may be giving out and fail to pay expenses. That these fears are not without some foundation will appear from the fol-

lowing table, showing the approximate yield of these mines during the first nine months of 1865:

	Pounds Avordupois.	Value.
January	54,123	
February	50,106	...\$4,484,669
March	64,737	
April	61,179	
May	58,453	...\$4,261,511
June	49,979	
July	41,526	
August	44,927	...\$3,224,951
September.....	40,273	

In nearly every mine on the ridge the lower workings now show ore which is of inferior quality and much less in quantity to what the upper levels have produced; and it becomes interesting to ascertain the practicability of continuing the excavations already commenced, with a view of finding new and valuable deposits of ore at a much lower depth. On this point the opinion of William Ashburner, Mineralogist of the California State Geological Survey, is worth quoting. "It is now," he says, "an accepted conclusion by all those persons who have examined the matter carefully, and have had the most experience in geological as well as in general mining matters, that the Comstock is a fissure vein of extraordinary width and productiveness, and, consequently, reasoning from analogy, we have great right to assume that ore exists and will ultimately be found at as great a depth as it is possible to extend underground workings. In fact, there is no instance where a well-defined fissure vein has been found terminating entirely in depth; and although nothing is more frequent in the progress of working than to meet with barren zones of unproductive matter, their metalliferous contents have never been exhausted at any depth which has yet been obtained by mining. The limit to the successful working of one of these veins appears to be fixed entirely by the increased cost of extraction of the ore, and pumping the water from the lower levels, and consequent reduction of the profits. There is a point, of course, where, in the absence of new discoveries of increased value, the receipts will exactly counterbalance the expenses of working, and then soon these latter will exceed the former." * * * "As a general thing, these mines have been worked heretofore, not so much with reference to the permanent interests of the stockholders, as for the purpose of raising the market value of the stock. With this view, it has frequently happened that circumstances deeply affecting the interests of the mines have been concealed from the public, and the policy has hitherto been to increase the production as largely as possible, in order to enable certain persons to realize immediately great profits from the sale of their stock, rather than await the slower and perhaps more hazardous returns which it was expected would be afforded by the dividends. This is the only excuse, or rather reason, why, in the midst of mines yielding so enormously, no proportion of the gain in their more prosperous days was

ever devoted to the purposes of exploration; and the necessity of keeping these works in advance of those of extraction seems never to have entered the minds of those persons who were called upon to fill the positions of trustees to the various companies, until the receipts began to be inferior to the expenses."

Conscious that their existence depends upon the discovery of new deposits of ore at a lower depth, most of the companies on the Comstock ledge are now engaged in sinking their shafts deeper. Their average depth is now about five hundred feet only, while that of some of the most celebrated silver mines of Mexico and Europe is from fifteen to twenty-five hundred. The Gould & Curry Company are tunnelling the mountain on which their mine is situated, some distance below their previous excavations, and in connection with it propose to sink a shaft of enormous depth, with a strong probability of finding valuable deposits of ore. There is also a project for draining these mines by means of an adit some three and a half miles in length, known as the Suro Tunnel, which will strike the vein at a depth of nearly two thousand feet below the outcrops. A careful estimate shows that within the last five years upward of thirty-five millions have been taken from the Comstock ledge and put upon the market, and that enough has been wasted in the working of the ore to make the products of the district reach sixty millions.

NEW HAMPSHIRE. The political canvass in this State commenced early in the year with the nomination by the Republican and Democratic parties of candidates for Governor and other State officers, and for members of Congress. The former nominated for Governor Frederic Smyth, and passed resolutions expressing confidence in the administration of President Lincoln and in favor of a vigorous prosecution of the war. The Democrats nominated Edward W. Harrington, and adopted as a platform of principles, "the Constitution and the Union." Amendments sustaining the Kentucky and Virginia resolutions of 1798-'99, recommending a convention of States, and denouncing the anti-slavery amendment and the war, were rejected. The election took place on March 14th, with the following result:

Governor.	Number of Votes.
Frederic Smyth, Republican.....	84,145
Edward W. Harrington, Democrat.....	28,017
Majority for Smyth.....	6,071

The Legislature elected at the same time stood as follows:

	Senate.	House.	Joint ballot.
Republicans.....	9	214	223
Democrats.....	3	114	117
Republican majority..	6	100	106

Three Republicans were also elected members of the Thirty-ninth Congress.

The Legislature convened at Concord on June 7th, and was organized by the election of E. A. Straw as President of the Senate, and A. F.

Pike as Speaker of the House of Representatives. On the succeeding day Governor Smyth was inaugurated, and a Secretary of State, Treasurer, and other State officers were elected by a convention of both houses. The Legislature adjourned on July 1st, having passed 153 acts and resolutions. One of the most important acts in relation to the State finances authorized the Treasurer, with advice of the Governor and Council, to issue bonds, not exceeding one million of dollars, in such sums and for such time, not less than one nor more than five years, and at such rate of interest, payable semi-annually, as the Governor, with the advice of the Council, should determine upon. It also provided for the raising of seven hundred and fifty thousand dollars by taxation, to be assessed, collected, and paid into the State Treasury on or before December, 1866; also, that on the first day of January, 1867, there shall be set apart the sum of one hundred and fifty thousand dollars, and annually, for four years afterwards, such sums as will be needed to pay up the one million of bonds authorized above. An act in relation to a temporary loan empowered the Treasurer to borrow for the immediate use of the State the sum of one million and five hundred thousand dollars for a period not exceeding one year. Another act levied a tax of twenty-five per cent. upon the income of all bonds, notes, or other securities not taxed by the State; the intent being to levy a duty upon the income of Government bonds, and thus indirectly tax the bonds themselves. This act was advocated by the Democratic members of the Legislature, and passed mainly through their votes, the great body of the Republicans opposing it.

By a vote of the people in the November election of 1864, it devolved upon the Legislature of 1865 to appoint a time for the meeting of a Constitutional Convention, and to order the election of delegates to the same. The action of the convention was to be limited to the following questions: to enable our qualified voters in the military or naval service to exercise the right of suffrage while absent from the State; to abolish all religious tests as qualifications for office; to diminish the number of members of the House of Representatives; to increase the number of members of the Senate; and to make provisions for future amendments of the Constitution. A Legislative committee, to whom the subject was referred, recommended that it be referred to the Legislature of 1866, which was done. Among the last proceedings of the Legislature, were the passage of a resolution ratifying the anti-slavery amendment to the Constitution, and also of the following resolutions on national affairs:

1. *Resolved, etc.*, That we welcome with profound gratitude to the Almighty Giver, the return of peace and the restoration of the national authority.

2. *Resolved*, That we give our hearty thanks to our soldiers, who left the comforts and security of home to suppress the rebellion and restore the Union; that we will cherish, with perpetual honor, the memory of those who have given their lives a sacrifice for

their country, and that we receive as a priceless treasure those who are permitted to return to us bringing with them the prestige of victory and the example of their heroic deeds.

3. *Resolved*, That we take a just pride in the patriotism, perseverance, and wise counsels of the statesmen who have administered our national Government amidst the difficulties and dangers of the rebellion, and confidently refer them for their reward to the gratitude of the nation and the records of history.

4. *Resolved*, That we have full confidence in the ability, integrity, and patriotism of Andrew Johnson, President of the United States; and while under the peculiar situation of the country no one can anticipate the exigencies which may arise, believing that he will be fully equal to every emergency, we pledge to him and to the Government our united action and earnest support.

5. *Resolved*, "That with proper safeguards to the purity of the ballot-box, the elective franchise should be based upon loyalty to the Constitution and Union, recognizing and affirming the equality of all men before the law," and that in the reorganization of the rebellious States, both justice and safety require that ample provision be made for the protection of the freedmen.

6. *Resolved*, That we ask the attention of our Senators and the Representatives in Congress, to these resolutions, as expressing the sentiments of the people of New Hampshire.

An additional resolution endorsing the declaration of President Johnson, "that the States that have been in rebellion are still States, or in other words that the Governments of those States are not destroyed but were only in abeyance, and that when the rebellion was suppressed, and the laws and the Constitution revived, neither the President nor Congress has any authority to prescribe the qualification of electors of those States," was rejected by a large majority.

The financial condition of the State was thus exhibited in the message of Gov. Smyth to the Legislature:

Funded debts and trust funds.....	\$1,023,873 44
Notes due the current year.....	2,355,000 00
Total debt, represented by loans.....	\$3,978,873 44
Interest due the current year.....	258,000 00
Total debt as represented by loans, with current interest.....	\$4,236,873 44
Outstanding obligations estimated by the Auditor.....	706,000 00
He estimates the demands upon the treasury the current year, including floating debt, interest, outstanding claims, and expenditures.....	\$3,575,050 00
Deduct estimated receipts.....	932,100 00
Leaves to be provided for the current year....	\$2,642,950 00

The Finance Committee of the House of Representatives reported toward the close of the session that, on July 1, 1865, the actual debt of New Hampshire would be \$3,793,625.82. The amount of deposits in savings banks at the date of the last commissioners' report was \$7,831,335.72, being an increase of \$167,577.26 over the previous year. The banks of discount were stated to be fast surrendering their State charters and passing into national associations. The public institutions and schools of the State were reported to be in a prosperous condition. From the printed report of the condition of the common schools in 1864, the following statistics are obtained: Number of districts reported,

2,328; number of scholars four years of age and upward, attending school, 83,401; average attendance, 52,826; number between four and fourteen not attending anywhere, 3,440; number of male teachers, 759; female teachers, 3,262; volumes reported in school, district, and town libraries, 71,411; school houses unfit for their purposes, 509; unsuccessful teachers, 163; money strictly used for schools, \$244,263.62; amount for each scholar, \$2.90; visits of citizens, not including strangers, 82,665; number of academies and permanent schools reported, 61.

During the recent civil war New Hampshire furnished 33,427 troops to the national armies. Of these 11,039 have been disabled, and 5,518 fell in battle.

Of the resources and products of the State the following account is given by Gov. Smyth:

In some branches of agriculture we have already reached a comparative degree of excellence. In wheat-growing our average yield per acre is 124 bushels, and is larger than that of Maine, Maryland, Pennsylvania, Delaware, Kentucky, Ohio, Michigan, Wisconsin, Iowa, or West Virginia. In corn crops our average yield per acre is 204 bushels, and is larger than that of Maine, New York, Maryland, Delaware, Kentucky, Michigan, Indiana, Missouri, Kansas, or Nebraska. In potatoes our average yield is 164 bushels per acre, and is larger than that of any other State this side the Rocky Mountains. In rye crops our average yield per acre is 144 bushels, and is larger than that of Maine, New Jersey, Kentucky, Ohio, Michigan, Indiana, Wisconsin, or West Virginia. In the hay crop the average yield is one ton to the acre, being larger than that of Maine and equal to each of the other New England States. Of beef and mutton we produce all that is required for home consumption, with a surplus for other markets.

The heavy growth of timber in the northern part of the State, must be a source of revenue to the owners for many years to come. Our minerals are also attracting more attention. The variety of ores existing in our soil is not surpassed by that of any Atlantic State, embracing iron, zinc, copper, lead, silver, and tin. It is quite probable that most if not all these ores may at no distant day be mined at a large profit. The slate quarries of Littleton, apparently inexhaustible, and the rich lime-beds in that vicinity, suitable for mechanical and agricultural purposes, only call for enterprise to develop sources of wealth and employment.

NEW JERSEY. This State had its full share of the general prosperity, as is evident from its increasing revenue and the condition of its finances. During the fiscal year ending November 30, 1865, the receipts of the treasury, including the cash balance of \$139,273 on hand at the close of the previous year, were \$595,311, the disbursements for ordinary and extraordinary expenses having been \$430,850, leaving a balance in the hands of the treasurer of \$164,461. Available assets, the property of the "State fund," consisting of shares of various railroad, canal, and other stock, etc., were also in the treasury, amounting to \$575,486. The receipts of the "School fund" during the fiscal year, including the balance of \$47,992 on hand at the end of the previous year, amounted to \$170,214. The disbursements from the fund

during the same time were \$82,017, leaving a balance on hand of \$88,198. The whole amount of the "School fund," securely invested and drawing interest, was, on the 30th of November, including the cash balance on that day, \$538,205.

The receipts and expenditures of the "War fund" during the fiscal year were \$984,933. The entire debt of the State on account of the war, nearly all incurred for the payment of the monthly bounty to discharged men and the families of volunteers, was \$2,818,119. Claims of the State against the United States for money advanced during the war, amounting to about \$800,000, when paid will reduce the entire indebtedness of the State, all of which was incurred for war purposes, to about \$2,000,000.

The number of men mustered into the United States service from this State during the war, exclusive of the militia sent to aid in the defence of Maryland and Pennsylvania in 1864, was 79,348—a total greater than that of all the able-bodied men in the State between the ages of eighteen and forty-five at the commencement of the war—all of whom, with the exception of one regiment, have been mustered out and discharged. The amount paid by the State during the year to soldiers honorably discharged, was \$126,472, and to families and dependent mothers \$416,205, the total for these purposes from the beginning of the war being \$2,317,375. Besides these amounts, an aggregate of more than \$2,300,000 was transmitted during the war by soldiers in the field for the benefit of their families in the State. The remains of seventy-seven New Jersey soldiers were entombed at the Gettysburg cemetery, the graves being all regularly graded, headstones erected, the avenues macadamized, and trees and shrubbery planted. Measures having been taken for the establishment of a similar cemetery at Antietam, an agent was sent by the Governor of New Jersey to visit all the battle-fields in Maryland, and mark the graves of the New Jersey dead, so that their remains might be identified, with the view of reinterment at Antietam.

On the 23d of March the Legislature passed an act incorporating the "Soldiers' Children's Home" at Trenton, and on the 6th of April an appropriation of \$5,000 was made in aid of the institution. To this was added a further sum of \$8,000, donated by the "Delaware and Raritan Canal" and the "Camden and Amboy Railroad" Companies. "The Home" is under the management of an association of ladies, who have now under their care forty-one homeless orphan children, all of whom are clothed and instructed at the expense of the institution. From statistics of orphanage returned to the Secretary of State, it appeared that there were recently in the State 1,865 orphan or half-orphan children of soldiers or sailors, and that of this number 1,539 were under twelve years of age. An act

was also approved on the 23d of March to authorize the establishment of a home for disabled soldiers.

The law passed at the session of the Legislature in 1865, for the more effectual organization of the militia of the State, has had the effect of reducing it to a better state of discipline and placing it in a more effective condition than at any former period. Several new companies were added to the rifle corps during the year, so that that organization now includes nearly 2,000 rank and file, well armed and equipped, and ready to be concentrated for active service at any point within the State at a few hours' notice.

The interest of the people in the cause of education is steadily increasing, and the amount of money raised and appropriated for the maintenance of public schools was larger than in any previous year, being \$704,694, an increase of \$67,614 over the expenditures for 1864. The number of children attending the public schools during the year was larger than in 1864. In compliance with an act passed by the Legislature on the 2d of February, the Governor purchased for the State the Model and Normal School buildings at Trenton, as well as the land, library, and other property connected with them, and the Normal School became one of the permanent institutions of the State. The number of pupils under instruction during the year, in these schools and in the Farnum Preparatory School at Beverly, was as follows:

	Males.	Females.	Total.
Normal School.....	11	114	125
Model School.....	208	162	365
Farnum Preparatory School.....	113	125	237
Total.....	326	401	727

The "College for the Benefit of Agriculture and the Mechanic Arts," organized in conformity with the act of Congress of July 2, 1862, donating public lands to provide colleges of this class in the several States, went into operation in September, by the opening of a Scientific School in connection with Rutgers College at New Brunswick. The course of instruction includes civil engineering, mechanics, chemistry, the theory and practice of agriculture, modern languages, and military tactics. Governor Parker, in his third annual message, says:

The farm attached to the institution has, during the past year, been greatly improved by under-draining, fencing, and the use of fertilizers. All the cleared land not in meadow, has been ploughed and prepared for cropping. The price originally paid for the tract, containing one hundred acres, was fifteen thousand dollars, and the improvements since made have cost more than three thousand dollars. The President of the Board of Trustees has given assurance that this farm shall be made all that the warmest friends of scientific agriculture can desire. Special attention will be paid to market gardening and the cultivation of fruits. The best implements of husbandry will be used, the most approved methods of culture adopted, and each pupil instructed to keep a full account of all experiments, with expenses and income.

Under the provisions of an "act to establish

and organize a State Reform School for Juvenile Offenders," passed at the last session of the Legislature, the Board of Control appointed six persons as trustees, whose first duty was to purchase land and erect buildings; but the sum of \$15,000, the amount appropriated for the purpose, having been found insufficient for the purchase of a suitable site, a further appropriation was recommended by Governor Parker, under the conviction, after visiting the State prison and county jails, that such an institution could not fail to work incalculable good to the community by the reformation of criminal and vagrant youths.

The number of patients in the State Lunatic Asylum at the beginning of the year was 333. In the course of the year 192 were received and 158 were discharged or died, leaving in the Institution at the end of the year 367 patients. The receipts for the year, including \$10,000 appropriated by the State, were \$86,236; the payments for the same period were \$86,155, leaving a balance in the hands of the Treasurer of \$81.

Owing to the high prices of provisions and the difficulty of procuring work for the convicts, the expenditures of the State Prison largely exceeded the income, the receipts having been only \$30,154, while the expenditures amounted to \$43,878, involving a loss of \$13,724.

The survey of the marl region of the State, comprising nearly a thousand square miles, is now complete, with the maps and sections, by the aid of which the position of the marl can be readily ascertained by the use of compass and level, thus making all the varieties of this valuable fertilizer easily accessible. The iron-ore region of Morris County, embracing eighty square miles, and including some of the richest iron mines in the United States, has also been minutely surveyed and mapped upon a large scale.

During the year efforts were renewed to have the New York Quarantine established on the soil of New Jersey. On this subject Gov. Parker, in his third annual message, says:

On the 6th of November last, application was made to the Federal authorities at Washington to permit the health officers of New York to locate hospitals on Sandy Hook. Having received information of the contemplated application, on the 4th of November last I telegraphed to the New Jersey State Agent to visit the President at once, and notify him that on behalf of the State of New Jersey, I protested against any action of the General Government looking to the establishment of a quarantine hospital at Sandy Hook. On the 6th of November I forwarded a telegram to the President, renewing the protest against granting the application, and claiming for the State of New Jersey jurisdiction over the designated locality. On the following day I received a despatch from the Secretary of War, stating that the question had been referred to him, and that the health officers of New York were then at Washington urging the Government to grant authority to locate quarantine hospitals on Government property at Sandy Hook. Accompanied by the Attorney-General of this State (whose views on the subject entirely coincided with

mine), I immediately visited Washington, and had full and satisfactory interviews with the President and Secretary of War. Written objections denying the right of the United States to make the proposed grant were filed with the Secretary, by whom they were referred to the Attorney-General of the United States. I have recently received information that the Attorney-General has decided that the General Government has not the right to grant the application. This decision, it is hoped, will settle the question of jurisdiction over Sandy Hook, and put an end to the efforts of the New York authorities to induce the General Government to aid in establishing their quarantine on the soil of New Jersey.

With regard to the controversy between the State and the General Government as to the power of the latter to make a post road of the railroad from Raritan Bay to the Delaware, Gov. Parker remarks:

The General Government has no right to build a foot of railroad or to charter a corporation to construct the same, in any of the States, for the purpose of carrying passengers or freight for compensation. Neither can Congress authorize any railroad company chartered by a State to do any act that is forbidden or that is not authorized by the law of its incorporation as passed by the Legislature. No power can make the creature superior to or independent of its creator.

The proposition to amend the Federal Constitution by adding an article abolishing slavery throughout the United States, was transmitted to the Legislature of New Jersey, at its last session, for ratification or rejection, and was rejected by the Senate and House of Assembly.

The Republican State Convention assembled at Trenton on the 20th of July, and nominated Marcus L. Ward for Governor, to fill the place of Joel Parker. A series of resolutions were adopted, pronouncing the war not a "failure," and rejoicing in the advent of peace, endorsing President Johnson's reorganization policy, strongly denouncing the conduct of the Democratic party during the war, pledging the support of the party to the constitutional amendment abolishing slavery, expressing gratitude to the heroic men of the army and navy, in favor of exempting discharged soldiers from the poll tax, pledging the party to the most rigid economy in the State administration, and reaffirming the resolutions of the Baltimore Convention in reference to the Monroe doctrine. A resolution in favor of negro suffrage was voted down by an overwhelming majority.

The Democratic Convention assembled also at Trenton on the 30th of August, and Gen. Theodore Runyon was unanimously nominated for Governor. A series of resolutions were reported, charging the consequences of the war on the election of a sectional President and the fanaticism of a sectional party, favoring a return of the Government to its original purposes and objects, declaring and insisting on the rights of the States, opposing negro suffrage, and agreeing with President Johnson that the question should be left with the States, favoring a return to the specie currency, opposing the exemption of Government bonds from taxation,

expressing sympathy with and gratitude to the soldiers, insisting on the full payment of the promised Government bounty, opposing military arrests, favoring freedom of elections and the restoration of the *habeas corpus*, and severely criticising the management of the national debt.

The election took place on November 6th with the following results:

Governor.	Number of Votes.
Marcus L. Ward, Republican.....	67,522
Gen. Theodore Runyon, Democrat.....	64,731

Majority for Ward..... 2,791

The Legislature chosen at this election stood:

	Senate.	House.	Joint Ballot.
Republicans.....	11	36	47
Democrats.....	10	24	34
Republican majority.....	1	12	13

NEW YORK. The great wealth and resources of the Empire State were strikingly manifested in its uninterrupted and increasing prosperity, notwithstanding the heavy burdens entailed upon it by the late war. The soldiers furnished to the General Government by this State alone were sufficiently numerous for military operations on a great scale. The total number whose term of service varied from three months to three years was 457,456; to which must be added 15,987 militiamen mustered for a less term of service than three months, making a grand total of 473,443 men. The total number of years' service supplied by the State since the commencement of the war was 1,148,604 years, equal to 382,868 three years' men. Of these there remained in the service of the United States at the end of the year, only seven regiments of infantry and two of cavalry. The total sum disbursed by the State for bounties from July 17, 1862, to January 1, 1866, was \$35,088,999.

The organizations of the National Guard as they existed at the close of the year, including officers and men of all arms, were of an aggregate strength of 49,906 men, of whom 31,170 were fully armed, equipped, and uniformed. The amount expended out of the sum appropriated by the last Legislature for the purchase of arms, accoutrements, and uniforms, for the National Guard, was \$216,651, the total payments having been, according to the Comptroller's report, \$643,359, or one-half as much as the entire amount of the other ordinary expenses of the State Government.

The number of men furnished by the city of New York during the war was, according to the report of the chairman of the Board of Supervisors, 116,382, for terms of one, two, three, and four years, the total number of years' service being 267,551. The average cost per man under each call was—for bounties, \$80.06; for bounties and hand-money, \$84.81; for bounties and hand-money and expenses connected and not connected with bounties, including expenses for the family relief fund, \$150.47.

The Legislature at its session in 1865 authorized the erection of a fire-proof edifice, to be

called the "Hall of Military Record," as a repository for the records of the war, and for the collections of the Bureau of Military Statistics, provided the sum of \$75,000 should be voluntarily contributed for the purpose. The authorities of the city of Albany offered an appropriate site, and contributions were made by the people of various sections of the State for the erection of the building. This institution it is hoped will secure the careful preservation of the records of the military services of individuals and of regiments, and of the part taken by the counties, cities, and towns, in raising troops, and at the same time afford a safe place for the deposit and display of flags, trophies, and other objects of military interest, belonging to the collection of the State, as well as for the preservation and convenient use of newspapers, books, pamphlets, and other papers belonging to the Bureau of Military Record, which already has in its custody eight hundred battle-flags of regiments, batteries, and ships, besides numerous relics from all the great battle-fields of the late war.

The receipts into the treasury during the fiscal year ending September 30, 1865, on account of all funds except the canal fund, were \$16,273,666; the payments on account of all the funds except the canal fund were \$16,183,096, leaving a balance in the treasury at the end of the fiscal year, of \$90,570. The receipts on account of the general fund revenue from all sources, were \$11,912,936; the payments, including the deficiency from the previous year, were \$13,092,330, leaving a deficiency on the 30th of September, 1865, of \$1,179,394. This was owing to the fact that the sum of \$2,667,437, taxes due from the city of New York, was not collected till the fall, which, if it had been paid before the end of the fiscal year, would have made the balance in the treasury \$2,758,007; and instead of a deficiency in the general fund, there would have been a surplus of \$1,448,043.

The funded debt of the State on the 30th of September, 1860, including the canal and general fund debts, was \$33,612,976; on the 30th of September, 1865, it was, not including the county debt, \$25,475,540, showing a diminution of the debt as it existed before the war, of \$8,137,436. The State would within a very few years have been entirely free from debt, but for the large bounty loan made during 1865; the certificates on account of which issued up to the 10th of December, amounted to the sum of \$25,566,000, the canal and general fund debts added to which made the total debt of the State on the 10th of December, 1865, \$51,041,540. The direct tax levied during the year was 4 $\frac{1}{2}$ mills: $\frac{1}{2}$ of a mill for schools, 2 $\frac{1}{2}$ mills for general purposes, and 1 $\frac{1}{2}$ of a mill for canals.

During the fiscal year the receipts on account of the canals from tolls and other sources were \$3,577,465, and the payments \$1,927,374, leaving a surplus revenue of \$1,650,091 to be paid into the sinking fund. A comparison of the

receipts with those of the preceding year, which were \$4,346,266, shows a diminution of \$763,800. Comptroller Robinson in his report of December 30, 1865, says:

The receipts and expenditures upon the canals, should attract the attention of taxpayers. Whilst the receipts are rapidly diminishing, the expenses are still more rapidly increasing. In 1863 the receipts were \$5,118,501.35, and the payments for collection and ordinary repairs, \$770,882.52. In 1865 the receipts were \$3,577,465.45, and the payments for collection and ordinary repairs, \$1,927,373.59. In 1863 the surplus to meet the requirements of the Constitution was \$4,347,618.83, leaving a "remainder" of \$981,376.17. In 1865 the amount was but \$1,650,091.86, leaving a deficiency of \$1,716,150.80, to be provided for by taxation. In 1863 the percentage which the cost of maintenance of the canals bore to the amount of tolls was but \$15.33; in 1865 it rose to the enormous rate of \$54.73, being far greater than it ever was before, in any year since the canals went into full operation. And this statement does not include the heavy payments for "extraordinary repairs," which would make it much higher. The payments of \$350,000 to the General Fund Debt Sinking Fund, and \$200,000 for the support of Government, cannot of course be made.

These facts and figures are instructive, and are worthy of the attention of those who think that a State can manage the business of transportation better than private individuals, and who are proposing to build new canals, and to commence another enlargement of some of the old ones.

The stock and debts of the railroads in the State on September 30, 1865, were as follows:

	Roads operated by steam.	Roads operated by horse-power.
Capital stock by charter and acts of the Legislature.....	\$4,516,200	\$1,781,000
Capital stock subscribed for.....	96,436,662	13,658,550
Capital stock paid in.....	96,040,187	13,105,105
Funded debt.....	68,304,976	5,974,605
Floating debt.....	5,560,634	576,845
Total funded and floating debt..	74,165,610	6,551,450

During the same year ending September 30th, the earnings of the railroads operated by steam were \$48,642,966, and the payments, other than for construction, including \$155,000 carried to the surplus fund, \$43,742,428; the earnings of the roads operated by horse-power were \$5,948,657, and the payments, including \$226,283 to the surplus fund, \$5,853,440.

On the 9th of March the Legislature passed an act called the "enabling act," the object of which was to afford to the banks of the State a means of transferring their organization and business to the national system without the tedious process of a formal dissolution, with the attendant inconvenience of a dispersion of their capital and surplus earnings. Between that time and the end of the fiscal year one hundred and seventy-three banks closed business as State institutions, and were converted into national banks. Besides these, twenty banks had received authority and were doing business under the national system prior to the passage of the act, ten of them having effected the change prior to the 1st of October, 1864. Thus one hundred and eighty-three banks were during the fiscal year transferred with all their wealth and influence to the national guardian-

ship. The magnitude of the change may be seen from the following statement of the Superintendent of the Bank Department:

The capital invested in banking, under our State laws, on the 24th day of September, 1864, was, \$107,806,948
On the 30th day of September, 1865..... 20,426,970

Decrease during the fiscal year..... \$86,869,978
The greatest decrease in any previous year during the last ten years..... 1,951,199

The circulation returned and destroyed during the year ending September, 1865, was \$16,728,179, which exceeds by about \$2,000,000 the amount returned during the panic year of 1857, and by about \$9,000,000 the average yearly amount for the last ten years.

The circulation issued and outstanding on the 30th September, 1864, was.....\$40,113,635 00
The circulation issued and outstanding on the 30th September, 1865, was..... 27,009,449 00

Decrease during the fiscal year.....\$13,199,186 00

Securities, including cash, held under general laws, to redeem circulation, September 30, 1864.....\$37,808,524 05
Securities held, under general laws, to redeem circulation, September 30, 1865..... 25,469,157 44

Decrease during the fiscal year.....\$11,834,866 61

The decrease of the different classes of securities has been as follows:

Of United States stocks.....\$3,523,600 05
" New York State stocks..... 2,225,706 00
" Illinois State stocks..... 233,400 05
" Bonds and mortgages..... 966,576 00

\$11,924,562 00

Increase of cash deposits to redeem circulation, 90,215 38

Total decrease as stated above.....\$11,834,866 71

Notwithstanding the large withdrawal of labor to maintain the military strength of the nation, the State has continued to make steady progress in agriculture and manufactures—improvements in the implements of husbandry and the discoveries of science having contributed largely to increase the productiveness of industry, and thus compensated in a measure for the scarcity of laborers and artisans.

The school system of the State continued to increase in efficiency and importance. The following is a brief summary from the returns of the commissioners for the year ending September 30, 1865, showing the condition of the common schools:

Number of school districts..... 11,780
Teachers for twenty-eight weeks or more..... 15,473
Children in the State between the ages of five and twenty-one..... 1,398,759
Male teachers employed..... 4,452
Female teachers employed..... 22,017
Children attending school..... 916,617
Average daily attendance of children..... 896,617
Volumes in school district libraries..... 1,278,123
Number of school houses..... 11,618

The receipts and expenditures on account of common schools were:

Receipts.

Amount on hand October 1, 1864.....\$474,447 89
Apportionment of public moneys..... 1,370,262 73
Proceeds of school lands, etc..... 18,381 11
Raised by tax..... 3,601,070 20
Raised by rate bill..... 635,158 78
From all other sources..... 228,471 79

Total.....\$6,252,242 51

Expenditures.

For teachers' wages.....	\$3,976,093 43
For libraries.....	26,816 08
For school apparatus.....	175,756 70
For colored schools.....	86,622 26
For school houses, sites, etc.....	799,160 70
For all other expenses.....	730,259 09
Forfeited in hands of Supervisors.....	751 93
Amount on hand October 1, 1865.....	516,732 30

Total.....\$6,252,242 54

The total number of pupils receiving instruction in the State, including colleges, academies, private schools, and common schools, but excluding professional schools, was 1,007,737. The number of pupils who received instruction in the State Normal School during the year was 278; in teachers' classes in academies, 1,598; in the Oswego Normal and Training School since its organization, 185, of whom 106 graduated. The number of teachers instructed in teachers' institutes during the year was 8,887.

In the Institution for the Deaf and Dumb on Washington Heights, the whole number of pupils was 402, of whom 234 were males and 168 females. Of these 267 were supported by the State and 81 by the counties, the remainder being beneficiaries of the institution and of the State of New Jersey, or supported by their friends. In the New York Institution for the Blind the number of pupils on the 30th of September was 121, of whom 108 were beneficiaries of the State. In the twenty-five schools on the Indian reservations the aggregate attendance of pupils was 971.

The number of convicts in the several State prisons on the 30th of September was 1,873, of whom 159 were females and 73 insane. The earnings for the fiscal year amounted to \$205,219, to which must be added \$78,477, the estimated value of a large stock of iron and nails manufactured by the inmates of the Clinton prison remaining unsold, making the total earnings \$283,696. The expenses during the same period were \$474,040, an excess over the receipts of \$190,344. Governor Fenton, in his message of January 2, 1866, says:

The large excess of expenditure over the earnings of the year compares unfavorably with the results of previous years, and is caused, in part, by the fact that during the first nine months of this period there was a large decrease in the number of inmates, while the volume of expenses could not be ratably diminished. The report of the inspectors shows gradual improvement in the discipline and internal management of the persons under their charge, and for their efforts in this behalf I cannot speak too warmly. Perhaps, however, to accomplish the highest success, our prison system should be wholly absolved from party influence, and the changes incident to the varying fortunes of political organizations. To attain this independence, and to engraft on our penal code valuable improvements, appears to be the purpose of the Prison Association of this State. This association is charged by law with the function of "visiting, inspecting, and examining" all the prisons of the State, and of reporting annually to the Legislature the results of this inquiry. These duties seem to have been discharged with intelligence and fidelity, and their recommendations, based upon extended observation and research, are worthy of the attention of the Legislature. The measures of this board to

furnish more thorough information, and to acquire familiarity with the working of prisons throughout the Union, will doubtless aid in the diffusion of practical knowledge and lead to salutary legislation.

On the 2d of November a vessel arrived from Europe at the port of New York, having on board a large number of passengers, several of whom were sick with Asiatic cholera. The commissioners of quarantine found themselves wholly unprovided with a place for their reception, except upon the floating hospital which had been used during the summer for yellow-fever patients. But this vessel was ill adapted for the purpose, and only partially met the requirements of the commissioners. There was still no place in which might be detained those persons who, from having been exposed to the disease, could not with safety be permitted to enter the city until they had undergone the usual precautionary treatment. Besides this difficulty, the commissioners were without funds to procure the necessary supplies and accommodations, the last appropriation having been exhausted in making the improvements and disbursements authorized by the Legislature. Under these circumstances, Gov. Fenton advised the commissioners to assume the responsibility of incurring such liabilities as might be necessary to meet the emergency, and to rely upon the Legislature to ratify their action. In accordance with his suggestions, every thing possible was done on the part of the commissioners and the health officer to provide what the occasion seemed to demand. But they were unable to procure any accommodations on land either for the care of the sick, or for the temporary detention of those who had been exposed to the disease. In view of this unfortunate condition of the quarantine, and the fact that the epidemic of eastern Asia, following the highways of commerce, had already made its way from Arabia and Syria to the basin of the Mediterranean and the shores of western Europe, and might be expected to commence its ravages in the seaboard cities of the American continent in the ensuing spring or summer, the Governor recommended prompt legislative action with regard to such measures as should meet the views of the commissioners and health officer, and suggested that if it should be found impossible to procure a suitable location on land, attention should at once be given to the erection of proper structures on the water.

The Democratic State Convention was held at Albany on the 6th and 7th of September. A Secretary of State was the highest officer to be elected. The Convention nominated Maj.-Gen. H. W. Slocum, and adopted the following platform:

Resolved, That the past history of the Democratic party is to be found in the proudest records of the country, and its creed in the Constitution; and that it is ready to meet the great questions of the future with the patriotism, fidelity to principle, and practical wisdom that have characterized its long and auspicious identification with the history of the nation.

Resolved, That we congratulate the people of this

State and of the nation, upon the termination of civil war and upon the return of peace, and especially that this blessing is attained with a preserved Union, an undivided country, and the reassertion of constitutional liberty throughout the land.

Resolved, That as the first fruits of this triumph, the people demand the subordination of military to civil rule, the restitution of the authority of the courts, and the recognition of the equality of the States; that we regard all efforts, either by prolonged military rule or by denying the right of representation to States, in order to compel them to adopt negro equality or negro suffrage as an element of their constitutions, as tending to delay and prevent the pacification of the country, and to subvert the principles of the Government, and endanger the liberties of the people.

Resolved, That in the plan of President Johnson for the speedy restoration of the States lately in rebellion to their old positions in the Union, by commencing the work of reorganization at the point of secession, and confiding it to those then recognized as electors by the laws of the respective States, leaving the question of suffrage, where the Constitution places it, to the future action of the several States, we recognize enlightened statesmanship, sound political theory, and an old-fashioned, time-honored regard for the relations and rights of the States and the Federal Government, as established by the Constitution; and that we pledge to the President, in this great work, our cordial and energetic support.

Resolved, That while we stigmatize as alike fatal to national prosperity and the rights of labor, the doctrine that "a national debt is a national blessing," we recognize the obligation by which the whole resources of the country are pledged to the payment of the public debt, and we believe the interests and honor of the people are involved in its faithful fulfillment, and that all constitutional and legal means should be taken to compel the whole property of the country, real and personal, to share in the public burdens, believing that equality of taxation is not only equity, but also the soundest possible basis of public credit.

Resolved, That the thanks and gratitude of the people are due to the soldiers and sailors of the nation and to their brave commanders, who have illustrated the pages of our history with deeds of valor that elevate the fame of the people, and vindicate the character of republican government.

Resolved, That the position originally taken by our Government in reference to the interference of European powers with the people of this continent, called the "Monroe doctrine," is a policy which has preserved peace and avoided foreign entanglements, and cannot be abandoned without dishonor to us as a Power among nations, nor without danger to democratic institutions.

Resolved, That the frank and generous acceptance by the Southern people of the condition in which they have been left by the recent war, including the abandonment of slavery, removes the main difficulties in the way of the restoration of amicable feeling among the States; and that it should be met on the part of the Federal Government in a spirit of conciliation and kindness.

Resolved, That, banishing all minor party considerations, and acting in the spirit of an enlarged and generous patriotism, we cordially support President Johnson in the policy which he has avowed, to enable the States lately in revolt to put their governments in practical operation, and in all such constitutional measures as he may inaugurate to harmonize the country and restore and cement the union of the States.

A resolution was also adopted, charging the Secretary of State and the enumerators under him with the perpetration of frauds in connection with the census.

The Republican Convention met at Syracuse, on the 20th of September. Maj.-Gen. Barlow was nominated Secretary of State, and the following resolutions were adopted:

Resolved, That we congratulate the people of this State upon the overthrow of the rebellion and the return of peace to all sections of our common country; and that we find in the preservation of the Union, the reestablishment of the national authority, and the extirpation of slavery, ample recompense for the suffering and sacrifices by which these results have been achieved.

Resolved, That to the soldiers and sailors of all ranks and in all departments, by whose valor, under divine Providence, this great result has been accomplished, and who have by their heroism shed new and undying lustre on the American name, we return the heartfelt thanks of a grateful people; that we renew the demand made by the Union National Convention at Baltimore that adequate provision be made by the national authorities for the support and comfort of such of their survivors as have received honorable and disabling wounds in the service of their country.

Resolved, That while we deplore the death by assassination of Abraham Lincoln as closing a career of transcendent usefulness and honor, and as a great national calamity, we recognize in Andrew Johnson, his successor, a statesman of ability, experience, and high-toned patriotism and the most unsullied integrity, and one who has rendered invaluable services to the Union cause during the rebellion, and whose single-hearted devotion to the permanent prosperity and glory of our common country commands the respect and confidence of the American people; and that we renew to him in his administration those assurances of cordial and effective support which were tendered by us in his nomination and election.

Resolved, That we approve as eminently wise and just the sentiments of kindness and confidence which President Johnson has evinced toward those of the communities and individuals lately in rebellion who accept the perpetuation of the Union and the perpetual prohibition of slavery as the legitimate and irrevocable results of the war; that we approve the initial steps which he has taken toward relaxing the bonds of military authority in the Southern States and in restoring to their people full and complete control over their local affairs just as soon as may be found compatible with the preservation of order, the maintenance of peace, the exclusion of slavery, and the fulfilment of the constitutional obligations of the national authority to guarantee to every State a republican form of government; and that we confidently look forward, under his wise and patriotic administration, to the establishment of more cordial relations, of greater mutual respect, and of a stronger interest in each other's welfare between the Northern and Southern sections of the Union than have hitherto prevailed, and that in all the measures he may adopt tending to the attainment of these just and beneficent ends we pledge him our cordial and hearty support.

Resolved, That while we regard the national sovereignty over all the subjects committed to it by the Constitution of the United States, as having been confirmed and established by the recent war, we regard the several States in the Union as having jurisdiction over all local and domestic affairs expressly reserved to them by the same constitutional authority, and that whenever it shall be deemed compatible with the public safety to restore to the States lately in rebellion the renewed exercise of those rights, we trust it will be done in the faith and on the basis that they will be exercised in a spirit of equal and impartial justice, and with a view to the elevation and perpetuation of the full rights of citizenship of all their people, inasmuch as these are

principles which constitute the basis of our republican institutions.

Resolved, That the restoration of peace will enable the Government to restore the civil tribunals of the country to their just and natural supremacy, and that we have full and entire confidence that this will be done as soon as the safety of the nation will permit, and no sooner.

Resolved, That the debt incurred by the nation in defence of its own existence is a sacred and inviolable obligation, resting upon all the property and all the resources of all sections of the country for its fulfilment; that while we demand at the hands of Congress such measures as shall impose the burden of taxation equally and impartially upon all classes, we have full reliance upon the people for the maintenance of the national honor and the ultimate extinction of the national debt; and that we approve and endorse the determination of the Government under no circumstances to assume, directly or indirectly, any portion of the debts incurred by the rebel authorities in the prosecution of the war against the United States.

Resolved, That we expect at the hands of the Government as prompt and as large a reduction of the national expenditures as the national safety will permit; an abolition of all sinecures, and a wise and economical administration of public affairs.

Resolved, That we have entire confidence in the direction, under President Johnson, of our intercourse with foreign nations, in his prompt enforcement against them of all just demands, in securing redress for national insults and wrongs, and in maintaining the fixed policy of our Government, by which the interference of foreign Powers with the institutions of this continent, is regarded as hostile to our peace and menacing to our independence.

Resolved, That we tender our congratulations to William H. Seward upon his providential escape from the knife of the assassin, and we rejoice that his distinguished services may still be continued to the nation and the cause of liberty.

Resolved, That the administration of Governor Fenton deserves and commands the respect and confidence of the people of this State, and that we hereby pledge to it our cordial and hearty support.

Resolved, That we call upon the loyal constituencies of the several districts in this State, in selecting candidates for the Legislature and other offices, to nominate none but men of known integrity of character, as the only means of avoiding corruption, and securing an honest administration of public affairs.

Resolved, That, as the Union party has steadily sustained the Government in its contest with the rebellion, not only against its open enemies in the field, but against those who gave it the aid of organized sympathy and encouragement in this and other loyal States, so will it now maintain its authority and second its efforts to restore all the blessings of union, freedom, and peace to all sections of our common country; and we confidently appeal to its past history, its present, and the character of its candidates, as its title to public confidence and support.

Resolved, That we repel as false and calumnious the imputation cast by the Democratic Convention upon the official integrity and personal honesty of Chauncey M. Depew, Secretary of State, and that we endorse his official conduct in the enumeration of the census, and in all respects, as worthy of the approval and commendation of the people.

Resolved, That we tender to the able men who have sustained the cause of American nationality in England our grateful thanks, and mingle our mourning with that of his countless friends in this country for the loss of Richard Cobden, one of the truest of their number.

The election took place on the 7th of November, and resulted in the success of the Republican ticket. The vote for Secretary of State

was, for Major-General Slocum (Democrat), 272,793, and 300,254 for Major-General Barlow (Republican), giving the latter a majority of 27,491. The Legislature chosen at this election stood:

	Senate.	House.	Joint Ballot.
Republicans.....	27	89	116
Democrats.....	5	39	44
Republican majority....	22	50	72

The whole number of votes cast in the State on the 14th of March on the proposition to amend the Constitution, so as to provide for the appointment of five Commissioners of Appeals, was 138,260, of which 56,486 were for, and 81,532 against the amendment, causing its rejection by a majority of 25,046 votes.

A State convention of colored men, representing quite a number of counties, met at Poughkeepsie, on the 9th of November. The following resolution was unanimously adopted:

Resolved, That this Convention is of the opinion that there should be a representation of colored men in the city of Washington from the different sections, to be there during the session of Congress, supported by the people, whose duty it should be to urge upon the members of Congress the importance of having the status of the colored American so fixed in the land that his color shall not be a bar to his occupying any position or to the enjoyment of all the rights that appertain to citizenship.

In accordance with the requirements of the Constitution, the State census was taken during the summer; the inquiries made by the enumerators referring to the status of the population on the first Monday in June. The aggregates according to the census were much less than had been anticipated; and instead of the population of the State having increased, it was found to be 48,958 less than in 1860, and only 363,282 greater than in 1855. The population of New York city was less by 87,283 than in 1860, and only 96,482 greater than in 1855. Secretary Depew, alluding in his "Preliminary Report" to this diminution, said: "The extraordinary efforts made by New York, in common with the loyal States, for the maintenance of the Union, could not fail of being shown in the results of the census. In every State where a census has been taken within the last year, this influence is shown; and if the aggregates are less than were anticipated, it is only because we have under-estimated the effect of this cause."

To the towns that showed an unusual loss or gain from the census of 1860 circulars were sent, requesting opinions as to what had occasioned the change. The decrease, in sixty-five towns, was ascribed to emigration, chiefly to the West; in thirty-seven towns to consolidation of farms; in thirty-two directly to the war, but in what manner was not specified; in twenty-five to imperfection of returns in 1860; in twenty-three to discontinuance of manufactories; in eighteen to increased mortality, especially from diphtheria; in eighteen to removals to Canada to avoid the draft; in fifteen to the decrease or discontinuance of the lumber-

ing business; in twelve to deaths in the military service; in eleven to the completion of railroads; and in eleven others to removals to the oil regions of Pennsylvania. The increase in twenty-eight towns was ascribed to the growth of manufactures; in twenty-two to the growth of villages; in fourteen to an increase of railroad business; in ten to emigration; and in nine to suburban growth.

The following table shows the population of the State in 1865 by counties, with the increase and decrease, and the number of aliens and colored persons not taxed:

Population of New York State.

COUNTIES.	Population.	Changes since 1855.		Aliens.	Colored persons not taxed.
		Increase.	Decrease.		
Albany	115,504	11,823	10,442	866

In the Senate the ratio of representation according to this census is 1 to 106,045. In the Assembly the Constitution secures to every county at least one member, with the exception of Hamilton, which is placed with Fulton County. Deducting aliens and colored persons not taxed, the total population divided by 128 gives a ratio of 1 to 26,511½. By the first of the two methods of distribution which exist in assigning ratios; the counties having a representative population less than this are first deducted, and the remaining population divided by the remaining number of members (Fulton and Hamilton having one), gives a ratio by which the larger counties receive their allowance. In the present census the counties of Cortland, Essex, Franklin, Fulton and Hamilton, Lewis, Putnam, Richmond, Rockland, Schenectady, Schuyler, Seneca, Warren, and Yates, having each less than the ratio of 1 to 26,511½, and together a representative number of 287,513, would be deducted. The remaining 3,105,926, divided by 115, gives the ratio of 1 to 27,008, by which the other counties would be equalized.

By the second method, as each county (excepting Hamilton) has a fraction that would entitle it to at least one member, the ratio of 1 to 26,511½ is used without previous deduction of the smaller counties.

NOMENCLATURE AND NOTATION, CHEMICAL. "No chemist will need to be reminded," observes Professor Hofmann (*Introduction to Modern Chemistry*), "that, during the last quarter of a century, the science of chemistry has undergone a profound transformation." He reminds his readers that the accessions of fact have been so rapid, so voluminous, and so heterogeneous, as almost to exceed the grasp of any single mind. Meanwhile, of course, attempts have continued to be made toward the scientific interpretation of such facts;

toward the discovery of those general principles which, it has been assumed, must hold true in respect to the chemical nature and relationships of different substances, and to the chemical phenomena they can exhibit; and, in fine, at once toward a comprehensive and orderly grouping of bodies, elementary and compound, and a unitary and philosophical system of the truths ascertained concerning them.

Such being the important ends to be kept in view, it has naturally happened, among the multitude of experimenters and theorists engaged in the work, that, in the first place, many of the suggestions and hypotheses put forward have sooner or later been proved untenable and valueless; and that, in the second place, a considerable degree of conflict and collision has unavoidably existed, both in respect to the views presented and to claims as to priority in advancing them. This ordeal of new views in chemistry has been similar to that through which, some two and three centuries earlier, the mechanical and certain of the physical sciences were passing. Indeed, in the realm of chemical science, the clash of opposing views has not yet ceased; and while there are chemists who still withstand, as unsupported or unnecessary, the recent theories respecting combinations and equivalencies, and the new system of names it has been proposed to introduce, it is also true that some at least of the principles referred to, as well as in some instances the claims to their origination, are still in question, and must await the decision of the future. Still, so large a proportion of the leading chemists of the world have taken part in developing the new views, or have already given assent to them, that we can no longer doubt their ultimate practical acceptance (subject to such extensions or modification as further research shall introduce), as the basis and doctrines of the science, in the new form in which it is to pass from the present to future times. Recognizing both the changes already accomplished, and the necessity for continued labors in the same direction, Professor Miller, in his opening address before the chemical section of the British Association, 1865, and in connection with a reference to certain researches in organic chemistry, said:

"In these and kindred investigations, the necessity for the introduction of fixed principles of nomenclature for regulating the construction of names for the recently discovered compounds has been sensibly felt; and indeed the changes in notation rendered necessary by the alteration in the values assigned to the atomic weights of many of the chemical elements have rendered a general revision of the system of chemical nomenclature a matter of pressing importance."

It is not surprising that, in the application of the new views of chemical combination, some outstanding and apparently irreconcilable facts are yet to be met with. But, admitting this, it is still safe to say that the period under consideration has effected the growth of a chemical philosophy which is largely new;

that it has established new conceptions of the molecular constitution of bodies, both elementary and compound; that it has thus necessitated new ideas of chemical equivalency and reactions, and a new scheme of symbolic notation; while, recently, it has witnessed the attempt to replace the imperfect system of names for compound bodies hitherto in use, by one that, at least both flexible and improvable, may yet be developed into a precision and completeness adequate to the constantly growing requirements of the case.

Basis of the Old and of the New Notation.—

From the time of the promulgation by Dalton, during the first few years of the century, of his discoveries respecting the combination of bodies in definite and fixed equivalents by weight, down quite or nearly to the present, the general theory of chemical changes or reactions, as held by a large body of chemists and adopted in text-books on the subject, and of course also the notation employed to represent the products of such reactions, have been essentially such as grew out of or harmonized with those views of the distinguished philosopher named. Strange to say, however, within a very few years of the publication of Dalton's views (as early, indeed, as 1808), Gay-Lussac made known another class of facts respecting at least those bodies existing or obtainable in the æriform state; and facts which, after the lapse of a full half-century, are now at length only just admitted to their due place and force in connection with the theory of chemical reactions and of the constitution of elementary and compound bodies. Illustrations of the application of Dalton's primary law, but without reference to the combining volumes in the case, are seen in the determination, by the most recent and accurate experiments, of the equivalents or combining weights of the elements *hydrogen, chlorine, oxygen, nitrogen, and carbon*, as respectively 1, 35.5, 8, 14, and 6; the ultimate atoms of these bodies being supposed also to have weights corresponding to the numbers so ascertained. Now, Gay-Lussac found that—temperature and pressure remaining the same—elements in the æriform state also combine invariably in certain simple relations by volume, the volumes of the products furthermore bearing some simple ratio to the sum of volumes of the components. Thus, 2 vols. H. combine with 1 vol. O., resulting in 2 vols. water-vapor; 2 vols. N. with 1 vol. O. form 2 vols. nitrous oxide; 1 vol. N. with 1 vol. O. forms 2 vols. nitric oxide; 3 vols. H. with 1 vol. N. form 2 vols. ammonia; 1 vol. H. with 1 vol. Cl. forms 2 vols. chlorhydric acid gas, etc.

This principle of combination by volumes, until recently admitted into the text-books of the science rather in the manner of an incidental circumstance, has at length, as already implied, come to be seen as of coördinate importance, in the determining of combining-ratios and the constitution of compound bodies, with the more familiar principle of equivalents

by weight. The spirit, then, of the chemical theory now apparently being superseded, was essentially that of recognizing *ponderal* equivalencies only, as found to exist between bodies elementary and compound. But it will be seen, as we proceed, that the modern chemical theory has its basis in the conjoint admission and determination of both *ponderal* and *volumetric* combining-ratios; while, as scarcely less essential, it incorporates at the same time two other leading ideas recently developed—that of *substitutions*, or replacements, of certain elements or groups in compound bodies; and that of definite molecular *types*, few in number, under which all elementary and all compound bodies would appear naturally to fall.

Determination of Weight and Volume Ratios.—It will be proper here to premise so much of chemical theory as to intimate the principles which have been, down to the present time, gradually matured, for determining the *weight* and *volume ratios* in which elementary (and of course also, compound) bodies enter into combination. Obviously, the relative combining weights can usually be determined with comparative ease; and the volumes also, whenever the bodies under examination are such as have naturally, or can be brought into, the gaseous form, at temperatures within which the experiments can conveniently be carried on. In the mode in which the modern chemical philosophy regards the constitution of elementary and compound bodies, and attempts the determination of their combining weights and volumes, an indispensable part is played by the hypothesis early advanced by Ampère, namely, that of all bodies in the gaseous state (pressure and temperature being the same) equal volumes contain an equal number of atoms, or of molecules; and to the application of this assumed principle, as yet, but a small number of apparent exceptions have been met with.

Let it for the present be granted, that in volumetric determinations it is the 2-atom or double volume which should be dealt with, and the following statement, from Hofmann's *Modern Chemistry*, will serve clearly to indicate the general rule of both weight and volume determinations:

"It is by first obtaining the gaseous or volatile compound formed by an element, either with hydrogen itself, or, failing this, with some element bearing thereto known weight and volume ratios, and by then ascertaining its *vapor-density* and *composition*, so as to learn how much of the element under investigation exists in the dilital [double] volume of such compound, that the atom-weights of the elements, whether volatile or fixed, can be most safely and certainly determined."

In a small proportion of instances, in which these usual modes of proceeding are impracticable, or give uncertain results, certain analogies traceable between different classes of compounds, or those relations constituting groups among the elements themselves, may be brought

to the aid of the chemist; and also certain physical principles, if applicable to the bodies in question. Among the latter, is the law of Dulong and Petit, to which but few exceptions (C, Si, and Bo, at least) appear to remain, viz., that the products of the atomic weights of the elements into their specific heats, give nearly a constant quantity—a law from which, in connection with Ampère's hypothesis, Regnault (1849) deduced the principle of thermic proportional numbers, or *thermal equivalents*, of the elements. Other principles of the like sort and value, especially in case of compound bodies, are that afforded in the law of *homologous series*, as those of the *alcohols*, *ethers*, *hydrocarbons*, etc., with certain relations, as the regular gradation of boiling-points, pertaining to them; as well as also the principle of *isomorphism*, or similarity of crystalline forms, etc.

Glance at the Rise of the Type Theory.—M. Auguste Laurent, November, 1846, first distinctly intimated the idea of *types* among compound bodies. Thus, he considered alcohol, and also certain hydrated oxides, as comparable with water—an atom of hydrogen being in the former replaced by one of ethyle (C_2H_5), and in the latter by one of a metal: thus, calling water H_2O ,—

$H.HO,$	$(C_2H_5).HO,$	$K.HO.$
Water.	Alcohol.	Hydrate of Potash.

Professor T. Sterry Hunt, a young American chemist, began (1848-'50) the expansion of this idea to its consequences, and toward the full breadth of its applications; while, later, through the labors and writings of Williamson, Gerhardt, Wurtz, Hofmann, Odling, and others, this work has been well-nigh completed; so that the doctrine of typical forms among compound bodies, and of a natural grouping or classification of bodies under such types, has become developed into a system, based on true scientific grounds, and warranted especially by the light it throws on cases of substitution, on chemical reactions generally, and on the results to be anticipated in the way of experiment, in case of given compound bodies. The history and details of the type theory in chemistry may possibly be given in a future volume: at present, it must suffice barely to indicate the main results reached.

The new theory admits generally a distinction between the *atom* (equivalent, or combining proportion) of any body, and the *molecule* (definite aggregation of atoms), or form under which the same body exists in the free state. It regards the molecules of most simple, and of many compound bodies, as composed respectively of two atoms (Ampère); so that free chlorine is $ClCl$, or *chloride of chlorine*, etc. Under it, four leading types have been determined, representing respectively 1-, 2-, 3-, and 4-atom combinations of certain elements or compounds with the single atom of certain others; those types being the following:

$HCl,$	$H_2O,$	$H_2N,$	$H_2C.$
Chlorhydric acid.	Water.	Ammonia.	Marsh-gas.

Owing to the fact of the successively increas-

ing condensation of volume, with increase in the number of hydrogen atoms—the product-volume in all the above cases being that of a single gaseous molecule=two atoms, the types after the first are called “condensed” (and “derived” also); while types still more condensed, and also “mixed” types, are admitted, to embrace peculiar forms of chemical constitution.

Weight and Volume of Atoms, and of Molecules.—It is quite impossible, within the limited space here allowed, to present in full either the important facts in the growth of the modern chemical philosophy, or the system of weight and volume determinations, atomic and molecular, and the notation corresponding, which find their basis in it. An attempt will, however, be made to give a general outline of the latter subjects, or at the least so far as to embrace the principles most essential to an understanding of them.

Up to a very recent period, the works of chemistry have, in the main, proceeded substantially on the assumption that the volume of hydrogen combined, in forming water, with oxygen, was to be taken as the *unit-volume*, or at least as representing (if the volumes of oxygen and hydrogen in the case were subdivided an equal number of times, and until the single atom of the former was reached) a single atom of hydrogen. In accordance with this view, the atomic weight of hydrogen being taken as 1, those of O, S, C, and Ca, respectively, would be 8, 16, 6, and 20; while the equivalents of the other elements would, of course, be made to accord with the same assumption. But the *half* of the hydrogen volume in water is the quantity which combines with a like volume of chlorine to form chlorhydric acid gas, and is the proportion also which directly combines with many other elements; while, besides this, other facts also go to show that this half of the volume of hydrogen in one unit-volume (compound) of water, is itself the true *unit-volume* for the elements, including not only hydrogen, oxygen, chlorine, etc., but in fact all, save four or five exceptions yet to be named.

Now, admitting the conclusion thus arrived at, many of the elements, as chlorine, iodine, nitrogen, potassium, etc., which like hydrogen combine with oxygen and elements of its class in the lowest usual proportion in double volumes, still retain their previously determined atomic weights unchanged; while of oxygen, sulphur, carbon, and calcium, above referred to, and of certain other elements, in consequence of the fact that their unit-volume (gaseous or volatilized, or as having analogies with other bodies which may be so) must be compared with two unit-volumes of hydrogen and bodies of its class, the previously determined atomic weights require now to be doubled; thus, O, S, C, and Ca are now, respectively, 16, 32, 12, and 40. Berzelius had crossed or *barred* the symbols of elements which he supposed to combine in *two*

atoms each; but more recently the *bar* has been turned to the new use of marking the symbols of elements whose atom-weight, calling the hydrogen in water 2 atoms, should be doubled. Williamson and Hofmann, however, have finally dropped the bar, employing the bare symbols as before, but now to indicate the new or double equivalents, in cases in which such have been determined.

By the atom of an elementary body is to be understood the smallest proportional weight of the latter which is capable of entering into or existing in chemical combination. It has already been intimated that, calling the ordinary elementary atom one volume, a body in the free state, and whether simple or compound, appears to exist as a collection of molecules, each consisting (as the rule) of two atoms of the given kind. The molecule of a body may, in general, be defined as the smallest proportional weight of it capable of existing in the free or uncombined state. Molecules generally, then, equal in volume two atoms each. Hofmann takes the cubic *litre* (equal to 1 cubic decimetre, or $\frac{1}{1000}$ th of a cubic metre) as his standard unit-volume; and, as his unit of actual weights, the weight of this volume of hydrogen at 0° C. of temperature and 760 mm. pressure; while, for this weight, which equals 0.0896 gramme, he has proposed the name of *erith* (*εριθ*), a barley-corn). He accordingly terms the usual atom-volume *monolital*, and the usual molecule-volume *dilitral*.

Exceptions to the rule just implied are, on one side, P and As, which combine in half the usual atom-volume, or are *hemi-lital*; and on the other Hg and Cd (to which, also, some authors add Zn), which combine in double the usual atom-volume, or are *dilitral*; so that, in these latter, the atom equals in volume the molecule. Exceptions to the general rule of product-volumes, or molecules of compound bodies, appear to exist also in certain instances; as in case of *perchloride of phosphorus*, *chloride of ammonium*, *monohydrated sulphuric acid*, and a few other bodies, the molecules of which seem to represent 4 volumes, in place of 2.

Analysis of the four Leading Types.—Observing, now, the combining proportions, both by volume and weight, in the four leading types, the following interesting results are obtained:

Atoms,.....	$\text{H} + \text{Cl}$	$\left. \begin{matrix} \text{H} \\ \text{H} \end{matrix} \right\} + \text{O}$	$\left. \begin{matrix} \text{H} \\ \text{H} \end{matrix} \right\} + \text{N}$	$\left. \begin{matrix} \text{H} \\ \text{H} \\ \text{H} \\ \text{H} \end{matrix} \right\} + \text{C}$
Proportions by weight, 1+35.5	$\left. \begin{matrix} 1 \\ 1 \end{matrix} \right\} + 16$	$\left. \begin{matrix} 1 \\ 1 \end{matrix} \right\} + 14$	$\left. \begin{matrix} 1 \\ 1 \end{matrix} \right\} + 12$	$\left. \begin{matrix} 1 \\ 1 \\ 1 \\ 1 \end{matrix} \right\} + 12$
Weights of compound } molecules,.....	36.5	18	17	16
Proportions by volume,.....	$1 + 1$	$\left. \begin{matrix} 1 \\ 1 \end{matrix} \right\} + 1$	$\left. \begin{matrix} 1 \\ 1 \end{matrix} \right\} + 1$	$\left. \begin{matrix} 1 \\ 1 \\ 1 \\ 1 \end{matrix} \right\} + 1$

Of course, the atomic volume and molecular

constitution of many elements in respect to which these particulars are not given in the table, are regarded as being known, with greater or less certainty, being inferred in accordance with principles already indicated. Further, some variation still exists between different authors in regard to the atomic weights and quantivalent coefficients to be assigned to certain of the elements. Odling, for example, agreeing in the other instances with the values above, places lead and palladium among tetrads, and thallium among triads; while Strecker regards the last-named element as presenting analogies with both monatomic and triatomic elements, and raises a question as to the invariableness of the atomicities.

It may here be remarked, that the symbols employed throughout this article have the equivalent (atomic-weight) values given in the table above, so far, at least, as the doubling of the equivalents of certain elements—O., S., Cl., etc.—is concerned.

Nomenclature.—Besides the general interest recently taken in the theory of chemical combination and equivalents, much attention has during a very few years past been given to the special subject of the nomenclature to be employed in case of compound bodies, and for the present at least, of those particularly of an inorganic character.

Professor A. W. Williamson delivered before the London Chemical Society, December 15, 1864, a short discourse on the subjects of "Chemical Nomenclature and Notation;" and, a large part of that and of a succeeding evening having been devoted to discussion of the views advanced, the result was a very general approval, in the main, of their purport, by the distinguished chemists present. Of course, as the title of the leading discourse indicates, principles relating to the symbolic expression of compounds, as well as to their naming, were considered. Some of the more important views advanced on the occasions mentioned, as well as in certain published articles on the same subjects, will be embodied in this place, but without following the precise order of their presentation.

Adopting, as now usual, the volume of 16 parts by weight of oxygen as the relative unit-volume of bodies in gaseous form, Professor Williamson had, for his absolute measures of both volume and weight, fixed on units different from those proposed by Hofmann. As the standard volume, he takes 11.19 (for most practical purposes, say 11.2) litres, selecting this for the reason that, measured in oxygen gas at 0°C. and 760 mm. pressure, the weight obtained is just 16 grammes. The selection of this number, which corresponds with the new equivalent weight of oxygen, renders comparatively easy, when the molecular weights of the latter are once known, all calculations relative to the actual weights and volumes of gaseous and volatilized bodies.

The lecturer's principal purpose, however, was to suggest the adoption in scientific

treatises and usage of a new set of names for a large class of chemical compounds—perhaps to be ultimately extended to all compounds, organic as well as inorganic—and names which, it appears, were regarded as obviating some of the difficulties and inconsistencies of the nomenclature hitherto in use, at least in text-books in the English language. The system of names proposed is, in fact, not wholly new, being in good degree the same with that employed in Gmelin's Hand-Book, and to some extent also by Berzelius and other continental chemists. Professor Williamson admitted the hopelessness of changing the common usage as to the commercial names of various substances, as *soda*, *arsenic*, etc.; but he considered a scientific system of nomenclature as unsuited to ordinary commercial use. Professor Odling called attention to the impropriety of the use of the word *of*, in the existing nomenclature, and which the new system would escape: thus, to call the compound ClO an *oxide of chlorine*, or a *chloride of oxygen*, does not in either case truly express the relation which in it the elements bear to each other.

The following examples will illustrate both the new notation, and the proposed new nomenclature. Thus, among elements and compound radicals:

H	— 1,	represents an atom of hydrogen.
O	— 16,	“ “ “ oxygen.
N	— 14,	“ “ “ nitrogen.
C	— 12,	“ “ “ carbon.
Hg	— 200,	“ “ “ mercury.
CO	— 28,	“ “ “ carbonic oxide.
SO ₂	— 64,	“ “ “ sulphurous acid.
NH ₄	— 18,	“ “ “ ammonium.
CH ₃	— 15,	“ “ “ methyle.
CN	— 26,	“ “ “ cyanogen.
C ₂ H ₄	— 28,	“ “ “ ethylene.

Free molecules of elements, as of Cl, O, N, P, As, Hg, Cd, Zn, are thus represented:

Cl₂, O₂, N₂, P₄, As₄, Hg, Cd, Zn;
and those of compound radicals thus:

(CH₃)₂, (CN)₂, (NH₄)₂, NH₃, C₂H₄.

The following examples illustrate symbols of the molecules of bases, and the proposed names:

H ₂ O	, hydric oxide (water);
K ₂ O	, potassic oxide (potash);
Cu ₂ O	, cuprous oxide;
Cu O	, cupric oxide;
(NH ₄) ₂ O	, ammoniac oxide;
Bi ₂ O ₃	, bismuthic oxide;
Fe ₂ O ₃	, ferric oxide;
K ₂ S	, potassic sulphide;
(C ₂ H ₅) ₂ O	, ethylic oxide (ether);
C ₂ H ₄ O	, ethylenic oxide;

the following, in like manner, in case of molecules of acids:

N ₂ O ₃	, nitrous acid;
N ₂ O ₅	, nitric acid;
I ₂ O ₅	, iodic acid;
I ₂ O ₇	, periodic acid;
CO ₂	, carbonic acid;
SiO ₂	, silicic acid (silica);
Bo ₂ O ₃	, boric acid;
(C ₂ H ₃ O ₂) ₂ O	, acetic acid;
C ₄ H ₄ O ₄	, succinic acid;

and finally, these, in case of the molecules of salts:

HNO ₃	, hydric nitrate (monohydrated nitric acid);
Fe(NO ₃) ₂	, ferrous nitrate;
Fe ₂ (NO ₃) ₆	, ferric nitrate;
Fe ₂ (SO ₄) ₃	, ferric sulphate;
H ₂ SO ₄	, hydric sulphate (monohydrated sulphuric acid);
HKSO ₄	, hydro-potassic sulphate;
H ₃ PO ₄	, hydric phosphate (trihydrated phosphoric acid);
Al ₂ Cl ₃	, aluminic chloride;
HCl	, hydric chloride (chlorhydric acid);
FeCl ₂	, ferrous chloride;
PtCl ₄	, platinic chloride.

The names assigned to compound bodies in the author's recent work, *Chemistry for Students*, are substantially in accordance with the examples here given. Prof. W. A. Miller and Mr. Newlands, while approving in substance the proposed nomenclature, both insist on the importance, with a view to definiteness and fixedness in the employment of the names for given compounds, not less than to accuracy in their use as analytic and suggestive of chemical composition, of incorporating with them as required the familiar prefixes, *proto*, *di* or *bi*, *tri*, *tetra*, *sesqui*, etc.; and the latter especially would guard against assigning to compounds analogous in composition differently formed names.

In the discussions above referred to, Professors Graham, Odling, Brodie, Hofmann, Miller, Frankland, and others took part. Prof. Brodie expressed the opinion that chemistry had reached a stage in which names of the now usual forms may be abolished altogether, the compounds being written or described merely by the symbols which make up their formulæ; but Prof. Frankland insisted that there must still be, as now, the two systems of expressions.

Prof. Williamson condemned Gerhardt's application of the term *acid* to the hydrated acids. He would restrict the term to what are now called the *anhydrous acids*, or *anhydrides*, calling the bare compound SO₂ sulphuric acid, etc.; while bodies of the former class he would regard as *hydrogen salts* (see examples of salts, above). These views, however, did not meet with general approval. Prof. Miller has proposed to substitute for the awkward expression *anhydride*, the term *oxyl*.

Finally, it may be remarked that the period of transition in chemical theory and nomenclature is not altogether passed. And at the best, this transitional period has been, and while it lasts must be, one of perplexity to both learners and instructors. Hofmann states that he had found such phrases as "old style," "new style," "newest style," "little equivalents," "big equivalents," etc., coming into use in instruction. The difficulties of such a transition, however, are held to be trifling in comparison with the advantages to be attained through its consummation; among these being the securing in a higher degree than before of simplicity and precision, both in theory and statement, with greater practical utility, and an increased value in the way of suggestiveness in the new

symbols, if not also in the new names, to be employed.

Sources of Information.—In the preparation of this article, besides the account of the lecture and discussions above referred to (*Chem. News*, December 24, 1864, and January 27, 1865), the lecture of Prof. Hofmann in the same journal (February 10, 1865), and certain articles in the *Philos. Magazine*, 1864-'65, recourse has been chiefly had for facts and illustrations—the language of such authorities being also in certain parts adopted—to the following sources: Two series of papers by Prof. Adolphe Wurtz, entitled, "An Introduction to Chemical Philosophy, according to the Modern Theories," and appearing in the *Chemical News*—the first, January 27 to June 16, 1865, and the second, January 19 to February 23, 1866; Prof. T. S. Hunt's paper, "On the Theory of Types in Chemistry" (*Chem. News*, March 17-24, 1865, reprinted from the *American Jour. of Science*, March, 1861); Dr. C. M. Wetherill's paper in the *Smithsonian Report*, 1863, entitled, "A Brief Sketch of the Modern Theory of Chemical Types;" and Prof. A. W. Hofmann's *Introduction to Modern Chemistry*, etc., London, 1865.

NORTH CAROLINA. The civil aspect of affairs in North Carolina was unchanged at the commencement of the year. The authorities presented a bold and confident aspect, and were unremitting in their efforts to stimulate the people. "I trust and believe," said Governor Vance in a proclamation to the people, "that there will be little difference of opinion in North Carolina, as to the propriety of continued resistance. The great argument which will be brought forward to shake your honor, and intended to excite you to despair, will be that successful resistance is no longer possible. Some will tell you that we are already subdued; that the enemy outnumber us; that our fighting men are all slain; our resources all exhausted, and we might as well submit now. This, my countrymen, is false, and as frequently proceeds from a craven or a traitorous as from an honest but mistaken spirit." As an evidence of strength to carry on the war, although it equally proved an indisposition to continue hostilities, the Governor further said: "Over four hundred thousand names yet stand upon the muster-rolls of the Confederacy, to say nothing of the many thousands who shirk. Where are they? Thousands upon thousands, absent without leave, are lurking in the woods and swamps of the South; hundreds of thousands of bushels of grain now rot at the various depots of the South for want of transportation, and this transportation cannot be protected because these absent soldiers are not at the post of duty." After the advance of General Sherman from Savannah had commenced, the Governor found it necessary to appeal again to the people to contribute for the support of General Lee's forces, as the interruption of railroad communication greatly endangered their subsist-

ence. At this time he proposed that each one should set apart a certain portion of his stores to be delivered at intervals to the nearest commissary agent. The military operations, however, which are related elsewhere (see *ARMY OPERATIONS*), soon exhibited the Federal strength so overwhelming and irresistible as to convince the most reluctant that the hour of submission was near at hand. The fall of Wilmington, the arrival of Sherman at Goldsboro', the surrender of Lee, followed soon after by that of Johnston, extinguished both the power and the disposition of the State to make further resistance. For the preservation of order until the will of the military commanders should be made known, Governor Vance now issued the following proclamation:

STATE OF NORTH CAROLINA, EXECUTIVE DEPARTMENT, }
GREENSBORO', April 23, 1865.

Whereas, By the recent surrender of the principal armies of the Confederate States, further resistance to the forces of the United States has become vain, and would result in useless waste of blood; and,

Whereas, All the natural disorders attendant upon the disbanding of large armies are upon us, and the country is filled with numerous bands of citizens and soldiers disposed to do violence to persons and property:

Now, therefore, I, Zebulon D. Vance, Governor of the State of North Carolina, in the sincere hope of averting some of the many evils which threaten us, do issue this my proclamation, commanding all such persons to abstain from any and all acts of lawlessness; to avoid assembling together in crowds in all towns and cities, or doing any thing whatsoever calculated to cause excitement, and earnestly appealing to all good citizens who are now at home, to remain there, and to all soldiers of this State to retire quietly to their homes, and exert themselves in preserving order, should it become necessary for the protection of citizens. I also appeal to the good and true soldiers of North Carolina, whether they have been surrendered and paroled, or otherwise, to unite themselves together in sufficient numbers, in the various counties of the State, under the superintendence of the civil magistrates thereof, to elect or stay any bodies of lawless or unprincipled men who may be committing depredations upon the persons or property of peaceable citizens, assuring them that it will be no violation of the parole to do so; and I would assure my fellow-citizens, generally, that under God I will do all that may be in my power, to settle the government of the State, to restore the civil authority in her borders, and to further the great ends of peace, domestic tranquillity, and the general welfare of the people. Without their aid I am powerless to do any thing.

By the Governor,

M. McPHERSON, Private Secretary.

On the next day Gen. Schofield, then Federal commander in the State, announced in the following order the policy which he proposed to pursue:

General Orders No. 31.

HEADQUARTERS DEPARTMENT OF NORTH CAROLINA, }
ARMY OF THE OHIO, RALEIGH, N. C. April 29, 1865.

The Commanding General has great satisfaction in announcing to the army and people of North Carolina that hostilities within this State have definitely ceased; that for us war is ended, and it is hoped that peace will soon be restored throughout the country.

It is now the duty of all to cultivate friendly relations with the same zeal which has characterized our conduct of the war, that the blessings of union, peace, and material prosperity may be speedily restored to the entire country.

It is confidently believed and expected that the troops of the army and people of North Carolina will cordially unite in an honest endeavor to accomplish this great end.

All good and peaceable citizens will be protected and treated with kindness, while those who disturb the peace or violate the laws will be punished with the severity of martial law.

The troops will be distributed so as best to secure the interests of the United States Government, and protect the people until civil government can be established in harmony with the Constitution and laws of the United States.

The most perfect discipline and good conduct are enjoined upon all officers and soldiers, and cordial support upon all good citizens.

All who are peaceably disposed are invited to return to their homes, and to resume their industrial pursuits. Such as have been deprived of their animals and wagons by hostile armies will be temporarily supplied, as far as practicable, upon application to the nearest Provost Marshal, by loans of captured property in possession of the Quartermaster's Department. The needy will also be supplied for the time being with subsistence stores from the Commissary Department.

It will be left to the Judicial Department of the Government to punish those political leaders who are responsible for secession, rebellion, and civil war, with all its horrors. Between the Government of the United States and the people of North Carolina there is peace.

By command of Major-General SCHOFIELD.
J. A. CAMPBELL, Assistant Adjutant-General.

To decide the civil position of the negroes, he at the same time issued the following order:

General Orders No. 82.

HEADQUARTERS DEPARTMENT OF THE ARMY OF THE OHIO, }
RALEIGH, April 29, 1865.

To remove a doubt which seems to exist in the minds of some of the people of North Carolina, it is hereby declared that by virtue of the proclamation of the President of the United States, dated January 1, 1863, all persons in this State heretofore held as slaves are now free, and that it is the duty of the army to maintain the freedom of such persons.

It is recommended to former masters of freedmen to employ them as hired servants, at reasonable wages. And it is recommended to freedmen that when allowed to do so they remain with their former masters, and labor faithfully so long as they shall be treated kindly and paid reasonable wages, or that they immediately seek employment elsewhere in the kind of work to which they are accustomed. It is not well for them to congregate about towns or military camps. They will not be supported in idleness.

By command of Major-General SCHOFIELD.
J. A. CAMPBELL, Assistant Adjutant-General.

The aspect of affairs in the State now changed almost instantaneously. It was apparent to every mind that North Carolina was destined to be, as she had been, a State of the Federal Union. The result was universally acquiesced in, and the mass of the people turned their thoughts to the pursuits of industry and peace. Public meetings were held in various counties of the State, at which resolutions expressing the views of the people were adopted. They generally expressed abhorrence of the assassination of the late President; requested the President to adopt measures as early as practicable for the restoration of civil law in the State; and accepted the abolition of slavery as a part of the accomplished situation of affairs.

General Schofield, by his position, was virtu-

ally Military Governor of the State, and would so continue until the authority at Washington, which alone was recognized as supreme in the State, commanded a change. He therefore issued a further order regulating the relations of the freedmen and whites, as follows:

General Orders No. 48.

HEADQUARTERS DEPARTMENT OF NORTH CAROLINA, }
ARMY OF THE OHIO, RALEIGH, N. C., May 15, 1865.

The following rules are published for the government of freedmen in North Carolina until the restoration of civil government in the State:

1. The common laws governing the domestic relations, such as those giving parents authority and control over their children, and guardians control over their wards, are in force. The parent's or guardian's authority and obligations take the place of those of the former master.

2. The former masters are constituted the guardians of minors, and of the aged and infirm, in the absence of parents or other near relatives capable of supporting them.

3. Young men and women, under twenty-one years of age, remain under the control of their parents or guardians until they become of age, thus aiding to support their parents and younger brothers and sisters.

4. The former masters of freedmen may not turn away the young or the infirm, nor refuse to give them food and shelter; nor may the able-bodied men or women go away from their homes, or live in idleness, and leave their parents, children, or young brothers or sisters to be supported by others.

5. Persons of age, who are free from any of the obligations referred to above, are at liberty to find new homes wherever they can obtain proper employment; but they will not be supported by the Government, nor by their former masters, unless they work.

6. It will be left to the employer and servant to agree upon the wages to be paid; but freedmen are advised that for the present season they ought to expect only moderate wages, and where their employers cannot pay them money, they ought to be contented with a fair share in the crops to be raised. They have gained their personal freedom. By industry and good conduct they may rise to independence and wealth.

7. All officers, soldiers, and citizens are requested to give publicity to these rules, and to instruct the freed people as to their new rights and obligations.

8. All officers of the army, and of the county police companies, are authorized and required to correct any violation of the above rules within their jurisdiction.

9. Each district commander will appoint a superintendent of freedmen (a commissioned officer), with such number of assistants (officers and non-commissioned officers) as may be necessary, whose duty it will be to take charge of all the freed people in his district who are without homes or proper employment. The superintendents will send back to their homes all who have left them in violation of the above rules, and will endeavor to find homes and suitable employment for all others. They will provide suitable camps or quarters for such as cannot be otherwise provided for, and attend to their discipline, police, subsistence, etc.

10. The superintendents will hear all complaints of guardians or wards, and report the facts to their district commanders, who are authorized to dissolve the existing relations of guardian and ward in any case which may seem to require it, and to direct the superintendent to otherwise provide for the wards, in accordance with the above rules.

By command of Maj.-Gen. SCHOFIELD.
J. A. CAMPBELL, Assistant Adjutant-General.

Public affairs continued under the control of

the military authorities until May 29th, when President Johnson issued a proclamation appointing William W. Holden Provisional Governor. This proclamation is similar to the one issued in the case of Alabama. (*See ALABAMA.*)

On June 12th Governor Holden issued a proclamation announcing his appointment, and stating that a convention would be held as early as practicable, the object before it, and the subsequent election of State and local officers, etc. He then urged the people with cheerfulness and confidence to resume their accustomed pursuits; invited all who had been refugees to return, assuring them of protection and encouragement in their exertions to improve their condition, and instructed the colored population in the duties proper to their new condition.

The acquiescence of the people in their altered position proceeded peacefully and rapidly, and on August 8th Provisional Governor Holden issued a proclamation for the election of delegates to a State Constitutional Convention. The persons who might be voters, the manner of election, etc., were ordered as follows:

In pursuance of power vested in me by Andrew Johnson, President of the United States, by his proclamation of May 29, 1865, appointing a Provisional Governor of North Carolina, under the fourth article of the Constitution of the United States, which guarantees to every State in the Union a republican form of government; and in order to enable the loyal people of said State to organize a State government, whereby justice may be established, domestic tranquillity restored, and loyal citizens protected in all their rights of life, liberty, and property; and in order, also, that said State may be reduced to its constitutional relations to the Federal Government, by presenting such a republican form of government as will entitle the State to the guaranty of the United States therefor, and its people to protection by the United States against invasion, insurrection, and domestic violence, I, William W. Holden, Provisional Governor, as aforesaid, do hereby proclaim that an election will be held in said State on Thursday, the 21st day of September, 1865, for a convention, to be composed of one hundred and twenty delegates.

The clerks and sheriffs of the respective counties will proceed at once to assemble the justices of the peace, a majority of whom will select from their number not less than six nor more than eighteen justices, men of intelligence, discretion, firmness, and approved loyalty, whose duty it shall be to administer to those who may be entitled to receive it, the oath contained in the President's amnesty proclamation of May 29, 1865, under such instructions as may be prescribed in the proclamation. The justices shall, at the same time, appoint inspectors of the elections at the various precincts in their respective counties, in accordance with the law in relation thereto—chapter 52 Revised Code of North Carolina. The elections for members of the convention shall be conducted in the same manner as elections for members of the House of Commons, in accordance with the provisions of chapter 52 Revised Code, so far as said provisions may be applicable; and the officers appointed to hold said elections, and to make returns thereof, shall be liable to the same penalties for failure to act or for neglect of duty as are prescribed in chapter 52 Revised Code.

No person will be allowed to vote who is not a voter qualified as prescribed by the Constitution and laws of the State in force immediately before the 20th

day of May, 1861, except that the payment of poll tax shall not be required.

All paroled soldiers of the army and navy of the pretended Confederate States, or of this State, and all paroled officers of the army and navy of the pretended Confederate States, or of this State, under and including the rank of colonel if of the army, and under and including the rank of lieutenant if of the navy, will be allowed to vote, provided they are not included in any of the fourteen excluded classes of the President's amnesty proclamation; and provided, further, that they are citizens of the State in accordance with the terms prescribed in the preceding paragraph.

No person will be allowed to vote who does not exhibit to the inspectors a copy of the amnesty oath, as contained in the President's proclamation of May 29, 1865, signed by himself and certified by at least two justices of the peace.

The sheriff of the respective counties shall furnish, as soon as practicable, certificates of election to those persons who may have received the highest number of votes as members of the convention; and the sheriffs shall also immediately send to the office of the Secretary of State, Raleigh, a statement of the vote in their respective counties for the members aforesaid, and also a statement of said vote, sealed up, directed to the President of the convention, Raleigh, to be laid before the convention.

The members of the convention thus chosen will assemble in the city of Raleigh, on Monday, the 2d day of October, 1865.

The attention of justices appointed to administer the amnesty oath is especially directed to the fourteen excluded classes of the President's amnesty proclamation of May 29, 1865.

Under the first exception are included all persons who have been civil or diplomatic officers or agents of the pretended Confederate Government, either within or without the territorial limits of the United States.

Under the seventh exception are included all officers, agents, or private citizens who have been absent from the United States for the purpose of aiding the rebellion.

Under the thirteenth exception are included all who, during the rebellion, have held any office or agency under the State or pretended Confederate Government, or have in any way voluntarily joined in the rebellion, as, for example, for entering or marching with armed forces hostile to the United States; by sending or furnishing money, provisions, or arms to persons engaged in the rebellion, save in cases where money or provisions were furnished from the promptings of charity or humanity; by acting with assemblages of persons, whether organized or unorganized, hostile to the United States; or in any other way giving voluntary aid, assistance, or encouragement to the rebellion, and whose taxable property on the 29th day of May, 1865, exceeded in value the sum of twenty thousand dollars.

The other exceptions are so plain as not to require explanation.

No certificate will be granted by the justices to any person who is included in any of the excluded classes, unless on exhibition by the party of his pardon for his offence from the President.

The justices appointed to administer the amnesty oath and to furnish certificates of the same, which shall be evidence of loyalty, are especially instructed to be vigilant and faithful. While it will not be their duty to attempt to pry into the hearts and consciences of men, they will, nevertheless, admonish those who may apply to take the oath, that it must be taken and subscribed to in good faith, with an honest intention on their part to keep it, without secret purpose or mental reservation upon any occasion or at any time to commit any act in violation of said oath; and they will warn them that if the oath is not thus taken and kept, the pardon offered them

by the President will be void, and they will remain subject to trial under the law for perjury and treason.

The justices, clerks, and sheriffs, whose duty it is to provide for administering the oath and to conduct the elections, are enjoined to use every practicable means to enable every citizen to take the oath who may desire and be entitled to do so. And the inspectors are enjoined to inspect and examine fairly and truly, to decide in every case in accordance with the law and with the instructions they have received from this office, and to make prompt and correct returns of the number of votes and for whom cast at their respective precincts.

Done at our city of Raleigh, the 8th day of August, 1865, and in the year of the independence of the United States the eighty-ninth.

WILLIAM W. HOLDEN, Provisional Governor.

The delay of the Governor in issuing this proclamation and fixing the period for the election, was in order to afford time to the people to take the amnesty oath, to enrol their names and obtain the certificates required. In the discharge of his duties he was sustained by Maj.-Gen. Schofield, who issued general orders requiring all officers and men to give a cordial support to the Governor and the persons appointed to office by him. At the same time the civil officers were authorized to call upon the nearest military commanders for necessary aid in the execution of their legal duties. The original proclamation of President Johnson was well received by the people of the State. They were divided into three classes: those who were Unionists, in opposition to the Confederacy; those who were Conservatives, under the Confederacy; and the Secessionists. The latter were destitute of all political power, and their influence was in a great measure destroyed by the moderation of the President's proclamation and the abstinence of all interference with the claim of suffrage for the negroes.

On the 12th of September the election for delegates to the State Convention was held, and that body assembled at Raleigh on October 2d, and organized by the election of Edwin G. Reade, an ex-member of the Thirty-fifth Congress, as President. All the counties of the State except three were found to be fully represented, and all the members present took the oath to support the Constitution of the United States. The President, on taking his seat, spoke as follows:

Gentlemen of the Convention: As the representatives of the people of North Carolina, we are assembled at a time of great perplexity to reorganize the government, which has been disturbed by a protracted and disastrous war. It is gratifying to know that a virtuous and intelligent people have chosen a body of men distinguished for abilities, of much experience, and of exalted patriotism, fully equal to the grave matters which are intrusted to them. As the interests of our constituents are the same, it is to be hoped that there will be little conflict of opinions among us, and that frank speech and courteous manners will distinguish our intercourse, so that he who has been called to preside over our deliberations will find but little inconvenience from his lack of experience, and will be enabled to use the position with which he has been honored, as he earnestly desires to do, for its legitimate objects only. Fellow-citizens, we are going

home. Let painful reflections upon our late separation and pleasant memories of our early union quicken our footsteps toward the old mansion, that we may grasp hard again the hand of friendship which stands at the door, and, sheltered by the old homestead which was built upon a rock and has weathered the storm, enjoy together the long, bright future which awaits us. With the guidance of Infinite Wisdom and the care of a merciful Providence, which I earnestly invoke for the Convention and for each individual member, I invite you to the calm consideration and wise solution of the important questions which are to result in the peace, prosperity, and happiness of ourselves, and in the prosperity, strength, and grandeur of our nation.

The Provisional Governor, in a brief message to the Convention, declared their duties to be too plain to require any suggestions from him, and said:

North Carolina attempted, in May, 1861, to separate herself from the Federal Union. The attempt involved her, with other slaveholding States, in a protracted and disastrous war, the result of which was a vast expenditure of blood and treasure on her part, and the practical abolition of domestic slavery. She entered into the rebellion a slaveholding State, and she emerged from it a non-slaveholding State. In other respects, so far as her existence as a State and her rights as a State are concerned, she has undergone no change. The President of the United States wisely determined that her existence as a State should not be extinguished, but that, under that clause of the Federal Constitution which "guarantees to every State in the Union a republican form of government," her people, in convention assembled, might so alter and amend their constitution and adopt such measures as would restore the State to her constitutional relations to the Federal Government, and thus secure once more to the people thereof the immeasurable benefits and blessings of the Union. Allow me to congratulate you, gentlemen, upon the favorable circumstances which surround you, while engaged in this great work of restoring the State to her former and natural position.

It was resolved by the Convention that a committee of five be appointed to revise the Constitution of the State; that a committee of eleven be appointed to report what action was necessary in regard to the secession ordinance of 20th May, 1861; that a committee of eleven be appointed to report an ordinance for the abolition of slavery; that a committee of two from each Congressional district, as they existed, be appointed to divide the State into seven Congressional districts; that a committee of eleven be appointed to report what acts of the Convention, Legislature, and the courts, since May 20, 1861, shall be declared to be in force; that a committee of eleven be appointed to report what steps were necessary to obtain a general amnesty for participation in the late war.

The committees were accordingly appointed, and on the 4th the Committee on Secession reported an ordinance which, after some debate, was adopted in the following form:

Be it ordained by the delegates of the people of North Carolina, in Convention assembled, and it is hereby declared and ordained, That the ordinance of the Convention of the State of North Carolina, ratified on the 21st day of November, 1789, which adopted and ratified the Constitution of the United States,

and also all acts and parts of acts of the General Assembly ratifying and adopting amendments to the said Constitution, are now, and at all times since the adoption and ratification thereof have been, in full force and effect, notwithstanding the supposed ordinance of the 20th of May, 1861, declaring the same to be repealed, rescinded, and abrogated; and the said supposed ordinance is now, and at all times hath been, null and void.

The vote of the Convention was unanimous on this ordinance.

On the 5th the Committee on the Abolition of Slavery reported the following ordinance:

Be it declared and ordained by the delegates of the people of the State of North Carolina, in Convention assembled, and it is hereby ordained, That slavery and involuntary servitude otherwise than for crimes whereof the parties shall have been duly convicted, shall be, and is hereby, forever prohibited within the State.

It was passed on the subsequent day by a unanimous vote of the Convention.

An election for members of Congress, Governor, and State Legislature, was ordered to be held on the second Thursday in November. The ordinance provided that no one should be eligible to office or qualified to vote who, being free in all respects, had not, before May 27th, taken and subscribed the oath of amnesty prescribed in the proclamation of President Lincoln with the purpose to suppress the insurrection, and restore the authority of the United States, and thenceforward had observed the same, or who had taken the oath prescribed in President Johnson's proclamation of May 29, 1865, or who was excepted from the amnesty.

An ordinance was also adopted dividing the State into seven Congressional districts, with a population as follows: 1st district, 118,000; 2d, 125,000; 3d, 119,000; 4th, 128,000; 5th, 127,000; 6th, 124,000; 7th, 126,000.

An ordinance was presented in the Convention, which provided for repealing or reducing the State debt to its gold value, and paying that which existed before the war, and that which had been contracted during the war. The question created much discussion, but the action of the Convention was finally determined by the following despatch from President Johnson:

WASHINGTON CITY, October 18, 1865.

W. W. Holden, Provisional Governor:

Every dollar of the State debt created to aid the rebellion against the United States should be repudiated, finally and forever. The great mass of the people should not be taxed to pay a debt to aid in carrying on a rebellion which they, in fact, if left to themselves, were opposed to. Let those who have given their means for the obligations of the State look to that power they tried to establish in violation of law, constitution, and will of the people. They must meet their fate. It is their misfortune, and cannot be recognized by the people of any State professing themselves loyal to the Government of the United States and in the Union.

I repeat, that the loyal people of North Carolina should be exonerated from the payment of every dollar of indebtedness created to aid in carrying on the rebellion. I trust and hope that the people of North Carolina will wash their hands of every thing that partakes in the slightest degree of the rebellion, which has been so recently crushed by the strong

arm of the Government, in carrying out the obligations imposed by the Constitution of the Union.

ANDREW JOHNSON,
President of the United States.

The payment of the debt contracted during the war was not only repudiated, but an ordinance was adopted prohibiting any future Legislature from assuming or paying any debt contracted directly or indirectly for the prosecution of the war against the United States.

It was also provided by the Convention that the ordinance declaring null and void the ordinance of secession passed May 20, 1861, and the ordinance prohibiting slavery in the State, should be submitted to the people for ratification or rejection, at the time when the election for State officers was held.

The subject of legislation relative to the freedmen, and the measures necessary to conform the laws of the State to the abolition of slavery, were referred to the Legislature, and a commission created to report a code to that body. The same reference was given to an address of a colored convention asking that equal rights should be granted to them.

An ordinance was also passed directing the sheriffs and boards of magistrates to enroll and organize as many military companies in their respective districts as might be necessary to preserve law and order therein, and to act as an armed police until the regular organization of the State militia. The following extract from the debate on this ordinance explains the social position of the people at this time:

Mr. Ferebee, in advocating the bill, said that in his county the white citizens had all been deprived of arms, while the negroes were almost all of them armed by some means or another. It was a fact that nearly every negro was supplied with arms, and there was a very general feeling of insecurity on the part of the whites. There had been rumors of anticipated trouble in some of the counties at the commencement of next year. He did not know how well grounded the fears might be, but there certainly was much apprehension among the white citizens, especially among the female portion, of coming danger.

Gen. Dockery confirmed the statement made by Col. Ferebee, and stated that in his county the white residents had been disarmed, and were at present almost destitute of means to protect themselves against robbery and outrage. He had consulted with the General in command of this department, and found that he had no objection to the raising of such a police force as was contemplated by the bill. He had stated that no force taking the shape of an army could be allowed to be raised except under his command, as there could be but one head to the military in the State. But he did not object to the establishment of an armed police.

Mr. Barrow thought that the Convention was overlooking the facts of their present situation. They were still under martial law, and he did not see what authority any person would have to raise the contemplated armed force, unless they do it under the authority and with the cooperation of the officer in command of the district. In his own county no danger was apprehended, and a police was in existence, under the charge of a Federal officer. He was unwilling to approve of any act that would seem to come in conflict with the Federal authorities.

Gen. Dockery directed the recollection of the Convention to the action of Gov. Sharkey in Mississippi:

in reestablishing the militia of that State, and to the fact that the President of the United States had approved and confirmed such action. He believed he would pursue the same course in relation to North Carolina should it become necessary to do so.

Judge Howard explained that the bill only provided for the raising of the contemplated police in counties where it was deemed necessary for the preservation of law and order, and that in case of any serious outbreak, it gave the command of the force to the United States officer. If Gen. Ruger abides by the opinions expressed by him to the committee, there was nothing in the ordinance which could come in conflict with his opinions or wishes.

Col. Ferebee read an extract from President Johnson's proclamation in relation to the Mississippi militia, wherein he says the people must be trusted with their own government, and if so trusted, he believed they would prove deserving of the confidence reposed in them.

A number of other ordinances of less general importance were adopted, when the Convention adjourned, to assemble again on the fourth Thursday in May, 1866.

After adjournment, the President and other members proceeded to Washington, on behalf of the Convention, to present their more important measures to President Johnson. On November 10th they appeared before the President, when Mr. Reade stated, among other things, that the first act of the Convention was to declare her uninterrupted connection with the Union, and that the ordinance of May, 1861, by which she was attempted to be severed, was null and void. This was done by a vote very nearly approaching unanimity, and thus the first issue in the late war was yielded. The next thing done was to prohibit slavery, and this was by a unanimous vote; and a committee of able lawyers was provided to prepare wholesome laws for the consideration of the Legislature; and thus the second issue in the late war was yielded. The Convention having yielded what was involved in the war, and being of the opinion that the State was, and always had been, in the Union, and that her relations had only been disturbed and not destroyed, respectfully asks the President to declare, on the part of the authorities of the United States, as the State has done on her part, that her governmental relations have been reconciled. The Convention instructed the Legislature to provide for the payment of the debts of the State; declared all debts contracted in aid of the rebellion to be illegal, and prohibited the payment of the same. Mr. Reade continued:

We have heard that, notwithstanding the State might yield, and as she understands it has yielded, all that was involved in the war, and notwithstanding our people were submissive, well disposed, and anxious for fraternal relations, her delegation in Congress would not be admitted unless they had qualifications not prescribed by the Constitution; that they would be required to take an oath which few men in the State can take, affirming not merely that they are right now, but that they have never been wrong. The exclusion of her delegation upon any such test as is suggested would be felt by our people universally, as such a deep wrong that it would put their strong devotion to the Government, and

their lively hope of perfect reconciliation, to the severest trial. They can understand the bitterness of strife and the aversion to treason; but they will be confounded at the repulsion of offered friendship and avowed loyalty. The Convention, therefore, respectfully asks Congress to repeal the test oath. I have thought it respectful, both to you and to Congress, that this request should pass through your hands, with the hope that your Excellency's magnanimity would add to it some reflection which would avail that body.

After further remarks by Mr. Reade, in which he spoke of the confidence reposed in the President by North Carolina, the latter responded as follows:

Hon. Mr. Reade:—I receive from you, with pleasure, a copy of the proceedings of the Convention of North Carolina. I reciprocate cordially the conciliatory spirit in which you have addressed me. The Convention of North Carolina has done much and well toward restoring that State to her proper national relations; but something yet remains to be done to render that restoration immediately practicable. An acceptance of her Congressional amendment abolishing slavery throughout the United States, by the Legislature of the State of North Carolina, is, in my judgment, practically important to the successful restoration which is so much desired by all. Without answering specifically the questions you have proposed to me, it will be sufficient to say that my action must depend upon events, and that Mr. Holden will be again instructed to continue the exercise of his functions as Provisional Governor until he shall have been expressly relieved by orders to that effect.

The ordinances referred to the people were ratified on the day of election, and Jonathan Worth was chosen Governor, by a majority of 6,730, over W. W. Holden, the Provisional Governor. The total vote at the election was 58,554. In 1860 the total vote for President was 96,230.

On November 27th the President sent the following despatch to the Provisional Governor:

WASHINGTON, D. C., November 27, 1865.
To the Hon. W. W. Holden, Provisional Governor of North Carolina:

Accept my thanks for the noble and efficient manner in which you have discharged your duty as Provisional Governor. You will be sustained by the Government. The results of the recent elections in North Carolina have greatly damaged the prospects of the State in the restoration of its government. Should action and the spirit of the Legislature be in the same direction, it will greatly increase the mischief already done, and might prove fatal. It is hoped the action and spirit manifested by the Legislature will be so directed as to repair their increase of difficulties, under which the State has already placed itself.

ANDREW JOHNSON,
President of the United States.

Meanwhile the Legislature which had been elected held a brief session, during which it ratified, with but six dissenting votes, the amendment to the Federal Constitution abolishing slavery, elected three judges of the Supreme Court, and John Pool and William A. Graham United States Senators, and adopted other measures suggested by the Provisional Governor. On December 15th the newly elected Governor was duly inaugurated. In his address he refrained from subjects upon which the Provisional Governor only was authorized to act, and said:

I regard it, however, as a fit occasion for me to declare that the people of North Carolina, impoverished by the late desolating war, and discouraged by the uncertainties of the future, ardently desire a restoration of the Union and of civil government. The animosities which produced and grew out of the war on our part are rapidly passing away. All good and wise men feel that the common good of our whole country required the suppression of the sectional criminations and recriminations from which have sprung our national calamities. I am sure that the great body of our people desire that national amity shall be restored. Such, I am assured and believe, is the general feeling among those we lately called our foes. Such is peculiarly the case among the brave men who perilled their lives in the respective armies lately engaged in mortal combat. The brave are always generous.

Admonished by the recent past, surely the virtue of this great nation will not again surrender itself to the guidance of turbulent sectional leaders.

I am sure all our people, if now admitted into full communion with the United States, upon the terms prescribed by the President (with all which terms we have fully complied), would perform all their constitutional obligations with as much fidelity as any people in the Union. Unfounded distrust will not beget kindness and confidence. We ought to be judged by our acts. To them I appeal for the verification of my assertion.

We honor the generous magnanimity and elevated statesmanship exhibited in the President's plan of reconstruction. It looks to the permanent good of the whole nation, and, in view of the appalling difficulties with which he was surrounded, is probably the wisest practicable plan which could be devised. We have promptly and almost unanimously complied with all its provisions by declaring our ordinance of secession null and void, by amending our Constitution abolishing slavery, repudiating our war debt, ratifying the amendment to the Constitution of the United States forever prohibiting slavery in the States, and by solemnly taking an oath renewing our allegiance to the United States. If all these acts are held insufficient to entitle us to confidence, we can scarcely hope to do anything which will be held satisfactory. I will vouch for North Carolina if not driven to despair by ungenerous distrust. She will grasp the hand of reconciliation, if offered, with generous, magnanimous confidence.

On December 23d Secretary Seward, by direction of President Johnson, addressed a letter to Provisional Governor Holden, of North Carolina, relieving him from his trust, and expressing the President's acknowledgment of the fidelity, the loyalty, and discretion which had marked his administration of affairs in that State. A copy of the letter was sent to the Governor elect of North Carolina, with the tender of the coöperation of the Government of the United States whenever it may be found necessary in effecting the early restoration and permanent prosperity and welfare of the State over which he has been called upon to preside. These official communications are similar, with the exception of names, to those addressed to the Governors elect and Provisional Governors of other Southern States with similar purpose.

On the same day, Provisional Governor Holden replied as follows:

RALEIGH, N. C., December 23, 1865.

To the Hon. W. H. Seward, Secretary of State.

SIR: Your despatch of this date, relieving me of my duty as Provisional Governor of North Carolina, has been received. It gives me pleasure to be

relieved of the responsibilities and labors of the office. I will at once transfer the great seal, papers, and property of the State, now in my possession, to the Hon. Jonathan Worth, the Governor elect. Be pleased to convey to the President my sincere acknowledgments for the honor he has done me and the confidence reposed in me in calling me to this position, with the expression of the hope that his plan for reconstructing the insurgent States to their natural and appropriate place in the Union may be crowned with entire success.

With the highest regard, your obedient servant,
W. W. HOLDEN.

On December 30th Governor Worth issued an address to the people of the State, congratulating them on the restoration of the State Government, and stated that an extra session of the Legislature would be soon convened and measures adopted which were necessary to the complete reorganization of the State. By a statement of the Treasurer, the debt of the State contracted before the war, and not repudiated by the Convention, was \$9,749,500, to which must be added the interest due and unpaid, in round numbers \$3,000,000, making in all \$12,749,500. The State owns stocks in railroad companies and bonds of railroads and other corporations, most of which were productive before the war, equal to \$9,673,289. He estimates the losses of the State by the war at \$250,000,000, of which \$200,000,000 was for slaves. The present value of real and personal property he estimates at \$250,000,000. In consideration of the want of a circulating medium, caused by the sudden destruction of the Confederate and State Treasury notes, he recommended that the bonds and coupons now due and to become due in the present year be funded, and that no appropriation be made to pay interest at present. The resumption of the payment of interest at an early day was anticipated.

The freedmen of the State came under the charge of the Freedmen's Bureau, and during a part of the year considerable numbers were sustained by the Government. But the demand for labor secured employment to the great mass. At Newbern a colored Equal Rights League was formed, which issued an address at the close of the year, describing their objects as follows:

The object of the League is to secure by political and moral means, as far as may be, the repeal of all laws and parts of laws, State and national, that make discriminations on account of color. This is our object in all its length and breadth. We therefore aspire to the condition and privileges of freemen. Is not this a natural aspiration? Is it not dictated by self-respect? We ask an opportunity to show that we are worthy to be free, and propose to attain the condition and privileges of freemen by becoming intelligent, by industry, by virtue, by piety. If the object is noble and one worthy of freemen, the means proposed for attaining it are moral and peaceful. We disclaim the remotest intention of enforcing the claim by violence. Does any one suggest insurrection, we frown upon him, denounce him. The address closes: We do pledge ourselves to maintain good order. Our arms and our lives, if necessary, are at the service of the Government to quell and crush insurrection. Having done this, we shall demand of the lawful authority protection for our property, schools, presses, and churches.

O

OBITUARIES, AMERICAN. 1864.—KING, DANIEL, M. D., omitted in *CYCLOPEDIA* of 1864. (See KING, DANIEL.)

KING, THOMAS STARR, omitted in *CYCLOPEDIA* of 1864. (See KING, T. S.)

KNIGHT, JONATHAN, M. D., omitted in *CYCLOPEDIA* of 1864. (See KNIGHT, J.)

Jan. 1, 1865.—MARLATT, REV. A. G., a clergyman of the Methodist Episcopal Church, and President of Irving Female College, Mechanicsburg, Pennsylvania, died at the college.

Jan. 1.—MCDONALD, ANGUS W., a colonel in the Confederate service, and for many years brigadier-general of Virginia militia, died in Richmond, Va. He was a native of New York, and was born in 1802. His father was a major in the United States Army, and died during the war of 1812, at Buffalo, N. Y. The son was appointed a cadet at West Point, and graduated in 1817, and on his graduation was appointed third lieutenant in the artillery corps. He was promoted to a second lieutenant in February, 1818, and in April of the same year to a first lieutenant. He resigned in January, 1819, and commenced the practice of law at Romney, Va. He had been for many years a brigadier-general of the militia of Virginia, and on the breaking out of the war received a commission as colonel of volunteers in the Confederate army. In June, 1864, he was captured by Gen. Hunter, near Lexington, Va., and was exchanged on the 14th of November.

Jan. 2.—MERSELES, HON. JACOB M., ex-State Senator of New Jersey, died of paralysis at South Bergen, N. J. He was a member of the legislature for three years, sheriff of Hudson County for three terms, and was the pioneer in establishing various stage and city railroad lines in that section.

Jan. 4.—WRIGHT, REV. AUSTIN H., M. D., Missionary of the American Board, died at Ooroomiah, Persia.

Jan. 5.—MILNOR, MRS. ELEANOR, widow of Rev. James Milnor, D. D., died at Brooklyn, L. I., aged 86 years. She was an authoress, and well known for her active interest in the New York City Orphan Asylums and other local benevolent institutions.

Jan. 10.—WELD, LEWIS LEDYARD, Lieut.-Col. of the 41st U. S. Colored troops, died near Richmond, Va., aged 32 years. He was a native of Hartford, Conn., graduated at Yale College in 1854, studied law, and in 1857 was admitted to the bar. In 1858 he commenced the practice of his profession in Leavenworth, Kansas, and subsequently removed to Denver City. Upon the organization of the Territory of Colorado, he was made Secretary, and was for some time the Acting Governor, exerting a powerful influence for the maintenance of the national authority. In 1862 he resigned his

office, with a view to engage in the military service, and while waiting a suitable opportunity edited the Denver "Commonwealth." He served in Maryland, South Carolina, Florida, and in the Army of the James, before Richmond, where he died from an acute disease brought on by exposure.

Jan. 12.—EWEN, DANIEL, City Surveyor of New York for forty-eight years, died at his residence in that city, aged 69 years.

Jan. 13.—BARTLETT, WILLIAM PITT GREENWOOD, an eminent mathematician connected with the Nautical Almanac Office in Cambridge, Mass., died in that place aged 27 years. He graduated at Harvard College in the class of 1858, after attaining a high standard of scholarship, and in 1859 was appointed one of the proctors of the college, which office he held until 1862. In the summer of 1860 he visited England and France, to attend the anniversary meetings of the great European Scientific Societies. He contributed largely to the "Mathematical Monthly," and was elected a member of the American Cabinet of Science.

Jan. 14.—FOWLER, COL. SAMUEL, a prominent member of the New Jersey Legislature, died at Trenton, N. J., of pneumonia.

Jan. 14.—KEMPSTALL, HON. THOMAS, ex-member of Congress from New York, died at Rochester. He was a native of England, and a pioneer settler of Rochester, representing his State in Congress from 1839 to 1841.

Jan. 15.—HARPER, HON. JOSEPH M., ex-member of Congress from New Hampshire, died at Canterbury in the 78th year of his age. He was a native of Limerick, Me., but studied medicine and commenced practice in Canterbury in 1819. In the war of 1812 Dr. Harper served for some time as a surgeon in the army. In 1826 and '27 he was a member of the New Hampshire House of Representatives and a member of the State Senate in 1829 and '30. The last year he was President of the upper branch of the Legislature, and by the resignation of Matthew Harvey, became acting Governor of New Hampshire from May till June in 1831. Soon afterwards Dr. Harper was four years a Representative in Congress. In 1843 he was elected President of the Mechanics' Bank in Concord, and filled the position till 1856.

Jan. 16.—BELL, COL. LEWIS, of the 4th New Hampshire volunteers, acting brigadier-general, died of wounds received at Fort Fisher the preceding day. He was born in Chester, N. H., in 1836, and was the youngest son of the late Governor Samuel Bell. He graduated at Brown University in 1853, and commenced the practice of law at Farmington, N. H. In 1860 he was appointed solicitor for Stafford County. In April, 1861, he was offered the captaincy of

a company of the 1st New Hampshire regiment of three months' men, and served during the campaign. Returning home he was appointed lieutenant-colonel of the 4th New Hampshire volunteers, and upon the resignation of Col. Whipple, in March, 1862, was made commander of the regiment. Col. Bell was for some time a member of Gen. T. W. Sherman's staff, and was inspector general of the Department of the South from November, 1861, to March, 1862. Previously to the Wilmington expedition he had been several times temporarily a brigade commander, and had served bravely at Pocotaglio and at the siege of Fort Wagner. At the attack on Fort Fisher he commanded a brigade of Gen. Ames' division, and was mortally wounded while leading his men in an assault upon one of the traverses of that work. He was a brother of Chief Justice Bell, of Manchester, N. H., of the late Dr. Luther V. Bell, of the McLean Lunatic Asylum, and of Dr. John Bell, U. S. A.

Jan. 17.—WHEATON, HON. LABAN, died at his residence in Norton, Mass., aged 68 years. He graduated at Brown University in 1817, and was the founder of the Wheaton Female Seminary.

Jan. 18.—LATIMER, JOHN R., a prominent citizen of Delaware, died at Wilmington. He was for nearly twenty years a successful merchant in Canton, China, and since his retirement from active mercantile life, has been prominent in unobtrusive acts of benevolence.

Jan. 20.—BUELL, WILLIAM, a canal contractor, died at his residence in Gates, Monroe Co., N. Y., aged 74 years. He was born in Canada, and removed to Rochester, N. Y., penniless, but with a determination to work, his first job being to saw a cord of wood in payment for his newspaper. He commenced business as a sub-contractor on the Erie Canal, but soon contracted largely upon his own account. Among his heaviest undertakings were the Lockport Locks and the Rochester Aqueduct.

Jan. 21.—WHELOCK, Brevet Brig.-General CHARLES, Colonel 97th New York volunteers, died at Washington, D. C., from disease contracted in the service. He was a native and resident of Oneida County, N. Y., where he was engaged at the beginning of the war in a large and prosperous business, which he abandoned immediately after the fall of Fort Sumter, and devoted his whole time to raising men for the army, pledging himself to provide for their families. In the summer of 1861 he said to a friend: "I am worth, I think, in the neighborhood of \$10,000. Half of this I have already given or pledged to aid the war, and if my country wants the other half it can have it, and myself into the bargain." Becoming impatient with the slow progress of the war, he soon after commenced raising a regiment on his own hook, fed and housed several hundred men at his personal expense for many months, and after a series of embarrassments and disappointments that would have disheartened almost

any other man, completed its organization and marched it to the field. Entirely without military experience, and with but a very limited general education, he became one of the best volunteer officers in the service, and so signally distinguished himself that he was brevetted brigadier-general for bravery and good soldier-ship. He had seen much service, was engaged in many of the bloodiest battles in Virginia, was taken prisoner, if we mistake not, at the second battle of Bull Run, and tasted for many months the sweets of prison life at Richmond, but was subsequently exchanged, when he rejoined his old regiment and did more gallant service in behalf of the old flag.

Jan. 23.—BACON, DAVID FRANCIS, M. D., an author and son of the Rev. David Bacon, Missionary pioneer in Ohio and Michigan, died in New York, aged 51 years. He was born in Prospect, Conn., graduated at Yale College in the class of 1831, and at the Medical College in 1836, and shortly afterwards was sent out by the American Colonization Society as principal colonial physician in Liberia. After his return from Africa, he published three parts of a work entitled "Wanderings on the Seas and Shores of Africa," in which his observations on the west coast of that country are very minutely recorded (N. Y., 1843. 8vo). During most of his life he resided in New York, and at one time he was actively engaged in political affairs, as an earnest advocate of the election of Henry Clay to the Presidency. He was a frequent contributor to the periodicals of the day. In 1835 he published a work, evincing much research, entitled "Lives of the Apostles."

Jan. 27.—NOBLE, SAMUEL, the oldest man in Boston, died in that city, aged 99 years. He was a native of Durham, New Hampshire.

Jan. 28.—JACKSON, DR. ROBERT MONTGOMERY SMITH, Medical Inspector of the 23d army corps, and acting medical director of the Department of the Ohio, died at Chattanooga, Tenn. He was a native of Pennsylvania, and a resident of Cresson, Pa., at the commencement of the war. He was widely known throughout Pennsylvania, being distinguished for great force of character, decided opinion, and some eccentricity withal. He was a man of strong and generous feelings, and intense in his patriotism. As a scientific man he had few superiors in Pennsylvania. He was thoroughly versed in all departments of natural science, and as a geologist and botanist was specially distinguished. He was a member of the Pennsylvania Geological Commission, of which Professor Rogers was chief, and very much of the results of that survey are due to the skill and industry of Dr. Jackson. He was an enthusiastic mountaineer, and believed that in the pure air of the Alleghanies the enervated and listless inhabitants of cities and the lowlands would find health, strength, and energy. He published, some years ago, a work called "The Mountain," which is distinguished by a love of nature, and by a scientific handling of the topics, which,

without being too technical, is of a character to elevate the human mind and teach the reader to look "from nature up to nature's God." Some of Dr. Jackson's views are bold and startling, but his fine command of language, his chaste and vigorous style, places the book among the most remarkable of its kind ever written. Dr. Jackson was a member of the American Philosophical Society, Academy of Natural Sciences, and other learned institutions.

Jan. 29.—SMITH, RESCARRICK M., State Treasurer of New Jersey, died at Hightstown, N. J.

Jan. 29.—FUNK, ISAAC, the great Illinois farmer, died at Bloomington, Illinois, aged 67 years. He went to that State forty years ago in poverty, but by industry and perseverance accumulated a large fortune, owning 40,000 acres of the best land in Illinois, and at the time of his death paying a tax upon nearly \$2,000,000. He was a member of the State Senate, and a speech delivered by him before that body two years since was widely circulated.

Jan. 29.—FUNK, HENRY B., a well-known philanthropist, died in Cincinnati, Ohio.

Feb. 1.—WEST, ROBERT ARTHUR, an editor, and head of the Bureau of Military Justice, died at Washington, D. C. He was a native of England, having emigrated to this country many years ago. His connection with the press commenced with an engagement on "The Commercial Advertiser," New York, during the editorship of the late William M. Stone. He afterwards became assistant editor, and subsequently editor, of that journal, holding the latter position until June, 1863, when he removed to Washington and took charge of "The Chronicle" of that city. About a year since he was appointed head of the Bureau of Military Justice in the office of the Judge-Advocate General. As an editor Mr. West was invariably well-informed, truthful, and courteous, always avoiding personality, and possessing an agreeable and facile pen. In politics he was a Whig and afterwards a Republican, and a thoroughly loyal man, an earnest supporter of the Government, and hater of slavery.

Feb. 3.—SWAIM, SAMUEL BUDD, D. D., an American Baptist clergyman, died in Boston, Mass., aged 55 years. He was a native of New Jersey, son of the Hon. Thomas Swaim, whose death a few years since was honorably mentioned in Baptist journals. When quite young he was sent to the Preparatory School of Columbian College, at Washington, D. C., where, in the spring of 1827, he became a subject of divine grace, and consecrated himself to the work of the Christian ministry. There he became endeared to all who knew him by the amiableness of his disposition and the geniality of his piety. Owing to the suspension of studies in that college, he entered Brown University, where he graduated in 1830, and subsequently went through the full course at Newton Theological Institution, graduating in 1833. Both at Providence and at Newton he was distin-

guished for correct deportment and superior scholarship, and few gave equal promise of efficiency in the sacred vocation.

After finishing his studies, his health was for some time so much impaired as to interfere with his plans of ministerial service. Yet he preached in various places, and had he felt himself equal to the demands of a pastorate upon his physical strength, he could have had a choice of eligible positions. With the hope of benefit from a change of climate, he resided and preached for a time in Ohio. With health partially restored, he returned to New England, and accepted the pastoral care of the First Baptist Church in Worcester. His labors in that city, continued through many years, were eminently blessed, and the prosperity of the denomination there is greatly owing to his ability and fidelity. At length his health gave way to such an extent as to induce him to retire from the field, and accept the smaller charge of the church at West Cambridge. Subsequently he served for a time the American Baptist Home Mission Society as District Secretary for New England, and during the past year he has preached at Lexington, Mass.

Feb. 5.—THOMAS, SIDNEY A., died at New Haven, Conn., aged 60 years. He had been a teacher of youth for many years, and was the author of a system of book-keeping, and other educational works. He was also one of the first teachers in New England to introduce the military dress and drill into schools. At the opening of the war, numbers of his pupils were employed by the State and Government in drilling the companies and regiments of volunteers before they left for the seat of war.

Feb. 6.—BARTLETT, WASHINGTON A., formerly an officer in the U. S. Navy, died in Brooklyn, L. I., aged 49 years. He was father of the young lady whose marriage a few years ago to to Señor Oveido of Cuba, was known as the "Diamond Wedding." In 1861 he was actively engaged in fitting out a naval brigade, but subsequently left the service.

Feb. 6.—PEGRAM, JOHN, a major-general in the Confederate service, mortally wounded in the battle of Hatcher's Run, and died in Petersburg the following day. He was a son of the late Hon. John Pegram, M. C. from Virginia in 1818 and 1819, but was born in South Carolina, to which State his father had removed. He graduated at West Point in 1855, and at the opening of the war was first lieutenant of 2d dragoons, but resigned on the secession of his State, and was soon after appointed to the command of a Confederate volunteer regiment, and in 1862 promoted to be brigadier-general. He was in most of the severe battles of the Army of Virginia, and in 1864 was made major-general. His division had distinguished itself through the campaign of 1864-'65 for its persistent and desperate fighting, and its commander, Gen. John Pegram, was regarded by his superiors in command as one of the ablest division commanders in the army.

Feb. 6.—WINDER, JOHN H., a brigadier-general in the Confederate service, died at Florence, S. C., of apoplexy. He was a native of Maryland, the son of Gen. William H. Winder, of Baltimore, an officer in the war of 1812, and graduated at West Point about 1825. He served in the army with considerable distinction, took part in the Mexican war, and at the commencement of the rebellion was major and brevet lieutenant-colonel of the 3d artillery. He resigned, and entered the Confederate service, where he was soon made a brigadier-general, but was not employed in active service to any great extent. He commanded the post of Richmond, and had charge of the Union prisoners in Libby Prison and Belle Isle for some time, and was finally sent to Andersonville, Ga., in a similar capacity. When Sherman's expedition passed through Georgia, he left Andersonville and repaired first to Charleston, and afterwards to Florence, where he died.

Feb. 8.—TREMAINE, COL. LYMAN, of the 10th New York cavalry, died near Petersburg of wounds received at the battle of Hatcher's Run, February 6th. He was the son of the Hon. Lyman Tremaine of Albany, and was born in Greene County, N. Y., in June, 1843; entered Hobart College in the fall of 1860, and remained till the summer of 1862, when, unable longer to resist the calls of patriotism, he entered the army as adjutant of the 7th New York heavy artillery. He served with distinction in the defenses of Washington, and subsequently as assistant adjutant-general, with the rank of captain, on the staff of Gen. Davies of the cavalry in Kilpatrick's division of the Potomac army. In this position he distinguished himself by his bravery and the prompt and intelligent discharge of his duties. In December, 1864, he was commissioned lieutenant-colonel of the 10th New York cavalry, in the command of which regiment he was wounded at Hatcher's Run in the battle of February 6th, and died on the following Wednesday. Col. Tremaine was distinguished for an unusual degree of generosity, firmness, and courage, great ability and entire devotion to the cause of his country.

Feb. 9.—HOLMES, DR. EZEKIEL, editor of the "Maine Farmer," died at Winthrop, Me., aged 64 years. He graduated at Brown University in the class of 1821.

Feb. 11.—STEVENS, BENJAMIN, a prominent citizen of Boston, died at his residence aged 75 years. He was sergeant-at-arms from 1835 to 1859, consecutively, and a member of the lower house of the Legislature, both before and after his incumbency of that office. He was also an active and zealous freemason, and a constant attendant upon the meetings and festivals of that order.

Feb. 12.—DEAN, COL. of the 58th Colored troops, was killed in Arkansas. He was on an expedition from Helena across the country to St. Francis River.

Feb. 12.—RODE, CHARLES R., author, editor, and publisher, died in New York city, aged

about 40 years. His father was a Prussian and his mother a native of Holland. For some years he was publisher of the City Directory. He was also conductor of "The Criterion," a short-lived literary journal, and subsequently took charge of "The Publishers' Circular." He was actively engaged on Appleton's "American Cyclopædia," and contributed to Harper's and other magazines. A few years since a number of his friends among the publishers presented him with the means of travelling in Europe for the benefit of his health.

Feb. 12.—SCHUYLER, PHILIP, grandson of Maj.-Gen. P. Schuyler, died at Pelham, Westchester County, N. Y., aged 77 years.

Feb. 13.—DANFORTH, REV. A. H., a Baptist clergyman and missionary, died at Milestown, Pa., aged 47 years. Immediately upon completing his educational course at Hamilton, in 1847, he went as missionary to Assam, India. There he labored for eleven years, when ill health compelled his return. For a time he indulged the hope of returning to the chosen field of his toil, but finding that the Providence of God indicated otherwise, he settled with the Baptist church at Milestown. During his pastorate of three years the church was greatly prospered, and the pastor enjoyed the highest respect and warmest regards of the entire community. Early last spring he went to the Army of the Potomac, under the auspices of the Christian Commission. His labors among the soldiers resulted in the conversion of several, but he labored to the point of exhaustion. He was prostrated by an attack of typhoid fever, from which he never fully recovered. Mr. Danforth was an able preacher, and showed in his intellectual efforts an acuteness of discrimination, a felicity of analysis, and a comprehensiveness of thought, which proved him to be endowed with ability of a high order.

Feb. 13.—HICKS, THOMAS H., U. S. Senator, and former Governor of Maryland, died at Washington, in his 76th year. He was born in Dorchester County, Maryland; frequently served in the Legislature of that State; was Governor from 1858 to 1862; and was elected a Senator in Congress upon the death of James A. Pearce, taking his seat during the third session of the Thirty-seventh Congress, and was reelected for the term ending in 1867, serving on the Committee upon Naval Affairs, and that on Claims. His firmness and adroit management were among the most efficient means of saving Maryland to the Union, when the secession mania began to sweep over the South. He refused to call a special meeting of the Legislature to consider an ordinance of secession, and by this most judicious act saved his State from the headlong measures that in the heat of the moment would probably have been taken. This gave time for second thought, and the Union element rallied. When the attack on the Massachusetts Sixth regiment was made in Baltimore, Governor Hicks issued a proclamation declaring that all his authority would

be exercised in favor of the Government. Before the Legislature assembled Baltimore was strongly garrisoned, and the State saved. In his public career he ever proved himself strong and steadfast against political pressure. He died suddenly of paralysis.

Feb. 16.—**DAVIES, REV. THOMAS FREDERICK**, a Congregational clergyman and editor, died in Westport, Conn., aged 72 years. He was fitted for college by Rev. Dr. Ely of Huntington, graduated at Yale College in 1813, and for a year or two subsequently was engaged in teaching at New Haven, at the same time pursuing his theological studies under the direction of Dr. Dwight. He was licensed to preach in May, 1816, and in March, 1817, was ordained and installed as pastor of the Congregational church of Huntington, succeeding his former teacher. Dr. Ely being compelled by ill health to resign his pastoral office, Mr. Davies removed to New Haven in 1819, and became the editor of the "Christian Spectator." After having been thus engaged for several years, and subsequently connected with the "Religious Intelligencer," he accepted a call from the church in Green Farms, now Westport, where he remained from 1829 to 1839. During the next ten years he resided in New Haven, and the residue of his life he divided between his native place, New Haven, and Westport, Conn.

Feb. 17.—**BOND, GEORGE PHILLIPS**, Professor of Astronomy in Harvard College, died at Cambridge, Mass., aged 39 years. He was the son of Prof. William Cranch Bond, Director of the Observatory of Harvard University, and was born in Dorchester, Mass. He graduated at Harvard in 1845, and in February, 1859, was appointed Phillips Prof. of Astronomy and Director of the Observatory of Harvard College. He was a member of the American Academy of Arts and Sciences, and stood in the highest rank of American astronomers. Among other papers he wrote one upon the construction of the rings of Saturn, in which their fluid nature was first established; another on the orbits of Hyperion, having participated in the discovery of Hyperion; others on the Nebula of Andromeda, on various comets, on stellar photography, &c. About a month previous to his death, the Royal Astronomical Society of London voted a gold medal to Mr. Bond for his great work on the Donati Comet.

Feb. 18.—**WALLACE, COL. JOSEPH**, died at Louisville, Ky. He was formerly a resident of Philadelphia, but for six years previous to his death had been connected with the editorial department of the "Louisville Journal."

Feb. 20.—**SHERMAN, WATTS**, an American banker, died in the Island of Madeira, whither he had gone for the restoration of his health, aged 53 years. He commenced his business career as a teller in the Ontario Bank at Canandaigua, New York. Subsequently he removed to Little Falls, Herkimer Co., where he became cashier of the Herkimer County Bank. He was then appointed cashier of the

Albany City Bank, and from thence removed to New York, where he established himself in the celebrated banking house now so widely known by the name of Duncan, Sherman & Co. Mr. Sherman was a man of the most rare qualifications for his position. His course was strictly governed by commercial integrity unswayed by any bias but the interests of his firm.

Feb. 22.—**CAMPBELL, Lieut.-Commander MARSHALL C.**, an officer of the U. S. naval service, and until a short time before his death instructor in seamanship and naval tactics in the Naval Academy, died in Baltimore, Md. He was born in Tennessee in 1834, but was admitted to the Naval Academy from Mississippi, where his parents then resided, in February, 1850. He was a young officer of fine attainments, and had spent nine years and seven months of the fifteen years he had been in the navy, afloat, his last cruise having closed in September, 1864. His assiduity in the performance of his duties had so far overtaken a somewhat feeble frame that he returned to Baltimore, now the residence of his widowed mother, only to die. Although from a seceding State, he was distinguished for his thorough attachment to the national cause.

Feb. 24.—**OGDEN, Hon. E. E. B. D.**, Justice of the Supreme Court of New Jersey, died at Elizabeth, N. J.

Feb. 25.—**FLEET, SAMUEL**, publisher and editor, died in New York city, aged 66 years. He was connected with one of the first agricultural journals published in New York, "The New York Farmer." He was afterwards connected with "The United States Farmer," and later still with "The American Artisan."

Feb.—**KELLOGG, Rev. R. O.**, formerly Professor in Lawrence University, Wisconsin, killed himself during an attack of insanity at the Insane Asylum, Madison, Wisconsin.

Feb.—**HINDMAN, THOMAS C.**, major-general in the Confederate army, was killed by Confederate soldiers in Texas.

March 1.—**WORDS, Hon. JONATHAN L.**, an eminent lawyer of Lockport, N. Y., died at his residence there.

March 5.—**ALSO, Hon. CHARLES RICHARD**, lawyer, and State Senator of Connecticut, died at Middletown, aged 62 years. He graduated at Yale College in 1821, studied law with Chancellor Kent and Daniel Lord, Esq., of New York, and commenced the practice of his profession, in Middletown. From 1843 to 1846 he was mayor of that city, and in 1855 he represented the 18th Senatorial District in the Connecticut Legislature. He was a member of the corporation of Yale College in 1855 and 1856.

March 10.—**WHITING, Major-Gen. WILLIAM H. C.**, an officer in the Confederate service, wounded at Fort Fisher, and taken prisoner, died at Governor's Island, N. Y., whither he had been removed. He was a native of New York, was born about 1825, and graduated at West Point in 1845, ranking very high in his class. He took part in the Mexican war, and

was promoted rapidly for an officer of engineers, having attained the rank of captain of engineers in 1861, when he went over to the Confederates, having resided for some years in Virginia. He was made a brigadier-general in 1862, and a major-general in 1863. In the autumn of 1864 he was put in command of Fort Fisher, and was in charge during both attacks.

March 11.—BRADBURY, EDWARD G., a well-known piano-forte manufacturer (of the firm W. B. & E. G. Bradbury), died in New York city, aged 15 years.

March 11.—STEINWAY, HENRY JR., piano-forte manufacturer, of the celebrated firm of Steinway & Sons, died in New York, aged 34 years.

March 14.—MILLINER, ALEXANDER, a Revolutionary pensioner, died at Adams Basin, N. Y., aged 105 years. He was a native of Quebec.

March 15.—WILSON, DR. THOMAS B., President of the Academy of Natural Sciences in Philadelphia, and an eminent ornithologist and naturalist, died at Newark, Delaware. He had for many years devoted himself to the promotion of zoological science, and his liberality and munificence in this direction were unbounded. The splendid collection of birds belonging to the Philadelphia Academy, which ranks as the third in importance in the world, was his gift, and the library of that institution was created mainly by his liberality.

March 16.—CRAIN, COL. WILLIAM C., a prominent Democratic politician, died in Herkimer, N. Y., aged 66 years. He was liberally educated, and studied medicine, but never entered upon the practice of his profession. He was a member of the State Legislature in 1832, 1845, and 1846, and during his last term was Speaker of the Assembly, which position he filled with dignity and ability. In 1840 he was elected sheriff of Herkimer County; was the Democratic candidate for the Senate in 1857, and also for Lieutenant-Governor in 1860. Was several times Presidential Elector upon the Democratic ticket, and frequently represented his party in State Conventions.

March 18.—CROSBY, WILLIAM B., a prominent merchant in New York city, died at his residence there, aged 80 years.

March 19.—JOHNSON, REV. EVAN M., an Episcopal clergyman, died at his residence in Brooklyn, L. I., aged 73 years. He was a native of Newport, Rhode Island, graduated at Rhode Island College, now Brown University, in 1805, and was ordained to the ministry in Trinity Church, Newport, by Right Rev. A. V. Griswold, July 8, 1813. Removed to New York city in 1814, and became Assistant Rector of Grace Church, which position he held for one year, when he took charge of St. James Church, Newtown, L. I., as rector. In the year 1824 he settled in Brooklyn, and built St. John's Church, now situated on the corner of Johnson and Washington Streets, two years thereafter. This thickly built portion of the city was then used as a farm, owned by Mr. Johnson himself. Here he preached the free gospel until 1847,

when he retired and hired a little place in Marshall Street, near the Jackson Ferry, for the purpose of continuing his services for the benefit of the poor for a short time. The building proving inconvenient for the purpose, he established St. Michael's Church in High Street, of which he remained rector up to the day of his death. During the years of Mr. Johnson's ministrations he united nearly 4,000 couples in marriage, and christened nearly 10,000 children. He was, at the time of his decease, the oldest settled Episcopal clergyman in the State of New York.

March 19.—MCLENAN, JOHN, a comic artist, died in Brooklyn, L. I., aged 35 years.

March 24.—BATES, REV. LEWIS, a pioneer Methodist clergyman, died at Taunton, Mass., aged 85 years. He was born in Cohasset, Mass., March 20, 1780, and was a descendant in the seventh generation of John Rogers the Smithfield martyr. His childhood was spent in part in Springfield, Vt. He joined the Methodist Episcopal Church in 1801, and commenced preaching in 1802, but did not receive deacon's orders until 1806, and in 1808 was ordained a minister at New London, Conn. His subsequent labors as a preacher were in connection with the New England and Providence Conferences. In 1850 he entered upon the superannuated relation, and located his family at Taunton, Mass., where he remained till his death. He had been for sixty-one years a minister, and forty-six years of the period had been in active service, mostly as a pioneer in the organization or early training of Methodist churches.

March 25.—TERRY, BRIG. GEN. WILLIAM R., an officer in the Confederate service, killed in the assault on Fort Stedman, near Petersburg. He was a native of Virginia, and had been educated in the Lexington (Va.) Military Academy.

March 28.—LITTLE, JACOB, a leading Wall Street speculator, died in New York city, aged 68 years. He was a native of Massachusetts, but commenced his business career in New York, where for many years past he has been well known as a "bear operator" among the business men of Wall Street. His financial abilities were great, and his vast successes and heavy losses, though causing constant fluctuations of fortune, were borne with equal self-possession. Throughout a long and active life, passed in a whirl of excitement, and in a business most dangerous in its influence, he was considered even by his enemies to be a man of spotless integrity. His mental powers were vast, and his decisions seemed the result of intuitive perception. Though for many years afflicted with poor health, his death was the result of a recent attack of softening of the brain.

March 30.—DANIEL, HON. JOHN M., a Virginian editor, author, and diplomatist, died in Richmond, Va. He had attained to some notoriety as a newspaper writer in Richmond prior to 1854, and was appointed by President Pierce,

in that year, minister resident at the Court of Sardinia; but his ignorance of the Italian language, and his affectation, rendered him very unpopular as a minister, and in 1858 he resigned and returned to the United States. Soon after his return he became again connected with the Richmond press, and was noted for the violence of his language as a political controversialist, and his readiness to resort to the *duello* as a means of settling personal difficulties. He was very bitter toward John Brown in 1859, and insisted strenuously upon his execution. At the commencement of the war he avowed himself a secessionist from conviction, and advocated to the best of his ability the claims of John B. Floyd and Henry A. Wise upon the gratitude and support of the Confederacy. He was for a time on the staff of one of the corps commanders (Jackson, we believe) of the Army of Northern Virginia, but returned soon to Richmond and to the editorship of the "Richmond Examiner," in which, while zealously advocating the prosecution of the war, he was unremitting in his attacks on Mr. Davis, the President of the Confederacy. After the death of "Stonewall" Jackson he wrote a memoir of him which was republished in England.

March —.—**LORINI**, Madame **VIRGINIA WHITING**, a distinguished opera singer, and prima donna in the Royal Opera House at Havana, died at Santiago de Cuba.

March 31.—**MILLS**, Brevet Major **CHARLES JAMES**, U. S. volunteers, was killed at the battle of Hatcher's Run, aged 24 years. He was a native of Boston, Mass., graduated at Harvard College in 1860, and subsequently entered the Lawrence Scientific School in Cambridge, when he left to accept the commission of lieutenant in the 2d Massachusetts volunteers. He joined the regiment in August, 1861, and was badly wounded in both legs at the battle of Antietam while acting as adjutant of the regiment. He never recovered from the lameness produced by these wounds, and being unable to join his regiment in six months, was mustered out of service. As soon as he was able to mount a horse he again sought a commission, and was appointed in October, 1863, the adjutant of the Massachusetts 56th volunteers. He went with his regiment to Virginia in March, 1864. As soon as the active movements of the campaign began, he was appointed by Brig.-Gen. Stoneman on the staff of his division, and subsequently served successively on the staffs of Maj.-Gen. Crittenden and Brig.-Gens. Ledlie and White. In August he was promoted to be captain and assistant adjutant-general of the 9th corps, on the staff of Gen. Wilcox. In October he was transferred to the 2d corps, on the staff of Maj.-Gen. Hancock. He was soon after promoted to be brevet-major "for gallant and meritorious conduct in the field," and remained in the 2d corps when he was killed.

April 1.—**WINTHROP**, Brevet Brig.-Gen. **FREDERICK** (colonel of the 5th New York vol-

unteers and captain 12th infantry U. S. army), killed at the battle of Five Forks, Va., while leading the 1st brigade, 2d division, 5th corps. He was born in New York in 1840, joined the 71st regiment New York State militia in its three months' service at the beginning of the war as a private, and fought at Bull Run. In October, 1861, he was appointed captain in the 12th U. S. infantry (regular army), and continued in service until the battles of the Wilderness in 1864, when he was appointed colonel of the 5th New York regiment, and shortly afterwards brevetted brigadier-general for gallantry in the field. He was a cousin of the late Major Theodore Winthrop and of Robert C. Winthrop, of Boston.

April 2.—**WILDER**, **SAMSON VETLING STODDARD**, an eminent philanthropist of New Jersey, died at Elizabeth, aged 85 years. He was a native of Bolton, Mass., and descended from a Huguenot family. He commenced his mercantile life in Boston, from which place in the interest of his business he went to Paris. In 1813 he went to London, where he soon formed the acquaintance of Rev. Roland Hill and other celebrities of that era. He very early enlisted in the Bible and Tract Societies, and in 1823, on the organization of the Tract Society, was prevailed upon after much solicitation to accept the presidency. He retired from the office in 1842, having presided over it for more than sixteen years. Removing to New York in 1830, he became a prominent banker in connection with the house of Hottinguer, in Paris, and later with the Bank of the United States. At the time he resigned his position over the Tract Society he was connected with a number of other organizations, all of which he retired from. He was the author of a number of religious tracts that obtained a large and worldwide notoriety.

April 3.—**HYDE**, Rev. **LAVIUS**, a Congregational clergyman and author, died at Vernon, Conn., aged 76 years. He was a native of Franklin, Conn., and when six years of age became for a time a member of the family of his brother, Rev. Alvan Hyde, D. D., of Lee, Mass., by whom, after the death of his father, in 1802, he was fitted for Williams College, from which he graduated in 1813. He studied theology at Andover, and in 1818 was ordained pastor of the church in Salisbury, Conn. In 1823 he was settled in Bolton, Conn., and subsequently at Ellington, Wayland, and Becket, Mass., returning again to Bolton. When threescore and ten years of age he retired from the pastoral office, passing the remainder of his days at Vernon, Conn. Mr. Hyde was a man of rare attainments. His reading was extensive and thorough, and through his fondness for books he had gathered a large and valuable library. He was the author of several books, among which was a biography of his brother, Rev. Dr. Hyde, published in 1834. He also edited a new edition of Dr. Nettleton's Village Hymns.

April 4.—**GRACE**, **ARCHIBALD**, an eminent

New York merchant, died in that city, aged 69 years.

April 5.—**BARNUM, ZENAS**, formerly proprietor of Barnum's Hotel, Baltimore, Md., died in that city. He was a native of Pennsylvania, and by profession a civil engineer. After realizing a handsome fortune in the management of his hotel, he relinquished it to devote his time, as president, to the resuscitation of the Baltimore Central Railroad, a task that he soon effectually accomplished. He was also among the earliest to venture his money and time for the establishment of the magnetic telegraph, and was himself the first president of the present American Telegraph Company. He was president of the old "Magnetic Company" at the time of his death. In all improvements calculated for the public good, Mr. Barnum was ever among the foremost to encourage and aid both with his capital and business qualifications.

April 5.—**JANEWAY, COL. HUGH H.**, 1st New Jersey volunteer cavalry, killed at Fame's Cross-roads, near Jetersville, Va. He was born in Jersey City, N. J., in 1842, entered the 1st New Jersey cavalry at the commencement of the war as second lieutenant, and rose steadily through every grade to the highest, being appointed colonel when but twenty-two years of age, at the written request of every officer in the regiment. He had been in every important battle of the Army of the Potomac, and had been twelve times wounded. He was a young man of extraordinary promise, and in his last as in every previous battle, he led his men into the fight, asking them only to follow his example. He had just seized the colors of his regiment, and was in the act of carrying them forward, when a bullet entered his brain, and he died instantly.

April 5.—**TROTTER, HON. JONATHAN**, ex-Mayor of Brooklyn, died at his residence in New York, aged 68 years. He was born in Newcastle-upon-Tyne, and emigrated to this country in 1818. Soon after he entered into the leather business in New York, where he continued until 1825, when he built an extensive manufactory in Brooklyn, and removed thither in 1829. He was soon after elected to the office of alderman, and subsequently became mayor, serving one term. He was the first president of the Atlantic Bank of Brooklyn, and was vice-president of the Leather Manufacturers' Bank of New York. Since 1837 he has lived in retirement.

April 6.—**READ, Brevet Brig.-Gen. S. T.**, Chief of Staff to Gen. Ord, shot by the rebel Gen. Dearing, in a hand to hand conflict at the High Bridge over the Appomattox, near Farmville, Va. Gen. Read was a native of Massachusetts, and had entered the service as captain of a company of unattached cavalry from that State in January, 1862. After considerable service in this capacity the several companies of cavalry having been organized into a battalion, he accepted a staff appointment, and distinguished himself at Gettysburg,

where he was severely wounded, and subsequently in the battles of Grant's campaign. When Gen. Ord took a command in connection with the Army of the James, he gave him a position as chief of staff, which he retained when Gen. Ord was assigned to the command of the Army of the James. He had recently received a brevet promotion for gallantry in the field.

April 6.—**MILES, PLINY**, post-office reformer and statistician, died at Malta, aged 54 years. He was a native of New York, was for some years a schoolmaster, contributed largely to American newspapers and magazines, and ultimately became widely known as a traveller. He was a strong advocate of cheap postal facilities. In 1854 he published an interesting volume of "Rambles in Iceland."

April 7.—**HALE, HON. JAMES T.**, an eminent Pennsylvania jurist, died of typhoid fever, at his residence in Bellefonte, Pa., aged 55 years. He was a native of Bradford County, Pa., received a common school education, studied law, and was admitted to the bar in 1832. In 1851 he was appointed Presiding Judge of the Twentieth Judicial District of Pennsylvania, and in 1858 was elected a Representative from that State to the Thirty-sixth Congress, serving as a member of the Committee on Claims, and on Roads and Canals; re-elected to the Thirty-eighth Congress, and was Chairman of the Committee on Claims. He was a warm and consistent patriot.

April 9.—**POTTS, HON. STACY GARDNER**, an eminent lawyer and politician of New Jersey, died at Trenton, aged 65 years. He was a native of Harrisburg, Pa., but at nine years of age removed with his father to Trenton, N. J. After passing four years in the Friends' School of that city, he became so captivated with the opportunities of seeing books and newspapers in a printing-office, that he was permitted to enter it as an apprentice. Having access to a bookstore, and becoming a member of a debating club, he cultivated his taste for composition, and soon began to contribute in prose and poetry, to the newspaper of the town. In 1821 he was employed as editor of a weekly paper, the "Emporium," chiefly literary, and at the same time was a contributor to the Philadelphia "Monthly Magazine." In 1823 he entered upon the study of law, still continuing to devote six hours of every day to his duties as editor, which obliged him to do the greater part of his study in the night. In 1827 he was admitted to the bar, and in 1828 and 1829 was in the legislature. In 1831 he was appointed by the legislature to the lucrative office of Clerk of the Court of Chancery, which he held for ten years. In 1834 he was appointed (also by the legislature) an alderman, which gave him a seat as Judge in the Court of Quarter Sessions. At the close of his clerkship, his health requiring relaxation, he accompanied his brother—the late William S. Potts, D. D., of St. Louis—on a visit to Europe, from which he returned in 1841. In 1845 he was associated, by act of legislature, with ex-

Governor Vroom, the present Chancellor Green, and the late Minister Dayton, on a commission to revise the laws of New Jersey, and besides performing his share of the revision, it devolved on him to arrange and systematize the result for publication. Upon the incorporation of the Lunatic Asylum of the State he was placed on the first board of managers, and was active in its affairs from 1847 till his resignation in 1852. In that year he was chosen a Justice of the Supreme Court, and at the close of the term of seven years retired from public life. In 1844 the honorary degree of Master of Arts was conferred on him by the College of New Jersey. Judge Potts was an active member of the Presbyterian Church, and was at different times connected with various boards and institutions of the Church at large. When a member of the General Assembly in 1851, he was made chairman of a special committee to arrange the complicated finances of the Church, and his report, published in full, elicited great admiration from its skill and perfectness. He devoted some of his later time to the composition of a work, entitled "The Christ of Revelation," designed to trace the Scriptural doctrine of the Redeemer from the prophecies to the life and teaching of the New Testament.

April 9.—SMYTH, Brig.-Gen. THOMAS A., commanding the 2d division 2d army corps, was mortally wounded near Farnville, Va., by a shot from a sharpshooter on the 6th of April, and died at Petersburg. He was born in Ireland, but emigrated to this country when a boy, and settled at Wilmington, Del., where he engaged in the coachmaking business. At the opening of the war he recruited a company in Wilmington, and proceeded to Philadelphia and joined a three months' regiment then leaving for the Shenandoah valley. Returning home he was made major of the Delaware regiment then leaving for the seat of war, and rose gradually from that position to lieutenant-colonel and colonel, and soon was put in charge of a brigade, where he won a high reputation for his daring and skill. He was appointed to the rank of brigadier-general in the summer of 1864, for his gallant conduct at Cold Harbor.

April 11.—AARON, Rev. SAMUEL, a Baptist clergyman, teacher, and author, died at Mount Holly, N. J., aged 65 years. He was a native of New Britain, Pa., and of Welsh-Irish extraction. Left an orphan at the early age of six years, he was placed under the care of an uncle, upon whose farm he worked for several years, spending a portion of the winter months in a district school. Inheriting a small patrimony from his father, when about sixteen years of age he entered the academy at Doylestown. At twenty, he connected himself with the Classical and Mathematical School at Burlington, N. J., as a student and assistant teacher, and subsequently, after his marriage, opened a day school at Bridge Point, and later became principal of an Academy at Doylestown. In 1829 he was ordained as a minister, and became

pastor of the Baptist church at New Britain. In 1833 he took charge of the Burlington High School, at the same time holding the pastorate of the church in that place. In 1841, accepting a call to the church at Norristown, Pa., he removed thither, and after preaching about three years, he resigned the pastorate, and removing to the suburbs, founded the "Treemount Seminary," which under his auspices became famous throughout Eastern Pennsylvania and New Jersey, not only for the number of its students, but for the thoroughness of the instruction afforded them. Becoming involved in the financial crisis of 1857, through endorsements for a friend, he gave up "Treemount" to his creditors, and removing to Mount Holly, accepted a call to the pastorate of the Baptist church—a position he retained till his death. In September of the same year, Mr. Aaron and his son Charles became the principals of the "Mount Holly Institute," continuing in the discharge of his duties up to the time of the brief illness which terminated his useful life. Mr. Aaron was twice tendered the presidency of the New York Central College. He was the author of many improvements in text-books.

April 11.—BOOTH, Mrs. MARY H. C., an American poetess, died at New York city, aged 34 years. She was a native of Connecticut, and married early an editor of some note by the name of Booth, with whom she removed about fifteen years since to Milwaukee, Wis. Here she contributed occasionally to her husband's paper. After some years domestic trials invaded her home, and the sorrow which brooded over it from the misconduct of others, impaired her naturally frail constitution. By the advice of her friends she made the voyage to Europe, and amid the mountain air of Zurich, Switzerland, found the pulmonary disease which had threatened her life measurably checked. She resided in Zurich several years, corresponding with some American papers and periodicals, and in 1864 a little volume of her occasional poems and translations was published in Germany, though with a Milwaukee imprint also, under the title of "Wayside Blossoms." Finding that her disease was again assuming an aggravated form, and yearning to behold her native land once more, she returned in the autumn of 1864 to the United States, and took up her residence in New York. During the winter she suffered most intensely, but by the force of a strong will succeeded in revising her poems for a new edition before her death. Her poems evince talent of a very high order.

April 11.—SERGEANT, Col. WILLIAM, 210th Pennsylvania volunteers, and captain of the 12th infantry, U. S. A., was wounded on the 31st of March near Petersburg, and died on board the boat coming from City Point to Fortress Monroe. He was born in Philadelphia in 1830, and was the son of the late Hon. John Sergeant, and brother of Mrs. General Meade. He was educated for the bar, and had attained a high position, and represented his native city in

the legislature before the opening of the war. He volunteered early in the war, and soon after received an appointment as captain in the 12th U. S. infantry, in which position his gallantry in the peninsular and other campaigns, attracted the attention of his superiors. He was subsequently called to the command of the 210th Pennsylvania volunteers, and in the duties of his new post was as remarkable for his personal bravery as for the military talent which he had developed. He was gentle, open-hearted, and generous to a fault.

April 17.—**TYLER, CHARLES H.**, a brigadier-general in the rebel army, killed at West Point, Ga., in the battle at that point with Major-General Wilson's cavalry. He was a native of the South, and at the breaking out of the war a captain of dragoons in the U. S. army. His promotion was not rapid, and he had not apparently distinguished himself in the war.

April 21.—**COOK, GEN. WILLIAM**, Chief Engineer of the Camden and Amboy Railroad, and a leading citizen of New Jersey, died at Hoboken, N. J., in the 64th year of his age. He was a native of New Jersey, and a graduate of the U. S. Military Academy at West Point. Immediately upon graduating, he entered the Engineer corps of the army, and served for some years, being employed principally upon Government explorations and surveys. In 1830, he left the army to accept the position of Civil Engineer of the Camden and Amboy Railroad Company, in which position he remained until his death.

April 21.—**MURPHY, MATTHEW**, Col. 69th regiment N. Y. volunteers, died in New York, from wounds received at the battle of Hatcher's Run, Feb. 4, 1865. He was a native of Ireland, born Dec. 26, 1840, but had come to the United States in childhood. At the commencement of the war he was a teacher in Public School No. 24, and from patriotic impulses entered as a private in the 69th, but soon rose from the ranks by his merit, and on the return of the regiment to this city was elected its colonel, reorganized and filled up the regiment, and led it again to the field. He had taken part in most of the prominent battles, and had won the reputation of a brave and gallant officer.

April 22.—**McKEAN, WILLIAM W.**, U. S. N., a commodore in the naval service of the United States, died near Binghamton, N. Y., after a brief illness. He was born in Pennsylvania in 1801, being the son of Judge McKean and a nephew of Governor McKean. He entered the navy from Pennsylvania in November 1814, and had consequently been over fifty years in the service, twenty-five of them afloat. His last cruise was completed in June, 1862. In 1823-'24 he commanded a schooner in Porter's squadron, and was very active in suppressing piracy along the coast of Cuba, and among the islands of the West Indies. In 1860 he was sent on the special service of conveying the Japanese embassy home, and on his return was the first commander of the West Gulf blockading squad-

ron. He received his commission as commodore July 16, 1862. Like Rear-Admiral Foote, he was as eminent for his piety as for his skill and daring, and won the esteem of all who were under his command for his consistent and practical Christian character.

April 23.—**CREIGHTON, REV. WILLIAM, D. D.**, an American Episcopal clergyman, died at Tarrytown, N. Y., aged 73 years. He was a native of New York city, graduated at Columbia College, and during a great part of his earlier ministry was rector of St. Mark's Church. During the suspension of Bishop Onderdonk, he was elected Provisional Bishop of the Diocese of New York, but declined to accept the position, which was afterwards filled by the election of Dr. Wainwright. He presided in the Diocesan Convention for many years previous to this, and also presided in the Lower House of the General Convention of the Protestant Episcopal Church during its sessions of 1853, 1856, and 1859. At the time of his death, and for many years previously, he had been rector of Christ Church, Tarrytown.

April 24.—**GREENLEAF, REV. JONATHAN, D. D.**, an American Presbyterian clergyman, died in Brooklyn, N. Y., aged 80 years. He was a native of Newburyport, Mass., was licensed to preach in 1814, and commenced his first ministry in Wells, Me., where he continued until 1828, when he removed to Boston and became agent of the American Seamen's Friend Society. In 1833 he became corresponding secretary of the same society, which position he retained until 1841, when he resigned. Soon after he accepted the pastorate of the Franklin Avenue Presbyterian Church, Brooklyn (then known as the Wallabout Presbyterian Church), and continued in that position until his death.

April 26.—**BOOTH, JOHN WILKES**, the assassin of President Lincoln, died in Caroline County, Va., from a gunshot wound in the base of the brain, inflicted by Sergeant Boston Corbett. He was the third son of the celebrated but eccentric actor, Junius Brutus Booth, and was born in Harford County, Md., about thirty miles from Baltimore, in 1839. His early education was irregular and deficient in moral training, and in 1856 he adopted the stage as a profession. He attained some reputation as an actor, mainly in those parts requiring extravagant and violent displays of passion. His habits were dissipated in the last degree, but he possessed those traits which made him popular with his fellow-actors, who overlooked his vices in their liking for his traits of good fellowship. In person, he was a man of remarkable beauty, gracefulness, and physical strength. At the very commencement of the war he avowed himself a Secessionist, and had been throughout the war prone to the most violent language and action whenever the subject was discussed. Indeed, his conduct in this respect had latterly been so outrageous, that his elder brother, Edwin Booth, the tragedian, who was thoroughly loyal, felt constrained to forbid him his house.

In the spring of 1864 he virtually withdrew from the stage, and had appeared but once since that time, when he took part with his brothers in the performance of "Julius Caesar," at the Winter Garden. He professed to have engaged in speculations in petroleum lands and oil; but there is reason to believe that this was mainly as a cover for the conspiracy for the capture or murder of the President, in which he had been involved for many months. He had repeatedly visited Canada during the year 1864 and the early months of 1865, and the evidence obtained on the trial of his fellow-conspirators indicated a scheme of abducting the President. The attempt to abduct Mr. Lincoln failed, and then Booth determined upon his murder. This he had attempted to accomplish on the day of the inauguration, but failing again, his fury, which grew by what it fed upon, led him to include in the massacre the principal members of the Cabinet, the Vice-President, and the Lieutenant-General. He addressed himself to the work of training his accomplices in Washington and its vicinity for their several parts. The murderous plot failed to kill any except the chief victim, though Mr. Seward and his son were saved from death almost by miracle. After firing the fatal shot at Mr. Lincoln, Booth leaped from the box to the stage, and his spur catching upon the flag which draped the front of the President's box, he fell upon the stage and fractured one of the bones of the leg, but springing up he flourished his bloody knife and shouting, "SIC SEMPER TYRANNIS," fled across the stage to a private entrance, where one of his accomplices was holding a horse for him. Accompanied by Harold, another accomplice, he passed rapidly across the Long Bridge into Virginia, and turning southward rode nearly thirty miles, to the residence of Dr. Müdd, where his broken limb was set. The doctor aided in concealing him, and finally conveyed him across a swamp from whence he escaped still farther southward, traversed the northern neck of Virginia, and crossing the Rappahannock at Swan Point, where he paid \$300 for a boat to take himself and his companion over, he made his way with great difficulty to Garrett's farm, near Bowling Green, about twenty miles below Fredericksburg. Colonel Baker, of the War Detective Police, had been following his trail indefatigably, and on the night of the 25th of April, a squad of his detectives under his brother, Lieut. Baker, had traced him to Garrett's farm, and by threats had compelled Garrett's sons to show them the barn in which he was concealed. They summoned him to surrender, but he refused obstinately, and they finally set fire to the barn. He then aimed at Lieut. Baker, and one of the detectives, Sergeant Boston Corbett, fired at him, and the ball took effect in the base of the brain, near the point where his bullet had wounded President Lincoln. He lived three hours, perfectly conscious, and in great agony, and died about 7 A. M. of the 26th of April, eleven days after his victim.

April 30.—LATTI, A. B., the inventor of steam fire-engines, died in Ludlow, Kentucky, aged 44 years.

April —.—MOORE, AUGUSTUS OLCOTT, publisher of works upon agricultural subjects, died at New York city, aged 43 years. He was a native of Columbus, Ga., and removed at an early age with his parents to Ohio, in which State, at the age of 19 years, he purchased and worked a farm. Subsequently he went into the banking business in Cincinnati, but after several years' experience, his love of art led him to leave mercantile life and devote his time and attention to painting, for which he had a decided talent. In 1853 he removed to New York and engaged in the publishing business, but the close confinement bringing on hemorrhage of the lungs, he relinquished it in 1859, and spent some time travelling in Europe, California, and Central America, frequently contributing articles for "The Agriculturist," illustrated by his own pencil. He returned from Europe in the fall of 1864.

April —.—SELDEN, GEORGE N., a philanthropist and leading citizen of Troy, N. Y., died in that city. He bequeathed the bulk of his large property to benevolent objects, among which was \$25,000 for the founding of an institution, to be known as the "Selden Institute," for the education, bringing up, and maintenance of female nurses.

April —.—WILLARD, Dr. SYLVESTER D., Surgeon-General of the State of New York, died at Albany.

May 1.—DE HAVEN, Lieut. EDWIN J., U. S. N., died at Philadelphia. He was born in that city in 1819, and entered the navy in 1829, being but ten years of age. He had been nearly thirty-six years in the service, about one-half of it in the sea service, but owing to impaired vision had been placed on the retired list. His last cruise was completed in 1857. He was a man of fine scientific abilities, and was often detailed for special service. He commanded the first Arctic exploring expedition, of which Dr. Kane wrote so graphic an account. Lieut. De Haven was for several years employed in the National Observatory, under Maury, who was indebted to him for much of the scientific reputation he attained.

May 8.—ORAM, Miss ELIZABETH, a teacher and authoress, died in Georgetown, D. C., aged 75 years. She was for many years a successful teacher in New York city, and was extensively known as the author of many elementary educational works, a Magnetic Globe, for which she received a patent under the administration of Gen. Jackson in 1831, and of numerous fugitive essays in poetry and prose. She also published translations of several works from the German and French into English, and from English into German and French.

May 8.—REYNOLDS, JOHN, formerly Governor of Illinois, died at Belleville, Ill., aged 76 years. He was a native of Montgomery County, Pa., and was born of Irish parents, who had landed

from an emigrant ship at Philadelphia three years before. When a lad, his family removed to Illinois, and in 1805 he entered school in Kaskaskia, attending only in the winter season. By his perseverance he made rapid progress in his studies, and in 1835 was a Representative in Congress, and again from 1839 to 1843. He was Governor of Illinois from 1830 to 1834.

May 12.—WILLARD, JOSEPH, antiquarian, author, and Master in Chancery, died in Boston, Mass., aged 67 years. He was a native of Cambridge, Mass., and at ten years of age entered Phillips' Academy, where he remained two years. He then returned to Cambridge to a private classical and mercantile school, from which he entered Harvard College; graduated in the class of 1816; studied law with Charles Humphrey Atherton, of Amherst, N. H., and first settled in Waltham; then went to Lancaster, and finally to Boston about 1829. While in Lancaster he wrote his very valuable and exact history of that town, being one of the earliest pioneers in that department of our New England literature. He also wrote the life of his ancestor, Simon Willard, containing the genealogies of the family down to the fourth generation. He was chosen a member of the Massachusetts Historical Society 29th January, 1829, and made its corresponding secretary, which office he held until April, 1864, when on account of ill health he declined a reelection. In 1838 Governor Everett appointed him Master in Chancery under the Insolvency act of that year, and he held the same until the Masters in Chancery were superseded by the Commissioners of Insolvency. In 1839 he was appointed by the Supreme Judicial Court joint clerk of the Courts of Suffolk (Supreme and Common Pleas), with George C. Wilde. In 1856 these offices becoming elective, he was chosen clerk of the Superior Court (which replaced the Common Pleas) for five years, and again in 1861 for a like term. He was also for about the same period, and until his death, one of the trustees of the old Boston Library.

May 18.—ARPIN, PAUL, an editor and author, died in New York, aged 54 years. He was a native of France, and the oldest French journalist in the United States. He was a large contributor to the "American Cyclopædia;" was for a long time editor of "The New Orleans Bee," and was more recently editor of "The Courier des Etats Unis."

May 21.—PINCKNEY, WILLIAM T., formerly a prominent politician of New York city, died of apoplexy. He represented the Seventh Ward in the Board of Education for more than twelve years, and when the first ten governors were appointed over the Almshouse, he was designated by the Governor of the State to occupy one of the chairs. After the completion of his term he was reappointed to fill a vacancy occurring in the Board, and subsequently was reelected to the position by the people. He was President of the Astor Fire Insurance

Company from its organization, retaining that position until his death.

May 23.—BIGELOW, TYLER, a lawyer and philanthropist, died at Watertown, Mass., aged 86 years. He was a native of Worcester, Mass.; was fitted for college at the High School in that town, graduated with a high rank of scholarship at Harvard College in 1801; studied law, and entered upon the practice of his profession in Leominster, and in 1805 at Watertown, where he resided until his death. He soon rose to a high position at the bar, but before reaching the prime of life was obliged to give up practice on account of deafness. By his last will Mr. B. left to Harvard College the sum of ten thousand dollars as a fund for the maintenance and support of indigent and meritorious students.

May 26.—MCMURTRIE, HENRY, M. D., late Professor of Anatomy and Philosophy in the High School of Philadelphia, died in that city, aged 73 years. He was the author of some valuable text-books.

May —.—EMERSON, GEORGE H., a chemist and author, died in Greenfield, Mass., aged 27 years. He was a young man of great promise, and his researches had already contributed much to the progress of the science of Blowpipe Analysis. He was the author of an essay on "Crystals and Precipitates in Blowpipe Beads."

June 2.—NICHOLS, CHARLES, formerly U. S. Consul to Amsterdam, died in Brooklyn, L. I., aged 75 years. He was a descendant of Sir Richard Nichols, the first colonial Governor in New York, and graduated at Yale College in the class of 1812. Early in life he removed to New York city and engaged in mercantile pursuits, being a member of the well-known firm of "Palmer & Nichols." He was appointed consul to Amsterdam, Holland, by President Tyler, and served also in that capacity during the administration of President Polk.

June 13.—CAMPBELL, Col. J. CLEVELAND, 23d U. S. C. T., died at Castleton, N. Y., from injuries received at the explosion of the mine at Petersburg, July 30, 1864. He was born in New York in July, 1836, and graduated successively at the Free Academy, Union College, and the University of Gottingen. Early in the war he entered as a private in the 44th N. Y. volunteers, was soon promoted to be a lieutenant on Gen. Palmer's staff, was next adjutant of the 152d N. Y. volunteers, then captain in Upton's 121st N. Y. volunteers, and after passing a most brilliant examination was commissioned lieutenant-colonel, and finally colonel of the 23d U. S. C. T. He led his regiment into the hottest of the fight at Petersburg, when the mine exploded, and left in and around that awful crater nearly 400 of his men, killed or wounded. His lung was contused and ruptured by a bursting shell, which eventually caused his death.

June 13.—DOTY, Hon. JAMES DUANE, an

American statesman, died at Salt Lake City, aged 65 years. He was a native of New York, but in early life removed to Wisconsin Territory, from whence he was sent a delegate to Congress, from 1839 to 1841, and was a Representative in Congress from that State from 1849 to 1853. He was also for many years U. S. Judge for Northern Michigan, and from 1841 to 1844 Governor of Wisconsin. In the fall of 1861 he was appointed Superintendent of Indian Affairs, and in 1863 was made Governor of Utah.

June 14.—PAGE, COL. JOHN HAM WILLIAMS, a lawyer and president of the Cape Cod Railroad Company, was drowned in Boston Harbor, aged 60 years. He fitted for college at Phillips' Academy, graduated at Harvard College in 1826, and studied law in the Law School at Cambridge and also at New Bedford, where he practiced his profession twelve years. He then removed to Boston to become treasurer of the Lawrence Machine Company. He was afterwards chosen president of the Cape Cod Railroad Company, which office he held at the time of his death. He was a representative in the State Legislature from New Bedford in 1844, 1845, and 1846; was a member of the Executive Council of Governor Clifford in 1853, and of Governor Washburn in 1854. He was several times affected with mental aberration, and while in this state he ended his life.

June 16.—RUGGLES, HON. CHARLES H., an eminent American jurist, died at Poughkeepsie, N. Y., aged about 75 years. He was a native of Litchfield Co., Connecticut, and was a member of the New York Assembly in 1820, and a Representative in Congress from that State from 1821 to 1823. After a successful career in the practice of his profession, he was appointed one of the eight Circuit Judges, under the Constitution of 1821, in which position he served with the entire approbation of the bar and the community for several years. When the Convention for revising the Constitution sat in 1846, he took his seat as a member from the county of Dutchess, and, by common consent, was placed at the head of the committee appointed to prepare the new judicial system to be established. He was made Judge of the Court of Appeals on its first organization, and in 1853 was presiding Judge. In 1855 Judge Ruggles retired from the bench on account of failing health.

June 17.—RUFFIN, EDMUND, a prominent Southern politician and agriculturist, died by his own hand, near Danville, Va., aged 80 years. He was a native of Virginia, and an active participant in the war, having made his boast of being the first to fire upon Fort Sumter. Previous to the war he devoted much attention to the subject of agriculture, was president of the Agricultural Society of Virginia, and for some years published "The Farmer's Register" at Petersburg. He was also the author of a popular volume on calcareous manures.

June 26.—GRUNDY, REV. R. C., D.D., a Presbyterian clergyman, died in Dayton, Ohio. He was a native of Kentucky, and a graduate of Princeton Theological Seminary. Early in his ministerial career he was settled at Maysville, Ky., where he labored zealously and effectively for many years. Subsequently he accepted a call from the Second Presbyterian Church at Memphis, Tenn. Here he labored until the war broke up the relations between himself and his church, being driven from the pastorate because of his attachment to the Union. He remained, however, in Memphis, preaching most of the time in a public hall, without compensation, until that city was occupied by the Union forces. Soon thereafter he was called to the pulpit of the Central Presbyterian Church in Dayton, where he remained until his death.

June 29.—BOLLES, ENOCH, a prominent citizen of Newark, N. J., died in that city, aged 86 years. He was a native of Connecticut, and in his early days followed the sea. The vessel in which he sailed was imprisoned in Charleston harbor by the embargo early in this century, and returning North, he engaged in the shoe business in Newark, and subsequently was for forty years principally engaged in real estate speculations, by which, through the growth of the city, he amassed a large fortune. He was for a long period on the town committee, and was a member of the first common council of the city in 1836, and also in 1837 and 1840.

June 29.—McCLANAHAN, COL. JOHN R., of the Confederate army, and editor of the "Memphis Appeal," was killed by a fall from the window of the Gayoso House, Memphis. In 1860 he was a warm supporter of Mr. Douglas for the Presidency. He subsequently engaged in the war, and on the approach of the national troops removed his publishing office to Grenada, Miss., and thence in rapid succession to numerous other points. After the close of the war he returned to Memphis. He was considered a fine scholar and an able writer.

June 30.—ORCHARD, REV. ISAAC, city missionary and author, died in New York, in the 80th year of his age. He was a native of England, converted at the age of 13 years, and soon after attaining his majority entered the ministry, and eventually became the pastor of an Independent or Congregational church at Walworth, near London. In 1828 he was led to unite with the Baptist Church, and a few years subsequently emigrated with his family to America, landing in New York, during the visitation of the Asiatic cholera. After laboring for a short time as pastor of the Baptist church at West Troy, and afterwards as an instructor in an educational institution at Haddington, near Philadelphia, he took up his final residence in New York, in 1836, in connection with the City Tract Society, where he continued till his death. He was the author of several tracts and controversial works.

June.—FREY, JOSEPH REESE, a Philadelphia

banker, and music and art connoisseur, died in that city of dropsy. He was widely known for his connection with music, criticism, and the literature of the operatic stage. He was a son of William Fry, who for many years published "The National Gazette," a celebrated daily newspaper, which for a long time enjoyed a high reputation for its articles on foreign politics. In connection with this paper, Mr. J. R. Fry, like his brother William, acquired a penchant for literary and art pursuits, which adhered to him through life. He was an accomplished scholar, well versed in several languages, especially familiar with the history and literature of music, and wrote with facility and taste. He translated and adapted Bellini's great opera of Norma, from the Italian, for the celebrated Wood-English opera troupe, and with his brothers, William and Edward, superintended its production here in a style truly memorable. He was the author of the libretto of the opera of Leonora, of which his brother William composed the music, and also of the libretto of the opera of Notre Dame, which was produced under his direction at the Academy of Music in such splendid style. Mr. Fry was a man of truly remarkable energy in whatever he undertook, and the events of his life abound in illustrations of the success with which he achieved seemingly impossible things by mere force of character. The production of Norma and Notre Dame here under his auspices was in each case far beyond all rivalry, and marked the man as a phenomenon in his way. The Union League Brigade, raised for service in the field at the time of deep gloom, was largely indebted to his efforts for its existence. Throughout his life he was thoroughly identified with the growth and prosperity of the city of his birth.

June.—BUCKMINSTER, WILLIAM, the founder, editor, and publisher of the Massachusetts "Ploughman," died at Framingham, Mass., aged 82 years.

July 4.—DUNDAS, JAMES, a prominent citizen of Philadelphia, formerly president of the Pennsylvania Bank, died at Philadelphia, aged 77 years. He was a native of Alexandria, Va., and at the time of his death was president of the Pennsylvania Horticultural Society.

July 8.—MULLIGAN, BILLY, a notorious rough, was shot and killed by a policeman in San Francisco. In 1856 he was the leader of a gang of outlaws infesting that city, and together with others was expatriated by the Vigilance Committee. In a fit of delirium tremens he fired upon and killed two men, and was about to fire again when killed as above stated.

July 10.—TILLOU, FRANCIS R., an eminent jurist and ex-Recorder of New York, died at Tillietudlem, N. J., aged 70 years. He was a prominent city politician, and for a time Governor of the Almshouse.

July 13.—HESTON, REV. NEWTON, a Congregational clergyman, and pastor of the State Street Congregational church, Brooklyn, L. I.,

died in that city of apoplexy, aged 44 years. He was a native of Pennsylvania, was converted at the age of fifteen, united with the Methodist Church, and at nineteen was considered a preacher of great power. He subsequently (in 1862) became connected with the Congregationalists. As a pastor he was devoted to his work, and his faithful, self-denying efforts for the conversion of souls were abundantly blessed. He was the author of several books for children, some of which had a large circulation.

July 16.—JORDAN, AMBROSE L., an eminent lawyer of New York city, died at his residence, aged 76 years. He entered upon the practice of his profession in 1812 at Cooperstown, N. Y. After a period of some years he removed to Hudson City, and remained there in business until 1838, when he took up his residence in New York. He was a member of the Assembly, a State Senator, Judge of the Court of Errors, and Attorney-General. In each of these positions he filled with honor his sphere of duty, discharging the responsibilities of his office with rare fidelity and skill.

July 16.—JUMEL, Madame ELIZA B., a French widow, who married Aaron Burr in 1832, died at Washington Heights, New York city, in the 92d year of her age. She was born of an English mother, Mrs. Capet, in the cabin of a French frigate which was carrying troops to the West Indies from La Brest. The mother dying at her birth, she was placed by the captain in the custody of a Mrs. Thompson, at Newport, R. I. Soon after attaining the age of seventeen years, Miss Capet became acquainted with a British officer, Col. P. Croix; an elopement followed, upon which they took up their residence in New York city. Brought into the highest circles by her position, her beauty and attractive manners made her a favorite with some of the most prominent men of that time, among whom may be mentioned Patrick Henry, Thomas Jefferson, Benjamin Franklin, and Gen. Knox. She was a woman of unbounded ambition, and it is no matter of wonder that her reputation suffered materially, by the scandal of those who witnessed her triumphs. Early in this century she married a French wine-merchant named Stephen Jumel, who became noted for his wealth and liberality. They went to Paris, purchased a magnificent establishment, and under the social patronage of Lafayette and his contemporaries, Madame Jumel became as noted in the *salons* of the French capital as in the parlors of the Western metropolis. But her life of prodigality made sad inroads upon her husband's fortune, he became dispirited, and, failing to arouse him to the necessary exertion, she broke up their establishment, returned to New York, and retiring to an estate of her own, devoted herself to the restoration of her husband's fortune, with such success that in 1828 he returned to this country, once more possessed of ample means. After his death business led her to seek legal advice of Aaron Burr, with whom in earlier

days she had been quite intimately acquainted, and who had reached by this time the age of 78 years. Soon after, he sought her hand in marriage, and after several decided rejections she was finally induced to give her consent. A few days after the wedding she placed a large sum in his hands, which was subsequently irretrievably lost in a Texan speculation, of which no mention was made to her; and upon her inquiries, his reply was such as to cause a coolness between them, which, aggravated by further speculations and losses, finally induced her to file a complaint against him, praying that he might have no further control or authority over her affairs. A separation ensued, though the marriage contract was never dissolved by law. Since then, Madame Jumel has resided in comparative retirement on Washington Heights.

July 17.—**BAILEY, HON. GEORGE W.**, Secretary of State of Vermont, died at his residence in Montpelier. He had held the above-mentioned office for four years, discharging the duties of his position with credit to himself and to the State.

July 18.—**BILLINGS, BENJAMIN L.**, an eminent lawyer of New York, died of apoplexy on the steamboat *Matteawan* while taking his family to Keyport, N. J. He was a practitioner of great ability and research.

July 18.—**HAYWARD, NATHANIEL**, an American inventor and manufacturer, died at Colchester, Conn., aged 57 years. He was a native of Easton, Conn., and resided there and at other places in the State until 1847, when he removed to Colchester. In 1837 he discovered the process of combining rubber gum with sulphur, which was the beginning of the successful manufacture of rubber cloth. This discovery he sold in 1838 to Charles Goodyear, of New Haven, who soon after secured a patent for it. In 1843 Mr. Hayward invented the process of preparing fire-proof or vulcanized rubber, and in that year he made the first rubber shoes that had been made from sheet-rubber, at Woburn. He soon after discovered a method for giving high polish to rubber shoes, and in 1847 established the Hayward Rubber Company at Colchester, which for several years employed five hundred hands in the manufacture of rubber boots and shoes, and is still one of the largest rubber shoe manufactories in the country. Latterly, he had taken a greater personal interest in the rubber mills at Stoneham, which have turned out large numbers of pontoons for army use, and other varieties of rubber manufacture. Mr. H. was always among the foremost in works of practical benevolence and local improvement, and has left a large estate and an excellent reputation as a moral and business man.

July 18.—**NICHOLAS, Capt. JOHN S.**, U. S. N., died at Bound Brook, N. J., in the 65th year of his age. He was a native and citizen of Virginia, from which State he was appointed in June, 1815. He received his last commission in 1855, and saw two years of sea service under it, making nearly twenty years spent at sea out

of forty-nine in the navy. He was a classmate of the late Admiral Du Pont, and was last ordered to some special duty under the War Department.

July 22.—**CARROLL, HON. CHARLES H.**, a prominent lawyer and politician of Livingston County, N. Y., died at his residence in Groveland, in the 71st year of his age. He was a native of Maryland, and removed with his father to Livingston County in 1815, where he has resided since, except during a few years' absence in Missouri, occupied in the supervision of the large estate of the family. He studied law with John C. Spencer, in Canandaigua, but never practiced, although he served one or two terms as Judge of Livingston County. He was a member of Assembly in 1836, and represented his district in Congress from 1843 to 1847. He was the last male representative of his family. His elder brother, Henry, was secretary to Henry Clay while Commissioner at Ghent, and was killed in 1820, in Missouri. Dr. Daniel J. died in New York, and the younger of the three brothers, Wm. T., died while holding the office of Clerk of the Supreme Court of the United States.

Judge Carroll was a man of positive character. Although not brilliant, he was an intelligent and forcible debater, and wielded, for many years, a commanding political influence in his district. He was a life-long and devoted friend of Henry Clay, an ardent Whig until that party was merged into other organizations, when he passed over into the American party, and subsequently identified himself with the Democracy. But during the war, he was thoroughly for the Union, and was happy that he lived to see the rebellion subdued. He was of a genial disposition, but found his greatest pleasure in superintending his large estate, in developing its agricultural resources, and in improving the breed of horses and cattle. In this he rendered a great service to the section of country where he lived for half a century.

July 23.—**SPEDDEN, ROBERT**, ex-Lient. U. S. N., died at New Orleans, aged 83 years. He entered the navy early in the present century, and left it in 1824. In 1814 to took a prominent part in the defence of New Orleans, losing an arm at the fight of Lake Borgne. In 1824 he resigned his commission, and settled permanently in New Orleans, where he occupied the highest social position, and held from time to time many offices of trust, such as port warden, harbor master, and coroner of the parish of New Orleans.

July 24.—**TAYLOR, REV. FITCH W.**, an Episcopal clergyman, and senior chaplain in the United States Navy, died in Boston, aged 64 years.

July 25.—**COOK, REV. EDWIN R. T.**, an Episcopal clergyman, rector of Wainwright Memorial Church, New York, died in that city, aged 40 years. He was an able, devoted, and efficient pastor, and his labors had been signally blessed to the prosperity of his church.

July 30.—INGRAM, ALEXANDER, M. D., a surgeon of the U. S. Army, was lost in the wreck of the steamship Brother Jonathan, off the coast of Oregon. Dr. Ingram was born in Scotland, during the temporary sojourn there of his parents—both American citizens. He entered the army of the United States in May, 1861, ranking sixth in a class of twenty members. In January, 1862, he was on duty with the 2d cavalry at Cantonment Holt, Washington. He served with credit to his corps and with eminent satisfaction to the regiment, and was with it through all its campaigns with the Army of the Potomac until January, 1863. He was then ordered to Washington, and assigned to the charge of St. Aloysius Hospital, and when that was broken up, was transferred, as surgeon in charge, to Judiciary Square Hospital. In September, 1864, he was ordered to California, and put on a board for the examination of applicants for appointment as assistant-surgeon of volunteers. After being relieved from this duty, he was appointed chief surgeon of the troops in Southern California. When Gen. Wright was ordered to the command of the Northern Division of the Pacific coast, the medical director of the department, knowing the eminent fitness of Dr. Ingram for the position, assigned him as the chief medical officer of Gen. Wright's command.

July 30.—NISBET, JAMES, an American editor and author, was lost in the wreck of the Brother Jonathan, off the coast of Oregon, aged about 65 years. He was by birth a Scotchman, and having been somewhat unsuccessful in his career as novelist and journalist in England and Australia, he removed to California not far from 1855. His first literary venture in this country was "The Annals of San Francisco," which, although pecuniarily a failure, led to his employment as news editor on "The Chronicle." Later, he accepted a like position on "The Bulletin," then edited by James King, who was subsequently assassinated during the disturbances prior to the reign of the Vigilance Committee. Upon the death of Mr. King, Mr. Nisbet became editor of that paper.

August 3.—BERGEN, PETER G., ex-Judge of Kings County Court, died in Brooklyn, L. I. He was a descendant of the early Dutch settlers of Long Island, and for a quarter of a century had been identified with the popular interests of the city of Brooklyn. He was at one time county judge, and besides other offices of honor and trust, was for twenty-two years a prominent and valued member of the Board of Education.

August 3.—McLOUGHLIN, Rev. F. T., a Roman Catholic clergyman, died in New York city, aged 29 years. He was born in the parish of Aglia, Upper Canada, and at an early age entered the College of St. Michael, Toronto. The office of the priesthood being evidently his vocation, Mr. McLoughlin came to the United States, and was received into the Seminary of St. Mary's, Baltimore, Md. His theological

studies having been completed, he was ordained priest by Bishop Loughlin, in the Cathedral of St. James, Brooklyn, for that diocese. Soon thereafter he was assigned to the parish of Flatbush, where he ministered with zeal and fidelity to the people committed to his care, until his health became visibly impaired, when he was translated to the Church of the Assumption, Brooklyn. Here he continued the studies of his office, and won, by his attention to the best interests of his people, the sincere admiration of all. Again was he assailed by disease, which the best medical skill could not overcome, and was obliged to cease his labors and retire to the country, where he could obtain that repose so essential to his complaint. At the time of his death he had just returned from a voyage to Europe, whither he had been for the benefit of his health.

August 11.—CAMPBELL, DUNCAN R., D. D., a Baptist clergyman, and for many years President of Georgetown College, Ky., died at Covington, Ky., aged about 63 years. He was a native of Scotland, and a graduate of one of the Scottish universities, but came to this country while yet a young man, and after spending some years in the pastorate, in which he was justly admired for his abilities as a preacher, he came to Georgetown, Ky., first as pastor of the Baptist Church in that flourishing town, and on Rev. Dr. Malcom's resignation of the presidency of the college in 1849, succeeded him in that office, which position he retained until his death. The college had been prosperous under his administration, until the commencement of the war, when the students very generally enlisted on one side or the other, and the classes were exceedingly small till the close of the war. Dr. Campbell was a man of fine culture, and extensive as well as thorough scholarship, both in belles-lettres and theology.

August 11.—SHERMAN, Hon. J. H., U. S. Consul to Prince Edward Island, died at his residence in Charlottetown, in the 63d year of his age. He was a native of Albany, N. Y., and early became interested in steam navigation. In 1830 he was master of the Hudson River steamer De Witt Clinton. Of late years he had resided in Vermont, and was appointed to the consulate from thence in 1861. The climate of Prince Edward Island acted unfavorably upon his lungs, and, after a long struggle against disease, congestion set in and proved fatal.

August 14.—MATTINGLY, JAMES F., manager of the American Telegraph for sixteen years, died in Baltimore, Md., of consumption.

Aug. 19.—DODD, Rev. EDWARD MILLS, missionary of the American Board at Constantinople, died of cholera at Marsovan, Turkey. He was born at Bloomfield, N. J., June 22, 1824. His father was an elder in the Presbyterian church at Bloomfield. After receiving a good school education he became a clerk in a store in his native place in 1839, and that year having become hopefully a Christian, felt that

it was his duty to prepare for the ministry, and commenced a course of preparatory study. He entered Princeton College in 1840, and graduated in 1844. After spending one year in teaching, and three in the Union Theological Seminary, New York; he was licensed to preach by the Newark Presbytery in 1848, having two years previously decided to become a missionary. He was ordained in June, 1848, at New-ark, married the following October, and sailed from Boston for Smyrna in January, 1849. He was first assigned to a mission to the Jews at Salonica. After a little more than three years' service, the state of his health was such that he was constrained to return to the United States. Having recovered his health he again sailed for Smyrna in September, 1855, and for the next eight years labored as a missionary among the Armenians at Smyrna. In 1863 he was transferred from Smyrna to Marsovan with special reference to the superintendence of the girls' boarding-school to be opened there. The organization of this school was unavoidably delayed till the summer of 1865, and meantime Mr. Dodd was engaged in ordinary missionary labors, and in preparing the building, &c., for the school. It had been opened but two months when he was attacked with cholera, and died after only twelve hours' illness. Though a constant sufferer from feeble health, Mr. Dodd was a very active and useful missionary. He was an excellent Turkish and Hebrew scholar, and had contributed a large number of hymns of great merit to the Turkish hymn book.

Aug. 19.—SEWALL, KIAH B., an eminent lawyer of Mobile, died at Boston, aged 58 years. He was a native of Edgecomb, Maine, and a son of the late Rev. Samuel Sewall, of that State, widely known and honored as an example of piety and faithful service in the ministry. Mr. Sewall graduated at Bowdoin College in 1829, with high honor, his scholarship giving him the position of President of the Pencilian Society, one of the chief literary associations of the college. After graduation he was selected as a tutor in the Gardiner Lyceum, where he remained two years; thence he removed to New York, and after teaching there two years, went to St. Louis and travelled over Missouri and Illinois. Returning to Portland, he engaged in speculation. In 1838 Mr. Sewall commenced the study of law in New York, to which he carried matured powers of mind and varied experience, which qualified him for the reception of the subtle principles of jurisprudence, and the discharge of the duties of a profession requiring keenness of perception, calmness of judgment, and readiness in the use of his faculties. Thus equipped for the practical duties of life, he entered upon the pursuit of his profession in Mobile with ardor and success. He soon acquired a high standing at the bar, and prominent official station; every thing was bright and encouraging before him, when the war broke out and dashed his fond hopes and well-founded expectations. Mr. Sewall,

from his New England education, from his ancestral antecedents, and from his firm Northern principles, could be no other than a Union man. For this he had been badgered by the Secessionists among whom he was living, and had been subjected to great pecuniary loss and peril to his life. Even after Mobile surrendered, the expression of loyalty to the United States Government was attended with inconvenience if not actual danger. But Mr. Sewall, nothing daunted by the threatening aspects around him, persevered to maintain the highest expression of devotion to the Union and its flag. At the meeting of loyal citizens on June 6th last, he was appointed chairman of a committee, and reported and advocated a series of resolutions expressive of devotion to the Constitution and laws of the United States, and of a desire on the part of the citizens of Mobile and Baldwin Counties for a reorganization of Government under that Constitution. Although these resolutions encountered severe opposition, they were carried by the earnest advocacy of Mr. Sewall and his associates. He did not cease in his efforts for the cause of the country and a peaceful submission to its laws, up to the time of his departure from the city in the early part of August; and it was his intention to return immediately, to give his effectual aid to the cause of a good, peaceful, and stable Government under the old Constitution. After more than four years of anxious solicitude and constant peril in Mobile, he was conducting his wife, with her children, to visit Portland, her native place, when he was seized, upon his passage up the Mississippi, with a severe cold, which terminated in his death in Boston, having the previous day reached that city, in a state of complete exhaustion.

Aug. 21.—HARDING, JESPER, Collector of Internal Revenue, and former editor and publisher of the Philadelphia "Inquirer," died at Philadelphia, aged 65 years. He was a native of that city, and was educated a printer in the office of the "United States Gazette." At twenty-eight years of age he commenced the publication of the "Inquirer," which, through his energy and industry, proved a decided success. In 1835 he commenced the publication of Bibles, and gradually extended his operations until he became the most extensive publisher in that line in the country. He was also largely engaged in the manufacture of paper at Trenton. The commercial disaster of 1857, which brought ruin upon so many, did not spare him; and during the administration of President Lincoln he became Collector of Internal Revenue for the First District of Pennsylvania. His health had been failing for a year previous to his death, and he had recently gone to Cape May in the hope of receiving some benefit, but was there stricken by paralysis.

Aug. 22.—MC CARTHY, Judge FLORENCE, of the New York Marine Court, died in New York city. As a jurist he was industrious, faithful, and honest, always carefully investi-

gating the cases submitted to him for adjudication.

Aug. 25.—**SWEAT, MOSES, M. D.**, an eminent physician and anatomist of Maine, died in North Parsonfield, Me., aged 77 years. He was widely known among the profession as one of the most skilful anatomists of his day, and many of his most difficult and successful operations are recorded in the leading surgical works. He was in the House of Representatives several terms, and was also a member of the State Senate.

Aug. 25.—**THOMAS, MOSES**, trade sale and real estate auctioneer, died in Philadelphia, at the age of about eighty-four years. Mr. Thomas was for many years engaged in the publishing business, but relinquished it for the sale of real estate, dry goods, etc., at auction nearly thirty years since. For the last sixteen or eighteen years he had also, in connection with his sons, held the semi-annual book-trade sales in Philadelphia. He was a man of rare integrity and superior business ability, and had won the confidence of the community by the upright and honorable manner in which he conducted his business.

Aug. 25.—**WHEATON, HENRY G.**, an eminent lawyer of New York, was killed by a railroad accident in New York city, aged 59 years. He entered the legal profession at an early age, in Albany, and by his assiduity and perseverance in a short time attained to a very high position at the bar. For many years he held the highest rank as a criminal lawyer in that city, and prosecuted, as District Attorney, some of the most important causes ever tried in that State. Thorough in his preparation, his acuteness, perseverance, and logical powers were always equal to the occasion. He was equally distinguished as a popular orator and a parliamentary debater, and for several years was a member of the Assembly from Albany. About ten years since he removed to New York city, and there also stood high as an advocate in the civil and municipal courts of the city.

Aug. 26.—**HOPKINS, G. R.**, chief engineer of the Cali and Buenaventura Railroad, died at Buenaventura. Mr. Hopkins, who held a high rank in his profession, offered his services some time since to the Government of Colombia, to construct the great wagon-road from Cali to Buenaventura, on the Pacific, through the fertile valley of the Cauca, and was employed by Gen. Mosquera as assistant engineer. He performed his duties with such credit to himself that he was soon promoted to the position of engineer-in-chief, and was progressing successfully with the work, but the humidity of the climate affected his health, which was never very robust, and he soon sank under the exposure incident to his professional duties.

Aug. 27.—**TUTHILL, FRANK, M. D.**, editor of the "San Francisco Bulletin," and former assistant editor of the "New York Times," died in Brooklyn, aged 43 years. He was a native of Suffolk County, L. I., graduated at Amherst

College, at the early age of eighteen years, studied medicine in New York, and, ere he had scarcely attained his majority, commenced the practice of his profession in the vicinity of his early home. After a period of seven years he removed to New York, and having great literary taste, soon after the "Times" was established he began to write for its columns, manifesting such marked ability and originality that he accepted an invitation to embrace journalism as a profession, and abandon the practice of medicine. He remained in that office until 1859, when he resigned his desk to go to San Francisco, upon an engagement with the "Bulletin," where his talents were soon so highly appreciated that he was taken into a partnership by its proprietors, with whom he was still associated at the time of his death. Dr. Tuthill held a seat in the Legislature of New York, as a representative from Suffolk County, in 1851, and again in 1859, from the city of Brooklyn. As a legislator his course was marked by intelligence, industry, fidelity, and an integrity which no man thought of questioning. So well satisfied were his constituents with his services, that he was renominated for the Legislature in 1859, but declined because of his engagement to go to the Pacific. In California, as already intimated, he speedily made his mark as an editor, a philanthropist, and a friend. Nearly a year ago he left San Francisco for Europe, to recuperate his failing health. A few weeks previous to his death he returned from a tour in Spain, France, Switzerland, and Italy, greatly benefited by the journey, and confident that he would return to California by steamer of the 16th September, to resume his professional duties with renewed energy and strength. The last work in which Dr. T. engaged was the completion of a history of California, finishing its preface and reading his last proof-sheets but a few days previous to his death.

Aug. 30.—**DRAPER, Brevet Brig.-Gen. A. G.**, U. S. volunteers, died from the effects of a wound received in Texas. Early in the war he recruited a company of volunteers for the 14th Massachusetts regiment, and was commissioned captain, July 5, 1861. In January, 1863, he was promoted major, and after being transferred to a colored regiment was promoted to a colonelcy. He was attached to the Twenty-fifth Corps, and for a month had charge of a brigade in Maj.-Gen. Paine's division, where his gallantry won for him the title of brevet brigadier-general. A few months previous to his death he left Virginia for Texas, with the Twenty-fifth Corps.

Aug. 30.—**JORDAN, SAMUEL**, paymaster U. S. Navy, died at Poland, Maine. He was a native of Maine, graduated with high honors in the class of 1861 at Bowdoin College, and immediately entered the navy, serving on the blockade along the coast, and latterly in the West Gulf Department, where he contracted the disease which ended a promising career.

Aug. 30.—**LIVERMORE, GEORGE**, historical and antiquarian writer and book-collector, died in Cambridge, Mass., aged 56 years.

Aug.—**CLAY, SMITH**, an aged negro, foster brother of the Confederate Gen. J. F. H. Claiborne, and a soldier in the war of 1812, died in Mississippi. In early youth he was the body servant of the late Gen. Ferdinand L. Claiborne, of Natchez. He served in the war of 1812, and had a narrow escape from the terrible massacre of Fort Mims. During the Murrell excitement in Mississippi, in 1836, when the central counties of Mississippi were under martial law, from an apprehended insurrection of the negroes, and many persons, white and colored, were summarily executed, Clay had charge of one hundred negroes in Madison County, the focus of the excitement, and by his prudence and discipline, and the universal confidence reposed in him, it was almost the only plantation in the county that escaped suspicion. There was no overseer on the place; for six weeks he permitted no one to leave or enter the premises, and he stood guard every night around the dwelling of his mistress. On his master's return from Congress he offered him his freedom and a farm; but he refused to accept them. The Governor of Mississippi (the late Hiram G. Runnels), who had been an eye-witness of his conduct, presented him a certificate, on parchment, of his fidelity.

Aug.—**IRVIN, DR. WILLIAM**, United States Consul at Amoy, China, and formerly a distinguished physician in Central Pennsylvania, died in Amoy, of cholera. He was appointed Consul in 1864, and devoted himself to the practice of his profession among the Chinese, but being unacclimated fell a victim to the disease which he had been successfully treating in others.

Aug. 31.—**LEFLORE GREENWOOD**, an Indian half-breed of the Choctaw tribe, died at his residence in Carroll County, Miss., aged 65 years. He was the oldest resident of the country, and, proud of his descent, used often to refer to the boast of his tribe, that it had never fought against, but always for the white man. It was chiefly through his influence that the fairest portion of Mississippi was ceded by the treaty of Dancing Rabbit Creek to the United States, thus giving up the State to the culture of civilization. When his tribe took up their march to the lands west of the Mississippi, Col. Leflore, as he was called, remained, and became a citizen of the State. He was a member of the State Senate, and his counsels upon the political questions of the day were always listened to with respect.

Aug.—**MCLEOD, REV. XAVIER DONALD**, a Roman Catholic clergyman and author, was killed upon a railroad in Indiana, aged 44 years. He was a native of New York, and the son of Dr. Alexander McLeod, a Presbyterian minister and author. He graduated at Columbia College, studied theology, and in 1845 took orders in the Episcopal Church. After a pastorate of a few years, he sailed for Europe in 1850, spend-

ing the two following years in travel and study, and returning to this country a Roman Catholic. He then gave himself for a number of years to literary pursuits, contributing to various magazines, and publishing "Pyanshurst, his Wanderings and Ways of Thinking" (New York, 1852), "Life of Sir Walter Scott" (1852), "The Bloodstone" (1853), and the "Life of Mary Queen of Scots" (1857). Mr. McLeod is also the author of "The Elder's House; or, the Three Converts;" "Chateau Lescure; or, the Last Marquis," and a "Life of Fernando Wood," the mayor of New York (1856). McLeod's "Fugitive Poems" are his most characteristic productions; some of them, "The Weeder" (Putnam's Monthly) and the "Saga of Viking Torquil" (Knickerbocker Magazine); have great merit. In 1857 he removed to St. Louis, Missouri, where he was for some time editorially connected with the "Leader" newspaper, then under the direction of Dr. J. V. Huntington. He subsequently became professor of Rhetoric and Belles Lettres at Mount St. Mary's College, near Cincinnati. After the long and trying preparation necessary for the Catholic priesthood, Mr. McLeod was ordained, and spent the last few years of his life in a little cell in the basement of his church, from which he came forth at times for works of charity and love.

Aug.—**MCHESNEY, COL. J. M.**, United States volunteer, died in Beaufort, N. C. He entered the army as a private in one of the Brooklyn regiments, and eventually gained the colonelcy of the Ninth New Jersey. Afterwards he was transferred to the First North Carolina volunteers, and had command of Fort Macon and the district. About the time of Gen. Johnston's surrender, being satisfied that the war was over, he resigned and went into business at Beaufort, but until the time of his death suffered from the effects of a severe wound received at the siege of Washington, North Carolina.

Aug.—**PARSONS, MONROE M.**, a General in the Confederate army, was killed in a fight between the Liberals and Imperialists, near Camargo, Mexico. He served under Sterling Price during the war. After the surrender of Kirby Smith, he went to Mexico with several of his men, and joined the forces of Juarez.

Sept.—**HORTON, HON. ALBERT C.**, ex-Lieut.-Governor of Texas, died at Matagorda, in the 67th year of his age. He was the first Lieutenant-Governor, and President of the first Senate of Texas as a State of the Union. At the expiration of his term in 1847, he retired from public office.

Sept. 2.—**LONG, JOHN COLLINS**, a Commodore in the United States Navy, died at North Conway, N. H., aged 70 years. He was a native of Portsmouth, N. H., and joined the navy in 1811. He participated actively in the engagements of the war with Great Britain, and was on board of the Constitution when she fought the Java. His sea service amounted to 21 years

and three months. For over 13 years he was on shore duty, and for about 16 years he was unemployed. He has served his country as a naval officer for 53 years, during which time he has performed acts which have rendered his name famous. For his services at the Sandwich Islands, the people of those islands will ever cherish his memory with the warmest affection. He was assigned the duty of bringing Kossuth to this country in the steam-sloop *Saranac*, but would not allow that excited patriot to deliver revolutionary harangues at Mar-seilles, which gave Kossuth so much dissatisfaction that he left the *Saranac* at Gibraltar. Commodore Long left active service about five years ago, and resided at Exeter, N. H. His last command was of the *Pacific Squadron*. He was esteemed by all who knew him as a gallant and faithful officer.

Sept. 2.—*RHEA*, Rev. SAMUEL A., missionary of the American Board of Commissioners for Foreign Missions to the Nestorians, died of cholera, between Tabreez and Ooroomiah, in the thirty-ninth year of his age. He was a native of Blountville, Tenn., and when fifteen years of age became hopefully pious and united with the Presbyterian Church of that town. He graduated at Knoxville University in 1847, and at the Union Theological Seminary, New York, in 1850. In April of that year he was licensed to preach the gospel by the Fourth Presbytery of New York, having previously determined to give himself to labors among the heathen. He was ordained at Blountville, February 2, 1851, and sailed for Boston early the following month for the Nestorian Mission. In November, 1851, he, in company with other missionaries, went to the new station at Gawar, among the Koordish Mountains. Here his labors were very arduous, and in 1858 his health was so much impaired that he returned to Ooroomiah, and subsequently to the United States. In July, 1860, he sailed again for his field of missionary labor, arriving at Ooroomiah in October, where he was stationed until his death. Mr. Rhea had been appointed by the Mission to the work of translating the Scriptures into the Azerbaijan-Turkish language, under the auspices of the American Bible Society, and was returning from Tabreez, whither he had been to obtain facilities for the work, when he died. As a scholar, he was studious, thorough, and accurate. He was a profound Hebrew scholar, spoke the modern Syriac with great accuracy and fluency, and his knowledge of the Tartar-Turkish was such as to enable him to preach in that language with great acceptance.

Sept. 4.—*BOYLSTON*, Hon. R. B., a prominent politician of South Carolina, died at Winnsboro, S. C. He was a native of Charleston, but removed to Fairfield District, where he gained great distinction at the bar, and was for several years the representative of that district in the State Legislature, occupying in succession the positions of chairman of the Judiciary Committee and Speaker of the House of Representatives.

Sept. 6.—*TAYLOR*, Hon. WILLIAM, M. D., a prominent physician of New York State, and ex-member of Congress, died at Manlius, Onondaga Co., aged 72 years. He was a native of Connecticut, but removed with his parents when very young to Onondaga Co., where he was educated, and for many years settled in practice. He was at one time President of the New York State Medical Society, and having removed his residence to the city of New York, was a member of the Board of Supervisors. In 1832 he was elected to Congress, and was reelected in 1835 and 1837; served two years in the Assembly from New York city, and, after his return to Manlius, he represented Onondaga Co. in the General Assembly for two years. He subsequently retired to private life and devoted himself to the practice of his profession.

Sept. 7.—*BAY*, WILLIAM, M. D., an eminent physician of Albany, died at the age of 92 years. He was a descendant of the Huguenots, his ancestors being among those who fled first into Holland, and subsequently into Ireland, from whence they came to America, and settled in Maryland in 1720. The subject of this sketch was born in Albany, graduated at Princeton, N. J., and removed to New York in 1794, where he studied medicine with Dr. S. L. Mitchell, and entered upon the practice of his profession in Claverack, Columbia County. In 1810 he was induced to remove to Albany, and after a few years became a leading practitioner. Upon the completion of his half century of practice, the profession of Albany gave him a public dinner in honor of the occasion, and in appreciation of his long and faithful services as a citizen and a physician.

Sept. 7.—*DOW*, AUGUSTUS F., a prominent merchant of New York city, died in Fayetteville, Onondaga Co., N. Y., in the 52d year of his age. He was a native of Connecticut, and started in mercantile life in Hartford; subsequently he removed to New York, and for the past twelve years had been at the head of the Wall Street commission house of Dow, Young & Co. He had been an active member of the Republican party from its organization, and was nominated for Congress in the sixth district in 1858, but withdrew in favor of Hon. George Briggs. He was an ardent friend of the public school system, and served at one time as school commissioner.

Sept. 7.—*ROBINS*, JOHN, an old and prominent merchant of New York city, died at his residence, aged 86 years. In 1797, having just returned from a voyage to Port Royal, Martinique, he sought a situation as under clerk in a dry goods house, with the determination to learn the business, and after a service of eighteen months, took a small store and set up in business upon his own account. By industry and perseverance he succeeded to such an extent that he soon became well known as a merchant and banker. In the war of 1812 he entered the army as private in an artillery regiment. He was for many years a large stockholder and

director in the Phoenix Bank. At his death his property was estimated to be between three and four millions.

Sept. 8.—CHOTEAU, PIERRE, Jr., an enterprising fur dealer, died at St. Louis, aged 77 years. He was the son of Pierre Choteau, one of the founders of that city, and was born there in 1789. The advantages for education were very limited at that time, but he improved them to the utmost, and when about fifteen years of age, commenced active life as clerk for his father and uncle, then largely engaged in the Indian fur trade. He also commenced early to do business upon his own account. Following the Indians from point to point as they receded, he at different times occupied the places where now are St. Joseph and Kansas, and then Bellevue, Council Bluffs, Fort Pierre, Fort Berthold, Fort Union, at the mouth of the Yellow Stone, and Fort Benton, or the head of navigation of the Missouri. He also followed the Indians as they receded up the Osage River, and up the Mississippi, from Keokuk to St. Paul, having trading posts all along the rivers. About the year 1806 or 1807 he went up to Dubuque, to trade with the Sac and Fox Indians, then inhabiting that country, ascending and descending the rivers in canoes. He was associated with several other heavy dealers in furs, among whom was John Jacob Astor, and they extended their trade as far south as the Cross Timbers of Texas, and as far northwest as the Blackfeet country, and, at one time, as far north as the falls of St. Anthony. The trade with Santa Fé was also in their hands. As a necessity he was drawn into extended operations, not only with Eastern cities, but in England and many parts of Europe. Mr. Choteau never had a taste for political life. He represented his county in the State Convention which made the first Constitution, but, with this exception, he invariably refused to take any part in politics.

Sept. 19.—REVERE, Brevet Brig.-Gen. WILLIAM H., died at Newbern, N. C. Gen. Revere entered the service as a first lieutenant in the New York Fire Zouaves, and subsequently became a captain in the organization known as "the Ellsworth Avengers." After being mustered out of the service he took up his residence in Baltimore, and was for some time a clerk in the Commissary Department in that city. Under the last call of President Lincoln for troops, he took an active part in recruiting the Tenth Maryland regiment, was elected colonel, and held that position until the completion of the term of service of the regiment. He was then appointed to the command of the One Hundred and Seventh United States Colored Troops, which was sent to North Carolina with the Twenty-fifth Army Corps. Gen. Revere was subsequently assigned to the command of the post at Moorehead City, continuing in that position to the time of his death.

Sept. 20.—DOWNES, Commander JOHN A., U. S. N., died at New Orleans. He was a na-

tive of Massachusetts, and son of the late Commodore Downes. Inheriting a taste for the sea, he entered the service in 1837, while yet quite young, and continued therein for twenty-seven years. During the war, he commanded the gunboat *Huron* and the monitor *Nahant*. He was recently occupied with special duty at Boston, from which he was detached to command the Grand Gulf squadron. He was a man of fine culture and unflinching patriotism.

Sept. 23.—MARSHALL, CHARLES H., Commissioner of Pilots, and shipping merchant, died in New York, aged 74 years. He was a native of Easton, Washington Co., N. Y. At an early age he proceeded to Nantucket, and followed the sea until the War of 1812, when he taught school for a while, and afterwards again resumed the profession of a seaman, in which he rapidly rose to honor and wealth. Subsequently he removed to New York, and entered into the mercantile business. Here he soon became a prominent citizen, and his frankness and marked integrity of character won him a position of great influence. His love of country was at once a profound conviction and a ruling passion, and during the darkest days of the rebellion he spared no effort in doing his part toward supporting the Government.

Sept. 23.—MURRAH, PENDLETON, Confederate Governor of Texas, died at Monterey, Mexico, in self-imposed exile. He was a native of Alabama, and graduated at Brown University, Providence, R. I., in 1848. He was elected Governor of Texas in 1863.

Sept. 27.—BAYLIES, Hon. WILLIAM, formerly a member of Congress, died at Taunton, Mass., aged 89 years. He was a native of Massachusetts, was educated a lawyer, and held many public offices, having been in the State Legislature in 1830 and 1831. He was a Representative in Congress from Massachusetts from 1813 to 1817, and from 1833 to 1835, serving as a member of the Committee on Revolutionary Claims.

Oct. 2.—TALMAGE, Rev. SAMUEL K., D. D., a Presbyterian clergyman and author, died at Midway, Georgia. At the time of his death he was President of Oglethorpe University. He was a man of decided ability, and author of several interesting works.

Oct. 4.—FULLERTON, Rev. ROBERT Stewart, missionary of the O. S. Presbyterian Board, died at Laudour, India, aged 43 years. Mr. Fullerton sailed for India as a missionary in 1850, and was at first stationed at Futtehghur, but at the end of nine months was called to Agra to take charge of two schools, one for boys and the other for girls, of East Indian birth. These schools were very successful, and while managing them he also officiated as pastor of the Presbyterian (English) Church at Agra, and continued to labor in this double capacity until the mutiny broke out in 1857, which scattered both the schools and the church, and destroyed the mission at Agra. He then returned to Futtehghur, where he speedily ac-

quired so thorough a knowledge of the native language as to be able to preach in it with fluency and accuracy. As soon as circumstances would permit he reopened the Furruckabah high school, which had been closed by the war, and soon brought it into a prosperous condition. His health failing from his excessive labors, he removed in 1864 to Deyrah, to be nearer the hills, but was attacked there by a malignant disease which soon carried him off.

Oct. 5.—MOORE, EDWIN WARD, a Commodore in the Texan Navy, died in New York city, aged 54 years. He was a native of Alexandria, Virginia, and at fourteen years of age was transferred from the Alexandria Academy to the United States Navy, with a midshipman's commission, and, beginning with an extensive cruise in the sloop-of-war *Hornet*, he was much in active service down to the Texan war of independence of 1836. At this time, by regular promotion, he had become a first lieutenant, and, as an intelligent, active, and enterprising young officer, he was singled out by the Government of Texas to the chief command, as commodore of its naval establishment, which had yet to be created. Young Moore, resigning his commission in the United States service, gladly accepted his new appointment, and hastened to his new field of labor and adventure. This was in 1837. He was a commodore in the cause of of a new republic which was without ships and without money. He contrived, however, partly from the credit of the republic and partly from his own resources, to purchase in New Orleans two small ships, which he fitted up and equipped as vessels-of-war. With these and a tender he set sail from New Orleans in the spring of 1843 for a trial of strength with the Mexican fleet awaiting him in the Gulf. This fleet consisted of eight or ten vessels, including two steamers, the *Guadaloupe* and *Montezuma*, built in England at an expense of a million of dollars. So great was the disparity between these opposing forces that, to save his ships from what he believed would be their certain destruction if they were overhauled by the enemy, President Houston repeatedly ordered Commodore Moore to seek shelter in the Bay of Galveston; but, disregarding these orders, or failing to receive them at New Orleans, Moore boldly put out to sea in search of the enemy. The Mexican fleet was at length sighted off the coast of Yucatan. A succession of hot engagements followed in the Bay of Campeachy, in which the Mexican squadron, invariably beaten, was finally routed and dispersed, with heavy losses in ships and men. In consideration of his services, the Congress of Texas— notwithstanding the removal of Moore by President Houston, and the veto of the bill for his reinstatement by President Anson Jones—passed the bill into a law, which included the liquidation of balances of money on account of the navy to the sum of over seventy thousand dollars, and the grant of a tract of land to the commodore of thousands of acres.

After the annexation of Texas, the commodore and his associate Texan naval officers applied to Congress to be reinstated in the United States Navy, with the rank they held from Texas. This proposition was defeated. A compromise was finally passed, in the shape of an appropriation to these officers, as officers of the Union on leave pay from the day of annexation to the passage of the bill. Of this appropriation (1855) the share accruing to Commodore Moore was some seventeen thousand dollars.

His time subsequently was largely occupied in experiments on new mechanical inventions.

Oct. 7.—CHAPIN, HON. MOSES, an eminent lawyer of Rochester, New York, died in that city, aged 74 years. He was a native of Springfield, Mass., studied law, and removed to New York in 1813. He was the first Judge of Monroe County, which position he filled from 1825 to 1831. Since that time he has devoted himself to the practice of his profession.

Oct. 7.—SANDERS, Brevet Brig.-Gen. HORACE T. (Col. 19th Wis. vols.), an officer in the U. S. volunteer service, died in Washington, D. C., of hæmorrhage of the lungs. He entered the army early in the war, and on the 2d of June, 1862, was appointed commander of the 19th Wisconsin regiment of infantry. He acquitted himself with great gallantry in his command, and on the 12th of January, 1865, received the brevet rank of brigadier-general. His death was the result of exposure in the service.

Oct. 10.—EATON, JAMES S., author, and principal of the English department of Phillips Academy, at Andover, Mass., died at that place. He had been long and favorably known as a teacher, and was the author of some school-books.

Oct. 10.—RICORD, MRS. ELIZABETH, a well-known authoress and teacher, died at Newark, N. J., aged 78 years. Her active life was spent mostly in Western New York. In 1828 she opened a young ladies' seminary in Genesee, which she continued for nearly twenty years. As a teacher she was highly gifted, and her personal and mental accomplishments, together with her winning methods, gave her great power over the young minds under her care. Her Christian influence also was so marked, that a large number of her pupils became subjects of Divine grace while connected with the seminary. The great revival of 1832 in Western New York commenced in Mrs. Ricord's seminary. Subsequently she taught some years in New York city. She was the author of a valuable book on mental philosophy and other important works.

Oct. 11.—CASTLEMAN, REV. ROBERT, an Episcopal clergyman of Petersburg, Va., was murdered near Gaston, N. C., for his efforts in behalf of the freedmen.

Oct. 11.—DIX, JAMES A., principal editor of the "Boston Daily Journal" for a number of years, died in that city of consumption.

Oct. 11.—GIGER, REV. GEORGE MUSGRAVE, D. D., a Presbyterian clergyman, Professor

Emeritus of the Latin Language and Literature, New Jersey College, Princeton, died at Princeton, aged 43 years. He was a very thorough classical scholar, and had been for some years Professor of the Latin Language and Literature, and Secretary of the Society of Alumni of the college. He took great interest in the promotion of the prosperity of the college, and at his death left it a bequest of thirty thousand dollars, to be realized on the death of his uncle.

Oct. 12.—JONES, Rev. Lot, D. D., an Episcopal clergyman of New York, died suddenly in Philadelphia, from the effects of a fall, aged 69 years. For nearly thirty years he was pastor of the Church of the Epiphany, having commenced his labors when the congregation consisted of some half-dozen adults and a few children, and the services were held in a little unfinished room over an engine-house. He was much beloved for his unvarying sweetness and gentleness of character, and his devoted and unselfish Christian life. He had gone to Philadelphia as a deputy to an Episcopal Convention.

Oct. 17.—GREEN, JOHN, M. D., died in Worcester, Mass., aged 82 years. He was a native of Worcester, and was the fourth in the descent of a line of physicians, all eminent in the theory and practice of medicine. He graduated at Brown University in 1804, and received the degree of Doctor of Medicine from both Brown University and Harvard College in 1826. His professional training was careful and thorough, and he kept pace with the progress of medical science while he continued in practice, having accumulated a valuable professional library of about two thousand volumes. He had also a collection of seven thousand volumes, which he presented to the city of Worcester in 1859, as the basis of a public library, consisting of travels, voyages, history, and theology. Ten years ago feeble health and increasing age compelled him to relinquish the active duties of his profession. He was esteemed and respected by all who knew him.

Oct. 18.—GREEN, Hon. BYRAM, Judge of Wayne County Court, died at Sodus, Wayne Co., N. Y., aged 79 years. He was a native of New York, served five years in the Assembly of that State, and was a Representative in Congress from 1843 to 1845.

Oct. 19.—AGNEW, Rev. JOSIAH HOLMES, D. D., a Congregational clergyman, teacher, and editor, died at Peekskill, N. Y., aged 61 years. He was a native of Massachusetts, and had for many years devoted himself to literary and educational pursuits, being at one time editor of the "Eclectic Magazine," and afterwards for some years principal of a female seminary at Pittsfield, Mass. He subsequently engaged in some speculations in coal-mining, which proved unsuccessful. In 1860 he became Secretary of the Southern Aid Society, and in 1865 took charge of the "American Federal Monthly," a continuation of the old "Knickerbocker Magazine."

Oct. 19.—FORWARD, Hon. WILLIAM A., Judge of the Supreme Court of Florida, died at Pilatka, Florida. He was a native of New York. In 1836 he was a Canadian rebel, and suffered imprisonment and banishment. In 1845 he accompanied Judge Bronson to Florida, when that gentleman was appointed United States Judge for the Northern District of the State, and had been a constant resident there from that period. He served several sessions in the Territorial and State Legislatures, and in 1852 was elected Judge of the Eastern Judicial Circuit, which position he held until 1857. In 1859 he was elected to the Supreme Bench.

Oct. 20.—HALL, Lieut.-Col. WILLIAM P., U. S. volunteers, died in New York city, of disease of the lungs, contracted in Southern prisons. Before he was of age he won the position from the ranks of sergeant-major in the regular army, and was conceded to have been the first to place the United States colors on the heights of Chapultepec. For this act of gallantry he was commissioned captain in the regular army, but for private reasons chose not to accept the appointment. When the celebrated snuff-box, left by Andrew Jackson as a legacy to the bravest soldier in battle, was offered a few years since for a claimant by Andrew Jackson Donelson, the adopted son of the legatee, the claims of Col. Hall were urged by many old soldiers who had witnessed his bravery on the battlefield of Mexico. The New York Common Council, however, who had the difficult task of awarding the gift in their hands, decided in favor of another, on the alleged ground that Col. Hall belonged to the regular army, and was on that account barred from the list of competitors. Early in the late war Col. Hall took the field, and was seriously wounded on more than one occasion. He was made prisoner by the Confederates when serving as major of the 9th New York or Ira Harris cavalry, and was held by them for seven months. Col. Hall was much esteemed by all who knew him, and possessed a liberal degree of culture, often contributing interesting articles to periodical literature.

Oct. 22.—BERRY, ABRAHAM J., M. D., an eminent physician and surgeon, died in Williamsburg, L. I., aged 66 years. He was a native of New York, educated carefully as a physician, and early in life obtained a prominent position in his profession. When the Asiatic cholera desolated New York, in 1832, he was one of the few who remained at his post, laboring day and night among the sick. His courage and zeal on that occasion called forth many expressions of admiration and respect from his fellow-townsmen, and the city authorities publicly acknowledged his eminent services by a vote of thanks. Latterly Dr. Berry had devoted his time to dealing in real estate in Williamsburg, a considerable portion of that part of Brooklyn having belonged to his family for more than a century. He identified himself with the interests of Williamsburg, became its mayor

when it was made a city, and, in connection with Mr. Law, established the present ferries. When the war broke out, Dr. Berry, in 1861, although over sixty years of age, fired by that enthusiasm which ran through the country like an electric shock, left his home to act as surgeon of the 38th New York regiment. When Gen. George B. McClellan took up his march for Harrison's Landing, the patients in charge of the doctor—over three hundred in number—were forgotten at their hospital, near the White House. The army had departed before he could commence to move, but he not only carried the sick and convalescent safely through six days' battles to the James River, but his train numbered over eight hundred sick and wounded men when he reached the Landing. His death was the result of a fever contracted at that period.

Oct. 22.—DWIGHT, WILLIAM THEODORE, a Congregational clergyman and author, born in Greenfield, Conn., June 15, 1795, died in Andover, Mass., Oct. 22, 1865. He was the seventh son and child of President Timothy and Mary (Woolsey) Dwight. The year of his birth, his distinguished father was inaugurated President of Yale College, and moved his family to New Haven. After spending some months in a classical school at South Farms, Litchfield, Conn., and also at Fairfield, young Dwight was admitted, at the early age of twelve, to the Freshman class in Yale College. Owing to his youth, it was not thought advisable that he should at once go on with his class, and two years were passed in general studies. He graduated in 1813, having maintained throughout a highly honorable position in his class. From 1817 to 1819 he served as tutor in the college. In 1818 his father's celebrated Theological Discourses were published, with a Memoir, in five vols. A large part of the labor of preparing this edition for the press was performed by Mr. Dwight. In the fall of 1819 he entered on the study of law, in the office of Charles Chauncey, Esq., of Philadelphia, Penn., and in the spring of 1821 he was admitted to the bar. His powers were admirably adapted to the profession thus chosen, and he pursued it with interest and success. Laying a broad and deep foundation by careful study of the principles of law, and acquiring, with the aid of a remarkably retentive memory, a large share of the learning of his profession, at the close of nearly ten years of practice he found success waiting on his endeavors, and the path to eminence in his calling fairly open. At this time, however, his convictions of duty underwent an entire change, consequent, as he believed, upon the renewal of his character through the truths of the Gospel. Though never questioning the compatibility of an earnest devotion to the duties of the legal profession with a thoroughly religious character, he found that the chief affection and interest of his mind centred in another work. Uniting with the Fifth Presbyterian Church, then under the pastoral care of Rev. Dr. Skin-

ner, he devoted himself to the work of preparation for the Christian ministry. Under his father's training and in editing his Sermons, Mr. Dwight had already made large attainments in the study of Divinity, and in a few months he was approved as a minister by a presbytery in New York city. After receiving several calls to settle, he finally accepted that of the Third Congregational Church in Portland, Me., and was ordained and installed June 6, 1832. After a ministry of nearly thirty-two years to that people, in consequence of declining health he resigned his charge in May 1864, and removed to Andover, Mass., where he died in October, 1865. For many years previous to his decease Dr. Dwight had been widely known as one of the most prominent and influential of the Congregational clergy. His intellectual vigor, especially a rare power of unravelling an intricate theme, of disentangling the main question from a mass of irrelevant matter, combined with his forensic experience, and a manner marked by ease, dignity, and decision, made him a leading member of deliberative bodies and an admirable presiding officer. Besides very frequent service as Moderator of Ecclesiastical Councils, some of them of much importance in the history of the Congregational Denomination, as *e. g.* the Council held in New York city, in connection with Rev. Dr. Cheever's Church, Dr. Dwight was a member of the Board of Overseers of Bowdoin College, a Corporate Member of the A. B. C. F. M., President of the Portland Benevolent Society, President of the Maine Missionary Society, President of the Congregational Library Association, President of the Board of Visitors of Andover Theological Seminary, and President of the Albany Convention of Congregational Churches. As a preacher, he excelled in the treatment of the most commanding themes. He dwelt chiefly on the central facts and disclosures of the Scriptures, the character of God, the soul, redemption, heaven, hell. He spoke of what to him were the great realities. The strength and clearness of his mind were accompanied by an equal power of sensibility. Under the influence of deep thought and emotion, he often rose to a high degree of noble eloquence. His countenance was open and expressive, his manner always earnest, often highly impressive, and not seldom naturally and spontaneously dramatic. He possessed remarkable power in extemporaneous address when questions involving great ethical principles and human interests were under discussion. He had a profound and instinctive abhorrence of all that was false, or unjust, or low. His resignation of his charge called forth many expressions of respect and affection from the community in which his ministerial life had chiefly been passed. One of the most noticeable of these was an address drawn up by Hon. William Willis, and signed by many of the leading citizens of Portland, of various professions, callings, and religious denominations, replete with testimony to the pub-

lie esteem in which Dr. Dwight was held, not only as a faithful pastor and preacher, but as a citizen and patriot. He received the degree of D. D., from Bowdoin College, Me., in 1846. His published works were, a "Memoir of Rev. Sereno E. Dwight, D. D.," 1851, "An Oration before the Association of Alumni of Yale College," "An Address before the Phi Beta Kappa Society of Bowdoin College," 1849, and numerous other orations, addresses, discourses, and review articles, all of them characterized by sound logic, profound thought, and a chaste and elegant style.

Oct. 23.—MISSROON, Commodore JOHN S., U. S. N., died at the Boston Navy Yard, aged about 55 years. He was a native of South Carolina, and entered the service in 1824. At the Boston yard he filled the position of Ordnance Officer, and in the last report of the Chief of the Bureau of Ordnance especial commendation is bestowed on Commodore Missroon.

Oct. 24.—JOHNSON, WILLIAM P., brother of President Johnson, and United States Collector at Velasco, Texas, died at Columbia, on the Brazos River, from an accidental gunshot wound. While taking a gun from a small boat in which his party had crossed the river, the ball entered the hand and came out at the elbow, shattering the bone, and making amputation necessary; but the surgeons of that region, who were rebels, refused to render him any assistance, because of his relationship with the President.

Oct. 26.—MINER, Hon. CHARLES, an editor, and formerly member of Congress, died at Wilkesbarre, Pa., aged 65 years. He was a native of Norwich, Conn., and when nineteen years old emigrated to Wyoming Valley, where with his older brother, a practical printer, he started the Luzerne "Federalist." This was superseded by the "Gleaner," with Miner as the principal editor. Through its columns he gave for several months the celebrated essays of morals and wit, of fact and fancy, and delicate humor, entitled, "From the Desk of Poor Robert, the Scribe." These gave him such popularity that he was invited to become assistant editor of the "Political and Commercial Register," in Philadelphia. He accepted, but soon went to West Chester, where, with his brother, he established the "Village Record." He here wrote over the signature of "John Harwood," and made the paper very popular. In 1825 he was elected twice to Congress as a colleague of James Buchanan. He took great interest in the subject of slavery, to which he was opposed. He awakened the country to the silk-growing business, and drew up and introduced the first resolutions on the subject, and wrote the able report which was introduced by General Stephen Van Rensselaer, as chairman of the Committee on Agriculture. About 1832 he relinquished the business in West Chester, and returned to the Wyoming Valley. He was the author of a "History of Wyoming."

Oct. 29.—HARDING, J. BARCLAY, collector of national revenue in the First District of

Pennsylvania, died in Philadelphia, of congestion of the brain. He was publisher of "The Evening Telegraph," and an active supporter of President Johnson's administration.

Oct. —.—HAWKINS, Col. WILLIAM S., an officer in the Confederate army, and a poet of some ability, died in Nashville, Tennessee. In 1861 he entered the rebel army as major of Gordon's battalion, was for a while on the staff of General Wheeler, with the rank of lieutenant-colonel, and was afterwards promoted to a colonelcy and served in the Army of Tennessee until taken prisoner and sent North, where he remained until released on the return of peace.

Oct. 29.—MCGORRISK, Rev. BERNARD, a Roman Catholic clergyman, for many years missionary priest at the West, died at his residence in Williamsburg, L. I., aged 47 years. He was a native of Ireland, and at an early age showed preference for the priesthood as the chosen profession of his after life. Having acquired the rudiments of education in Ireland, he was sent, when yet quite young, to Paris, in order to finish his education and study theology. At this college he graduated with much distinction. Early in 1842 he came to this country, and for several months was engaged as Professor of French at St. John's College, Fordham. While there he endeared himself to his colleagues and the students both by his talents and his devotion. He was not, however, long permitted to remain at the college, as missionary priests were much needed in the far West. He was sent for by Bishop Quarters, of the West, and entering with all the ardor of youth upon his new field of labor in the Western wilds, remained as a missionary priest in that section of the country for nearly eighteen years, often enduring the greatest hardships and exposure in the duties of the ministry. While there he built fifteen or sixteen churches. But as he grew older, exposure began to tell upon him, and it became evident that the seeds of disease had been sown in his heretofore robust constitution, and, a change of life becoming necessary, he at length reluctantly parted from his flock in the West, removing to Brooklyn, about five years ago, where he built the present Church of St. Vincent de Paul, which has a congregation of seven thousand persons, and was its pastor at the time of his decease. Mr. McGorrisk was a man of fine scientific attainments, and spoke and wrote the French language with fluency and accuracy.

Oct. 30.—FITCH, ASA, a well-known manufacturer and millionaire of Fitchville, Conn., died in that village. He was for many years a leading citizen of the town.

Nov. 2.—REYNOLDS, Lieut.-Col. JOHN G., U. S. volunteers, and captain of marines, died in Brooklyn, L. I., aged 64 years. At the age of seventeen he entered the Military Academy at West Point, but left the institution during the third year of his course. In May, 1824, he entered the Marine Corps as second lieutenant. Eleven years after, as first lieutenant, he served

with distinction in the Florida war. In 1843 he accompanied Commodore Kearny in the "Constellation" in his cruise around the world. On his return from this cruise, Lieutenant Reynolds with his battalion of marines was ordered to duty with the army of General Scott, and participated in the campaign from Vera Cruz to Mexico. While engaged in this campaign he was promoted (March, 1847) to be captain, having served twenty-three years as a lieutenant. He also received the brevet promotion of major (September 13, 1847) "for gallant and meritorious conduct in the storming of Chapultepec and the capture of the city of Mexico." The Mexican war over, Captain Reynolds was first on duty at the recruiting rendezvous at New York; next in the Pacific Squadron; then at New York again; then at the Marine Barracks at Warrington, Florida; then on the frigate *St. Lawrence*; then at the Marine Barracks at Portsmouth, N. H.

When the civil war broke out, Captain Reynolds was promoted to be major, and as such commanded the battalion of marines which were engaged at Bull Run July 21, 1861. For his conduct on this occasion he was promoted lieutenant-colonel, and soon after entered again on active duty. He commanded another battalion of the corps in the secret service operations, which resulted in breaking up the contraband traffic between Maryland and the Southern army, and in destroying large stores intended for that army which were at Port Tobacco. With the same battalion he took part in the expedition to Port Royal. Col. Reynolds was some time later ordered to Morris Island, and relieved Major (now Colonel Commandant) Jacob Zeilin of the command of the battalion of marines, holding a position and manning a battery on that island. Col. Reynolds asked to be relieved on account of age and health in 1864, and the request being granted he was placed on the retired list with Colonels Delancy and Ward Marston. He was ordered to duty first at the Marine Barracks, Charlestown, Mass., and subsequently to the command of the Brooklyn station, where he died. Col. Reynolds was one of the most prominent officers in the Marine Corps.

Nov. 3.—ARNOLD, GEORGE ("McArone"), an editor and poet, died at Strawberry Farms, N. J. He was widely known as the author of the "McArone" papers and several biographical works, and by various contributions to "Vanity Fair," the "Leader," and other journals. He was also the author of several poems of remarkable sweetness. During the late war he did honorable service in the cause of the country, and for a long time performed military duty at one of the forts on Staten Island.

Nov. 4.—COOKE, JOHN P., an eminent musical composer and leader of orchestral bands, died in New York, aged 45 years. He was a native of Chester, in Cheshire, England. He inherited the musical and theatrical ability of

his father, who was a musician and an actor of good repute. The first thirty years of his life were passed in England, where he occupied the position of leader of the orchestra at Astley's theatre, London, under the management of Batty. At different times he acted as conductor at the Adelphi and the Strand houses, and in 1850, having come to this country at the pressing instance of Burton, assumed the leadership of the orchestra at the old Chambers Street theatre. It was there he composed and arranged the music for the *Winter's Tale*, the *Midsummer Night's Dream*, and other Shakspearian productions. When engaged at the Old Broadway theatre he wrote the melodies which added so much to the great success of the drama of the *Sea of Ice*. He also furnished many other compositions, which have been considered worthy the reputation of more pretentious musicians.

Nov. 8.—CALHOUN, Hon. WILLIAM B., a lawyer, and formerly member of Congress, died in Springfield, Mass., aged 69 years. He was a native of Boston, Mass., graduated at Yale College in 1814, studied law, and by his talents and integrity of character soon won his way into public favor. In 1825 he was sent to the State Legislature, and continued a representative for ten years, being Speaker during the last two years. From 1835 to 1843 he represented the Congressional District of Hampden and Hampshire Counties in Congress; was President of the State Senate in 1846 and 1847; Secretary of State from 1848 to 1851; Bank Commissioner from 1853 to 1855; Presidential Elector in 1844; and Mayor of Springfield in 1859. In 1861 he was again a representative for Springfield in the State Legislature. This was the last of his public service. Increasing ill health compelled him, at the close of that year, to seek repose in complete retirement from political duties. Mr. Calhoun was a powerful and earnest writer for the press. His style was pure, vigorous, and effective. For many years he was an occasional editorial writer for the Springfield "Republican," and for a long period was quite a voluminous contributor to its columns.

Nov. 9.—BALLANTINE, Rev. HENRY, missionary of the A. B. C. F. M. to Ahmednuggur, India, died at sea, four days and a half from Liverpool, while upon his return to the United States, aged 52 years. He was a native of Schodack, N. Y., graduated at the University of Ohio and at Andover, Mass., and was ordained at Columbus in 1835. In May of the same year he sailed from Boston for Western India, and has since labored among the Mahrattas with great fidelity and success. He was returning to his native land in the hope of recovering from the effect of his severe and protracted toil at Ahmednuggur.

Nov. 9.—EASTMAN, Capt. ROBERT LANGDON, U. S. A., died at Washington, D. C., at the residence of his father, Col. S. Eastman, U. S. A., aged about 25 years. He graduated in May, 1861, at West Point. His class, in conse-

quence of the breaking out of the war, and the need of officers, being examined in advance of the usual time, he was ordered at once to the field, and was in the battle of Bull Run: from that time he was on duty with the Army of the Potomac, until severe disease, contracted in the service of his country, so prostrated his physical powers, that he was no longer capable of active service. After the battle of Malvern Hill he was ordered to West Point, and there, though constantly suffering from illness, he faithfully and skilfully performed the double duty of Assistant Professor of Drawing and Ethics, until it was impossible for him to continue his efforts to be useful. He was a native of the State of Maryland, but never hesitated about his duty to his flag and to his country. The remembrance of his modesty, his worth, and his talents, will be cherished by those to whom these qualities so much endeared him. He was a brave officer, and his short career in the army was useful to his country, and honorable to himself and to his family. He had been promoted to the captaincy of the Sixth regiment of Regular Infantry, and, at the time of his death, was attached to Gen. Augur's staff.

Nov. 11.—**McCORMICK, JAMES**, one of the oldest men in the United States, died in Newburg, N. Y., in his 115th year. He was a native of the county of Cavan, Ireland, and his age was accurately fixed by the fact, that in the Irish Rebellion of 1798, when ages were a matter of importance, he was 47 years old. He was a rebel in that war, and was wounded. In his youth he was not especially remarkable save for health and strength. On one occasion he lifted a stone weighing seven hundred pounds, and upon another, walked fifty-two miles in one day, returning the same distance the next day. He was not married until he was forty-five years old, and subsequently had a family of fourteen children. In 1846 he came to this country. His habits were temperate, and all of his senses continued perfect except that of sight, which was fast failing at the time of his death.

Nov. 13.—**MORRISON, WILLIAM W.**, major and commissary of subsistence in the Confederate army, died in North Carolina. He was formerly a clerk in the Construction and Equipment Bureau of the Navy Department at Washington. He subsequently had charge of the Impressment Bureau of the rebel Commissary Department in North Carolina, and at one time was the chief dependence of Lee for subsistence.

Nov. 13.—**PARSONS, WEARE DRAKE**, a merchant and editor, died suddenly in New York city, aged 59 years. He was a native of Maine. Early in life he went to New Orleans, where he was for some time engaged in mercantile pursuits. He also had business connections in Texas. Subsequently, and about twelve years since, he took up his residence in New York, and finally started the "Daily News," with Gideon J. Tucker as editor, and Jacob Thompson

and other men of ability as contributors. Later, he transferred the establishment to its present proprietors, since which time Mr. Parsons, up to the date of his demise, had not engaged in any active occupation. He had many friends, was a Freemason, and always bore the reputation of being an honorable man. A member of the Mozart Hall branch of the Democracy, from the hour of its organization, he held the position of a member of its General Committee, but never was an incumbent of any political office. He enjoyed excellent and robust health until the attack of paralysis which struck him down at his own threshold, and from the effects of which he died after lingering a few days.

Nov. 14.—**LANE, WASHINGTON**, editor of the "Public Ledger" for twenty-five years, died in Philadelphia, aged 52 years. Although holding a very important position, his retiring nature caused him to be little known beyond his appropriate sphere. He was, however, admirably fitted for the duties of his profession, and was particularly noted for his industry and integrity of character.

Nov. 15.—**ADAMS, Capt. JULIUS W.**, U. S. A., died in Brooklyn, L. I., aged 25 years. He was born in Massachusetts, of Revolutionary stock. Selecting the profession of arms from his earliest youth, he was appointed from Kentucky to the Military Academy at West Point at the age of seventeen, and graduated in 1861, with the privilege of selecting either the ordnance, artillery, infantry, cavalry or dragoon arm of the service. He selected the infantry, and was commissioned a second lieutenant. He was retained as an Assistant Instructor in Tactics until June, 1862, when he joined his regiment in the Army of the Potomac. He was severely wounded at the battle of Gaines' Mills, and left in the hands of the enemy at Savage Station in the retreat of the "Seven Days;" neglected by the Confederate surgeons, and left in an open shed exposed to the weather to dress his own wounds, he was finally paroled for exchange; but he contracted disease from his exposure, from the effects of which he never entirely recovered. Upon the recovery from his wounds, he rejoined his regiment, and participated in the campaigns which followed under Generals Hooker, Burnside, and Meade, and although but a captain, commanded his regiment, the old 4th U. S. Infantry, in the battles of Fredericksburg, Chancellorsville, and Gettysburg, but the last campaign under Gen. Grant proved too much for his enfeebled body, and despite his efforts to bear up, he was, a short time after the battle of Cold Harbor, prostrated by pneumonia and compelled to quit the field. From this attack he never fully recovered, and gradually sank until relieved by death.

Nov. 16.—**STEPHENSON, GEORGE**, one of the survivors of the Kane Expedition, died in New York city, aged 38 years. He was a native of Dublin, Ireland, and early took to the sea. While in the Arctic expedition he contracted a disease of the heart, and since that period had

suffered more or less from it. The Government, in recognition of his services, gave him a position in the custom-house as night inspector, in which capacity he remained up to the time of his death.

Nov. 16.—**WALSH, THOMAS J.**, founder and President of the National Typographical Union, died in New York city. He was a native of Albany. For over a quarter of a century Mr. Walsh has been intimately connected with the typographical fraternity of the United States, and in nearly every city in the Union his influence in ameliorating the condition of journey-men printers has been felt and recognized. Mr. Walsh was one of the founders of the National Typographical Union, and for many years occupied the most responsible official positions connected therewith. He unhesitatingly sacrificed time and money in his advocacy of the interests of his fellow-workmen; and his advice and influence, as connected with their advancement in a social and pecuniary point of view, were equally sought after and generally followed. His views on the labor-reform question were broad and comprehensive, and he was recognized as one of the leaders of that movement in New York.

Nov. 17.—**IVES, THOMAS POYNTON**, Lieutenant in the U. S. Navy, died in Havre, France. He was a native of Providence, R. I., and the son of one of the merchant princes of that city. Remarkable for his devotion to the flag of the Union at the very outbreak of the war, he laid aside all private enterprises; and abandoning the comforts and pleasures which wealth and a high position in society afforded, he hastened to offer his services to the Government, and entered the navy as an acting volunteer lieutenant, at the same time presenting his yacht to the Navy Department, and refusing to receive any compensation whatever for his services as an officer of the navy. He bore an active part in the earlier operations against the Hatteras forts and at Roanoke Island; was then transferred to the Potomac flotilla, and, subsequently, assigned to ordnance duty at the Washington ordnance yard. While there, the premonitory symptoms of the fatal disease which finally terminated his life, began to develop themselves, but he still continued to perform his duties with singular self-denial and scrupulous fidelity, until the advice of his physicians and friends could no longer be disregarded. With extreme reluctance he therefore tendered his resignation as an officer of the navy, which the Department refused to accept, and he then asked for and obtained a leave of absence to visit Europe, in the vain hope of obtaining permanent relief. In his death the service lost a young and accomplished but zealous officer, and the country a true patriot.

Nov. 18.—**TERRY, HON. SETH**, an eminent citizen and lawyer of Connecticut, Judge of the Superior Court, etc., died at his residence in Hartford, aged 85 years. He was a native of

Enfield, Conn., removed to Hartford in 1803 or 1804, and was admitted to the bar of that county in 1804, being at the time of his death its senior member. As a lawyer, Judge Terry was accurate, keen, methodical, and reliable. His attention, for many years past, has been confined to the office business of his profession, drafting, conveyancing, and the care of estates. He faithfully fulfilled many private trusts, and was a favorite draughtsman of wills, deeds, and contracts arising from the domestic relations. In court, Judge Terry's position was always respectable, and he filled the offices of Judge of Probate and of City Recorder with credit, and retired from their duties, declining to be re-appointed. Mentally, he was logical, acute, and active, with an overflowing humor always available. He was of incorruptible integrity, of great decision, conscientious, zealous, just, and benevolent. He was a member of many of the great charitable corporations of the land, and a friend of the poor of the community. The Orphan Asylum and the Beneficent Society have each lost, by his death, one of their most practical friends and advisers. Mr. Terry had a keen eye for the humorous, and his retentive memory and quaint manner rendered his wit very pleasing. His religious views were clearly defined, and were of the old school New England stamp. Early in life he was noted for his devotion to doctrinal truths, and he was decidedly opposed to what he thought was heresy. But as he advanced in years the sincere Christian triumphed over the theologian, and his piety and zeal grew more and more warm and active as he approached the end of life.

Nov. 19.—**VOORHIES, JOHN S.**, an eminent law bookseller and publisher of New York, died in Brooklyn, L. I., aged 57 years. He had been for forty years engaged in business, and was widely known and esteemed by the profession. He compiled and published "Voorhies' Code of Procedure," "Abbott's Digest," "Cleveland's Banking Laws," "Greenleaf's Overruled Cases," "Burrill's Circumstantial Evidence," "Voluntary Arraignments," etc., and many other standard law books.

Nov. 23.—**HAND, EDWARD**, superintendent of the banking department of the State of New York, died at Albany, N. Y. He was a man of rigid integrity and probity, possessing capacity of a high order and the most thorough fitness for the position which he filled. He had been connected with the department since 1849, when it was attached to the Controller's office, and, on its organization as a distinct bureau of the State government, he received the appointment of deputy superintendent, which position he held until August, 1865, when his long and faithful services to the State in a subordinate capacity were justly recognized by the executive in his appointment as superintendent to fill the vacancy occasioned by the resignation of Mr. Van Dyck.

Nov. 23.—**RUSBY, COL. RENE E. DE**, United States Engineer Corps, died in San Francisco,

Cal., aged 74 years. His parents belonged to the French nobility, and formerly resided in Hayti, where they possessed large landed estates, the value of which was fearfully depreciated in 1791, causing the family to emigrate to this country and settle in New York city, where the subject of this notice was born. In 1807 he entered West Point, and graduated with merit in 1812, being at the time of his death, perhaps, the oldest living graduate of that institution. On graduating, De Russey was promoted a second lieutenant of engineers, and on the 6th of July following was advanced to a first lieutenant. In September, 1814, he was brevetted a captain "for gallant conduct at the battle of Plattsburg, New York." More than this, Gen. Macomb, then commanding the army operating on the Canada frontier, promoted him to be his chief engineer, and he participated in that capacity at the age of about twenty-two during the campaign on Lake Champlain. February 9, 1815, he received his full promotion of captain. It was nine years after before he received another advancement, and that was only by brevet, being that of major for ten years' faithful service in the same grade. He was made a full major December 22, 1830. His brevet as lieutenant-colonel was won, as his majority had been, by ten years' faithful service. His term of service as superintendent of the Military Academy began in 1833 and continued for five years. In December, 1838, he was made a lieutenant-colonel of engineers, and from that time until the breaking out of the late war he was a member of the Board of Engineers in charge of the construction of our coast defences. He was in charge for a long time of the defences of the harbor of New York city, where he became widely known, and was held in high estimation. When the war broke out he was in charge of Fortress Monroe, and the construction of the works on the Rip Raps in Hampton Roads. While still engaged in this work he was promoted colonel March 3, 1860, and ordered to command of the defences of the Pacific coast, which position he held to the time of his death. Col. De Russey's two sons, Gustavus and John, were graduates of West Point.

Nov. 25.—BARNES, Rev. WILLIAM, a Methodist clergyman, died in Philadelphia, from an apoplectic attack. He was born near Cookstown, Tyrone County, Ireland, about 1795. His father was a Presbyterian, his mother a Methodist, though nominally connected with the Anglican Church. He had the advantages of excellent schools in his native county, but while still in his minority emigrated with some of his relatives to the United States and settled in Baltimore, where he followed for a time the profession of an ornamental painter, in which he was very skilful. At the age of 19 he united with the Light Street M. E. Church in Baltimore. Having become satisfied that it was his duty to preach, he placed himself under the direction of Rev. George Roszel, then presiding

elder of the Baltimore District, and in 1817 was licensed to preach. The first eight years of his ministry were spent in the bounds of the Baltimore Conference; at its division he was placed in the Pittsburg Conference, from whence he was soon transferred to the Philadelphia Conference, in the bounds of which he passed the remainder of his ministry, closing it in charge of the M. E. Church at Bristol, Pa. During his long connection with this Conference he filled with great success several of the best appointments in its limits, fourteen years being passed in the service of some of the largest churches in Philadelphia, two years at Wilmington, Delaware, two at Dover, Delaware, two at Harrisburg, and two at Easton, Pennsylvania. That he was called twice for periods of two years to several of his Philadelphia charges, shows the estimation in which the people held him. His ministry was very successful, large accessions being made to the churches during his pastorate. He had made respectable attainments in the classics, and was very thoroughly versed in theological science. He bore a high reputation as a preacher, both for the eloquence of his delivery and the attractiveness of his style and language. He was attacked with vertigo in the streets of Philadelphia, while visiting that city on business; the attack soon passed into an apoplectic form, and he died the day following. He left a volume of sermons ready for the press, as well as several other manuscripts on controversial and other topics, some of them in verse.

Nov. 26.—BINGHAM, Rev. ABEL, for thirty-three years a Baptist missionary among the Seneca and Ojibwa Indians, died at Grand Rapids, Michigan. He was born at Enfield, N. H., May 9, 1786; ordained as a Baptist minister at Wheatland, New York, September 3, 1838, having been appointed in July previous, as missionary to the Ojibwas. He resigned his connection with the mission in October 1855, and removed to Michigan. He had had a son and daughter also engaged in the missionary work.

Nov. 28.—HARRINGTON, Hon. SAMUEL MAXWELL, LL. D., Chancellor of the State of Delaware, died in Philadelphia, in the 63d year of his age. He was a native of Dover, Delaware; graduated at Washington College, Maryland, in 1823, with the first honors of his class, and immediately entered upon the study of the law. In 1830 he was appointed Secretary of State, to succeed Hon. John M. Clayton. At this time he displayed such legal ability that at the early age of twenty-eight he was appointed Chief Justice of the Supreme Court of his native State, and held the position until the change in the State Constitution which abolished his court and merged it into the Superior Court. Of such value to the State were his legal abilities deemed that he was induced to accept the position of associate justice on the latter bench. He continued as such for many years, and in 1855 was again appointed chief justice, and

subsequently, in 1857, was elevated to the chancellorship, the highest attainable judicial position, the duties of which he continued to discharge up to the time of his death. In 1849 he was at the head of the commission appointed to revise and codify the laws of the State, and for the able manner in which he fulfilled his important task received a vote of thanks from the Delaware Legislature. In 1854 he received the honorary degree of LL. D., and has been for some years President of the Delaware Railroad Company. Through all the long years of the war he was a steadfast and influential supporter of the Government, and did much to strengthen the administration of President Lincoln, whose warm personal advocate he was.
